Appendix G, Energy and Greenhouse Gas Emissions Data

G.1 Energy

G.1-1 Existing Energy Summary (Correlates to Table 3.5-2)

G.1-2 Construction Energy Summary (Correlates to Table 3.5-3)

G.1-2.1 Off-Road Equipment – Diesel
G.1-2.2 Off-Road Equipment – Electric
G.1-2.3 Off-Road Equipment – CNG
G.1-2.4 On-Road Workers Fuel Consumption
G.1-2.5 On-Road Haul Truck Fuel Consumption
G.1-2.6 On-Road Vendor Fuel Consumption
G.1-2.7 Construction Office Electricity Use
G.1-2.8 Construction Electricity from Water Use

G.1-3 Operational Energy Summary (Correlates to Tables 3.5-4a and 3.5-4b)

G.1-3.1 Total Operational Energy Summaries

G.1-3.1a Full Backfill Scenario
- Net Electricity Use
- Net Natural Gas Use
- Net Gasoline Use
- Net Diesel Use

G.1-3.1b Full Backfill Scenario
- Net Electricity Use
- Net Natural Gas Use
- Net Gasoline Use
- Net Diesel Use

G.1-3.2 Building Energy Summaries

G.1-3.2a Full Backfill Scenario
- Existing
- Backfilled Events
- Relocated/Shifted Events
- Project

G.1-3.2b Partial Backfill Scenario
- Existing
- Backfilled Events
- Relocated/Shifted Events
- Project

G.1-3.3 Mobile Energy Use Summaries
- Existing On-Site and Clippers Office and Training Center
- Clippers Office and Training Center Backfilled
- Staples Center Backfilled – Full
- Staples Center Backfilled – Partial
- Regional Event Venue Backfilled Market-Shifted
- Regional Event Venue Market-Shifted
- Staples Center Market-Shifted
- Project

G.1-4 Utility Will-Serve Letters

G.1-4.1 Southern California Edison
G.1-4.2 Southern California Gas
G.1-4.3 AT&T
G.1-4.4 Charter Communications

G.2 Greenhouse Gas Emissions

G.2-1 Existing On-Site (Correlates to Tables 3.7-6, 3.7-9a, and 3.7-9b)

G.2-1.1 Emissions Summary
G.2-1.2 Summary of Assumptions and CalEEMod Output

G.2-2 Existing Off-Site LA Clippers Practice and Athletic Training Facility and Team Office (Correlates to Tables 3.7-6, 3.7-9a, and 3.7-9b)

G.2-2.1 Emissions Summary
G.2-2.2 Summary of Assumptions and CalEEMod Output

G.2-3 IBEC Construction Emissions (Correlates to Tables 3.7-7, 3.7-9a, and 3.7-9b)

G.2-3.1 Emissions Summary
G.2-3.2 CalEEMod Output
G.2-3.3 Mobile Calculations
G.2-3.4 Construction Electricity Use (Electric Equipment, Construction Office, Construction Water Usage) and Alternative-Fueled Equipment

G.2-4 Backfilled LA Clippers Practice and Athletic Training Facility and Team Office (Correlates to Tables 3.7-9a and 3.7-9b)

G.2-4.1 Emissions Summary
G.2-4.2 Summary of Assumptions and CalEEMod Output

G.2-5 Backfilled Staples Center Events (Correlates to Table 3.7-9b)

G.2-5.1 Emissions Summary
G.2-5.2 Summary of Assumptions and CalEEMod Output

G.2-6 Backfilled Staples Center Events Full (Correlates to Table 3.7-9a)

G.2-6.1 Emissions Summary
G.2-6.2 Summary of Assumptions and CalEEMod Output

G.2-7 Relocated Staples LA Clippers Games (Correlates to Tables 3.7-9a and 3.7-9b)

G.2-7.1 Emissions Summary
G.2-7.2 Summary of Assumptions and CalEEMod Output

G.2-8 Market-Shifted Regional Event Venue Events (Correlates to Tables 3.7-9a and 3.7-9b)

G.2-8.1 Emissions Summary
G.2-8.2 Summary of Assumptions and CalEEMod Output

G.2-9 Backfilled Market-Shifted Regional Event Venue Events (Correlates to Tables 3.7-9a and 3.7-9b)

G.2-9.1 Emissions Summary
G.2-9.2 Summary of Assumptions and CalEEMod Output

G.2-10 IBEC Operational Emissions (Correlates to Tables 3.7-8, 3.7-9a, and Table 3.7-9b)

G.2-10.1 Emissions Summary – Full Backfill
G.2-10.2 Emissions Summary – Partial Backfill
G.2-10.3 Summary of Assumptions and CalEEMod Outputs

G.2-11 Mobile Source Emissions (Correlates to Tables 3.7-6, 3.7-8, 3.7-9a, and 3.7-9b)

G.2-11.1 Mobile Emission Factors
G.2-11.2 Existing On-Site Mobile Emissions
G.2-11.3 Existing Off-Site LA Clippers Practice and Athletic Training Facility and Team Office Mobile Emissions
G.2-11.4 Backfilled Off-Site LA Clippers Practice and Athletic Training Facility and Team Office Mobile Emissions
G.2-11.5 Backfilled Staples Events Mobile Emissions
G.2-11.6 Backfilled Staples Events Full Mobile Emissions
G.2-11.7 Relocated Staples LA Clippers Games Mobile Emissions
G.2-11.8 Market-Shifted Regional Event Venue Events Mobile Emissions
G.2-11.9 Backfilled Market-Shifted Regional Event Venue Events Mobile Emissions
G.2-11.10 IBEC Project Operational Mobile Emissions

G.2-12 IBEC Operational Stationary Source, Media Van Generator, Delivery Truck, and Off-Road Equipment Emissions (Correlates to Tables 3.7-8, 3.7-9a, and 3.7-9b)

G.2-12.1 Cooling Tower Emissions
G.2-12.2 Emergency Generator Emissions
G.2-12.3 Media Van Generator Emissions
G.2-12.4 Delivery Truck Emissions
G.2-12.5 Off-Road Equipment Emissions

Total	**1,421**	**2,840**	**145,195**	**16,827**

Notes:

a Totals may not add up exactly due to rounding in the modeling calculations.

b CO_2e emissions are calculated using the global warming potential values from the IPCC AR4.

c Existing onsite fossil fuel consumption is calculated as a total for all onsite existing land uses.

d Energy consumption from the proposed well would be less than under existing conditions.

CalEEMod Water Electricity Factors	Electricity Intensity Factor To Supply (kWh/Mgal)	Electricity Intensity Factor To Treat (kWh/Mgal)	Electricity Intensity Factor To Distribute (kWh/Mgal)	Electricity Intensity Factor For Wastewater Treatment (kWh/Mgal)
Total	9727	111	1272	1911

Sources and Assumptions:
-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).
-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

This tool provides a quick estimation of the fuel use and emissions for your equipment in a specific year. The results may slightly differ from those from the official inventory model.

Instructions:

Enter the horsepwer, model year, and other details about your equipment in the Input box.

Make sure to update the ***load factor*** for your equipment using the lookup table.

The ***Output*** box gives a quick estimation of the fuel use, NOx, PM, and THC emission for your equipment.

All Uses	9,727	111	1,272	1,911

Sources and Assumptions:
- Energy use taken from CalEEMod v2016.3.2 outputs used in the Air Quality analysis.
- Water electricity intensity rates taken from CalEEMod default emission factors
-Building energy weighted based on the size of event. Greater than 14,500 attendees assumed to be operating at 100% of the building's energy capacity. Medium events (<14,500 and >2,000 attendees) operates at 80%. Small events (<2,000 attendees) operate at 25%. Plaza events would not require any building energy.

Your project is located in Southern California Edison (SCE) service territory. SCE will serve the above subject project's electrical requirements per the California Public Utilities Commission and Federal Energy Regulatory Commission tariffs.

SCE may need to conduct utility studies, where applicable, to assess whether additions or modifications to the existing electric infrastructure are required to serve this project. Where applicable, SCE has attached Appendix (B) which not only describes the study, and permitting, but includes a Project Information Sheet that will need to be completed by you and submitted to SCE if your project is at a point where SCE has to determine the required electrical utility work. This Will-Serve letter does not imply that either: (i) these studies have been completed, or (ii) that any required California Environmental Quality Act (CEQA) analysis of project-related electric utility impacts has been conducted.

I am the SCE Design Representative currently assigned to this project. SCE or Applicant will design and construct all required electrical infrastructure to serve this project provided you enter into the applicable contractual agreements with SCE identify scope of electrical utility work required, and supply the following information:

- Site plans as required
- Required contracts and agreements (fully executed)
- Applicable fees
- Local permits
- Required easement documents

Your project will be scheduled for construction once SCE has all the necessary information for your project and you have submitted or agreed to the applicable requirements as stated above, and paid any necessary fees.

If your project will not require SCE services, please notify us so that we can update our records.

SCE appreciates your business. If you have any questions, please feel free to call me at (714) 296-7609.

Sincerely,

SCE Design Representative

As your Southern California Edison (SCE) Design Representative for this project, I am committed to providing you with excellent customer service. The following information is intended to help explain SCE's planning and permitting process for the electric infrastructure needed to serve your Project.

Depending on the scope of work necessary to serve your project (electric facility installation, removal, relocation, rearrangement and/or replacement), it may be necessary for you to submit an Advanced Engineering Fee. This Fee will be applied to certain expenses associated with preliminary design and engineering work required to estimate the cost for SCE to perform the electric work associated with your project. Please note: Depending on factors such as resource constraints, construction or relocation of SCE facilities requirements, the need for environmental review, and so forth, delays in meeting your projected completion date may occur. To help minimize the potential for delays it is imperative that you provide all requested information as early as possible.

If the project results in the need for SCE to perform work on SCE electrical facilities that operate at between 50 and 200 kilovolts (kV), please be advised these facilities are subject to the California Public Utilities Commission's (CPUC's) General Order 131-D (GO 131-D) Permit to Construct (PTC) requirements. For the CPUC PTC review, the CPUC acts as the lead agency under the California Environmental Quality Act (CEQA). Depending on the scope of SCE's work, certain exemptions to the PTC requirements may be available. If no exemptions are available, the PTC application preparation and environmental approval process could take a minimum of 24 - 48 months.

If you anticipate that your project will require work to be performed on SCE electrical facilities operated at between 50 kV and 200 kV, please inform me at your earliest possible convenience for further assistance to determine the potential G.O.131-D permitting requirements and/or permitting exemption(s).

In order for SCE to determine the required electrical utility work necessary to support your project, and to determine any permitting requirements and costs associated with constructing these facilities, project plans and a completed Customer Project Information Sheet will need to be submitted.

If you have any additional questions, please feel free to call me at (714) 296-7609.

Sincerely,

SCE Design Representative

RE: Will Serve Letter Request for – Century Blvd., S. Prarie Ave., Doty Ave., 101st St., 102nd St., 103rd St., Inglewood, CA 90301

To whom it may concern:

Thank you for inquiring about the availability of natural gas service for your project. We are pleased to inform you that Southern California Gas Company (SoCalGas) has facilities in the area where the above named project is being proposed. The service would be in accordance with SoCalGas' policies and extension rules on file with the California Public Utilities Commission (Commission) at the time contractual arrangements are made.

This letter should not be considered a contractual commitment to serve the proposed project, and is only provided for informational purposes only. The availability of natural gas service is based upon natural gas supply conditions and is subject to changes in law or regulation. As a public utility, SoCalGas is under the jurisdiction of the Commission and certain federal regulatory agencies, and gas service will be provided in accordance with the rules and regulations in effect at the time service is provided. Natural gas service is also subject to environmental regulations, which could affect the construction of a main or service line extension (for example, if hazardous wastes were encountered in the process of installing the line). Applicable regulations will be determined once a contract with SoCalGas is executed.

If you need assistance choosing the appropriate gas equipment for your project, or would like to discuss the most effective applications of energy efficiency techniques, please contact our area Service Center at 800-427-2200.

Thank you again for choosing clean, reliable, and safe natural gas, your best energy value.

Sincerely,

Re: Will Serve Notice

Mr. Chris Holmquist

This letter is written to confirm that the proposed multipurpose project site in the general area encompassed by Century Blvd to the north, S Prairie Ave. to the west, Doty Ave. to the east and 104st to the south, is within the Base Rate Area of the AT&T California serving area in the Inglewood Exchange. AT&T expects to be in a position to provide telephone service to applicants in the above-referenced development upon request in accordance with requirements of, and at the rates and charges specified in; it's Tariffs that are on file with the California Public Utilities Commission.

This offer to provide service will terminate 24 months after the date of this letter unless both of the following first occur: 1) you, in your capacity as the developer, enter into a written service agreement with AT&T; and, 2) you, in your capacity as developer, pay all charges you are required by AT&T's Tariffs to pay.

If you have any questions I can be contacted on 310-515-4511

Sincerely,

Bryon Love

SUBJECT: will serve letter

In concern of Charter facilities at the property located near Cenury Blvd and S. Prairie Ave. in Inglewood CA, Charter has existing coax and/or fiber facilities near this location that may provide a possible point-of-connection for available services in the future.

Services for any Commercial or Multi-Family Parcels will be available dependent upon the right-of-entry agreement and entry routing for the respective buildings, as determined by contract. Contact our Commercial Business Class Sales department, at (866)519-1263 to facilitate a request for new commercial service, or your local MDU Sales Department for all residential services. In addition to initiating your request, they can also provide specifics regarding costs and other details associated with obtaining our services in this area at the appropriate point in time.

For future reference, please send all utility coordination, abandonments, encroachments, plat signatures, or serviceability requests, or notices of relocation to west-engineering-relo@charter.com. Please share this information with whoever needs these services.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Operations run for existing on-site buildings to be demolished. 2017 SCE CO2e intensity factor used because that is the most recent emission factor available.

Land Use - See Ch.2, Project Description for additional details.

Construction Phase - Operations run for existing on-site uses only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use - Historical energy data used.

Water And Wastewater - Water usage from Water Supply Assessment prepared for Project.

Solid Waste - Solid Waste generation rate from Ch.3.15, Utilities and Service Systems, solid waste input for motel accounts for all solid waste generated by existing on-site land uses

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Operations run for existing on-site buildings to be demolished. SCE CO2e intensity factor adjusted for year 2024 RPS.

Land Use - See Ch.2, Project Description for additional details.

Construction Phase - Operations run for existing on-site uses only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use - Historical energy data used.

Water And Wastewater - Water usage from Water Supply Assessment prepared for Project.

Solid Waste - Solid Waste generation rate from Ch.3.15, Utilities and Service Systems, solid waste input for motel accounts for all solid waste generated by existing on-site land uses

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2017 LADWP CO2e intensity factor used because that is the most recent emission factor available. Operations run for existing off-site LA Clippers practice and athletic training facilities and team offices.

Land Use - Accounts for existing off-site LA Clippers practice and athletic training facility and team offices.

Construction Phase - Operations run for existing off-site uses only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use - Historical energy data used

Water And Wastewater - Water usage was estimated through employee water usage rates, office land use values and indoor floor cleaning rates from the Water Supply Assessment prepared for Project.

Solid Waste - Solid Waste Generation Rates estimated through generation rates of land uses from Ch. 3.15, Utilities and Service Systems Section.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Project Characteristics - LADWP CO2e intensity factor adjusted for year 2024 RPS. Operations run for existing off-site LA Clippers practice and athletic training facility and team offices.

Land Use - Accounts for existing off-site LA Clippers practice and athletic training facility and team offices.

Construction Phase - Operations run for existing off-site uses only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use - Historical energy data used

Water And Wastewater - Water usage was estimated through employee water usage rates, office land use values and indoor floor cleaning rates from the Water Supply Assessment prepared for Project.

Solid Waste - Solid Waste Generation Rates estimated through generation rates of land uses from Ch. 3.15, Utilities and Service Systems Section.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Sources and Assumptions:
-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).
-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).
-Number of watering days assumed to be the number of days of construction up until concrete pouring and building construction
-GHG intensity factor for SCE from 2021 was used

1.3 User Entered Comments & Non-Default Data

Project Characteristics - LADWP CO2e intensity factor adjusted for year 2024 RPS. Operations run for backfilled off-site LA Clippers practice and athletic training facility and team offices.

Land Use - Accounts for backfilled off-site LA Clippers practice and athletic training facility and team offices.

Construction Phase - Operations run for backfilled off-site uses only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use - Historical energy data used

Water And Wastewater - Water usage was estimated through employee water usage rates, office land use values and indoor floor cleaning rates from the Water Supply Assessment prepared for Project.

Solid Waste - Solid Waste Generation Rates estimated through generation rates of land uses from Ch. 3.15, Utilities and Service Systems Section.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Notes:

1 Event Numbers and VMT based on VMT calculations as presented in Appendix K

Arena energy emissions scaled based on event energy demand scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy demand, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy demand, small events (less than 5,000 attendees) assumes 25% arena energy demand. Conservatively assumed that 10,500 attendee event categorized as large event. Number of backfilled Staples events is 7 large events, for a weighted event number (equivalent large events) of 7

2 events.

Notes:

1 Information from Appendix K of the Project's Draft EIR. Staples Center square footage. http://www.lasports.org/lafacilities/display.php?s=Arena&id=19.

2 Solid Waste Generation Rates estimated from Ch. 3.15, Utilities and Service Systems Section of the Project's Draft EIR.

3 Water usage estimated from Water Supply Assessment prepared for Project.

4 Arena land use energy and solid waste generation rate scaled based on event energy and solid waste generation scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy use and solid waste generation, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy use and solid waste generation, small events (less than 5000 attendees) assumes 25% arena energy use and solid waste generation.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - LADWP CO2e intensity factor adjusted for year 2024 RPS.

Land Use - Accounts for Staples Center arena use for 7 backfilled Staples events, see Ch.3.7, Greenhouse Gas Emissions for additional details.

Construction Phase - Operations run for Staples Center arena use for 7 backfilled Staples events only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use -

Water And Wastewater - Water usage was estimated through employee and visitor water usage rates from the Water Supply Assessment prepared for Project and based on the number of events as described in Ch. 3.7, Greenhouse Gas Emissions.

Solid Waste - Solid waste generation rate estimated through generation rates land use from Ch. 3.15, Utilities and Service Systems Section and scaled based on the number of events described in Ch.3.7, Greenhouse Gas Emissions.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Notes:

1 Event Numbers and VMT based on VMT calculations as presented in Appendix K

Arena energy emissions scaled based on event energy demand scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy demand, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy demand, small events (less than 5,000 attendees) assumes 25% arena energy demand. Conservatively assumed that 10,500 attendee event categorized as large event. Number of backfilled Staples events is 47 large events, for a weighted event number (equivalent large events) of

2 47 events.

3 Half Year of Emissions for 2024 displayed because to mirror Project since Project is expected to be operational mid 2024. First full operational year is 2025

Notes:

1 Information from Appendix K of the Project's Draft EIR. Staples Center square footage. http://www.lasports.org/lafacilities/display.php?s=Arena&id=19.

2 Solid Waste Generation Rates estimated from Ch. 3.15, Utilities and Service Systems Section of the Project's Draft EIR.

3 Water usage estimated from Water Supply Assessment prepared for Project.

4 Arena land use energy and solid waste generation rate scaled based on event energy and solid waste generation scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy use and solid waste generation, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy use and solid waste generation, small events (less than 5000 attendees) assumes 25% arena energy use and solid waste generation.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - LADWP CO2e intensity factor adjusted for year 2024 RPS.

Land Use - Accounts for Staples Center arena use for 47 backfilled Staples events, see Ch.3.7, Greenhouse Gas Emissions for additional details.

Construction Phase - Operations run for Staples Center arena use for 47 backfilled Staples events only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use -

Water And Wastewater - Water usage was estimated through employee and visitor water usage rates from the Water Supply Assessment prepared for Project and based on the number of events as described in Ch. 3.7, Greenhouse Gas Emissions.
Solid Waste - Solid waste generation rate estimated through generation rates land use from Ch. 3.15, Utilities and Service Systems Section and scaled based on the number of events described in Ch.3.7, Greenhouse Gas Emissions.
Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Notes:

1 Event Numbers and VMT based on VMT calculations as presented in Appendix K

Arena energy emissions scaled based on event energy demand scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy demand, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy demand, small events (less than 5,000 attendees) assumes 25% arena energy demand. Number of
2 shifted events is 47 large events, for a weighted event number (equivalent large events) of 47 events

3 Half Year of Emissions for 2024 displayed because to mirror Project since Project is expected to be operational mid 2024. First full operational year is 2025.

47	large events	1
47	Weighted Event Number (equivalent large events)	

Notes:

1 Information from Appendix K of the Project's Draft EIR. Staples Center square footage. http://www.lasports.org/lafacilities/display.php?s=Arena&id=19.

2 Solid Waste Generation Rates estimated from Ch. 3.15, Utilities and Service Systems Section of the Project's Draft EIR.

3 Water usage estimated from Water Supply Assessment prepared for Project.

4 Arena land use energy and solid waste generation rate scaled based on event energy and solid waste generation scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy use and solid waste generation, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy use and solid waste generation, small events (less than 5,000 attendees) assumes 25% arena energy use and solid waste generation.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - LADWP CO2e intensity factor adjusted for year 2024 RPS.

Land Use - Accounts for Staples Center arena use for relocated Clippers basketball games.

Construction Phase - Operations run for Staples Center arena use for relocated Clippers basketball games only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use -

Water And Wastewater - Water usage was estimated through employee and visitor water usage rates from the Water Supply Assessment prepared for Project and based on the number of events as described in Appendix K. See Ch. 3.7, Greenhouse Gas Emissions for more details.

Solid Waste - Solid waste generation rate estimated through generation rates of land use from Ch. 3.15, Utilities and Service Systems Section and scaled based on the number of events described in Appendix K. See Ch. 3.7, Greenhouse Gas Emissions for more details.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations.

Notes:

1 Event Numbers and VMT based on VMT calculations as presented in Appendix K

Arena energy emissions scaled based on event energy demand scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy demand, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy demand, small events (less than 5,000 attendees) assumes 25% arena energy demand.

2 Number of shifted events is 10 large events, 38 medium events, 41 small events, for a weighted event number (equivalent large events) of 51 events

3 Half Year of Emissions for 2024 displayed because to mirror Project since Project is expected to be operational mid 2024. First full operational year is 2025.

1 Information from Appendix K of the Project's Draft EIR. Staples Center square footage. http://www.lasports.org/lafacilities/display.php?s=Arena&id=19.

2 Solid Waste Generation Rates estimated from Ch. 3.15, Utilities and Service Systems Section of the Project's Draft EIR.

3 Water usage estimated from Water Supply Assessment prepared for Project.

Arena land use energy and solid waste generation rate scaled based on event energy and solid waste generation scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy use and solid waste generation, medium events (between 5,000 and 10,000 attendees) assumes
4 80% arena energy use and solid waste generation, small events (less than 5,000 attendees) assumes 25% arena energy use and solid waste generation.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - LADWP CO2e intensity factor adjusted for year 2024 RPS.

Land Use - Accounts for the regional event venue/arena land use for events shifted from the region based on specifications in in Appendix K.

Construction Phase - Operations run for the regional event venue/arena land use for the shifted events from the region as specified in Appendix K.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use -

Water And Wastewater - Water usage was estimated through employee and visitor water usage rates from the Water Supply Assessment prepared for Project and based on the number of events as described in Appendix K. See Ch. 3.7, Greenhouse Gas Emissions for more details.

Solid Waste - Solid waste generation rate estimated through generation rates of land use from Ch. 3.15, Utilities and Service Systems Section and scaled based on the number of events described in Appendix K. See Ch. 3.7, Greenhouse Gas Emissions for more details.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Notes:

1 Event Numbers and VMT based on VMT calculations as presented in Appendix K

Arena energy emissions scaled based on event energy demand scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy demand, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy demand, small events (less than 5,000 attendees) assumes 25% arena energy demand.

2 Number of shifted events is 10 large events, 38 medium events, 41 small events, for a weighted event number (equivalent large events) of 51 events

3 Half Year of Emissions for 2024 displayed because to mirror Project since Project is expected to be operational mid 2024. First full operational year is 2025.

Notes:

1 Information from Appendix K of the Project's Draft EIR. Staples Center square footage. http://www.lasports.org/lafacilities/display.php?s=Arena&id=19

2 Solid Waste Generation Rates estimated from Ch. 3.15, Utilities and Service Systems Section of the Project's Draft EIR.

3 Water usage estimated from Water Supply Assessment prepared for Project.

Arena land use energy and solid waste generation rate scaled based on event energy and solid waste generation scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy use and solid waste generation, medium events (between 5,000 and 10,000 attendees) assumes

4 80% arena energy use and solid waste generation, small events (less than 5,000 attendees) assumes 25% arena energy use and solid waste generation.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - LADWP CO2e intensity factor adjusted for year 2024 RPS.

Land Use - Accounts for the backfilled regional event venue/arena land use for the backfilled events shifted from the region based on specifications in Appendix K.

Construction Phase - Operations run for the backfilled regional event venue/arena land use for the backfilled shifted events from the region as specified in Appendix K.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use -

Water And Wastewater - Water usage was estimated through employee and visitor water usage rates from the Water Supply Assessment prepared for Project and based on the number of events as described in Appendix K. See Ch. 3.7, Greenhouse Gas Emissions for more details.
Solid Waste - Solid waste generation rate estimated through generation rates of land use from Ch. 3.15, Utilities and Service Systems Section and scaled based on the number of events described in Appendix K. See Ch. 3.7, Greenhouse Gas Emissions for more details.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Notes:

1 Event Numbers and VMT based on VMT calculations as presented in Appendix K
2 Arena energy emissions scaled based on event energy demand scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy demand, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy demand, small events (less than 5,000 attendees) assumes 25% arena energy demand. Plaza events assume zero arena energy demand. Number of shifted events is 62 large events, 65 medium events, 100 small events, and 16 plaza events, for a weighted event number (equivalent large events) of 139
3 Half Year of Emissions for 2024 displayed because Project is expected to be operational mid 2024. First full operational year is 2025
4 Total over 30 years is a summation of half year 2024 values to 2054 values since Project life starts from when Project is operational in mid 2024 through year 2054

Notes:

1 Event Numbers and VMT based on VMT calculations as presented in Appendix K
2 Arena energy emissions scaled based on event energy demand scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy demand, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy demand, small events (less than 5,000 attendees) assumes 25% arena energy demand. Plaza events assume zero arena energy demand. Number of shifted events is 62 large events, 65 medium events, 100 small events, and 16 plaza events, for a weighted event number (equivalent large events) of
3 Half Year of Emissions for 2024 displayed because Project is expected to be operational mid 2024. First full operational year is 2025.
4 Total over 30 years is a summation of half year 2024 values to 2054 values since Project life starts from when Project is operational in mid 2024 through year 2054.

Notes:

1 Information from Ch.2 Project Description of the Project's Draft EIR

2 Solid Waste Generation Rates from Ch. 3.15, Utilities and Service Systems Section of the Project's Draft EIR.

3 Water usage from Water Supply Assessment prepared for Project.

4 Information from Appendix K of the Project's Draft EIR

5 Arena land use energy and solid waste generation rate scaled based on event energy and solid waste generation scaling assumptions. Large events (12,000 or more attendees) assumes full arena energy use and solid waste generation, medium events (between 5,000 and 10,000 attendees) assumes 80% arena energy use and solid waste generation, small events (less than 5000 attendees) assumes 25% arena energy use and solid waste generation. Plaza Events assume zero energy use.

6 Solar PV system modeled on West Parking Garage Site accounts for all LEED credit solar for the Proposed Project that would include a 700-kilowatt PV system, generating approximately 1,085,000 kilowatt-hours of carbon-free energy annually. See 3.7, Greenhouse Gases for more information.

Project Characteristics - SCE CO2e intensity factor adjusted for year 2024 RPS.

Land Use - See Ch.2, Project Description for additional details.

Construction Phase - Operations run for West Parking Garage Site only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use - Adjusted to account for 2019 Title 24 Standards

Water And Wastewater - Water usage from Water Supply Assessment prepared for Project.

Energy Mitigation - Solar PV system modeled on West Parking Garage Site accounts for all LEED credit solar for the Proposed Project that would include a 700-kilowatt PV system, generating approximately 1,085,000 kilowatt-hours of carbon-free energy annually.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

1.3 User Entered Comments & Non-Default Data

Project Characteristics - SCE CO2e intensity factor adjusted for year 2024 RPS.

Land Use - See Ch.2, Project Description for additional details.

Construction Phase - Operations run for East Transportation and Hotel Site only.

Vehicle Trips - Operational mobile emissions calculated outside of CalEEMod.

Energy Use - Adjusted to account for 2019 Title 24 Standards

Water And Wastewater - Water usage from Water Supply Assessment prepared for Project.

Solid Waste - Solid Waste Generation Rate from Ch, 3.15 Utilities and Service Systems.

Waste Mitigation - 50 percent diversion assumed consistent with state regulations

Notes:

1. Number of events and ancillary days from Appendix K. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
2. CO2e value accounts for Global Warming Potential Values that are consistent with CARB values from IPCC AR4

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes:

1. Number of events and ancillary days from Appendix K. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
2. CO2e value accounts for Global Warming Potential Values that are consistent with CARB values from IPCC AR4

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes:

1. Number of events and ancillary days from Appendix K. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
2. CO2e value accounts for Global Warming Potential Values that are consistent with CARB values from IPCC AR4

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 1.3 mile trip length segment was defined as the distance each vehicle would travel in the local study area. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length varied since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 1.3 and 5 miles. See Section 3.2, Air Quality, subsection Regional Operational Emissions Methodology for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes:

1. Number of events and ancillary days from Appendix K. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
2. CO2e value accounts for Global Warming Potential Values that are consistent with CARB values from IPCC AR4

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes

1. Trip Length and Trip generation values from Appendix K.
2. Total VMT per event and Total daily VMT values may not add up exactly due to rounding in the modeling calculations as compared to Appendix K.
3. Event related trip lengths were separated into three trip length segments with different vehicle speeds. The 0.3 mile trip length segment was defined as the distance each vehicle would travel from the freeway to Staples. The 5 mile trip was defined as the distance each vehicle trip travelled on residential and business district roadways to and from freeways from the point of the trip origin to the nearest freeway. The remaining trip length since it was the total trip lengths of the various event related trip types (attendee vehicles/attendee TNC vehicles, employee vehicles/employee TNC vehicles, attendee shuttles/employee shuttles, and miscellaneous vehicles) minus the other two trip length segments of 0.3 and 5 miles. See Section 3.7, Greenhouse Gas Emissions for more details.
4. Emission factors include the following processes: Running Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

5. Emission factors include the following processes: Idle Exhaust, Starting Exhaust. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.

Notes:

1. Number of events and ancillary days from Appendix K. EMFAC2017 does not provide emission factors beyond 2050; thus, emissions associated with mobile sources were conservatively assumed to remain constant through 2050 and 2054.
2. CO2e value accounts for Global Warming Potential Values that are consistent with CARB values from IPCC AR4
