													ARENA EVENT				102,636	3	3
													ANCILLARY USES				20,554	1	1
													PROJECT TOTAL (EVENT+ANCILLARY)				**123,191**	**4**	**4**

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				87,545	2	2
													ANCILLARY USES				26,516	2	2
													PROJECT TOTAL (EVENT+ANCILLARY)				**114,061**	**3**	**3**

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				87,545	2	2
													ANCILLARY USES				20,554	1	1
													PROJECT TOTAL (EVENT+ANCILLARY)				**108,099**	**3**	**3**

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				77,274	1	2
													ANCILLARY USES				26,516	2	2
													PROJECT TOTAL (EVENT+ANCILLARY)				**103,790**	**3**	**3**

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													PROJECT TOTAL (EVENT+ANCILLARY)				**97,828**	**3**	**3**

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				32,827	1	1
													ANCILLARY USES				22,373	1	1
													PROJECT TOTAL (EVENT+ANCILLARY)				**55,200**	**2**	**2**

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
