													ARENA EVENT				24,672	0.5	1

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes:

1. Number of events and ancillary days from Appendix K. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
2. CO2e value accounts for Global Warming Potential Values that are consistent with CARB values from IPCC AR4

													ARENA EVENT				132,837	3	4

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				135,440	3	4

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				109,819	2	3

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				111,966	2	3

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				74,252	2	2

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				75,651	2	2

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				62,196	1	1

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				63,465	1	2

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				55,101	1	1

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				56,239	1	1

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				24,379	0.5	1

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

													ARENA EVENT				24,672	0.5	1

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Non-Event at IBEC	2054	Ancillary	Weekend	23261.4	1.3	1.3	28	651,320	37	38				

Notes:

1. Number of events and ancillary days from Appendix K. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
2. CO2e value accounts for Global Warming Potential Values that are consistent with CARB values from IPCC AR4
