Subject: To the Inglewood Planning Commission public hearing city of inglewood scheduled for June 17, 2020 IBEC

To the Inglewood Planning Commission

public hearing city of inglewood

scheduled for June 17, 2020

Dear All,

In reference to Item #5 under Public Hearing.

"promote the enjoyment and recreation of the public by providing access to the City's residents in the form of spectator sports"

Please let us know what percentage of this "City's residents," specifically Inglewood's residents will be able to afford the for profit tickets that often sell through third parties for hundreds of dollars? In the current planning commissions scenario the purchasing of a expensive ticket is required for "enjoyment and recreation." The initial quote above implies something all residents can enjoy like a public park, free of cost. This is a special privilege that is being given to a private business by the city, buried in mountains of documents.

Has there been a study conducted to see what percentage of Inglewood residents will be able to afford to go to these basketball games? I am sure it will not be affordable for the majority of the residents who will of course be effected by the traffic, congestion, trash and increase in living expenses.

Why have I never been informed by the city of their intentions?

Why has the warehouse to the east of my building not been included in the redeveloppment? Why have the businesses directly north of my building not been included? According to the project site aerial map they have deliberately drawn around them. What side deal has been cut?

Attachment No. 4 Zone Change and Zoning Code Amendment Findings

"All properties to be rezoned for consistency with the General Plan Land Use Element are owned by the City of Inglewood or the City of Inglewood as Successor Agency to the former Inglewood Redevelopment Agency (City as Successor Agency) and are currently vacant."

Is the above amendment referring to my property to? If so, it is obviously not true.

Please clarify the plans for my building?

I will be calling in to participate in the hearing. If you don't hear from me during the meeting you will know that yet another obstacle has been put in my way, not allowing me to be there due to the limitations of your technology.

Please confirm receipt of this email via reply.

Respectfully,

Dev Bhalla

To the Inglewood Planning Commission, 6/10/20

My family received your notice today of the public hearing scheduled for June 17, 2020 to consider the matters associated with the IBEC. We were troubled to see that this public event, by definition, was being held in the middle of a pandemic. So many other venues of greater public importance within our city, state and federal government are still closed and/or highly curtailed, yet this "business proposal" rubber stamping between a private corporation and the city must continue at the risk of all the attendees, who may or may not come due to the risk to their personal health. It has a calculated feeling.

My father an architect, city planner and retired LA county commissioner along with myself built the building standing on 3838 W. 102 st. over 30 years ago. Our business and temple were both situated there for decades. We have been part of the Inglewood community and invested there long before it was fashionable. My father is 87 years old an amputee with multiple underlying health issues and by doctors orders has not left his house in months, nor can he while the pandemic continues. He feels strongly about making his case in person as his right.

Our unsolicited experience with Murphy's Bowl LLC and their agents has not been positive. They have been opportunistic at the least if not deceptive. The city should not give any unfair advantage to a private business just because they have deeper pockets than a smaller business. Our building has been redlined within Murphy's Bowls plans to expand their business and profits. We are presumed out of the picture, without even asking. How exactly do they plan on building their business over us? This is not a city project, it is a private business trying to build their empire at our expense.

1) Please provide us with the plans on how our building will be incorporated in this project prior to the public hearing so we have reasonable time to review and respond.

2) Please provide contact information for the Mayor of Inglewood, our Councilperson and all others in charge of this project.

Please confirm receipt of this email via reply.

Respectfully,

Dev Bhalla

Re: **Public Hearing re Inglewood Basketball and Entertainment Center**
June 17, 2020

Ladies and Gentlemen:

This firm represents the Michino family which owns 3915 W. 102nd Street, bearing Assessor's Parcel Number 4032-001-048. The owners object to the adoption of the proposed General Plan Amendment redesignating their parcel from Commercial to Industrial, object to the redefinition of the scope of industrial uses to include sports and entertainment facilities, object to the proposed vacation of streets, and to the zoning code amendments and changes. It appears these changes are a precursor to the City attempting to take private property from the owners for a private use by Murphy's Bowl and its affiliates. Please make this letter part of the public record.

Very truly yours,

Kevin Brogan (digital signature)

Re: Comments on the Draft Environmental Impact Report for the Inglewood Basketball and Entertainment Center (IBEC), SCH 2018021056

Dear Ms. Wilcox:

This is a brief comment on the City of Inglewood's responses to my March 24, 2020 comment letter on the Clippers arena project.

One argument in my March 24 letter focused on the differences in the GHG analysis between the AAB 900 certification application and the DEIR. One of the City's responses is that the AB 900 process requires a fixed baseline – the time of the NOP – but the EIR used a baseline that was adjusted annually.

An annually adjusted baseline is improper under CEQA in the circumstances of this case. The standard rule is that, as CARB realized, the CEQA baseline is the actual condition on the ground at the time of the NOP. CEQA Guidelines Section 15125 provides:

> An EIR must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant.

Although less than clear, what the City's comment response appears to contemplate is use of a future baseline as emission standards and the like are tightened. In doing so, the project attempts to take credit for circumstances that it has nothing to do with, and that would occur whether the project is ever built or not – such as tightened auto GHG emission standards over time. Indeed, even if those standards are tightened, building

the project will make emissions worse than they otherwise would be because of increased VMT directly attributable to the project.

In *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority*, 57 Cal.4th 439 (2013), the California Supreme Court evaluated use of a future baseline in an EIR for the Expo Line light rail project. The agency used a baseline for air quality that projected traffic fifteen years into the future, based on projections from SCAG. The court upheld that baseline in the case before it, explaining that a future baseline for traffic may be permissible where an agency can show that an analysis based on the usual standard would tend to be "misleading or without informational value" and is "justified by unusual aspects of the project or the surrounding conditions."

There is nothing unusual about the Clippers project that would validate departure from the standard rule about CEQA baselines. It is a large stationary project, not a rail line or other transportation project. A baseline as of the date of the NOP is easy to calculate. Whether cars are, or are not, more efficient in the future does not change the fact that the project will draw many tens of thousands of new vehicle trips into the area. The EMFAC program can easily account for changes in emissions factors over time and the program's results can be directly compared with the pre-project baseline. Thus, the special circumstances described in the *Neighbors For Smart Rail* case do not exist here.

The reason that developers like using a future baseline is that is makes the increase in emissions look smaller and so mitigation will be less costly. That is not sufficient reason to bend the law in favor of the Clippers project.

Finally, I would like to draw your attention to the June 12, 2020 decision of the California Court of Appeal, 4th Appellate District, in *Golden Door Properties v. County of San Diego*, available at 2020 WL 3119041. The Court's opinion rejects the County's attempt to short-circuit GHG mitigation by using standardless GHG offset protocols, even if sold by an agency certified by CARB. Based on the *Golden Door* opinion, the City needs to take another look at the Clippers project's offsite mitigation proposals and make sure that they are each additional and enforceable – which San Diego's were not.

NRDC

Thank you for your consideration of this letter.

Re: Objections on Behalf of Dev and Roopa Bhalla to Proposed Actions Related to Inglewood Basketball and Entertainment Center to be Considered at June 17, 2020 Special Planning Commission Meeting of the Economic and Community Development Department of the City of Inglewood

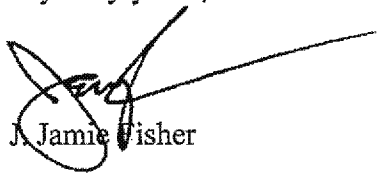
Dear Commissioners and Staff:

We have received notice of the meeting of the Special Planning Commission of the Economic Community Development Department of the City of Inglewood ("SPC") scheduled for June 17, 2020 wherein the SPC plans to take certain actions set forth in the Agenda relating to the Inglewood Basketball and Entertainment Center ("IBEC").

This purpose of this letter is to provide written objection on behalf of Dev and Roopa Bhalla (the "Bhallas"), owners of the improved property situated at 3838 W. 102 St., Inglewood, CA 90303 ("Subject Property") to the actions proposed in the City of Inglewood Agenda relating to the above referenced meeting. Accordingly, we request that this letter be included as part of the formal record for said Agenda.

Specifically, the Ballas object to Agenda Items 5(A)-5(F), inclusive, to the extent any such proposed actions adversely affect, *inter alia*, the zoning, utility, developability, salability and/or otherwise reduce the value of the Subject Property in any way. Additionally, since the Subject Property has been designated as part of the IBEC project area and presumably will be acquired by the City in the future in connection with said project, any action taken by the City to diminish the value of the Subject Property or otherwise adversely affect same prior to its acquisition of the property are in bad faith and are in violation of California law.

Very truly yours,



J. Jamie Fisher

(11) Illegal statement of overriding considerations;

(12) Illegal specific plan amendments;

(13) Violation of Subdivision Map Act;

(14) Violation of Surplus Land Law;

(15) Illegal Disposition and Development Agreement.

Dear Mayor, City Council, Ms. Horton, Ms. Wilcox and Mr. Jackson:

I. INTRODUCTION.

This firm and the undersigned represent Kenneth and Dawn Baines, owners of the property located at 10212 S. Prairie Ave., Inglewood. Please keep this office on the list of interested persons to receive timely advance notice of all hearings and determinations related to the City's actions and potential approvals related to the IBEC/Clippers Arena project ("Project") and any of its components, including but not limited to general plan amendments, eminent domain actions and resolutions of necessity, noise insulation projects, road improvement projects, street or alley vacation determinations, specific plan amendments, the Media WOW billboard project at Prairie and Century and its MND, the Inglewood Transit Connector project, and any environmental determinations and/or CEQA exemptions.

The request for the above advance notice is pursuant to all applicable laws, including but not limited to Pub. Res. Code § 21167(f).

This letter consists of several distinct objections, but all related to the Project.[1]

II. THE CITY HAS VIOLATED THE PUBLIC RECORDS ACT, PREJUDICING OUR ABILITY TO FULLY PARTICIPATE.

As a preliminary issue, while the administrative process and environmental review of the Project has been pending, we have made several Public Records Act ("CPRA") requests and have sought various documents related to the Project. Despite the specificity of our requests, the City has not responded to any of our requests, with the exception of one related to the documents exchanged or produced during the open and closed sessions on March 24, 2020, in response to which the City has provided incomplete and *unsigned* and/or signed but *undated* documents, among other deficiencies in that single, limited production

The City's failures to respond to our CPRA requests dated April 22, April 23, and May 28, 2020, as well as unreasonable improper invocation of claimed privileges or exemptions, places the City in violation of the California Public Records Act and has deprived us of being able to fully participate in meaningfully understanding and responding to the City and applicant Murphy's Bowl or Clippers' (sometimes "Applicant") contemplated actions.

Attached collectively at **Exhibit 1** hereto are true and correct copies of correspondence regarding this matter as well as copies of currently-outstanding CPRA requests, to which the City has failed to provide responsive documents, to our prejudice. (**Exh. 1** [CPRA requests to City (April 22, 23, May 8, June 4, 11, and 12, 2020].) Because these documents have not been produced, the City has hampered our ability to exhaust administrative remedies and object, and impaired our ability to submit the most meaningful and comprehensive evidence possible.

The California Supreme Court has stated: "Implicit in the democratic process is the notion that government should be accountable for its actions. In order to verify

---

[1] These objections are provided under protest. Our client objects to the entire special CEQA scheme for the IBEC Project under AB 987, which is unconstitutional and illegal per se. Our client submits these objections while simultaneously asserting that AB 987 is illegal and unconstitutional, and as a result, that the process by which the City and Applicant are proceeding as to CEQA approvals and all approvals for the Project that depend on the City's finding of CEQA compliance are improper, invalid, and *void ab initio*. Our client expressly reserves all rights and remedies in connection therewith.

accountability, individuals must have access to government files. Such access permits checks against the arbitrary exercise of official power and secrecy in the political process . . . ." CBS, Inc. v. Block (1986) 42 Cal.3d 646, 651. Those precepts apply to the City's actions herein.

As stated by the Supreme Court in Laurel Heights Improvement Assn. v. Regents of University of California (1993) 6 Cal.4th 1112, CEQA's "purpose is to inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR protects not only the environment but also informed self-government. To this end, public participation is an essential part of the CEQA process." Id. at 1123 (italics in original).

It has been held that "the whole purpose of the CPRA is to shed public light on the activities of our governmental entities . . . ." Fairley v. Superior Court (1998) 66 Cal.App.4th 1414, 1422.

Because the documents requested from the City relate to critical issues concerning the Project, its EIR, and the City's impending approvals of same, we ask that **no decision** be made until the requested documents have been produced to us. If necessary, we will seek to augment the administrative record to remedy the violations of our client's and the public's constitutional and due process rights to a fair and impartial hearing, among other violations committed by the City.

III. INTERFERENCE WITH THE ADMINISTRATIVE RECORD HAS ALSO PREJUDICED MEANINGFUL PUBLIC REVIEW.

Confidential information

Confidential information

Confidential information

Confidential information

[2] Our firm downloaded the document at 9 p.m. on Friday, May 15, 2020, shortly after the Agenda was made available to the public. However, as of May 19, 2020 the hyperlink in the Council agenda was disabled and the page was unavailable. **(Exh. 3** [May 19, 2020 agenda and printout of the notice of the unavailable page].)

However, CEQA requires the decision makers and the public – and consequently the Court – to make a decision on the Project or on CEQA compliance in light of the entire record, rather than a record that is favorable to the Project Applicant or proponents.

> "The 'in light of the whole record' language means that the court reviewing the agency's decision cannot just isolate the evidence supporting the findings and call it a day, thereby disregarding other relevant evidence in the record. (*Bixby v. Pierno* (1971) 4 Cal.3d 130, 149 [93 Cal.Rptr. 234, 481 P.2d 242].) Rather, the court must consider all relevant evidence, including evidence detracting from the decision, a task which involves some weighing to fairly estimate the worth of the evidence. (*County of San Diego v. Assessment Appeals Bd. No. 2* (1983) 148 Cal.App.3d 548 [195 Cal.Rptr. 895].)" Lucas Valley Homeowners Assn. v. County of Marin (1991) 233 Cal.App.3d 130, 141-142.

The administrative record mandated by CEQA under Pub. Res. Code § 21167.6(e) and applicable to AB 987 projects under Pub. Res. Code § 21189.52(j) is broad and expansive. "First, the language is mandatory – *all* items described in the enumerated categories *shall* be included in the administrative record." Madera Oversight Coalition, Inc. v. County of Madera (2011) 199 Cal.App.4th 48, 63 (ital. orig.). "When an agency prepares and certifies the administrative record, it exercises no discretion and employs no specialized expertise; it performs a ministerial task when it applies the mandatory language of section 21167.6, subdivision (e)." Madera at 64.

> "Recently in [Madera], we made several observations about the contents of the administrative record as defined by these provisions. First, the language is mandatory: The administrative record shall include the listed items. Second, the list is non-exclusive; the administrative record's contents include, but are not limited to, the listed items. Next, the administrative record as defined is very expansive. We quoted language that originated in one Court of Appeal case and was subsequently quoted in another: Section 21167.6 'contemplates that the administrative record will include pretty much everything that ever came near a proposed development or to the agency's compliance with CEQA in responding to that development.'" Citizens for Ceres v. Superior Court (2013) 217 Cal.App.4th 889, 909-910. See also, County of Orange v. Superior Court (2003) 113 Cal.App.4th 1, 8, cited with approval by Eureka

Citizens for Responsible Government v. City of Eureka (2007) 147 Cal.App.4th 357, 366-367.

[redacted] the public and other agencies have been deprived of the opportunity to review the entire administrative record as mandated by CEQA and to comment on the DEIR. Thus our client and the public have been deprived of a full and fair opportunity to comment on the Project and its impacts in light of the whole of the record. All objections are expressly reserved.

IV. THE CITY'S FAST-TRACKING OF THE PROJECT DURING THE COVID-19 PANDEMIC AND FAILURE TO CIRCULATE THE IBEC DEIR NOTICE OF EXTENSION OF THE PUBLIC COMMENT PERIOD FURTHER IMPAIRED PUBLIC COMMENT.

The public review period of the IBEC DEIR coincided with the turmoil of the COVID-19 pandemic, when the public and public/responsible/trustee agencies were fighting for human lives. Because of that timing, the scheduled 2020 Olympic games were cancelled and postponed for one year. [3],[4] California's leaders have suggested similar postponing of large scale events until 2021. (**Exh. 4** [article re halting sports events until 2021].) Yet Inglewood chose to fast-track the IBEC sports arena Project.

On March 13, 2020, when an extension was requested from the City and granted, the City *delayed* posting its notice of extension to the *public* and failed to circulate it properly.[5] Although the extension was provided on March 13, 2020 and for only a few days until March 24, 2020, it was posted on the County website only on March 18, 2020,

---

[3] See https://www.olympic.org/tokyo-2020

[4] We specifically request that all the hyperlinks in this letter be downloaded and printed out, submitted to the agency, and be included in the City's control file and administrative record for the Project.

[5] Culver City – a city immediately adjacent to Inglewood and to be directly impacted by the Project – had specifically requested a further extension of the public comment period beyond March 24, 2020, due to COVID-19 pandemic. The administrative record does not reflect that Culver City's request was granted. (**Exh 5.** [Culver City Request].)

which lost 5 days of circulation. (**Exh. 6** [extension notice on County website].) As for the State Clearinghouse's website, no official "notice" was posted there; only a short memo dated March 16, 2020, with attached email correspondence dated March 13, 2020 appeared. (**Exh. 7** [memo, March 16, 2020].) The City should not delegate its CEQA notice posting duties to the State Clearinghouse and should have provided proper and timely notice to the public, including to our client, which the City did not do. Furthermore, per the State Clearinghouse's memo, the notice was addressed to "all reviewing agencies" – not the public at large.

The City specifically made the decision not to publish the notice of extension. (**Exh. 8** [City correspondence to not publish the notice].)

Thus, the only way the public could have been timely informed of the extension was by continuously checking the City's website or County and State Clearinghouse websites on a daily basis. That is not adequate notice to the public. This is even more so in view of the Governor's safer-at-home order on March 19, 2020. (**Exh. 9** [Safer-at-Home Orders and Restrictions].)[6]

Per the Notice, the public comment period was extended to March 24, 2020 at 5 p.m. The City Council meeting on March 24, 2020 began at 2 p.m., i.e. slightly prior to the close of the public comment period. Had the public been duly apprised of the extended public comment period, the public – and our clients – could and would have made comments at the March 24, 2020 Council meeting. The City's lack of proper notice of the extension of the public comment period impaired public comment and opportunity to address the City Council on the DEIR.

The City's failure to duly notice was also in violation of Pub. Res. Code § 21092 and Inglewood Municipal Code noticing requirements, which require timely circulation and publishing of CEQA notices, especially related to DEIRs.

V. THE CITY'S FEIR RESPONSES TO COMMENTS TO THE DEIR ARE UNAVAILING AND NOT MADE IN GOOD FAITH.

We further object that the FEIR's so-called responses to comments fail adequately to provide meaningful, good faith responses to comments, including but not limited to the comments sent by sister governmental agencies, by the NRDC related to GHG violations, and by other objectors like the Forum and IRATE, including but not limited to objections

---

[6] See at https://covid19.ca.gov/stay-home-except-for-essential-needs/

about the illegal precommitment to the project in violation of CEQA by the City's entering into the Exclusive Negotiating Agreements ("ENA") (**Exh. 10** [we incorporate by reference all such arguments, including piecemealing arguments, as contained in the briefs attached collectively hereto]) and other documents demonstrating that the impending approvals were a *post hoc* rationalization for decisions already made.

The responses to comments also fail to show a good faith effort at full disclosure of the Project's environmental impacts, and how they will be mitigated, including in violation of Guidelines Section 15151. For example, as to impacts to the system of roadways and the State Highway system as raised in comments by Caltrans, the FEIR's ostensible mitigation measures are improper, inadequate and unenforceable, including because they do not guarantee feasibility of such mitigation and solely add funds to Caltrans' existing CM project addressing the *baseline* traffic impacts *without* the IBEC Project:

> "As mitigation for the significant cumulative impacts on the I-405 freeway, based on further consultations with Caltrans, the following mitigation measure is added to the Draft EIR following Mitigation Measure 3.14-24(g) on page 3.14-294:
>
> > **Mitigation Measure 3.14-24(h)**
> > *The project applicant shall provide a one-time contribution of $1.524.900 to Caltrans which represents a fair share contribution of funds towards Caltrans' I-405 Active Traffic Management (ATM)/Corridor Management (CM) project."*

Payment of fair share impact fees by a developer is not proper mitigation measures unless those "mitigation measures require the City to undertake an action"; i.e., to "prepare" the fair share plans and unless the City provides that those are feasible and not speculative, i.e., provide an estimate of the cost to prepare the fair share plans, if any, and the estimate of how much the mitigation measures themselves in those plans will cost or how they will be implemented." California Clean Energy Committee v. City of Woodland (2014) 225 Cal.App.4th 173, 197. Moreover, although Caltrans' CM project is aimed to reduce traffic impacts and was studied, if at all, to address the existing baseline traffic, it was not targeted to reduce the IBEC project impacts and any amendment to it may have its own impacts on the environment, which have not been accounted for.

The above noted response adds to the uncertainties already present in the case, whereby – according to the Project's AB 987 Application (p. 18) – "[t]he operational life of the IBEC Project is assumed to be 30 years and operational emissions were estimated from July 1, 2024 (the anticipated beginning of operations) through 2054. Operational emission sources include on-road motor vehicles (mobile), energy (electricity and natural gas), water and wastewater, solid waste, area, and stationary (emergency generators)."[7]

The response to comments and MMRP also fail adequately to demonstrate that the so-called mitigation imposed will be carried out or is feasible, including as to objections regarding GHG emissions, as raised by others in this process. Mitigation is required by CEQA to be fully enforceable, and to be carried out. Guidelines § 15126.4(a)(2); Lincoln Place Tenants Assn. v. City of Los Angeles (2005) 130 Cal.App.4th 1491, 1508. The FEIR and MMRP also improperly defers mitigation in violation of CEQA. The FEIR should not be certified, and the DEIR should be recirculated for proper disclosure, analysis and mitigation of all impacts.

VI. COMMENTS/OBJECTIONS TO THE PROJET DEIR BASED ON *NEW INFORMATION* RELEASED BY THE CITY AND/OR *NEW INFORMATION* THAT WAS NOT REASONABLY KNOWN DURING THE OFFICIAL PUBLIC COMMENT PERIOD MUST BE RESPONDED TO.

We incorporate by reference all prior objections to the Project, including but not limited to objections/comments to the Project in the administrative record, or that should have been in the administrative record, dated *prior* to the public comment period beginning on December 27, 2019 and objections to AB 987 certification. Since AB 987 certification documents do not appear in the administrative record, we are providing those as an exhibit hereto. (**Exh. 11** [AB 987 comment letters].) Each objection to the Project raised therein must be responded to by the City as part of a recirculated DEIR and process.

Moreover, pursuant to Pub. Res. Code Section 21189.55(d), the lead agency must still consider new information:

---

[7] See https://opr.ca.gov/ceqa/docs/ab900/20190104-AB900_IBEC_Application.pdf

"(d) The lead agency need not consider written comments submitted after the close of the public comment period, **unless** those comments address any of the following:

(1) **New issues** raised in the response to comments by the lead agency.

(2) **New information** released by the public agency **subsequent to the release** of the draft environmental impact report, such as new information set forth or embodied in a staff report, proposed permit, proposed resolution, ordinance, or similar documents.

(3) **Changes** made to the project **after the close** of the public comment period.

(4) Proposed conditions for approval, **mitigation measures**, or proposed findings required by Section 21081 or a proposed reporting and monitoring program required by paragraph (1) of subdivision (a) of Section 21081.6 , where the lead agency releases those documents **subsequent to the release** of the draft environmental impact report.

(5) **New information** that was not reasonably known and could not have been reasonably known during the public comment period." (Emph. added.)

The comments below are based on such "new information" that came to light after March 24, 2020.

A. The COVID-19 Crisis Mandates Re-evaluation of Mitigation Measures in the DEIR and AB-987 Certification, as well as Significant Impacts from Those Measures.

The comment below is based on new information of health and safety concerns regarding the proposed mitigation measures of alternate modes of transportation. Pub. Res. Code § 21189.55(d)(4)-(5).

CEQA requires a mandatory finding of significance where "(4) The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly." Guidelines § 15065(a)(4). CEQA also requires agencies to consider the environmental impacts of the mitigation measures that are proposed for the project.

The COVID-19 crisis brought to light significant impacts related to the proposed mitigation measures of promoting the use of mass public transit, walking and bicycling, especially in crowded places and dense city centers, which were not reasonably known or could not have been comprehended or documented before March 25, 2020.

The Project's DEIR and AB-987 certification and their findings, including the GHG emission impacts and their alleged reduction, largely rely on the *assumption* of vast use of public transit, walking, and bicycling, to achieve 50% GHG reduction, as claimed.

However, the Project assumptions or even the enforceability of the proposed mitigation measures have not been supported by any substantial evidence and are even more attenuated now, in view of the pandemic. First, there are no statistics or studies to support the assumption that reduced parking or more bus lines will make people use buses, walk or ride bicycles. Metro ridership has been steadily declining in all major cities where public transit measures were improved and transit-oriented development ("TOD") policies were introduced. (**Exh. 12** [article re Metro ridership in major cities].)[8] Second, the COVID-19 crisis revealed the flipside of the proposed mitigation measures: there is now a documented correlation between public transit and the spread of diseases, including life-threatening ones, such as COVID-19. (**Exh. 13** [NY articles and study by MIT].)[9] Many cities have acknowledged this threat. (**Exh. 14** [articles re Carson City's request to Metro to stop service; deaths of Metro employees, NY Post; Article re NY Mayor Admitting to Transit Danger].)[10]

---

[9] https://www.nytimes.com/2020/03/23/nyregion/coronavirus-nyc-crowds-density.html; https://nypost.com/2020/04/15/mit-study-subways-a-major-disseminator-of-coronavirus-in-nyc/; http://web.mit.edu/jeffrey/harris/HarrisJE_WP2_COVID19_NYC_24-Apr-2020.pdf

[10] See https://www.dailybreeze.com/2020/04/05/carson-calls-on-metro-to-stop-service-after-bus-driver-tests-positive-for-coronavirus/;

Third, the COVID-19 reality and the need for social distancing suggests that public reliance on and acceptance of public transit as a desirable and practical means of transportation will permanently change. (**Exh. 15** [article re potential permanent shifts; Federalist article re resilience; MTA cleaning protocol gaps].)[11] Dr. Anthony Fauci, Chief of Laboratory on Immunoregulation, opined that this pandemic may become seasonal.[12] (**Exh. 16** [article re Fauci statement re seasonal nature of virus].) Measures to make Metro ridership safe were not working as planned.[13] (**Exh. 17** [article re ineffective metro cleanups].) It is an absolute imperative – to avoid exposure to health and safety hazards from COVID-19 as well as other identified and *unidentified* viruses and bacteria – that people have a safer choice to get to their destinations rather than be forced to use mass transit, walk or ride a bike in crowded or dense places, especially on narrow sidewalks such as those that the Project proposes. (**Exh. 18** [density article].)[14]

Finally, the Project and EIR's assumptions that mass transit is indeed ecologically "green" in general is itself based on false or now infeasible assumptions.[15] (**Exh. 19**

[14] See https://californiaglobe.com/section-2/coronavirus-spread-in-high-density-cities-halting-proposed-more-density-housing-measures/

[15] See the analysis of flawed assumptions behind allegedly "green" mass transit, as reported by Tom Rubin, the Controller-Treasurer of the Southern California Rapid

[article re analysis of bus transit].) Thus, pursuant to an analysis by Tom Rubin, author of numerous research reports on transit issues, the conclusion that mass transit is ecologically green was made based on the assumption of 70 people per bus and off the road. Even if this statistic were theoretically possible, the current rules of social distancing run counter to such crowded buses and will require more buses and more frequencies to accommodate the same 70-people/bus count. This will in turn amount to more GHG emissions and air pollution than assumed, and at the same time expose people to viruses.

In sum, COVID-19 demonstrated the dangers and health/safety hazards of mass transit or higher concentration of density at the Project site and radically affects the Project's baseline traffic and pedestrian safety assumptions and, derivatively, their impacts analyses and mitigation measures.

The DEIR and the Project's feasibility must be reevaluated in light of changed circumstances that have come about in the last approximately two months, including related to the EIR's now-demonstrably faulty assumptions and proposed transit-oriented mitigation measures for traffic and GHG impacts.

B. The DEIR Lacks An Adequate Project Description.

CEQA requires that the project description in the EIR be "accurate, stable and finite," to enable meaningful evaluation of Project impacts and informed decision-making and public comment as to Project impacts, mitigation, or approval in general. The DEIR leaves numerous Project elements – other than the sports arena itself – undefined and unspecified. For example, it does not specify the impacts or details about the hotel,[16] beyond mentioning that it will have up to 150 rooms; e.g., will it also have restaurants, bars, cafés, outdoor and indoor gathering areas and event space, pools, open to patrons or to the public in general?

Transit District from 1989 until 1993, who has written many research reports on transit issues. https://reason.org/commentary/does-bus-transit-reduce-greenhouse/

[16] The Project's building of a hotel on the City lots acquired with the FAA is also illegal as violating the FAA grant conditions according to which no residential structure may be built on those lots. (**Exh. 20** [email confirming the hotel lots were purchased with FAA grant].) Hotels are treated as residential structures in Inglewood.

Further, as evidenced by the Applicant's May 7, 2020 (long after the March 24, 2020 closing of the public comment period) draft of the Sports and Entertainment Center ("SEC") "overlay zone" description, there are numerous land uses covered in the Project, yet not disclosed or evaluated in the DEIR.[17] (**Exh. 21** [Applicant's Overlay Zone draft].) The DEIR itself (at p. 2-89) failed to list the land uses in the overlay zone, beyond mentioning the height and setbacks and other *design* characteristics only.

For example, per the Applicant's draft, the proposed SEC overlay zone will include "Other non-Arena uses that support the Arena and are located in the Event Center Structure," which suggest daily and potentially 24-hour activity (bars, restaurants), where:

> (C) "Event Center Supporting Structures and Uses" shall mean any of the following uses located within the boundaries of the SE Overlay Zone but not within the Event Center structure:
>
> (1) Retail uses, including, but not limited to, the sale or rental of products or services;
>
> (2) Dining uses, including **restaurants**, **bars**, **cafes**, **catering** services, and **outdoor eating** areas, including the sale of food and drink for consumption on-site or off-site **and the sale of alcoholic beverages for consumption onsite**;
>
> (3) Community-serving uses for cultural, exhibition, recreational, or social purposes." (Id. p. 2; emph. added.)

Further, the Overlay Zone contains events expressly held "outside" the Arena:

> "(D) "Infrastructure and Ancillary Structures and Uses" shall mean any uses or structures, temporary or permanent, that are accessory to, reasonably related to, or maintained in connection with the operation and conduct of an Event Center Structure and Use or Event Center Supporting Structure and Use, including, without limitation, open space and plazas,

---

[17] See the Applicant's proposed overlay zone description at http://ibecproject.com/IBECEIR_031906.pdf

> pedestrian walkways and bridges, transportation and circulation facilities, public or private parking facilities (surface, subsurface, or structured), signage, outdoor theaters, broadcast, filming, recording, transmission, production and communications facilities and equipment, and events **held outside of the Event Center Structure** that include, but are not limited to, sporting events, concerts, entertainment events, exhibitions, conventions, conferences, meetings, **banquets**, **civic and community events**, **social, recreation, or leisure events**, celebrations, and other similar events or activities." (Emph. added.)

The Overlay Zone also contains "any other" uses to be determined by the City:

> "(E) "Sports and Entertainment Complex" shall mean a development that includes the following:
>
> (1) **Event Center** Structure and Uses;
>
> (2) Event Center Supporting Structures and Uses;
>
> (3) **Infrastructure and Ancillary Structures and Uses**; and
>
> (4) **Any other uses** that the Economic and Community Development Department Director ("Director") **determines** are similar, related, or accessory to the aforementioned uses." (Id. at p. 3, emph. added.)

These uses are all undefined and left to future identification. That is a wholesale violation of CEQA because this situation violates the required "accurate, stable and finite project description." These multiple and various uses, and their potential interaction with one another and other Project uses, have not been properly disclosed, analyzed or mitigated in the DEIR. They must be as part of a recirculated DEIR.

We emphasize, as the Court of Appeal recently held in Stopthemillenniumhollywood.com v. City of Los Angeles (2019) 39 Cal.App.5th 1, 16, where similar Design Guidelines were invalidated:

> "The requirement of an accurate, stable, and finite project description as the *sine qua non* of an informative and legally sufficient EIR has been reiterated in a number of cases since County of Inyo. (See, e.g., Treasure Island, supra, 227 Cal.App.4th at p. 1052, 174 Cal.Rptr.3d 363 ["This court is among the many which have recognized that a project description that gives conflicting signals to decision makers and the public about the nature and scope of the project is fundamentally inadequate and misleading"]; Communities for a Better Environment v. City of Richmond (2010) 184 Cal.App.4th 70, 85–89, 108 Cal.Rptr.3d 478 [EIR failed as an informal document because the project description was inconsistent and obscure as to the true purpose and scope of the project]; San Joaquin Raptor Rescue Center v. County of Merced (2007) 149 Cal.App.4th 645, 653, 57 Cal.Rptr.3d 663 [an EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider 309 meaningfully the issues raised by the proposed project].)" Id. at 17.
>
> "'Only through an accurate view of the project may affected outsiders and public decision makers balance the proposal's benefit against its environmental costs, consider mitigation measures, assess the advantage of terminating the proposal . . . and weigh other alternatives in the balance.' [Citation.]" Id. at 18-19.

Finally, for the Applicability of the Overlay Zone, the Applicant's draft provides: "Except as otherwise provided in this Article and/or in the SEC Development Guidelines, the provisions of the Inglewood Municipal Code, Chapter 12, Planning and Zoning, shall apply. This Article and the **SEC Development Guidelines shall prevail** in the event of a conflict with other provisions of Chapter 12." (Id. at p. 4, emph. added.) Similarly, the draft provides: "(B) The SEC **Design Guidelines** establish specific design and review standards for the development of a Sports and Entertainment Complex within the SE Overlay Zone, including, without limitation**, standards for buildings and structures**, landscaping, signage, and lighting, and shall apply **in lieu of any** contrary provisions in the Inglewood Municipal Code, including without limitation the Site Plan Review process contained in Article 18.1 of this Chapter." (Id. at p. 7.) The draft also overrides setbacks, height and parking requirements in the Code, **provides for only the Planning Department Director's approval, i.e., with no further CEQA review,** and specifically states that any "lot line adjustments" will be "ministerial" actions; i.e., not subject to CEQA and public review.

This clearly runs afoul of CEQA. As recently explained in Stopthemillenniumhollywood.com, supra, at p. 14, where the Court of Appeal affirmed the trial court's invalidation of the project EIR and all project approvals there, under quite similar facts, including the power of the Planning Director to make future approvals with no further CEQA review:

> "Additionally, the trial court held that the conceptual approach used to define the project in this case impermissibly deferred a portion of the environmental impacts analysis. It noted that without knowing which of the project "concepts" would ultimately be built, the EIR could not (and did not) explain how the developers would avoid exceeding the maximum impacts when the project was finally designed and built. Moreover, the LUEP allowed Millennium to transfer or change uses within the project, and it allowed the planning director to approve a change request if the request demonstrated that it was consistent with the maximum allowable number of increased vehicle trips (trip captures) and did not exceed the maximum environmental impacts identified in the EIR. The trial court asked, "But how will the Planning Director make that determination for changing the Project and using what criteria?" It noted that since no additional CEQA review was required to ensure that Millennium was within maximum environmental standards, and no public input would be allowed, the final EIR essentially "defers the environmental assessment of the Project and ultimately fails to ensure that the finally designated Project will not be approved without all necessary mitigations of environmental harm.""

The Overlay Zone and the EIR do not pass CEQA muster regarding the critical and foundational accurate, stable and finite project description. As that fails, everything else fails with it. Accordingly, it is impossible to evaluate the Project's impacts – the whole of the action – in view of the ancillary uses, such as hotel, restaurants, cafes, retail uses, many of which are not currently identified or, apparently, even known. However, the gamut of potential uses suggests daily 24-hour activity, with the potential for generating much more traffic and/or activity and attendant impacts (noise, need for public services, such as police, utilities, GHG emissions) than discussed in the DEIR. The Project description is fatally flawed, and the FEIR and Project cannot be approved.

C. Crenshaw Line Construction Delays and the DEIR's False Baseline Assumptions; the Project's Potential Inability to Meet the AB-987 Certification Threshold.

The DEIR is based on unrealistic baseline assumptions. Per the DEIR, the environmentally superior alternative is Alternative 3 for several reasons, one of which is the Project's proximity to Metro's Crenshaw Line and the provision of shuttle services from the respective stations to the Project site. (DEIR, pp. S-51-52; pdf. 71-72). For that purpose, the DEIR relies on the fact that the Crenshaw line – which will have 3 stations in Inglewood – is slated to start operation in 2019. (DEIR, p. 2-4; pdf. p. 144.)

Yet, it was only after the DEIR comment period closed that Metro admitted that the Crenshaw line's construction will be delayed by 2 years, in view of recently discovered construction defects necessitating a redo; a planned grade separation will further delay that process. (**Exh. 22** [LA Times article re Crenshaw Line, April 10, 2020; Streetsblog article, May 20, 2020].)[18] Inglewood and the Project will be directly impacted by these delays. In turn, those dramatically changed circumstances that undermine the EIR's assumptions require recirculation of the DEIR. Based on the article, Mayor Butts did not respond with comment about these delays. Neither did Los Angeles Mayor Garcetti. (Id.)

Moreover, as cautioned by Metro in its DEIR comment to the City on March 24, 2020, the K-line (also known as Crenshaw Line) grade separation activities may coincide with construction of the IBEC Project and thereby present "operational limitations" by not being able to provide the level of service to the arena that is contemplated. (Metro Comment Letter, p. 3].) Metro's delays with the Crenshaw Line and grade separation activities by themselves will adversely impact the traffic in Inglewood.

The fact that Crenshaw Line construction, grade separation, and Project construction activities will coincide significantly also affects the DEIR's *cumulative* impacts analysis and adds more *construction* impacts than contemplated in the DEIR. Delays in construction activities translate into operational limitations (i.e., failure to serve the Project site as contemplated under AB 987 and the EIR). The cumulative operational and construction impacts, in turn, will result in more traffic, air pollution, and GHG

---

[18] See https://www.latimes.com/california/story/2020-04-10/metro-crenshaw-lax-line-opening-date-delayed; https://la.streetsblog.org/2020/05/20/metro-pursuing-disruptive-centinela-grade-separation-on-nearly-complete-crenshaw-line/

emissions than contemplated in the DEIR. All of this needs to be disclosed, analyzed and mitigated in a recirculated DEIR.

The DEIR needs to be amended to account for corrected baseline assumption changes, impacts and mitigation measures, and recirculated for comment to other public agencies like Metro, and the general public.

Further, with these delays in Crenshaw Line construction and grade separation activities causing service operational limitations, the Project ultimately fails to meet all of the threshold requirements in Pub. Res. Code §21168.6.8(a)(3), and particularly the requirement that the Project "(A) Receives a Leadership in Energy and Environmental Design (LEED) gold certification for new construction within one year of the completion of the first NBA season." (Id.) The delays identified above may affect the Project's ability to achieve the expected GHG and traffic reductions "within one year of the completion of the first NBA season." Thus, the Project does not meet the definition of the ELDP project in Pub. Res. Code § 21168.6.8 and does not qualify for a certification as such.

D. The Citywide Parking Amendments in the Ordinance Exceed the Scope of the Project Analyzed in the DEIR.

This section is also based on *new information* released by the City after the release of the DEIR and not reasonably known during the public comment period, i.e., the City Council's approval and signing of the Settlement Agreement with MSG Forum, Murphy's Bowl, LLC, and others on March 24, 2020. Pub. Res. Code §§ 21189.55(d)(2) and (5).

Although the DEIR went to great lengths to document the existing parking regulations in the Inglewood Municipal Code and the proposed transportation management features, it failed to mention that the Project would be accompanied by a highly-impactful stealth ordinance allowing *any* parking facility Citywide to be used for parking for the proposed Sports and Entertainment Complex.[19] (**Exh. 21,** pdf. p. 14

---

[19] The proposed Ordinance is also unconstitutionally vague because it fails to give a reasonable person notice of what is prohibited. Under what circumstances is parking provided "for" the SEC? A few hours prior to major events, or all day even for minor events, guests and employees? What percent of parking guests must be visiting the SEC? Does proximity matter? Can a nonconforming parking lot on the other side of the City remain open every day claiming to be "for" the SEC?

[Overlay Zone, Section 6]; see also **Exh. 23** [Citywide Permit Parking Ordinance].) The ordinance is undeniably part of the Project – not a related project, and not a stand-alone ordinance – because it is literally inoperable without the Project: without an approved Sports and Entertainment Complex, an ordinance allowing parking Citywide for the Sports and Entertainment Complex has no independent utility. Yet not one word about this seismic regulatory change appears in the Project Description or anywhere in the DEIR.

The proposed changes to Citywide parking regulations not only renders the Project description fundamentally incomplete, it also undermines the environmental analysis throughout the DEIR. Currently, Inglewood Municipal Code Section 3-63 permits parking facilities to serve as public off-street parking upon issuance of a permit by the Permits and Licenses Committee. Such permits may only be issued when required to reduce traffic hazards – a high standard that would likely apply only during the largest events. The proposed ordinance permits *any* lot to be used for public parking, Citywide, regardless of whether such parking lots are necessary to reduce traffic hazards. The proposed Ordinance radically expands the expected impacts of the Project. This failure also infected traffic and air quality analyses by failing to account for longer exposure to intrusion of traffic in residential neighborhoods. This further inadequate Project description deprived the public and other agencies of the opportunity to fully understand the Project's impacts. A recirculated DEIR should issue.

E. Illegal Precommitment.

This section is also based on *new information* released by the City after the release of the DEIR and not reasonably known during the public comment period, i.e., the City Council's approval and signing of a settlement agreement with MSG Forum, Murphy's Bowl, LLC, and others on March 24, 2020. Pub. Res. Code §§ 21189.55(d)(2) and (5).

Despite the City's duty to independently make CEQA findings prior to any certification of the EIR as complete and prior to Project approval, the City's pre- and post-public review period demonstrate that the City and City Council/Mayor have precommitted to approving the Project, including on March 24, 2020 by signing a settlement agreement to dispose of MSG, the Forum, and IRATE's environmental and other challenges to the Project. (**Exh. 24** [article about Mayor signing the settlement agreement].)

> "The Inglewood City Council approved the settlement at its meeting Tuesday. Butts, smiling ear to ear, **paused the agenda** so he **could**

> **sign** the document immediately. A **copy of the agreement was not available** Tuesday. (Id.; emph. added.)

This occurred after the City Council and the Mayor had a closed-door session related to four pending lawsuits involving the same parties as in the settlement agreement. The meeting – with its open and closed sessions – was in violation of the Brown Act. (**Exh. 1** [Cure and Correct letter, April 23, 2020].)[20] The City's responses to our Cure and Correct – mailed on May 4, 2020 and May 5, 2020 – confirmed: (1) in closed session on March 24, 2020, City Council "unanimously authorized" the settlement agreement between the parties in all four lawsuits; (2) the City Council did not report taking this action in closed session, claiming that the action was not yet final; (3) Mayor Butts signed two other agreements related to the IBEC Project during the open session. (**Exh. 25** [City responses].) The settlement agreement "authorized" by the City Council behind closed doors allowed it to end all then-outstanding CPRAs and all claims and cases against Murphy's Bowl, the City, and Mayor Butts. The tri-party agreement, in turn, made sure that the Petitioners in all four actions were unable to submit comments on the Project any time thereafter: Petitioners would not be able to submit comments during the "standoff" period of escrow while MSG transferred title to the Forum to Murphy's Bowl, and would not be able to submit comments through third parties thereafter. Mayor Butts signed the tri-party agreement condoning those arrangements, which effectively ended those parties' prior CEQA claims, and foreclosed future CEQA and other claims by them.

The pre-DEIR administrative process was marred by the City's actions with the Court found that the Mayor misrepresented to MSG Forum the future development of the Project site. Although the litigation was against the Mayor, it was further reported that the Councilmembers supported the Mayor and condoned his actions. (**Exh. 26** [Dailybreeze article re Mayor may be personally liable].)

Brining it full circle, on March 24, 2020, the City's decision-making body again confirmed its precommitment to the Project by signing the settlement and tri-party agreement. Since the settlement/tri-party agreement(s) was/were not produced at the hearing, the public could not evaluate its terms or the import of those on the environmental issues under consideration as part of the EIR process.

The lead agency pre-commits to the project where it "'contracted away its power to consider the full range of alternatives and mitigation measures required by CEQA' and

---

[20] See http://ibecproject.com/IBECEIR_030991.pdf

had precluded consideration of a 'no project' option. (Citizens for Responsible Government, supra, 56 Cal.App.4th at pp. 1221–1222, 66 Cal.Rptr.2d 102.) 'Indeed, the purpose of a development agreement is to provide developers with an assurance that they can complete the project. After entering into the development agreement with [the developer], the City is not free to reconsider the wisdom of the project in light of environmental effects." (Id. at p. 1223, 66 Cal.Rptr.2d 102.)." Save Tara v. City of West Hollywood (2008) 45 Cal.4th 116, 138.

The City of Inglewood is listed as the Lead Agency to certify the Final EIR for the Project, without which the Project may not move forward. The lead agency must make its independent review of the EIR findings before certifying it. The Mayor's comments in the open session preceded by a closed door session on the same issue, the adoption/signing of the settlement agreement coupled with the inadequate agenda description and failure to produce the settlement agreement prior or during the public hearing for public review and comment – all suggest that the City again precommitted to the Project, and the Council/Mayor will not be able to make independent findings on the EIR, as required by CEQA, or to select an alternative or to reject the Project.

F. New Comments by Impacted Public Agencies Reveal New Unidentified and Unmitigated Impacts, Mandating Supplementation/Recirculation.

This section is based on the new information (comments of public agencies) released to the public on the City's administrative record website *after* the release of the DEIR and not reasonably known to the public. Pub. Res. Code § 21189.55(d)(4)-(5).

The Project's plans for increased use of mass transit and alternative modes of transportation were the major feature and baseline assumption to support AB 987 certification and the finding of net zero greenhouse gas (GHG) emissions. The DEIR similarly relies on the same assumptions. However, as evidenced by comment letters from various public agencies, those assumptions are neither enforceable nor realistic and the DEIR and FEIR fail either to identify or mitigate various impacts. Specifically:

1. Caltrans Comment and Request for More Mitigation Measures.

Caltrans is listed as a responsible agency[21] for the Project in the DEIR (DEIR, at p. 1-8 and 2-90).

---

[21] We also object that the City, as now definitively shown in the post-March 24, 2020 release of the proposed FEIR, has failed to comply with all of Caltrans' original

Based on Caltrans' comments sent on March 24, 2020 and seen after the public review period closed, Caltrans identified significant impacts and proposed additional mitigation measures, which is new information that the public did not or could not reasonably know (**Exh. 27** [Caltrans, March 24, 2020].)[22] In particular, Caltrans stated (in italics):

> - *"The Daytime and Major Events at the proposed project arena **would cause significant impacts on State facilities, specifically 1-405**, under cumulative conditions. Given that this proposed project would result in **significant State facility usage**, it is recommended that the developer work closely with Caltrans to identify and implement operational improvements along 1-405. Such traffic management system improvements could include, but are not limited to, the following: Active Traffic Management (ATM) and Corridor Management **(CM)** Strategies such as queue warning, speed harmonization, traveler information; Transportation Management System (TMS) elements such as closed circuit television cameras (CCTV), changeable message signs (CMS), etc.*
>
> *To **mitigate the potential impacts on the 1-405, we recommend** that the project's developer work with Caltrans early on developing a **fair share mitigation agreement towards** a proposed project that involves **adding** the aforementioned improvements to the 1-405 within the project's vicinity."* (Id. p. 2, emph. added.)

Caltrans' comment identified non-mitigated significant impacts on the I-405, which means that the Project may cause significant traffic on the freeway; this in turn affects the GHG emissions and impacts analysis. Slowed traffic results in increased *time*

---

study directions to the City for inclusion in the EIR. This is another failure to proceed by the City in the manner required by law. This objection also applies to the City and the FEIR's disregard of the comments and study directions provided by other responsible agencies like Los Angeles County Metro.

22 http://ibecproject.com/IBECEIR_030279.pdf

for cars on the road, *more* cars on the road at the same time, and more GHG emissions. It follows that both the AB-987 and CARB approval and the DEIR use the wrong baseline of calculating GHG emissions based on the freeway speed of 65 mph instead of slower speeds, more cars, and more GHG emissions.

Second, Caltrans' proposal that the Developer work with Caltrans to develop a fair share mitigation agreement shows there is presently no enforceable agreement and by inference no enforceable mitigation at this time. This lack of enforceable agreement runs counter to CEQA's mandate that mitigation measures be fully enforceable. Pub. Res. Code § 21081.6(a)-(b), Guidelines, § 15126.4(a)(2).

- *"Per Table K.2-T, K.2-U, K.2-V, K.2-W, and K.2-X, Northbound (NB) and Southbound (SB) 1-405 mainline segments will have **direct significant impact(s)** due to **weaving/merging operation. Please identify the mitigation measures**, if any."* (Id. at p. 2; emph. added.)

Caltrans' comment above indicates significant direct impacts for which the DEIR identified no mitigation measures. As to the requirement to both identify impacts and mitigation measures, as well as mitigate and/or prevent impacts under Guidelines § 15002(a) in the DEIR, the City failed, rendering the DEIR incomplete and precluding informed public comment or decisionmaking.

- *"Mitigation measure 3.14-3(c) includes restriping the center lane on the 1-405 NB Off-Ramp at West Century Boulevard to permit both left and right-turn movements. Caltrans anticipates that **the conversion of the middle lane to a shared lane will result in queue for the left turn traffic**. Please provide further explanation **to justify** that the mitigation measure at the 1-405 NB off-ramp at West Century Boulevard will not lead to **significant impacts.***

  *If necessary, **widening of the off-ramp** to add another right turn lane would be considered as a viable mitigation alternative. Please note that **ICE screening is required** if intersection modification is proposed."* (Id.; emph. added.)

Caltrans' comment identifies potential significant impacts from the proposed conversion of the middle lane to a shared lane. This potential impact was not identified

for the public to comment on. Moreover, the comment proposes *widening of the off-ramp,* which will require Intersection Control Evaluation ("ICE") screening for the intersection modification. The DEIR failed to provide the requested information, precluding informed public comment and decisionmaking.

- *"According to the DEIR the following intersections have "Significant Impacts" under one or more scenarios. Please provide more details regarding* ***what mitigation measures*** *were proposed for these intersections and* ***why they were not feasible for this proposed project.***

  If no mitigation measures have been identified, Caltrans is able to help the developer identify any viable mitigation measures at the following locations for the proposed project:

  o Eastbound (EB) 1-105 on-ramp from Imperial Highway
  o EB 1-105 on/off-ramps from 120th Street
  o Westbound (WB) 1-105 off-ramp to Hawthorne Boulevard."
  (Id.; emph. added.)

Caltrans' comment above shows that the City and the DEIR failed to identify ***all feasible*** mitigation measures, which in turn means that the DEIR is incomplete and the Project *may not* be approved with the Statement of Overriding Consideration pursuant to Pub. Res. Code § 21002. The Agency must work with Caltrans, perform all studies and use all methodologies directed by Caltrans, add mitigation measures that Caltrans suggests, and then recirculate the DEIR so the public may comment on those, as required by CEQA. There are at least three locations where, per Caltrans, mitigation measures are feasible and failure to incorporate those will affect the environment.

- *"As a reminder,* ***Caltrans requires*** *the Intersection Control Evaluation (ICE) Step One screening to be conducted as per the guidelines set forth in the Caltrans ICE Process Informational Guide for Traffic Operations Policy Directive 13-02 - Please perform Intersection Control Evaluation (ICE TOPD) at the* ***following locations.***

  o WB 1-105 off-ramp approach to South Prairie Avenue
  o WB 1-105 off-ramp to Crenshaw Boulevard." (Id. pp. 2-3.)

The comment shows that no ICE screening as to the viability of the intersection modifications occurred, which further shows that the DEIR's proposed mitigation measures have not been validated and shown to be enforceable as required by CEQA.

2. Metro Comment and EIR's False Baseline Assumptions.

On March 24, 2020, another responsible agency, Los Angeles County Metro, sent its own comments on the DEIR, which revealed new information. (**Exh. 28** [Metro's comment, March 24, 2020].)[23] The Comment raised numerous discrepancies in the DEIR, affecting the baseline and requiring new mitigation measures. Although Metro's focus in the comment letter was to eliminate discrepancies and seek cooperation with the Applicant/City to resolve those, Metro's comments provide substantial evidence of a host of environmental impacts that were not disclosed and not mitigated. In particular, Metro notes (in italics):

- "*Page 3.14-47, "Fixed-Route Bus Service": The narrative describes scheduling shakeups as occurring in December and July of each year. This should be corrected to* ***December and June*** *(not July). Also,* ***shakeups include both minor and major changes (not just minor*** *as the narrative describes*)." (Id. at p. 2; emph. added.)

"Major changes" and shakeups in "December and June" of each year in scheduling is substantial evidence of unstudied potentially significant impacts, contrary to the City's narrative. December is a busy month, in view of the holiday season accompanied by concerts and events. Major shakeups during two months vastly affect the baseline assumption in the Project regarding possibilities to coordinate events and transit services, themselves highly vague and imprecise "mitigation measures."

- "*Page 3.14-53, "Adjusted Baseline Transit Assumptions": The narrative describes rail operating plan C-3 that was adopted by the Metro Board of Directors (Metro Board) as being a two year service plan; however, the Metro Board motion indicates the proscribed [sic.] period is* ***only one year (not two).***" (Id. [Metro comment, p. 2].)

---

[23] http://ibecproject.com/IBECEIR_030294.pdf

The fact that the adopted rail operating plan C-3 is for one year, not two, is substantial evidence of the remaining one-year impacts that were overlooked in the DEIR and improperly deemed as mitigated.

- *Page 3.14-130, "Transit System Evaluation": Metro C Line trains are typically two-car trains; however,* ***service is shifted to one-car or two-car trains starting in the 9 PM hour each night on weekdays****. The calculations of* ***train capacity*** *in Table 3.14-36 do not reflect* ***this reduction for weekday night post-event time periods.*** *Also, existing C Line schedules provide three trains an hour after 7 PM (one train every 20 minutes in each direction).* ***During weekends****, the C Line operates every 15 minutes with two-car trains* ***during the day****, and* ***every 20 minutes*** *with* ***one-car or two-car trains in the evenings****. C Line service and headways may or may not change once the K Line opens. Depending on resource availability such as rail cars, train operators, and budget, Metro Rail Operations may be able to keep two-car trains in service later than the 9 PM hour to accommodate post-event demand.*

  "Also, please note that the ***K Line*** *is being designed to provide service* ***with three-car trains.*** ***However****, platform lengths on segments of the existing C Line can* ***only*** *accommodate* ***two-car train service****. Metro is* ***seeking grant funding*** *from the State of California to extend platforms at four C Line stations. However, in the event that such grant funding is* ***not secured****,* ***trains may be limited to two-car service which would limit their carrying capacity for events at the Project site****."* (Id. at p. 2; emph. added.)

These passages are substantial evidence that the DEIR **inflated the baseline** by presenting more services and train capacity than realistically exists and therefore understated the Project impacts. It is also important to note that most if not all events occur in the *evenings* and on the *weekends*. A new DEIR should both correct the proper

information and analyze, quantify, and mitigate the impacts of such reduced services and capacity.[24]

- *"While funding and tentative construction timelines [of **grade separation project** for the K Line at the Centinela/Florence intersection] have not yet been identified by the Board for this project, the City and Applicant should be advised that **construction of this project** may **coincide with construction** of the Inglewood Basketball and Entertainment Center. For the duration of the grade separation construction, the K Line could have **operational limitations** and therefore **may not provide the same level of service to the arena and other venues** in the vicinity temporarily."* (Id. at p. 3.)

Consistent with Metro's comment, the City must disclose/mitigate this operational limitation in the DEIR and the cumulative impacts of parallel construction.

- *"Shuttle Service provision: The EIR should describe/confirm, in the Project Description section and/or the Transportation and Circulation section:*

  *a) whether the **shuttles** will be a **private bus service**, funded and/or provided by the Applicant, or a **municipal/public-provided** service;*

  *b) the **frequency** of shuttles (headways) proposed for event days;*

  *c) whether **fares** for the shuttle will be free, paid, or TAP-card enabled.*

  *Shuttle **service hours** and **augmenting staff** (law enforcement, traffic officers and general support) pre- and post-event should be extended on days with*

---

[24] We also note as a general objection applicable throughout this letter that the City may not, for the first time in an FEIR, introduce substantial new information or changed data that should have first been part of the DEIR. Any attempt to cure the deficiencies noted herein, and as noted by other commenters, in the FEIR will be a further violation of CEQA.

concurrent events at the Forum or SoFi Stadium to assist with excessive pedestrian and vehicle traffic." (Id. at p. 4; emph. added.)

Similar to the above comment, the City must disclose the requested information and address all impacts, rather than leave those issues vague and defer mitigation.

- "*Curb space: **Adequate curb space and/or bus berths** should be allocated and designated for shuttle bus stops at each of the rail stations to be serviced. This is necessary to ensure **safe and efficient** service by shuttle buses and regular Metro Bus and Rail operations, as well as overall vehicular circulation. Metro has completed the Metro Transfers Design Guide, a best practices document on transit improvements. This can be accessed online at https:www.metro.net/projects/systemwidedesign.*

  *Street Closures. Pre- and post-event planning may or may not require **street closures and/or queuing of event** attendees on the sidewalk (i.e., public right-of-way) to uniformly control crowds. The City and Applicant should coordinate with transportation and public works staff of local jurisdictions where the shuttle services is anticipated to connect to Metro rail stations within and outside the City of Inglewood (e.g. City of Hawthorne, City of Los Angeles, County of Los Angeles) to identify needs for allocation of curb space and sidewalks.*

  *Staff Support **Additional traffic officers** and **law enforcement support** should be provided by the Applicant at transfer locations between rail and the shuttle service (at street level, not Metro property) to **mitigate pedestrian and vehicle conflicts** at intersections and sidewalks on the day of the event.*" (Id. at p. 5; emph. added.)

The above-noted omissions in the DEIR (adequate curb space, street closures, and more traffic officers and law enforcement officers) were not addressed in the DEIR and their impacts have not been considered. For example, if street widening is required then – as a domino effect – the Project's design and size will have to change. Street closures

mean more traffic spill-over to adjacent streets, and additional traffic officers suggest slower traffic. Slower traffic contributes to more cars on the road and more GHG emissions, not identified/mitigated in the EIR process.

The DEIR must be supplemented with the above noted information and recirculated to the public and public agencies for review and comments.

3. Los Angeles Department of Transportation Comment re Incorrect Baseline.

LADOT comment reveals several flaws and omissions in the DEIR which need to be corrected and addressed, to comply with CEQA. In particular, LADOT wrote:

- *"[T]he project analysis has been executed using an "**adjusted baseline**" calculation to establish the "**existing**" **traffic conditions** level against which to determine Project activity traffic increases. While LADOT agrees with this analytical approach, it should be noted that **the** "**adjusted**" **traffic activity** attributable to the HPSP **is additional traffic**, that in-and of itself, will contribute significant traffic activity increases to City of Los Angeles intersections while also creating elevated baseline traffic conditions for the proposed project. Therefore, although the IBEC project is being analyzed separately from the HPSP, there is clearly a need to ensure comprehensive coordination between the two projects, particularly in regard to stadium events. In order to provide comprehensive mitigation and ongoing collaboration, a cooperative mitigation program for both projects should be considered."* (**Exh. 29**, p. 2, emph. added. [LADOT Letter].)[25]

First, even though "LADOT agrees" with the DEIR's use of the "adjusted baseline" or elevated baseline of existing traffic conditions in view of the NFL stadium slated to complete construction in 2021, such baseline calculation violates CEQA. CEQA generally requires the baseline to reflect the "existing conditions" at the time the "Notice of Preparation" is published. Guidelines § 15125(a)(1). The requirement is to

---

[25] See http://ibecproject.com/IBECEIR_030295.pdf

ensure that the impacts of the Project are considered at the *earliest* possible time.[26] The Notice of Preparation for the Project was published on February 20, 2018. Therefore, the EIR's use of an adjusted baseline of 2021 was an error as a matter of law, as it artificially inflated the baseline and understated the impacts. Put differently, the cumulative impacts of the Clippers Project *together with* the NFL project were not analyzed in the NFL project and evaded review in the IBEC DEIR – exactly what CEQA prohibits. POET, LLC v. State Air Resources Bd. (2017) 12 Cal.App.5th 52, 83.

Second, even LADOT acknowledges the practical effect of the Project DEIR's analysis, which understated the cumulative "additional traffic" of the IBEC Project together with the NFL stadium and requires coordination of events. Even if MSG Forum and Clippers have agreed to coordinate their events for a "$400 million" settlement, there is no such agreement between the NFL and IBEC projects. For this additional reason, the Project DEIR is incomplete and flawed, requiring use of a corrected baseline and reevaluation and mitigation of understated impacts.

- LADOT's comment re "Traffic Mitigation" requests *mandatory* language to be added in the proposed mitigation measures to "deploy officers" to help with queuing conditions on streets, and requires collaboration with LADOT to secure approvals for the mitigation measures (removal of "*median islands*"). (**Exh. 29**, p. 2 [LADOT Comment].)

The noted recommendations suggest that there is no mandatory enforceable collaboration between LADOT and the Applicant, and that the DEIR improperly deferred mitigation measures for no acceptable reason under Guidelines § 15126.4(a)(1)(B). The improper deferral violated CEQA.

- In its Comment 5 re Traffic Mitigation, LADOT identifies another omission in the DEIR: "*The Project does not identify specific measures to address* ***the potential impact to key City of Los Angeles corridors*** *leading into the project. Therefore, it is imperative that* ***further collaboration on this issue*** *be afforded in order to fully explore potential mitigation. The discussion of this mitigation should also include direction to*

[26] Even though the Project *aims* for traffic reduction, there is no substantial evidence in the record that such traffic reduction is plausible. Public comments from the transit-regulating agencies have identified many omissions and flaws in those assumptions.

> *determine an appropriate agreement instrument in order ensure appropriate funding for any necessary event-day resources.*" (Id. at p. 3 [LADOT Comment].) The Comment also underscores deferred mitigation measure and the lack of any specific commitment or financial arrangement to resolve the problem. The DEIR's deferred mitigation violates CEQA.

These defects render the DEIR invalid and require correction to the baseline assumptions, supplementation of the missing information, incorporation of enforceable mitigation measures, and recirculation of a correct DEIR for public review and comment.

4. LA Public Works Comment re Omitted Impacts/Mitigation and Methane Hazards.

"Good faith effort at full disclosure" is a key mandate in CEQA. Guidelines § 15151. LA Public Works' comment, which was "received" by the City on March 24, 2020, identified several instances where the Project DEIR failed in the required good faith full disclosure, thereby making it incomplete. LA Public Words wrote:

> "*A. The DEIR should* ***disclose*** *the following County* ***proposed traffic enhancements*** *in Westmont-West Athens:*
>
> - *The leading* ***pedestrian intervals*** *at the intersections of Century/Van Ness and Normandie/Century.*
> - ***Curb extensions*** *at Century Boulevard/Gramercy Place (Intersection #51) at the southeast and northeast comers. Note that although these curb extensions will not impede right-turning vehicles, please include a comment to the consultant to* ***ensure that defacto right turn lanes were not assumed*** *at this intersection in their line-of-sight calculations.*" (**Exh. 30**, p. 2 [Public Works Letter]; emph. added.)[27]

LA Public Works' comment requests disclosure and assurance that the DEIR is not based on an incorrect baseline. It fully questions the validity of the DEIR's

---

[27] See http://ibecproject.com/IBECEIR_030282.pdf

calculations, which questioning has not been properly or adequately addressed in the FEIR.

> "*B. The DEIR should disclose the following potential County traffic enhancements in Lennox:*
>
> - *The leading pedestrian intervals at the intersections of Lennox/Inglewood, Lennox/Hawthorne, 111th/Hawthorne, Lennox/Freeman, 104th/Inglewood, and 104th/Hawthorne.*" (Id. at p. 2 [Public Works Letter]; emph. added.)

The comment identifies another traffic impact that was not disclosed in the EIR. Any traffic enhancement may have its own impacts and needs respective disclosure and mitigation in the DEIR. This again shows the proposed FEIR to be legally deficient.

> - "*SB 1383, which requires a 50 percent reduction in anthropogenic black carbon and a 40 percent reduction in hydrofluorocarbon and methane emissions below 2013 levels by 2030, where methane emission reduction goals include a 75 percent reduction in the level of statewide disposal of organic waste from 2014 levels by 2025* . . . " (Id. at p. 2; emph. orig. [Public Works Letter]).

The comment above regarding methane underscores the DEIR's lack of methane hazards disclosure. The Project EIR vaguely provides:

> "As indicated previously, the Project Site is not located within the immediate vicinity of an active or abandoned oil well. The closest known oil production well is located approximately 1,200 feet northeast of the Project Site and is categorized as "idle."
>
> "Methane (CH4) is a naturally occurring colorless gas associated with the decomposition of organic materials. In high-enough concentrations, methane can be considered an explosion hazard. According to the Los Angeles County Department of Public Works Solid Waste Information Management System, the Project Site or its elements are not within 300 feet of an oil or gas well or 1,000 feet of a methane producing site. As such, the potential for explosive

> methane gases impacting the Project Site is low." (DEIR, pdf p. 541.)

The statement in the EIR is inaccurate. Based on information from DOGGR, there is an oil well API: 0403720016 as close as 449.6 ft. from the Project site; the oil well was reabandoned in 2016. (**Exh. 31** [oil well next to project site].)[28] This is apart from the *idle* oil well indicated in the DEIR. Moreover, the DEIR does not explain what "idle" means and suggests that it is somehow harmless, where in fact idle wells present more risks than properly abandoned ones. (**Exh. 33** [idle wells are a major risk].)[29]

Finally, the DEIR comment is non-specific as to whether any of the Project's proposed 28-acre site is located within a methane zone. (DEIR, pdf p. 491, 541.)

The fact that the LA Public Works' comment requires the DEIR to mention methane reduction goals of 75% and that the DEIR inaccurately and vaguely presents methane hazards and the adjacent oil well near the Project site allow the DEIR to skirt analysis of oil well/methane combination hazards near the Project site. This is a failure to provide necessary information for informed decision making by the lead agency and the public, as well as other public agencies. It is known that methane being a light explosive gas seeks "preferential pathways" to reach the surface and is therefore more dangerous in the vicinity of oil wells providing such openings and conduits. (**Exh. 34**, [Lorena Plaza Project MND excerpt].)

Thus, while the DEIR denies that the Project is within 300 feet of an oil well or 1,000 feet of a methane producing site, it does not conclusively establish lack of methane hazards, especially where the DEIR inaccurately presents the closest known oil well to be 1,200 feet away. The DEIR presents incomplete and raw data and does not provide the analytic path traveling from those raw facts to the conclusion of low impacts. The EIR fails to provide substantial evidence on a critical safety issue of methane gas and methane explosion, while proposing to attract tens of thousands of people to the area.

---

[28] Based on MSG Forum's unsealed court documents lawsuits, the City (Mayor Butts) and Clippers contemplated the IBEC Project in 2016. See (**Exh. 32** [Clippers' City's 2016 Concealment Efforts].) https://therealdeal.com/la/2019/02/26/l-a-clippers-city-worried-msg-would-learn-of-inglewood-arena-plans/

[29] https://www.fractracker.org/2019/04/idle-wells-are-a-major-risk/

- *"Clarify the type of **pedestrian flow management** that will be used. The document should note the type of proposed management, particularly in the southwest comer of the proposed project site."* (**Exh. 30**, p. 3 [Public Works Comment, 3-24-20]).

The comment reveals another significant omission in the DEIR related to transportation and circulation. That is that the Project won AB 987 certification primarily for its claim to be able to reduce GHG emissions through alternative modes of transportation, including walking and biking. Therefore, the DEIR's failure to regulate the pedestrian flows – for a Project that can accommodate 18,000-20,000[30] attendees at a time for the events and includes other amenities, such as a sports clinic, with their own flow of visitors – cannot omit disclosure and analysis of this critical pedestrian flow management issue. This concern was raised *inter alia* in Culver City's April 1, 2020 comment about narrow sidewalks. (See Sec. VI.F(5), infra [Culver City comment].)

Moreover, the more pedestrians that are crossing the streets and the less such flows are managed, the slower the traffic on the streets will become. The more pedestrians are on the streets, the more red light signals will be triggered to halt traffic. These impacts will be further aggravated in view of potential similar large events at the nearby Forum and NFL arenas.

- *"The DEIR only considers line of **sight E or F results as significant**; however, **multiple County intersections have significant impacts** at **LOS D, C,** etc, thresholds. Please include/denote these as significant impacts as well and then address them in the mitigation section.*

---

[30] Even though both the DEIR and the AB 987 certification project application have been consistently speaking about an 18,000-seat arena, the City's latest communications *after the DEIR public comment period closed* have been noting 18,000-20,000 seats. (**Exh. 35** [real estate appraisal item in City Council agenda packet, May 5, 2020].) This reveals another instance of filing to have an "accurate, stable and finite project description," and perhaps more importantly, reveals an undercounting and artificial diminishing of the Project's true magnitude and impacts. Based on this changed attendance/capacity figure, the entire DEIR should be recirculated and all measurements and metrics reanalyzed to account for this greater than 10% increase.

- *Please **use the enclosed ICU methodology** for all signalized intersections and unsignalized intersections within or shared with the County.*

- ***Address mitigations** for each County-impacted intersection.*

- *Provide an **event management plan to Public Works for review***" (Id. at p. 4 [Public Works Letter]).

The comment identifies a flaw and error in the DEIR's methodology, requiring it to identify *more intersections* as significantly impacted and to mitigate that impact. As stated in OPR's letter to the City dated December 4, 2019, "According to AB 987, the project's Travel Demand Management (TDM) program must achieve trip reduction of 15 percent by January 1, 2030 and 7.5 percent by the end of the first NBA season. The TDM program is required to include specific measures, as listed in the statute." (**Exh. 36** [travel efficiency comment from OPR, December 4, 2019].)

The omissions noted in the Public Works comment on the DEIR establish that the findings of the DEIR, also relied upon in the AB 987 certification – which requires achieving 15% reductions in traffic and 50% reduction of GHG impacts – are not supported by substantial evidence. In the words of California legislators about this very Project:

> "To mitigate this **artificially low** estimate of net GHG emissions, the applicant proposes the **Transportation Demand Management** (TDM) program/targets (47-48% of total) and 50% of the reductions attributable to the LEED Gold certification (2.5% of total), both required by the bill. They **claim** this gets to 49.5-50.1 % of required reductions, conveniently achieving AB 987's local GHG mitigation floor of 50%. By **lowballing** net GHG emissions, the applicant **circumvents** the need to make any of the local GHG mitigation investments, and associated community benefits, touted when the bill was before the Legislature." (**Exh. 11,** at p. 420 [AB 987, California Legislators, June 28, 2019].)[31]

---

31 See http://opr.ca.gov/ceqa/docs/ab900/20190628-IBEC.pdf

The City must supplement/correct the information in the DEIR and recirculate the updated DEIR for public review and comment.

5. Culver City Comment About Sidewalk Width, Need for Bike Lanes, and Defined Transportation Management.

Culver City, which had requested several extensions of the public comment period to accommodate for COVID-19 constraints, submitted its comments on April 1, 2020. We could not have seen those comments prior to March 23, 2020. Culver City is adjacent to Inglewood, and will be immediately and negatively impacted by the proposed Project.

The comment raises the issue of the width of the sidewalks and the need for bike lanes to accommodate the Project's claimed pedestrian/bike flows. Since traffic and the noted alternative modes of transportation are directly associated with GHG emissions, the comment presents new information and proposes new mitigation measures, signaling more impacts than those disclosed. In particular, Culver City stated:

- *Chapter 3.14 page 50. Pedestrian Network.* It is unclear based on the description how wide different sections of the sidewalks are along South Prairie Avenue and West Century Boulevard. Immediately adjacent to the project site, along South Prairie Avenue and West Century Boulevard, it is also unclear whether the "8-foot landscaped area that also contains signage and utilities" is an area that people can walk on as well if the five foot wide sidewalk gets too crowded. Five feet wide sidewalks support two people walking side by side, and eight feet wide sidewalks support two pairs of people passing each other (Boston Complete Streets Guidelines). **Narrow sidewalks do not support heavy pedestrian activity** and can create **unsafe conditions** where people **walk on the street**. The project should consider **widening the sidewalks within the vicinity of the project** site to accommodate the thousands of attendees for Clippers games and other big events. https://nacto.org/wpcontent/uploads/2016/04/1-6_BTD_Boston-Complete-Streets-Guidelines-2.4-6-SidewalkWidths_2013.pdf" (**Exh. 37**, p. 1 [Culver City comment letter].)

This comment provides a link to studies about the width of sidewalks and recommends *widening sidewalks* near the Project area. While the comment focuses on the need and benefit to widen the sidewalk for pedestrians, it does not mention the environmental impacts of such widening of sidewalks, nor needed mitigation for that. Should the Project indeed widen the sidewalks, it will involve modifications to the streets or the Project, longer construction impacts, and need for additional mitigation. But if it doesn't widen them, the impacts and problems as noted remain unaddressed and unmitigated. The DEIR may not simply respond to the Culver City comment and specify the width of the sidewalk, without addressing concerns and recirculating the DEIR for public review and comment.

The inadequate sidewalk width issue raised by Culver City is also renewed by the new information about the proposed two illuminated motion billboard signs proposed on both South Prairie St. and on Century Blvd. – exactly where the problem was identified by Culver City. See Sec. VII.A, infra (piecemealing of Billboard Project from IBEC Project and this firm's objection letter to the Billboard Project MND, April 14, 2020, incorporated herein by reference.) Tellingly, the DEIR misrepresents the specifications of the billboard signs at those locations and does not state that they are motion signs. The Billboard Project MND failed to disclose the IBEC Project, or its obvious connection to the IBEC Project, and that it is apparently proposed on the 5-foot-wide sidewalk itself.

- "*Chapter 3.14 page 50. Bicycle Network.* The project should also consider adding bike lanes on South Prairie Avenue and West Century Boulevard. E-scooters could also use the bike lanes as well. Creating a safer environment for bikes and e-scooters could provide first/last mile travel options for people traveling to/from the arena." (Id. p. 1 [Culver City comment, April 1, 2020].)

On the other hand, the comment's recommendation of adding bike lanes, if followed, would require either eliminating one lane or curbside parking (and creating more traffic) or significantly altering the Project, each requiring mitigation and renewed review. Also, should the Project indeed add bike lanes, the DEIR must specify that information, City/Applicant must consult with various responsible agencies (including Metro, LADOT, CALTRANS, and LA Public Works) and address the associated impacts.

In sum, the comments by multiple public agencies disclose unidentified and unresolved issues, which CEQA requires the EIR to consider, mitigate and prevent to the extent feasible. The FEIR brushes these concerns aside and does not engage in a good faith effort at responding, much less at full disclosure. This is particularly troubling as a key purpose of receiving comments from other agencies is to engage in an open, iterative process that benefits from those other agencies' particular areas of expertise. As such, the DEIR and FEIR are faulty, may not be legally certified without supplementing the missing information and analysis, and recirculating the DEIR for renewed comment.

VII. THE CITY HAS PIECEMEALED THE PROJECT IN VIOLATION OF CEQA AND STATE PLANNING AND ZONING LAWS IN SEPARATELY ADOPTING PIECEMEALED PROJECT COMPONENTS.

This section is based on *new information* released by the City after March 24, 2020. Pub. Res. Code §§ 21189.55(d)(2) and (5).

The City and the Applicant have engaged in blatant piecemealing of the IBEC Project, several examples of which came to light only after the close of the public comment period on the Project DEIR. As revealed to date, the Project piecemealed at a minimum five Project components: (1) the Billboard Project by WOW Media to install two motion illuminated billboard signs; (2) Hotel Project; (3) General Plan amendment of the Land Use Element; (4) General Plan amendment of the Circulation Element; and (5) General Plan amendment/adoption of Environmental Justice (EJ) Element. This list is not a complete list of piecemealing actions, but only reflects the information disclosed by the City to date, *after* March 24, 2020, and discovered by us.

A. Illegal Piecemealing of the Billboard Project.

For violations of CEQA with respect to the Billboard Project piecemealed from the IBEC Project, we incorporate by reference our objection letter sent to the City on April 14, 2020. (**Exh. 38** [TSLF Objections to MND for the Billboard Project, April 14, 2020].)

The City's responses to and denials of our piecemealing objections, as expressed in the staff report, are unsupported. The billboard signs are proposed to be placed on property apparently soon to be owned or controlled by Murphy's Bowl, pursuant to the draft Disposition and Development Agreement. (**Exh. 39** at p. 21 [Disposition and Development Agreements].)

B. Piecemealing of the Hotel Project.

The EIR references the construction of a hotel at the east side of the Project, but does not disclose details about it, such as the number of stories or parking spaces, setbacks, or height of the building. The DEIR only mentions an approximate number of rooms. For example, the DEIR does not mention whether the hotel will have any accessory uses, such as restaurants or bars, whether those will be allowed to serve alcohol or will be open to the general public. Answers to this missing information in the DEIR would better illuminate the Project's total impacts and would enable analysis and mitigation of those potential impacts. At a minimum, the DEIR fails as an informational document because of the lack of an accurate project description.

The March 31, 2020 Draft Disposition and Development Agreement prepared by the Applicant, Murphy's Bowl, discloses that the hotel will be developed by a different developer who will be responsible for obtaining entitlements for it.[32] The segmentation of the hotel from the whole of the action contemplated by the Project is piecemealing prohibited by CEQA and effectively curtailed CEQA review of the Project's overall impacts, along with those of the hotel, in the IBEC DEIR.

C. Piecemealing of the Inglewood Transit Connector Project.

The Project does not note that it is part of the Inglewood Transit Connector Project. However, the administrative record, including the AB-987 documents, show that the Project has two parts: the Arena site and a "transportation" component. Pub. Res. Code § 21168.6.8 (a)(6).

In the meantime, the Inglewood Transit Connector Project, which was officially initiated at the same time as the IBEC Project (Initial Study, July 2018),[33] is relied upon in the DEIR as a mitigation measure of traffic impacts, connecting the Project site to Metro's Crenshaw Line and originating exactly across from the Project site at the intersection of Century Blvd. and Prairie St.

---

32 See at p. 37 of http://ibecproject.com/IBECEIR_030287.pdf

33 See https://www.cityofinglewood.org/DocumentCenter/View/11934/Initial-Study

The Inglewood Transit Connector Project has not advanced beyond the initial study at this time of the proposed approvals of the Project and certification of the Project EIR, which relies on it. Thus, the Project relies on another project as a mitigation measure, which did not have its own environmental review completed and which impacts are not included in the Project DEIR as either part of the IBEC Project itself, or at a minimum, a related project needed to be included in the IBEC Project DEIR for, *inter alia*, cumulative impacts purposes. These omissions are a further fatal flaw.

D. Piecemealing of Public Works Improvements on Arterial Roads, Adding Lanes, and Enhancing the Capacity for Traffic Increase.

As evidenced by photos taken by our client and incorporated into our objections to the Billboard Project and its MND, the arterial streets around the Project site have been undergoing extensive road improvement work. We requested records on the road improvements from the Public Works Department on April 9, 2020; however, the City failed to respond to our requests. We reserve the right to request augmentation of the record with such evidence. Still, in light of the available evidence and on information and belief, it appears that the City's road improvement project was also part of the Project here and intended to enlarge the streets, add lanes, provide electrical circuits for the billboard signs, all as part of and in furtherance of the Project.[34]

E. Piecemealing and Piecemeal Approval of the General Plan Amendments.

We incorporate by reference our April 13, May 26, and June 9, 2020 objection letters. (**Exh. 40** [Objection letters to GP Amendments].)

---

[34] As noted above in Sec. VI.D, supra, the City has also planned and is separately implementing extensive amendments to parking regulations as part of the IBEC Project, whereby all residential streets in the City will become part of a parking district and will have only a limited number of cars allowed per unit, while IBEC may seek parking outside of its Project area. These extensive and drastic amendments to parking regulations – to the detriment of the residents of the City and for the benefit of the IBEC Project – are also an example of the IBEC EIR's piecemealing in violation of CEQA. Further, the City's changes to the parking regulations implicitly counters the IBEC Project's assumptions and claims of reduced traffic for IBEC Project events.

In addition to the violations listed in prior letters as to the City's illegal adoption of these General Plan amendments, the City's IBEC Project and EIR violated CEQA and the State Planning and Zoning Laws as follows:

1. The Circulation Element Amendment in the DEIR Violates State Planning and Zoning Laws.

Even though the IBEC DEIR includes amendments to the Circulation Element, it does not serve the purpose of the correlation requirement in Govt. Code § 65302. The correlation requirement is to ensure that the City does not make significant land use amendments without resolving the infrastructure needs and traffic circulation issues to support them. Here, the IBEC Project – with anticipated 18,000-20,000 visitors for just the events, as well as numerous visitors to the Project's other amenities, such as the hotel, bars, restaurants, retail, and medical center – contemplates a dramatic influx of visitors to Inglewood, and to the area already impacted (to be impacted) by two other major arenas. The Circulation Element therefore was to *create* infrastructure to support such pedestrian and traffic influx.

However, the DEIR does not specify any change to the Circulation Element in Section 2.6 of the DEIR, and the only change suggested by the Applicant in its draft General Plan Amendments is striking out the designation of 102nd street as a collector street. Thus, the proposed changes are not to *create* the infrastructure to *support* the anticipated pedestrian and traffic circulation but rather to *remove* such infrastructure. By definition, collector streets in Inglewood's Circulation Element are to "collect" or link traffic from the small streets to the arterial streets. The Project proposes to remove this collector. This late-disclosed change is in addition to the fact that the Project also intends to vacate portions of both 101st and 102nd streets as well as to allow encroachments by the Project onto the public rights of way. Finally, based on the DEIR's unspecified and the Applicant's recently proposed overlay zone details, the Arena is proposed with absolutely no front, rear, or side yard setbacks and will therefore not allow for widening of any portion of the adjacent streets.

The amendments to the Circulation Element are a violation of the General Plan's internal consistency and the correlation requirement.

2. The IBEC DEIR Violates CEQA Because of the *Incomplete* General Plan Consistency Analysis in View of the Missing EJ Element.

CEQA requires any project EIR to analyze the consistency of such project with the General Plan. Guidelines § 15125(d); see also Families Unafraid to Uphold Rural El Dorado County v. El Dorado County Bd. of Sup'rs (1998) 62 Cal.App.4th 1332, 1336 "Because an EIR must analyze inconsistencies with the general plan (14 Cal. Code Regs § 15125(d)), deficiencies in the plan may affect the legal adequacy of the EIR. If the general plan does not meet state standards, an EIR analysis based on the plan may also be defective. For example, in Guardians of Turlock's Integrity v. Turlock City Council (1983) 149 Cal.3d 584, 593, the general plan did not contain a noise element; thus "a necessary foundation" to acceptable analysis in the EIR was missing." 2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act, § 20.3, p. 20-9; see also Friends of "B" Street v. City of Hayward (1980) 106 Cal.App.3d 988, 998-999.

The City's piecemealing of the EJ element from the IBEC DEIR has resulted in the missing mandatory EJ element and thereby an inadequate analysis of the IBEC Project's consistency with the General Plan in the DEIR.

Comments by others, such as the NRDC or members of the State Legislature, show that the Project is inconsistent with EJ principles as mandated by the Government Code, and therefore may not be adopted as the City proposes.

A land use decision (or zoning ordinance) must be deemed inconsistent with a general plan if it conflicts with a single, mandatory general plan policy or goal. Families Unafraid to Uphold Rural El Dorado County v. El Dorado County Bd. of Supervisors (1998) 62 Cal.App.4th 1332, 1341. A local land use decision that is inconsistent with the applicable general plan is invalid when passed, i.e., *void ab initio*. Lesher Communications. Inc. v. City of Walnut Creek (1990) 52 Cal.3d 531, 540. Despite the questionable policies in the newly adopted EJ Element, the IBEC Project is inconsistent with the Element's goal – per state mandate – to ensure the health of the population.

The City's approach and piecemealing has made the "process exactly backward and allows the lead agency to travel the legally impermissible easy road to CEQA compliance." Berkeley Keep Jets Over the Bay Committee v. Board of Port Com'rs (2001) 91 Cal.App.4th 1344, 1371.

Despite the City and Applicant's throwing caution to the wind in rushing to approve the FEIR and Project, the IBEC EIR may not be certified and the Project may not be approved without a complete EIR, which discloses all pieces of the Project in their full scope, and which provides for genuine, responsive, informed and meaningful public participation in the drafting of the EIR and General Plan amendments. "[E]xpediency should play no part in an agency's efforts to comply with CEQA." San Franciscans for Reasonable Growth v. City and County of San Francisco (1984) 151 Cal.App.3d 61, 74-75.

VIII. THE EIR AND PROJECT VIOLATE CEQA'S PRECOMMITMENT PROHIBITION BY THE CITY'S SIGNING THE EXCLUSIVE NEGOTIATING AGREEMENT AND PRIOR VIOLATIONS OF THE BROWN ACT.

On March 24, 2020, on the last day of the inadequately noticed public comment period, the City Council violated the public trust yet again by convening behind closed doors and unanimously voting to settle four lawsuits, including one on CEQA and one on Brown Act violations.

We have requested that the City cure and correct the Brown Act violations committed on March 24, 2020, which would have resulted in the invalidation of the settlement agreement approval and any action taken by the City Council on March 24, 2020. The City denied any Brown Act violation occurred on March 24, 2020 and denied the existence of a settlement agreement in its letter *backdated* April 30, 2020, mailed out on May 4, 2020, without any emailed copy, as claimed on the letter. The City then sent us a supplemental letter on May 5, 2020, where it admitted that on March 24, 2020, the City Council indeed authorized the settlement agreement. The copy provided by the City bears no dates of execution of the agreement by any signatory, including by Mayor Butts. Most importantly, both responses from the City to our Cure and Correct occurred *after* May 4, 2020, when Murphy's Bowl successfully closed escrow transferring MSG Forum to Murphy's Bowl.

The City's settlement and disposal of CEQA and Brown Act lawsuits late on March 24, 2020 as to MSG/Forum, IRATE, and related persons is significant new information which was not and could not have been reasonably known during the public comment period.

We hereby incorporate by reference all the claims made by MSG, IRATE and related parties in all four lawsuits, including those of illegal precommitment in violation

of CEQA and Brown Act violations, and further incorporate by reference, and request that the City include in this administrative record, all administrative records and evidence submitted in all of those matters. (See collectively **Exh. 10** [operative petitions in the various cases, trial briefs, and Court of Appeal briefs, as applicable].)

IX. THE DEIR AND FEIR FAIL ADEQUATELY TO DISCUSS IMPACTS ON SCHOOLS, IN VIOLATION OF CEQA.

The Project's administrative record shows no consultation or communication occurred with Lennox Elementary School District, in violation of CEQA. Under Pub. Res. Code §15186(a), "CEQA establishes a special requirement for certain school projects, as well as certain projects near schools, to ensure that potential health impacts resulting from exposure to hazardous materials, wastes, and substances will be carefully examined and disclosed in a negative declaration or EIR, and that the lead agency will consult with other agencies in this regard."

Among other things, if the Project is within 1/4 mile of a school site, CEQA requires the lead agency not to certify an EIR unless the lead agency does both of the following: (1) **consult** with the affected school district regarding the potential impact of the project on the school; and (2) notify the affected school district or districts of the project, **in writing**, not less than 30 days prior to approval or certification of the EIR. Guidelines § 15186(b). Obviously, we could not have known that the City and the FEIR would not have complied with this requirement until after the March 24, 2020 close of the official public comment period.

The Applicant listed numerous schools located within 2 miles of the Project site, including several schools from the City of Lennox.[35] Yet the only school-related communications in the Project's administrative record are about the Inglewood School District's development fee nexus and calculations that the IBEC Project Applicant must pay to the Inglewood School District.[36],[37] Development fees, however, do not address the *air quality* or *traffic* mitigation issues the Project will cause to the surrounding schools, including to those of the Lennox School District.

[36] See http://ibecproject.com/PREDEIR_0000036.pdf

[37] See http://ibecproject.com/PREDEIR_0002337.pdf

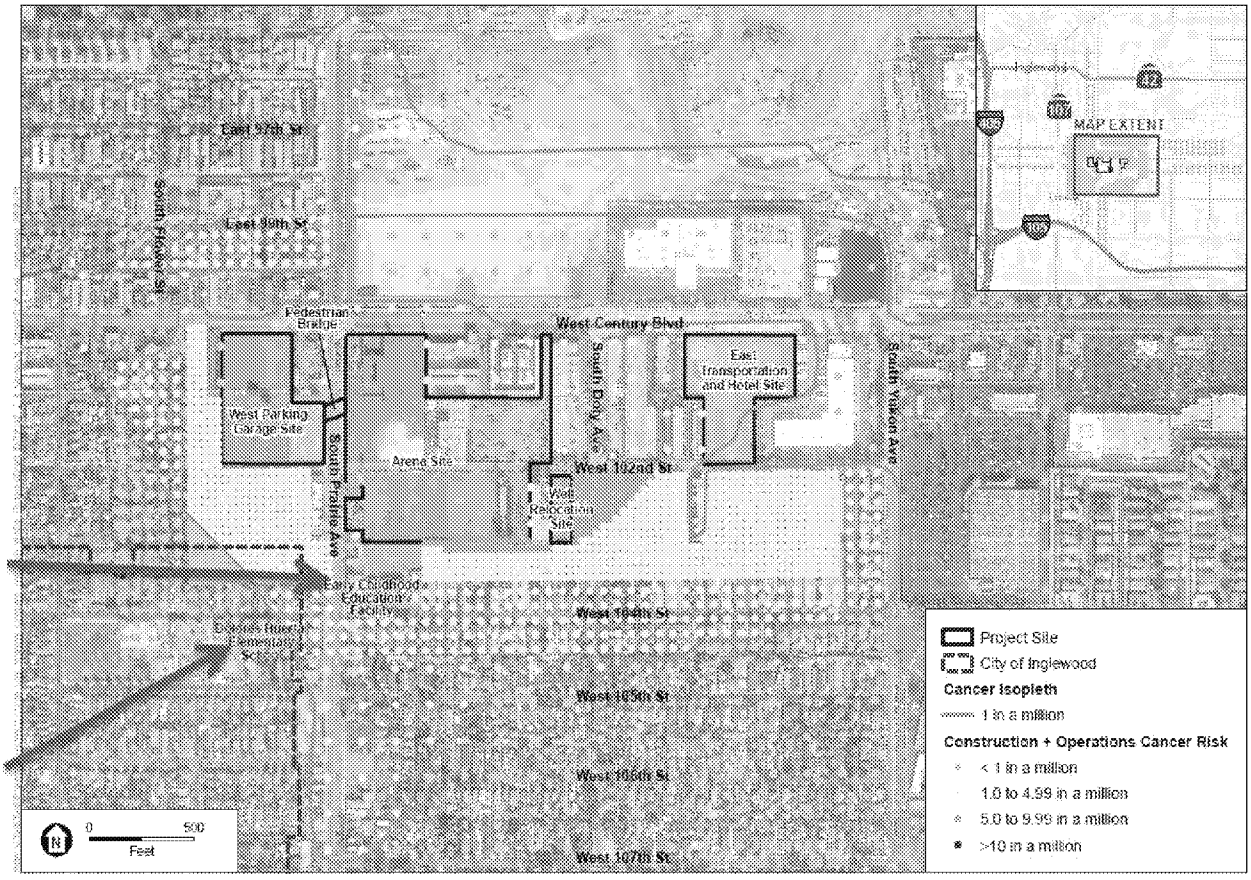
Moreover, the IBEC Project is located within 0.2 miles of the Huerta Dolores Elementary School. (**Exh. 41** [Notice of AB 987 Certification Completion; Notice of EIR Completion, and Google Maps of Dolores Huerta Elementary School].)[38] The Elementary School is part of the *Lennox* Elementary School District, serving the needs of about 5,000 young students.[39] (**Exh. 42** [Lennox and Huerta web page].) As depicted in the DEIR, p. 3.2-99 (and shown in the figure below), the Project is also adjacent to an Early Childhood Education Facility. Instead of analyzing and discussing the health hazards of the Project's extensive demolition, construction and operational activities to the nearby school children, the EIR's discussion of health hazards is limited to a cursory discussion of cancer risks and a conclusory assertion that the risks are less than significant. (DEIR, pp. 3.2-98 – 3.2-102.) Procedurally and substantively, this is improper under CEQA.

The EIR does not explain or justify the analysis of risks and does not show how those risks disappear in a straight line just above the school. See the figure below from the IBEC DEIR, p. 3.2-99 (arrows pointing to the school/education center):

---

[38] The administrative record's document about schools completely omits the Huerta Dolores Elementary School from the list of schools within or adjacent to the Inglewood Unified School District. http://ibecproject.com/PREDEIR_027103.pdf

[39] See p. 5 of https://4.files.edl.io/a093/11/15/19/175500-608b5924-96d9-40ce-88db-b2f2b7da78f9.pdf



SOURCE: TerraServer, 2018; ESA, 2019.

Inglewood Basketball and Entertainment Center

Figure 3.2-4
Construction + Operations Cancer Risk

The DEIR and the FEIR do not identify, analyze, or mitigate the traffic impacts on the school and the road closures for purposes of Project construction and operation, the permanent road closure on W. 102nd Street, which will spill over traffic onto adjacent streets including W. 104th Street and thereby present additional health and safety hazards for children, as well as the air pollution associated with the dramatic increase in traffic and the massive construction planned in the area. These omissions are also unacceptable since, based on the Project's administrative record, the Project's development fees are calculated based on the needs of the Inglewood Unified School District[40] [41], leaving out

---

40 See, e.g., http://ibecproject.com/PREDEIR_027103.pdf

41 Commercial development http://ibecproject.com/PREDEIR_0000036.pdf; Residential development http://ibecproject.com/PREDEIR_0002337.pdf

the impact of the Project on the Lennox Elementary School District, which will be heavily impacted.

Moreover, DTSC responses to our CPRA requests revealed that properties along 102nd Street "within the perimeter" of the Project have EPA records and our further investigation showed asbestos records at one of the problem sites. (**Exh. 43** [DTSC Response 1 re Sites; Google Map of all sites; and records of 3818 102nd St.].) Asbestos is known for its dangers effects, especially on children with developing lungs.[42] (**Exh. 44** [asbestos dangers to school children].) DTSC's subsequent responses revealed more sites with DTSC records. (**Exh. 45** [DTSC's Response 2 with list of problem addresses].) The DEIR and FEIR are silent on that information, including the hazards of demolition. The proximity of the sites identified by the DTSC to the elementary school and the Child Education Center makes the DEIR and FEIR's omissions fatal.

It is the City's duty to investigate the hazards at DTSC's listed addresses, to inform the public and decision makers about those in the EIR, to consult with the affected school district and education center, to address and mitigate the Project's impacts on school children, and now to recirculate a DEIR in full conformance with CEQA.

X. THE PROJECT CANNOT BE APPROVED DUE TO THE INADEQUACY AND UNENFORCEABILITY OF THE MITIGATION MONITORING PROGRAM.

The City's proposed Mitigation Monitoring and Reporting Program ("MMRP") is flawed and may not be approved. It focuses mainly on *temporary construction* impacts, requires only *noticing* to property owners, even though such notices do not mitigate any impact by themselves, and otherwise makes recommendations rather than provide any evidence that the Project's *long–term operational* impacts will indeed be mitigated. This critique by us applies to all sections in the MMRP and all mitigation measures.

The AR and the City's response to Caltrans' DEIR comments show that the Project Applicant agreed to pay Caltrans over $1.5 million dollars to reduce impacts on the state highway. The MMRP is silent on this arrangement but provides that the Project Applicant must work with Caltrans and the determination of whether such activities will even be feasible will be made *prior to* the issuance of the "certificate of occupancy"[43]:

---

42 https://ehs.oregonstate.edu/asb-when

43 See p. 53 at http://ibecproject.com/IBECEIR_033034.pdf

> "Prior to issuance of a Certificate of Occupancy, Applicant shall work with the City of Inglewood and Caltrans to determine that offramp improvements are feasible and acceptable to Caltrans, and if feasible and acceptable, such improvements shall be completed or adequate security for the estimated amount to complete such improvements provided to the City of Inglewood in a form acceptable to the City." (MMRP at p. 53.)

The timing of determining the feasibility of mitigating the impact – prior to *issuance* of a *certificate* of occupancy, i.e., *after* the Project is fully developed – is a gross subversion of CEQA, including but not limited to CEQA requirements to provide enforceable mitigation measures *before* the Project approval, and not to defer mitigation.

The above example is only one of numerous instances of the MMRP's CEQA violations, warranting the rejection of the MMRP and FEIR as violating CEQA.

XI. THE STATEMENT OF OVERRIDING CONSIDERATIONS IS CONCLUSORY AND UNSUPPORTED BY EVIDENCE.

We object to each and every factual claim made in the Statement of Overriding Considerations ("SOC") as unsupported by substantial evidence. The "findings" are not supported by the data cited. Moreover, to the extent the findings rely on the EIR – which is flawed for all the reasons noted above, including but not limited to flawed or changed baseline assumptions, piecemealing, deferred and unenforceable mitigation – it is further unsupported by substantial evidence.

Further, to the extent that the EIR, the MMRP, and other Project entitlements are based upon *falsified, omitted,* or *concealed* data, such data cannot support findings of overriding considerations.

Beyond the inadequate "findings" the SOC renders the IBEC Project inconsistent with various elements of the General Plan, such as the General Plan's Land Use Element densities and designations,[44] Circulation Element, Safety Element, and in violation of the consistency requirement under the state Planning and Zoning Law.

---

[44] We note that the Project had to show consistency with the General Plan applicable *at the time the* Project Application was deemed complete and the FEIR was prepared. We have further objected to the City's amendment to the Land Use Element, which rewrote the densities and intensities on June 9, 2020 – *a week before* the Planning

The SOC – in conclusory terms and completely disregarding the public comments of lack of any benefit of the Project to the Inglewood community which will be impacted – declares that the IBEC Project's benefits will outweigh the 41 adverse environmental impacts. CEQA requires providing evidence of such benefit as to each impact. The SOC does not do so. Also, because the Project and EIR suffer from a lack of the mandatory "accurate, stable and finite project description," it is impossible for the decision makers to properly balance and weigh the Project's purported benefits from its detriments when multiple significant Project elements remain unknown and undefined, with those future decisions to be made by the Planning Director out of the public eye, and without public and CEQA review at that time. This is a clear CEQA violation. Stopthemillenniumhollywood.com, supra, at p. 14

To approve a project with a significant impact, the agency is "required to make findings identifying (1) the "[s]pecific ... considerations" that "make infeasible" the environmentally superior alternatives and (2) the "specific ... benefits of the project [which] outweigh" the environmental harm. (Pub. Res. Code §§ 21002.1, subd. (b), 21081; Guidelines, § 15092, subd. (b).)" Preservation Action Council v. City of San Jose (2006) 141 Cal.App.4th 1336, 1352-1353. Such findings must be supported by substantial evidence and cannot be presumed by courts. Walnut Acres at 1312-1313; Guidelines § 15091(a)-(b). Such evidence must be supported by facts and cannot be an argument, assertion or clearly erroneous. Pub. Res. Code § 21082.2(c); Guidelines § 15384 (a)-(b). The SOC's failure is a CEQA violation separate from the EIR's other inadequacies. Guidelines § 15093(b)-(c) (SOC findings "shall be supported by substantial evidence"); Uphold Our Heritage v. Town of Woodside (2007) 147 Cal.App.4th 587, 603 (record does not support infeasibility finding). Moreover, such infeasibility must be *legal* (i.e., legal restraints), rather than *financial* (as in not financially profitable).

The City's findings of infeasibility to mitigate each and every one of the 41 adverse environmental impacts lack substantial evidence that it was infeasible to build a smaller Project or to develop the City's land with less intensive uses. The findings are also clearly erroneous, as they rely on the same illusory mitigation measures as in the EIR or in the latest MMRP.

Commission's scheduled June 17, 2020 hearing on the IBEC Project – under the guise of merely "clarifications." We incorporate by reference all of our objections to the City's eleventh-hour rewriting of the General Plan's Land Use Element to allegedly make it consistent with the IBEC Project. Again the tail wags the dog.

The true nature and scope of the Project, and its alleged benefits, cannot be determined based on the faulty DEIR and FEIR, and thus the necessary balancing of competing issues required to lawfully support an SOC cannot be found. An SOC cannot properly be adopted, and should be rejected, along with the entirety of the Project and the proposed FEIR. In the words of the Court:

> "The EIR is intended to furnish both the road map and the environmental price tag for a project, so that the decision maker and the public both know, before the journey begins, just where the journey will lead, and how much they – and the environment – will have to give up in order to take that journey. As our Supreme Court said in Bozung v. Local Agency Formation Com. (1975) 13 Cal.3d 263, 283 [118 Cal.Rptr. 249, 529 P.2d 1017], '[t]he purpose of CEQA is not to generate paper, but to compel government at all levels to make decisions with environmental consequences in mind.'" Natural Resources Defense Council, Inc. v. City of Los Angeles (2002) 103 Cal.App.4th 268, 271-272.

XII. THE PROJECT IS ILLEGAL DUE TO ITS FAILURE TO SUBSTANTIATE THE NEED FOR SPECIFIC PLAN AMENDMENTS AND DISCRIMINATORY SPOT ZONING.

The Project includes Specific Plan amendments and the following action:

> "Approval of a Specific Plan Amendment to the Inglewood International Business Park Specific Plan **to exclude properties** within the Project Site from the Specific Plan Area." (DEIR, p. 2-89.)

The proposed "exclusion" is improper as it constitutes: (A) an unsupported variance; and (B) discriminatory spot zoning.

A. The Specific Plan Amendment Amounts to a Variance Without Required Grounds to Justify It.

The DEIR and FEIR do not specify why exactly the sites must be excluded or why the Project will be inconsistent with the Specific Plan, short of mentioning wider setback requirements under the Specific Plan, i.e., 25-foot setbacks along South Prairie and 15-foot setbacks along West 102nd street and the need to "remove" portions of the IBEC

Project from the Specific Plan, allegedly to ensure consistency with both the Specific and General Plans. (DEIR, p. 3.1-13, pdf p. 263.)

The DEIR description, along with the fact that the Specific Plan amendment seeks to "remove the portions of the Project site" from the Specific Plan to obtain consistency with the General Plan, shows that the "Specific Plan amendment" is in reality a misnomer. In essence, the City is trying to de facto "exempt" the Project lots from certain Specific Plan requirements. This is also evidenced by the fact that on May 4, 2020, long after release of the Project DEIR on December 27, 2019, the Project Applicant presented its own draft of the Specific Plan amendments, which stated: "By doing so the City intends, as provided below, that if developed in connection with the IBEC Project the lBEC Project Related Parcels shall be excluded from the HBP Specific Plan, but otherwise the provisions of the HBP Specific Plan shall apply."[45] (**Exh. 46** [Applicant's Draft of Specific Plan Amendments].) As such, what is proposed is not a Specific Plan Amendment but rather a *variance* for the Project sites only. In any event, whether denominated a specific plan amendment or a variance, this entitlement triggers various required findings, including a necessary finding of "unnecessary hardship."

"Unnecessary hardship" is a term of art generally used in the context of evaluating a zoning variance. For example, under the Los Angeles Municipal Code, no variance may be granted unless "'the strict application of the provisions of the zoning ordinance would result in practical difficulties or unnecessary hardships inconsistent with the general purposes and intent of the zoning regulations.'" (West Chandler Boulevard Neighborhood Assn. v. City of Los Angeles (2011) 198 Cal.App.4th 1506, 1514, fn. 4, 130 Cal.Rptr.3d 360.) Although the test includes both "practical difficulties" and "unnecessary hardships," the focus should be on "unnecessary hardships" and not "practical difficulties," which is a lesser standard. (Stolman v. City of Los Angeles (2003) 114 Cal.App.4th 916, 925, 8 Cal.Rptr.3d 178; Zakessian v. City of Sausalito

---

[45] See the Applicant's draft at http://ibecproject.com/IBECEIR_031887.pdf The Applicant's draft also shows that the Specific Plan Amendment is expressly dependent on the concurrent amendment of the General Plan. This is to ensure that the Specific Plan Amendment is consistent with the General Plan. However, such an arrangement of amending the General Plan to find consistency of it with the subsequent Specific Plan Amendment violates the state planning and zoning laws requiring the *action's* consistency *with* the General Plan, not the opposite. "The tail does not wag the dog. The general plan is the charter to which the ordinance must conform." Napa Citizens for Honest Government v. Napa County Bd. of Supervisors (2001) 91 Cal.App.4th 342, 389.

(1972) 28 Cal.App.3d 794, 799, 105 Cal.Rptr. 105.)" Walnut Acres Neighborhood Assn. v. City of Los Angeles (2015) 235 Cal.App.4th 1303, 1305

> "Although the developer argued the unnecessary hardship was based on its purported lost "economy of scale," no evidence supported that claim. The record contained no evidence that following the zoning regulations and building a less dense facility would cause either financial hardship or unnecessary hardship. We therefore affirm the trial court's judgment requiring the City to rescind its approval of the proposed eldercare facility." Walnut Acres Neighborhood Assn. v. City of Los Angeles (2015) 235 Cal.App.4th 1303, 1306.

Similarly, the Inglewood Municipal Code § 12-97.1 sets out four (4) grounds that must be met to approve a variance:

> "Before any variance may be granted, findings establishing the factual existence of each of the following grounds must be made:
>
> (1) That there are **exceptional** or **extraordinary circumstances** or conditions applicable to the property involved, including, but not limited to, size, shape, topography or surroundings, that do not apply generally to other property or uses in the same zone and vicinity; and
>
> (2) That the strict application of the zoning provisions of this Chapter would result in **practical difficulties** or **unnecessary hardships** inconsistent with the general purpose and intent thereof (the **costs** of providing required improvements or of correcting violations **shall not** constitute such hardship); and
>
> (3) That the granting of such variance will not be materially detrimental to the public health, welfare or safety or injurious to the property or improvements in such zone and vicinity in which the property of the applicant is located; and
>
> (4) That the granting of such variance will not conflict with the provisions of the comprehensive general plan." (**Exh. 47** [Inglewood Municipal Code § 12-97]; emph. added.)

The IBEC DEIR lacks any analysis or any findings to establish the variance grounds listed above.

Moreover, the EIR lacks information about how the Project is inconsistent with its encompassing Specific Plan or the larger General Plan. This missing information is fatal for the FEIR certification for the following reasons:

1) The noted 25- and 15-feet setbacks under the Specific Plan are required to provide for open space and to allow for future street widening. The narrow setbacks left by the Project will significantly limit the City's options.

2) The EIR provides no good faith disclosure and no baseline of what is appropriate under the Specific Plan and General Plan and therefore provide no possibility for the public to identify the extent of proposed changes and associated impacts.

The EIR and proposed Project approvals not only lack information about how the Project is inconsistent with the Specific Plan, but also misses the important findings necessary to approve the Specific Plan amendment under state law.

> "The planning commission's summary of 'factual data'—its apparent 'findings'—does not include facts sufficient to satisfy the variance requirements of Government Code section 65906.
>
> "As we have mentioned, at least two sets of legislative criteria appear applicable to the variance awarded: Government Code section 65906 and Los Angeles County Zoning Ordinance No. 1494, section 522. The variance can be sustained only if All applicable legislative requirements have been satisfied. Since we conclude that the requirements of section 65906 have not been met, the question whether the variance conforms with the criteria set forth in Los Angeles County Zoning Ordinance No. 1494, section 522 becomes immaterial." Topanga Assn. for a Scenic Community v. County of Los Angeles (1974) 11 Cal.3d 506, 518.

The DEIR must be supplemented with information about the inconsistency of the Specific and General Plans along with analysis of the proposed changes, and recirculated.

The City may not approve the changes to the Specific Plan or remove the Project sites from it without the findings required by the Inglewood Municipal Code. Doing so would be a violation of the Inglewood Municipal Code, State Planning and Zoning Law, and CEQA.

B. <u>The Specific Plan Amendment Results in Discriminatory Spot Zoning.</u>

The Project's Specific Plan amendment removing the Project sites from the Specific Plan and essentially exempting just the Project site lots from the Specific Plan requirements creates impermissible spot zoning without any justifiable public interest or benefit for the *Inglewood* community. Stated otherwise, even though the City of Inglewood through the Project will attract numerous people from *other* places for games and events and will become an entertainment center for *visitors,* the Project will bring no actual interest or benefit to Inglewood's disadvantaged community but only the brunt of the Project's 41 adverse environmental impacts.

The lack of public benefit or interest is particularly the case here, as the Specific Plan requires 25-foot setbacks on South Prairie St. and 15-foot setbacks on 102nd Street and where the Project significantly reduces the setbacks on South Prairie and vacates the portion of 102nd street around the Project area:

> "South Prairie Avenue – In the vicinity of the project, the street has continuous sidewalks with widths varying from about 5 to 13 feet. Sidewalks **immediately adjacent** to the **Project Site** are **less than 5 feet**, and adjacent to an 8-foot landscaped area that also contains signage and utilities. Striped crosswalks are provided at signalized intersections, and most curb ramps do not have truncated domes.
>
> "West 102nd Street – Sidewalks on West 102nd Street near the Project Site range from 5 to 7 feet. Signage and utilities **obstruct the pedestrian path** of travel in **several locations**." (DEIR, p. 3.14-50, pdf p. 1134, emph. added.)

The *sidewalk* being the public right of way is *distinct* from *setbacks* that the Applicant itself must provide on the private property; therefore, the setbacks that the Project must provide should not count the 5-foot or less sidewalk towards its own setbacks. The setback reductions – and essentially the violations of the Specific Plan – are contrary to the public benefit for both the visitors of the Project and the residents of the Project's surrounding area.

The California Constitution, Article 1, Section 7(b) provides: "A citizen or class of citizens may not be granted privileges or immunities not granted on the same terms to all citizens." Under this provision, a "privilege" includes "a particular and peculiar benefit or advantage enjoyed by a person, company, or class beyond the common advantage of other citizens." Diagh v. Schaffer (1937) 23 Cal.App.2d 449, 454-455, unrelated language clarified in Johnson v. Superior Court (1958) 50 Cal.2d 693, 699. The case of Foothill Communities Coalition v. County of Orange (2014) 222 Cal.App.4th 1302, 1313 (Foothill) holds that to create a privileged "island of property with less restrictive zoning in the middle of properties with more restrictive zoning is spot zoning." Such discriminatory zoning can only be justified by a "*substantial* public need." Foothill, 222 Cal.App.4th at 1314 (emphasis added).

Without citing to *any* "public need" and in defiance thereof, the Project proposes significant changes and amendments to benefit the *private needs* of the IBEC Project's Applicant. The City has not made findings of substantial public need, nor can it do so with the controversial Project objected to by many in Inglewood, by interested groups, and even legislators. (**Exh. 11** [AB-987 comments].)

Where there is discrimination, where the classification and resulting benefits given to the privileged "island" are not related to particular characteristics of the site that are not shared by the surrounding land, then a higher standard of review is applied, as in Foothill. Because it involves discrimination, spot zoning "entails a 'more rigorous form of judicial review.'" Avenida San Juan Partnership v. City of San Clemente (2011) 201 Cal.App.4th 1256, 1268, quoting Ehrlich v. City of Culver City (1996)12 Cal.4th 854, 900 (Mosk, J., conc.) While Ehrlich involved restrictive spot zoning, the principle should apply equally to preferential spot zoning, which is, in essence, discrimination against like-situated properties.

For these additional reasons, the Specific Plan amendments should not be approved.

XIII. THE PROJECT VIOLATES THE SUBDIVISION MAP ACT.

The Project's proposed actions for approval include:

> "• Approval of subdivision map(s) or lot line adjustments to consolidate properties and/or adjust property boundaries within the Project Site." (DEIR, p. 2-89.)

In fact, the Project will need to consolidate numerous lots and *vacate* portions of City streets at W. 101st and W. 102nd Street and encroach on public right of way. The requested approvals also include:

> "• Approval of the vacation of portions of West 101st Street and West 102nd Street, and adoption of findings in connection with that approval.
>
> • Approval of right-of-way to encroach on City streets." (DEIR, p. 2-89, emph. added.)

The Project's proposed subdivision/tentative tract map(s) should not be approved because it violates the Subdivision Map Act, Govt. Code §§ 66410 et seq.

Pursuant to Govt. Code § 66473.5:

> "No local agency shall approve a tentative map, or a parcel map for which a tentative map was not required, unless the legislative body finds that the proposed subdivision, together with the provisions for its design and improvement, is consistent with the general plan required by Article 5 (commencing with Section 65300) of Chapter 3 of Division 1, or any specific plan adopted pursuant to Article 8 (commencing with Section 65450) of Chapter 3 of Division 1.
>
> "A proposed subdivision shall be consistent with a general plan or a specific plan only if the local agency has officially adopted such a plan and the proposed subdivision or land use is compatible with the objectives, policies, general land uses, and programs specified in such a plan." (Id.)

In addition, Govt. Code § 66474 mandates that the agency make specific findings, prior to the approval of a tentative map or parcel map:

> "A legislative body of a city or county **shall deny** approval of a tentative map, or a parcel map for which a tentative map was not required, if it makes any of the following findings:
>
> (a) That the proposed map is not consistent with applicable general and specific plans as specified in Section 65451.

(b) That the design or improvement of the proposed subdivision is not consistent with applicable general and specific plans.

(c) That the site is not physically suitable for the type of development.

(d) That the site is not physically suitable for the proposed density of development.

(e) That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

(f) That the design of the subdivision or type of improvements is likely to cause serious public health problems.

(g) That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision. In this connection, the governing body may approve a map if it finds that alternate easements, for access or for use, will be provided, and that these will be substantially equivalent to ones previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction and no authority is hereby granted to a legislative body to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision." (Id.; emph. added.)

Because of its 41 non-mitigated significant adverse environmental impacts – including but not limited to the impacts on traffic and pedestrian circulation, open space, displacement of numerous residential and commercial structures (including through the alleged right to use eminent domain), air quality and greenhouse gas emissions[46]

[46] We also direct your attention to the June 12, 2020 decision of the California Court of Appeal in Golden Door Properties v. County of San Diego (2020 WL 3119041). This

associated with both the Project construction and its operation – the Project presents a serious public hazard and substantial environmental damage to the Inglewood community and to nearby schools and school children.

Moreover, Subdivision Map approval is subject to CEQA, and we incorporate our CEQA challenges by reference for purposes of the Subdivision Map Act and all other land use applications and potential approvals.

The DEIR admits that the Project is inconsistent with the Specific Plan and seeks to amend it, in order to avoid such inconsistency. See supra. The DEIR also admits that the Project is inconsistent with the General Plan and therefore improperly seeks amendments thereto. Id. See also supra (General Plan Amendments and Piecemealing).

The Project – with its planned development, its proximity to other similar arenas, and its adverse impacts on and/or displacement of numerous commercial and residential properties involved[47] – is not physically suitable or consistent with the intensity of development for the area. The Project's inconsistency with the area where it is proposed is also evidenced by the City's piecemealing efforts to increase the building intensity and density in the General Plan, in large part to benefit the Project. See Sec. VII.E, supra (General Plan Amendments). Friends of "B" Street v. City of Hayward (1980) 106

---

case also requires the City to deny certification of the FEIR and, instead, to amend and recirculate a new DEIR for public and agency review. Among other things, and applicable to the inadequate and illegal EIR herein, the Golden Door opinion eviscerates the validity of a GHG mitigation measure that depends on obtaining offsets from a registry registered with CARB. The Court in detail explained why such offsets are not as effective as compliance-grade offsets used in the cap-and-trade program. The Project and its EIR and MMRP's commission of these same errors is improper and incurable without recirculation of a new DEIR. The opinion also has a helpful summary of the law on cumulative impacts, alternatives, and deferred mitigation, especially why deferred mitigation (of GHG mitigation measures) without clear standards and performance criteria is impermissible. Again, the Project EIR and MMRP fail as to these critical issues. Finally, the opinion upheld the trial court's requirement for an environmental justice ("EJ") analysis as part of CEQA. The EJ "analysis" in the Project EIR is at best tissue thin, and as discussed above, actually fails to properly disclose, assess and mitigate impacts from the City's concurrent proposed EJ General Plan Amendment, which has been egregiously piecemealed out of the instant EIR.

[47] See **Exh. 10,** Case No.: BS170333 (IRATE FAP, Exhibit E).

Cal.App.3d 988, 998 ("Such consistency is expressly required by Government Code section 66473.5").

Section 6 of the proposed Ordinance violates the Subdivision Map Act as it purports to allow unlimited ministerial lot line adjustments, involving five or more contiguous parcels, with one adjustment starting before another adjustment has been finalized with a recorded deed, and without specific approval of the local agency. The Subdivision Map Act excepts lot line adjustments only in compliance with Government Code Section 66412(d). Section 6 of the Ordinance conflicts with the scope of exception for lot line adjustments and is preempted by the Subdivision Map Act. Lot line adjustments granted pursuant to Section 6 of the Ordinance, therefore, would be illegal.

Finally, because many of the Project properties are former Inglewood Redevelopment Agency properties and/or Successor Agency properties, any lot line adjustments would have to be approved by the State Department of Finance or Real Estate. The City cannot assume either the granting, or the timing for granting, of such approvals by the DOF. If the City attempts to avoid this oversight requirement, this will subject the City and the Project to further legal challenge.

We hereby request notice of any and all applications for lot line adjustments for or in connection with the Project.

The Project and its Tentative/Parcel Map must be denied for violation of the Subdivision Map Act.

XIV. VIOLATION OF THE PROVISIONS UNDER SURPLUS LAND LAWS.

The Project approvals listed in the Notice of Preparation include DEIR Section 2.6, which states:

> "• Approval of a Disposition and Development Agreement (DDA) by the City of Inglewood governing terms of disposition and development of property." DEIR, p. 2-89.)

The Project is proposed in most part (23 acres out of 28) on public land. The Project has been challenged and the City (its various departments and related agencies) and the Project Applicant were sued for violation of applicable laws governing the disposition of surplus land. (**Exh. 10** [MSG pleadings related to surplus land].) The City's arguments in court to counter petitioner's claims that the lots could not be offered

for residential affordable housing purposes first because of the FAA regulations and noise. However, the Project does include a residential structure – a hotel, another 14-story hotel is proposed in close proximity and across from the Project as part of the Hollywood Park Redevelopment Project, and the latest draft of the Disposition and Development Agreement includes a provision that the FAA restrictions should not bar the development of the Project as outlined in the DDA (i.e., including the hotel).

In view of this conflicting new and different evidence, not before the Court at the time, we reinstate the claims and allegations in the respective pleadings by MSG Forum. (See **Exh. 10** [collective pleadings].)

XV. THE DISPOSITION AND DEVELOPMENT AGREEMENT IS BASED ON FRAUD AND IS *VOID AB INITIO.*

As the law prescribes and the Supreme Court has held since the founding of this state: "Fraud vitiates all transactions into which it enters." 34A Cal. Jur. 3d Fraud and Deceit § 4, Simmons v. Ratterree Land Co. (1932) 217 Cal. 201, 203-204.

Ample evidence exists – including evidence brought before the Court and found valid by the Court – that the Project itself commenced based upon fraudulent representations and concealment by the City and particularly by Mayor Butts as to what would be proposed on the lots the City purchased with the FAA grant. Specifically, Mayor Butts misrepresented to MSG Forum – and to the public – that the area would be used to build a technical or industrial park. (**Exh. 26** [fraud case against the City and Mayor Butts].)

There is also evidence that the area, much of which is vacant and proposed to be used for the Project, was previously home to numerous apartment buildings, whose tenants were relocated and their residences demolished. The City has been setting the stage up for the Clippers Project long before the community became aware of it. Hundreds of people were relocated because of the allegedly objectionable air plane noise, whereas the Clippers arena will bring in numerous people and even hotel guests despite those objections.

Tellingly, the latest draft of the Disposition and Development agreement[48] provides that the parcels that the City had previously acquired with the FAA grant and are therefore subject to developmental restrictions will be conveyed to the Project

---

[48] See at http://ibecproject.com/IBECEIR_032579.pdf

Applicant with those same restrictions. However, the agreement then undermines this by providing: "However, **no** such covenants, conditions, **restrictions** or equitable servitudes **shall prohibit** or limit the development of the Project Site as permitted by the Scope of Development and this Agreement." (Disp. Agreement, Section E [283]; emph added.)

Also, due to the above-quoted carve-out related to the encumbrances and more specifically FAA restrictions, the City's justification that the Project site is not suitable for residential structures because of the FAA grant[49] conflicts with the IBEC Project's proposed hotel – a residential structure (**Exh. 48** [Inglewood Municipal Code § 8-121]), about which no specific information is provided in the EIR. This City justification – which helped the City counter claims of violation of the surplus land laws – is also sophistry in view of the City's approval of a 14-story hotel in the vicinity of the Project as part of the Hollywood Park Redevelopment Project.[50]

Finally, the DDA is illegal and fraudulent because it sets the stage for eminent domain action by the City to condemn private properties – all financed by the Project Applicant and for the latter's *private* purposes. The DDA further provides that – after eminent domain is exercised – all the properties taken by eminent domain will be conveyed to the Project Applicant. This is a naked abuse of the power of eminent domain (which power cannot be lawfully exercised here). The alleged public purpose for the City's intended use of eminent domain is pretextual and a transparent prevarication.[51]

Development of the Project and similar stadiums also increases nearby properties' rents and real property values. We believe that evidence that certain City officials (and decision makers), or those related to them such as family members, have been purchasing properties and expect a prospective economic advantage from approval of the Project. This situation can qualifies as a "bribe," and constitute a further basis for challenging any ostensible right to take.

---

[49] See FAA Grant Agreement at http://ibecproject.com/IBECEIR_031082.pdf

[50] See pdf pp. 12 and 15 at https://www.cityofinglewood.org/DocumentCenter/View/108/II-Project-Description-PDF

[51] We have previously objected to the City's stated intended use of eminent domain to take private properties for the benefit of Murphy's Bowl and the Project, particularly our client's property at 10212 South Prairie Ave. We expressly reserve all objections thereto, which will be more fully raised if/when the City proceeds to a resolution of necessity hearing. (See, e.g., **Exh. 49** [April 23, 2020 letter].)

Fraud vitiates any transaction and any potential approval of the DDA is therefore *void ab initio*. The City's approval of the DDA will also lead to the violation of our client's civil rights, and the civil rights of similarly situated property and business owners.

Finally, the DDA should not be approved as it is tainted and illegal due to the City's precommitment to the Project through its ENAs in violation of CEQA, the City's flawed CEQA findings, as well as the City's sanctioning of the illegal *rewriting* of the City's General Plan, Specific Plan, and the overlay zone to accommodate the Project.

XVI. CONCLUSION.

For all of the foregoing reasons, the FEIR must be rejected, the Project applications and entitlements denied, and a new and legally compliant DEIR circulated prior to any further consideration of the Project.

Very truly yours,

/s/ Robert P. Silverstein

Subject: California Public Records Act Request | IBEC Project SCH 2018021056; Billboard Project Case No. EA-MND-2019-102

Dear Public Works Officials:

This is a public records request made pursuant to Government Code § 6250, et seq.

Please provide the following documents:

1) All documents and communications - from January 1, 2020 through the date of your compliance with this request - which relate or refer to the public works, construction, or improvements on **S. Prairie St., between 10200-10212 S. Prairie St.** or within 300 feet of same in each direction, including but not limited to the purpose of these ongoing improvements and or construction, the associated projects and applicants that the construction/improvement work is related to, as well as any road or sidewalk widening plans for the noted area on S. Prairie St.;

2) All documents and communications - from January 1, 2018 through the date of your compliance with this request - which relate or refer to the **IBEC Project's (aka Murphy's Bowl) SCH 2018021056** proposed signage, or signage that would be used, in whole or in part, in connection with events at the proposed IBEC project including but not limited to communications from the planner, the City's various departments, Mayor Butts and Council members, as well as the Applicant Murphy's Bowl, LLC and its representatives and agents;

3) All documents and communications - from January 1, 2018 through the date of your compliance with this request - which relate or refer to the **Billboard Project EA-2019-102 by WOW Media, Inc.** and the installation of motion billboard signs on S. Prairie St. between 10200-10204 S. Prairie St., including but not limited to communications from the planners, the City's various departments, Mayor Butts and Council members, as well as WOW Media, Inc. and its representatives and agents.

Govt. Code § 6253.9(a) requires that the agency provide documents in their native format, when requested. Pursuant to that code section, **please also provide the requested documents, including all applications, in their native and electronic format.**

Because I am emailing this request on April 22, 2020, please ensure that your response is provided to me by no later than **May 2, 2020.** Thank you.

Also, **please include** this correspondence and CPRA request in the administrative record and council files for both the IBEC Project and the Billboard Project, as described above.

Thank you.

Re: Brown Act Violations; Cure and Correct Demand in Connection with Public Meeting on March 24, 2020 and Demand to Cease and Desist, Including Under Govt. Code § 54960.2; IBEC Project SCH 2018021056, and Request to Include this letter in Admin Record for IBEC DEIR

Public Records Act Request for March 24, 2020 Council's Closed Session Audio/Video Recording and Notes, Minutes, Records.

Dear Ms. Horton and City Officials:

I. INTRODUCTION.

This firm and the undersigned represent Kenneth and Dawn Baines, owners of the property located at 10212 S. Prairie Ave., Inglewood, directly impacted by actions taken by the City of Inglewood Council on March 24, 2020.

We write to demand that the City of Inglewood, Inglewood City Council and above-referenced City bodies (collectively "City") cure and correct their March 24, 2020 violations of the Brown Act, which violations include taking action on items not duly listed on the regular meeting agenda of the City Council for March 24, 2020 in both the open and closed-door sessions, and further include depriving the public of the opportunity to adequately participate and comment on items by failing to produce copies

of the agreement(s) that the City approved and the Mayor signed at the March 24, 2020 meeting.

As part of this cure and correct, we demand that the City invalidate any actions taken on, and related to, the Mayor's signing of the settlement agreement(s), and take no further action unless and until a copy thereof is timely produced to the public, is subject to advance public comment at a properly noticed public hearing, and is included in the administrative record for the IBEC Draft EIR, as such actions by the Mayor and City have a direct bearing on the City's consideration of the IBEC Draft EIR.

We also demand that the City to produce records and documents of the March 24, 2020 closed session.

In addition, we demand that the City cease and desist what has become an ongoing pattern and practice of Brown Act violations, particularly with regard to the IBEC Project, and that the City fully comply with the letter and spirit of the open meeting laws.

II. ONGOING PATTERN AND PRACTICE OF BROWN ACT VIOLATIONS.

The City has consistently engaged in the pattern and practice of misinforming the public about the true nature and scope of the proposed IBEC Project, as well as its required approvals. The City's actions have been previously criticized and challenged on those grounds. (See, e.g., **Exh. 1** [IRATE Letter, March 21, 2018, with enclosures of IRATE's Complaint to the District Attorney on March 15, 2018], incorporated in full herein.)

In response to IRATE's complaint and as a result of an ensuing investigation, the District Attorney concluded: "It should be noted that the deficiency of the agenda description appears to have been part of concerted efforts between representatives of the city and the Murphy's BOWL LLC to limit the notice given to the public." (**Exh. 2** [DA Letter of May 17, 2019].)

Unable to prosecute the City Council and all related persons solely because of the statute of limitations that had run, the District Attorney expressed hope that the City Council would correct their actions:

> "Violations relating to the agenda description of an item of business could render action by the city council null and void. ·However, because the complaint was received after the time limits to remedy the violation, no action will be taken at this time. Nonetheless, we sincerely hope that this letter will assist the city council in ensuring

that such violations will not recur in the future." (**Id.** [DA Letter of May 17, 2019].)

The District Attorney's hope and the public's trust were abused by the City's violations on March 24, 2020, as further detailed below.

III. FACTUAL BACKGROUND.

On March 24, 2020 – a week after California Governor issued a stay-at-home order applicable to everyone and all non-essential services, and when the public could no longer physically participate in public meetings – the City Council held a meeting related to the Clipper's Inglewood Basketball Entertainment Center Project and effectively sealed the fate of the Inglewood community to endure the IBEC Project's 41 adverse environmental impacts. (**Exhs. 3 & 4** [NRDC Letter, March 24, 2020 and California Legislature Letter, June 28, 2019].)

In particular, the City Council convened:

(1) In closed session, to discuss the settlement of 4 ongoing lawsuits by MSG Forum and community group IRATE against the City related to the IBEC project and challenging the City on various grounds, including violations of the Brown Act, Surplus Land Act, and CEQA, and

(2) In open session, to sign an *unspecified* settlement or "tri-party agreement" or "one or more agreements" with MSG, IRATE, Clippers, City Hall and other *unidentified* people.

Unlike other items on the agenda, the noted "tri-party agreement" was not hyperlinked to or in the agenda. It was not available at the hearing. (**Exh. 5** [Daily Breeze Article re mayor signing of the settlement agreement: "The Inglewood City Council approved the settlement at its meeting Tuesday. Butts, smiling ear to ear, paused the agenda so he could sign the document immediately. A copy of the agreement was not available Tuesday."]) As of April 23, 2020 – nearly a month after it was signed – the agreement is still not linked to the agenda, or available online or elsewhere that we can determine. It was not readily available to the public even through the City Clerk's office, which – upon requests for same – had to search for it, but still has not produced it through the present time. (**Exh. 6** [emails requesting Settlement Agreement; no responses from the City to multiple requests].)

The City's actions on March 24, 2020 in connection with both open and closed-door session items violated the Brown Act.

IV. MISLEADING AND INADEQUATELY DESCRIBED AGENDA ITEM.

As before, when it was established that the City conspired with Murphy's Bowl (the developer entity of the Clippers Arena) to limit the description of the agenda item to be considered by the City Council on June 15, 2017 "so it won't identify the proposed project," and agreed not to provide the "normal 72 hours" notice under the Brown Act[1] (see **Exh. 1** [IRATE's March 15, 2018 letter to the DA as part of Exh. 1]), the City's March 24, 2020 agenda failed to provide adequate description – beyond vague statements – of the settlement agreement(s) to be approved and actually signed. The Agenda stated:

A-2. **CITY ATTORNEY/GENERAL COUNSEL'S OFFICE**

Consideration of and possible action on one or more agreements with MSG Forum, LLC; Inglewood Residents Against Taking and Evictions; Murphy's Boal LLC; and, other entities and individuals in furtherance of a potential settlement of claims arising from the proposed development of, and CEQA review for, the Inglewood Basketball and Entertainment Center Project, as well as obligations of the landowner of the Forum*
Recommendation:

- Consider and Act on the following agreements:

1) Release and Substitution of Guarantor Under Development Agreement by and among MSG Forum, LLC, MSGN HOLDINGS, L.P., POLPAT LLC, and the City of Inglewood; and
2) Tri-Party Agreement by and among MSG Forum, LLC, MSG Sports & Entertainment, LLC, Murphy's Bowl LLC, and the City of Inglewood.

(**Exh. 7** [March 24, 2020 City Agenda].)

The description reflects another "concerted effort" by the City and Murphy's Bowl, as previously condemned by the District Attorney, to hide information from the public as to what exactly the agreements were that the Council would possibly act upon. The description does not specify either what those "one or more agreements" are, or who the "other entities and individuals" are. Moreover, the relevant documents were not available at the hearing and were not hyperlinked or provided with the agenda packet for the public to find out the missing information.

---

[1] The District Attorney concluded this was a Brown Act violation but could not prosecute because of the statute of limitations.

Most importantly, the description does not make clear that the settlement agreement(s) were related to the very same lawsuits discussed in the same day's closed session:

- MSG Forum, LLC v. City of Inglewood, et al.; Case No. YC072715;
- MSG Forum, LLC v. City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, et al.; Case No. BS174710;
- Inglewood Residents Against Takings and Evictions v. City of Inglewood, et al.; Case No. B296760; and
- Inglewood Residents Against Takings and Evictions v. City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, et al.; Case No. BS174709

This essential nexus between the closed session lawsuits and the subsequently signed settlement agreement(s) should have been disclosed and the description of the settlement agreement(s) should have plainly referenced, or even cross-referenced to the closed session item description, the lawsuits in order to be meaningfully informative to the public. Yet this essential information was concealed from the public. As stated by the District Attorney to the City Council in the District's Attorney's letter related to the IBEC Project:

> "The Brown Act, in Government Code section 54954.2(a)(1), requires that a local agency "post an agenda containing a brief general description of each item of business to be transacted or discussed at the meeting." That section further states, "A brief general description of an item generally need not exceed 20 words. "Courts have held that although the description need not include every detail of a matter, it must be **sufficient** to give the public "fair notice of the **essential nature** of **what** an agency will consider," and not leave the public "to **speculation**." *(San Diegans for Open Government v. City of Oceanside* (2016) 4 Cal. App. 5th 637, 645; *San Joaquin Raptor Rescue Center et al. v. County of Merced et al.* (2013) 216 Cal. App. 4th 1167, 1178.)" **(Exh. 2,** emph. added)

The City Council's agenda failed to comply with the Brown Act, Govt. Code Section 54954.2(a)(1), in that it failed to provide an adequate description of the agenda item and sufficient public notice of the essential nature of what the agency would not only consider but also act upon. As a result, the public was left to *speculate*.

Moreover, the agenda description must not be misleading. The brief description of an item that the City will consider or deliberate on cannot be ambiguous or misstate the item under discussion. Moreno v. City of King (2005) 127 Cal App 4th 17 (an item on the agenda describing consideration of contract for Interim Finance Director was not sufficient notice of actually considering the termination of the sitting Finance Director). Thus, apart from the vague and ambiguous description, compounded by failure to provide the actual settlement agreements to be signed (and which through today still have not been made publicly available, despite repeated requests [**Exh. 6**]), the agenda was also misleading, since the essential agenda items involving the City Council/Mayor's signing of the agreement(s) was misplaced and put at the end of the agenda, under the section of **"REPORTS – CITY ATTORNEY And/Or GENERAL COUNSEL."** Placing Action Items in Reports further denied fair notice to the public of the critical action the City would take.

The above-noted violations in vaguely listing the agenda items, coupled with the failure to provide the copy of the agreement(s), and misleading placement of the agenda item of signing a settlement agreement in the "report" section precluded fair notice to the public and frustrated public knowledge and participation, in violation of the Brown Act.

V. FAILURE TO PROVIDE A COPY OF THE SETTLEMENT AGREEMENT TO THE PUBLIC PRIOR TO THE CITY SIGNING IT.

Based on our information and the City's responses and lack thereof, the City Clerk has not made the settlement agreement(s) publicly available even as of the date of this letter. In any event, as of April 23, 2020, they were not placed in an active link to the relevant agenda (doing so now would be too late even if it were), and our requests for these critical documents have been entirely ignored. (**Exh. 6**.)

We further note that pursuant to Govt. Code Sec. 54954.3, the agenda must provide an opportunity for the public to address the legislative body before or during the legislative body's consideration of the item. Stated differently, apart from the fact that the agenda item was vaguely described, a person who listened to the City meeting (assuming they could even hear, given the City's terrible audio quality) and wanted to make a comment on the subject would have been precluded from doing so meaningfully because of the City's failure to produce for public review the settlement agreement(s) either prior to or even at the time of the March 24, 2020 meeting.

The City's failure to so provide a copy effectively precluded the public's right to be meaningfully informed about the agreement(s) to be signed and to address the

legislative body on that agenda item, prior to the City taking action on it, including the actual signing of the settlement agreement(s).

VI. VIOLATION OF THE CLOSED SESSION EXCEPTION UNDER THE BROWN ACT.

On the flipside, the City's agenda for the March 24, 2020 violated Govt. Code Section 54950 as it exceeded the scope of the closed session litigation exemption under Govt. Code Section 54956.9.

In particular, the agenda for the closed session provided:

> **"CS-1, CSA-5 & P-2.**
>
> Closed session – Confidential – Attorney/Client Privileged; Conference with Legal Counsel regarding Existing Litigation Pursuant to Government Code Section 54956.9(d)(1); Name of Cases: MSG Forum, LLC v. City of Inglewood, et al.; Case No. YC072715; and MSG Forum, LLC v. City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, et al.; Case No. BS174710.
>
> **CS-2, CSA-6, & P-3.**
>
> Closed session – Confidential – Attorney/Client Privileged; Conference with Legal Counsel regarding Existing Litigation Pursuant to Government Code Section 54956.9(d)(1); Name of Cases: Inglewood Residents Against Takings and Evictions v. City of Inglewood, et al.; Case No. B296760; and
>
> Inglewood Residents Against Takings and Evictions v. City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, et al.; Case No. BS174709."

It may be reasonably inferred that the closed session on the four (4) lawsuits filed by MSG and IRATE against the City and Murphy's Bowl involved settlement discussions of same. Such inference is supported by the fact that the parties in the noted four lawsuits were the same parties to the open session settlement "tri-partite" agreement, and the fact that noted lawsuits were stayed by the same parties through joint stipulations filed the day before on March 23, 2020.

While it is proper for the legislative body to discuss and/or adopt settlement agreements in closed session, it is unacceptable where, as here, such settlement pertains to significant policy changes that should have been the subject of discussion in open session, notwithstanding the provisions of the Brown Act that allow for discussion of pending litigation in closed session under Govt. Code Section 54956.9. See Trancas Property Owners Association v. City of Malibu (2006) 138 Cal.App.4th 172. In Trancas the Court held that the adoption in closed session of a settlement agreement that called for certain zoning actions violated the Brown Act because deciding to take those actions would normally be subject to the Brown Act's open meeting requirements. The court stated that whatever else Section 54956.9 permits, "the exemption cannot be construed to empower a city council to agree to take, as part of a non-publicly ratified litigation settlement, action that by substantive law may not be taken without a public hearing and an opportunity for the public to be heard." Id. at 186.

The settlement agreement in the subject City Agenda was described as pertaining to "claims arising from the proposed **development** of, and **CEQA review** for, the Inglewood Basketball and Entertainment Center Project." (Emph. added.) It is undisputed that CEQA review of an EIR – especially that of the controversial IBEC Project with 41 adverse environmental impacts – is required to be an explicitly public process. Hiding discussion of "CEQA review"-related issues behind closed door sessions and vague agenda descriptions violates that principle.

As our Supreme Court has stated:

> "We have repeatedly recognized that the EIR is the 'heart of CEQA.' [Citations.] "Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions before they are made. Thus, the EIR 'protects not only the environment but also informed self-government.'" [Citations.] To this end, public participation is an 'essential part of the CEQA process.' [Citations.]" Laurel Heights Improvement Assn. v. Regents of Univ. of California (1994) 6 Cal. 4th 1112, 1123.

The Brown Act, Govt. Code Sec. 54950, provides:

> "In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and the other public agencies in this State exist to aid in the conduct of the people's business. It is the intent of the law that their **actions be taken openly** and that their **deliberations be conducted openly**.

> "The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created." (Emph. added.)

Govt. Code Sec. 54952.2 defines meetings and disclosure mandates broadly. As the Attorney General has explained:

> "In construing these terms, one should be mindful of the ultimate purposes of the Act – to provide the public with an opportunity to monitor and participate in decision-making processes of boards and commissions. . . . Conversations which advance or clarify a member's understanding of an issue, or facilitate an agreement or compromise among members, or advance the ultimate resolution of an issue, are all examples of communications which contribute to the development of a concurrence as to action to be taken by the legislative body." The Brown Act: Open Meetings for Local Legislative Bodies, p. 12 (Cal. Atty General's Office 2003).

Thus, the City's deliberations and discussions about signing the settlement agreement(s) on the four lawsuits during the closed session and to effectively dispose of claims of public interest and concern requiring a public hearing (including CEQA issues) violated the overarching purposes of the Brown Act and its mandates for conducting the public's business through open, non-occluded meetings and deliberations, including under Govt. Code Secs. 54950, 54952.2.

VII. CALIFORNIA PUBLIC RECORDS ACT REQUEST.

In view of the above-noted violations, where the Mayor and City improperly discussed the settlement agreement and related "CEQA review" issues and lawsuits during the closed session instead of in the open session as required by law, we request that the City provide the audio and video recordings of that closed session, as well as any minutes, notes, or records made or exchanged by anyone present at the meeting re same.

This request is made under the California Public Records Act pursuant to Government Code § 6250, et seq.

Govt. Code § 6253.9(a) requires that the agency provide documents in their native format, when requested. Pursuant to that code section, **please also provide the requested documents in their native and electronic format.**

Because I am emailing this request on April 23, 2020, pursuant to Govt. Code Secs. 6253 and 6255, please ensure that your response is provided to us by no later than **May 3, 2020**.

VIII. DECLARATORY RELIEF FOR PATTERN AND PRACTICE VIOLATIONS.

Based upon the ongoing failure of the City and City Council to properly identify the agenda items in both the closed session and the open session and allow meaningful opportunity to the public to study, be informed and comment on City actions, including through the City's failure to provide copies of documents to the public that the City intends to act upon, particularly related to the IBEC project, and as to which the District Attorney has already recognized improprieties in the City's conduct, pursuant to Government Code Section 54960.2, this letter shall also be **a demand to cease and desist** the City's pattern and practice of violating the rights of members of the public in a similar manner. We also demand that the County agree to implement training of its officials and personnel to prevent these illegal actions from occurring in the future.

IX. CONCLUSION.

The City must **cure and correct** these Brown Act violations by rescinding the March 24, 2020 approval and signing of the settlement agreement(s) and by producing/circulating them to the public in advance of and as part of any future consideration of them and their potential signing, or regarding any other potential action related to them and/or regarding all IBEC project CEQA issues.

The City must also produce all video/audio and other records and or minutes and notes of the closed session held on March 24, 2020.

//

//

//

//

If we do not receive a positive and fully corrective response from the City, it will be necessary to initiate litigation to set aside the City Council's illegal actions and/or to seek declaratory or injunctive relief to bring the City's practices into conformity with the law. Thank you for your courtesy and prompt attention to this matter.

Very truly yours,

/s/ Robert P. Silverstein

Re: Comments on Notice of Preparation of Draft Environmental Impact Report for the Inglewood Basketball Entertainment Center

Dear Ms. Wilcox:

On behalf of Inglewood Residents Against Takings and Evictions (IRATE), we submit the following comments on the Notice of Preparation of an environmental impact report (EIR) for the Inglewood Basketball Entertainment Center (Proposed Project).

A. The ENA Must Be Rescinded Prior to Consideration of the EIR.

As an initial matter, we again call upon Inglewood to rescind its August 2017 approval of the Exclusive Negotiating Agreement (ENA) with Murphy's Bowl LLC that has locked Inglewood into refusing to consider any alternative uses of the Project site for at least three years.[1]

The NOP claims that the EIR will identify and evaluate a range of reasonable alternatives to the Proposed Project, including a No Project Alternative (Guidelines section 15126.6). However, Inglewood, along with its associated redevelopment and parking entities, through the ENA has already committed itself to refuse to consider alternatives during the three year exclusive negotiating period.

The ENA explicitly states: "During the Exclusive Negotiating Period and the sixty (60) day period referred to in Section 22 below, the Public Entities … shall not negotiate with or consider any offers or solicitations from, any person or entity, other than the

[1] IRATE seeks a writ of mandate from the Los Angeles Superior Court to require Inglewood to set aside the ENA in *Inglewood Residents Against Takings and Evictions v. Inglewood*, case no. BS 170333.

Developer, regarding a proposed DDA [Development and Disposition Agreement] for the sale, lease, disposition, and/or development of the City Parcels or Agency Parcels within the Study Area Site." (ENA, section 2 (a).) With the ENA in place, Inglewood would not in good faith be able to fully consider a range of alternatives as required by CEQA. Instead, its EIR review would become a post-hoc rationalization for a decision to approve the Proposed Arena Project which has already been made. Courts have expressly condemned such a use of an EIR:

> A fundamental purpose of an EIR is to provide decision makers with information they can use in deciding *whether* to approve a proposed project, not to inform them of the environmental effects of projects that they have already approved. If post-approval environmental review were allowed, EIR's would likely become nothing more than *post hoc* rationalizations to support action already taken. We have expressly condemned this use of EIR's.

(*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 394.)

B. Alternatives to the Arena Project Must Be Analyzed in Depth in the EIR.

While an environmental impact report is "the heart of CEQA", the "core of an EIR is the mitigation and alternatives sections." (*Citizens of Goleta Valley v. Bd. Of Supervisors* (1990) 52 Cal.3d 553, 564.) Preparation of an adequate EIR with analysis of a reasonable range of alternatives is crucial to CEQA's substantive mandate to "prevent significant avoidable damage to the environment" when alternatives or mitigation measures are feasible. (CEQA Guidelines § 15002 subd. (a)(3).)

1. A Potential Rezone of the Lockhaven Tract Back to Its Original Residential Zoning Should be Analyzed.

Alternative uses of the parcels throughout the Project area are possible, including for housing. The proposed project area, also known as the northern portion of the Lockhaven Tract, was formerly zoned as R-3 until 1980. Then it was changed to M1-L for limited manufacturing. There are people living in the northern portion of the Lockhaven Tract currently, including people receiving Section 8 housing vouchers. If the area is rezoned to a residential type of zoning as it was in 1980 and before, the vacant lots could be used for affordable housing.

From the NOP, it is apparent that one or more zone changes would be required as part of the Proposed Project approvals. (NOP, p. 5 ["Zoning Changes" listed among "Anticipated Entitlements and Approvals"].) Therefore, the alternative of changing zoning to R-3 or some other type of residential zoning should be analyzed in the EIR.

2. The Potential for Usage of the Area for a Technology Park Must be Analyzed.

There was discussion of a Technology Park to be placed on the parcels, and that would be a potentially feasible alternative well worth analysis in the EIR. (https://www.dailybreeze.com/2018/03/06/owners-of-the-forum-sue-inglewood-its-mayor-for-fraud-over-potential-clippers-arena/.) The area's current M-1L zoning allows for extensive uses such as hotels, warehousing, and retail sales. (https://www.qcode.us/codes/inglewood/.)

3. The Potential for Usage of the Area for Community Serving Uses Must be Analyzed.

The community group Uplift Inglewood has a detailed proposal for potential usage of the parcels for various parts of the project area which is posted at the following address: https://www.upliftinglewood.org/resources.

The proposal includes a youth center, a day care senior center, a day care children center, a creative arts center, an environmental studies community center, a financial literacy center, a small business incubator center, office space, public art, public plazas, parks, courtyards, bikepaths, and sideswales. Because the parcels owned by the City, Successor Agency to the Redevelopment Agency, and the Parking District are public property, these public-serving ideas must be analyzed as part of the alternatives analysis.

4. Alternative Locations For the Arena Project Must Be Analyzed in the EIR.

Offsite alternatives are a key component of an adequate environmental analysis. An EIR must describe "a range of reasonable alternatives to the project, *or to the location of the project*, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives." (CEQA Guidelines § 15126.6 subd. (a).) Therefore, in addition to considering onsite design alternatives for the Proposed Arena Project, the EIR must also consider the possibility of relocating the Proposed Project elsewhere in a location that could have fewer adverse environmental impacts.

C. The Large Arena Project Would Have Extensive Environmental Impacts

The proposed Project would include a professional basketball arena consisting of approximately 18,000 to 20,000 seats as well as related landscaping, parking and various other uses such as a practice facility, team offices, a sports medicine clinic, restaurants, and retail uses. In addition to the 2-5 preseason, 41 regular season and 16 possible postseason games played by the Clippers, the project would include an additional 100-150 or possibly more events including concerts, family shows, conventions, and

corporate or civic events. A project of this magnitude could have extensive impacts on the environment including impacts to air quality, traffic congestion, nighttime lighting, noise, etc.

D. The Public Must Be Involved With Proper Notice and Full Information.

We are very concerned that Inglewood must ensure it complies with the public participation requirements of the Brown Act, the California Environmental Quality Act, and other applicable legal requirements. We have contacted the District Attorney to express our concern that Inglewood has failed to appropriately comply by providing the public with inadequate notice and inadequate information to allow participation in Inglewood's review process. A copy of our letter to the District Attorney is attached. (Enclosure 1.) Press reports have underscored the public interest in the City's review process in published stories about the concerns. (Enclosures 2 and 3, "Documents Show How Inglewood Clippers Arena Deal Stayed Secret," KCET, Karen Foshay, March 15, 2018 and "In Possible Brown Act Violation, Inglewood Called Special Meeting to Minimize Public Involvement," March 17, 2018, Warren Szewczyk.)

Thank you for consideration of our views. We look forward to reviewing and commenting upon the Draft EIR. Pursuant to Public Resources Code section 21092.2, we request all future notices related to the Proposed Project.

Sincerely,

Douglas P. Carstens

Re: Request for Investigation of Intentional Violations of the Brown Act by City of Inglewood in Approving Exclusive Negotiating Agreement and Arena Project

Dear District Attorney:

On behalf of the Inglewood Residents Against Takings And Evictions ("IRATE") we request that your office investigate Brown Act violations committed by the City of Inglewood[1] involving the proposed Clippers Arena Project in Inglewood. As evidenced in emails required to be produced by Court Order in *Inglewood Residents Against Takings And Evictions v. City of Inglewood*, counsel for the City and the project developer, Murphy's Bowl, agreed to limit the description of the item to be considered by the Council "so it won't identify the proposed project" and agreed not to provide the "normal 72 hours" notice under the Brown Act. The City and Murphy's Bowl collaborated, in violation of the Brown Act, to prevent the public from having a "fair chance to participate in matters" being considered by the City Council.

On June 15, 2017, the City held a special meeting. It is evident from emails between the City and Murphy's Bowl that there was ample time to provide the "normal 72 hours" notice as provided for by the Brown Act. (Attached as Enclosure 1 is a copy of the Special Meeting Agenda for the Inglewood City Council, the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency and the Inglewood Parking

[1] As explained below, the actions appear to have been taken on behalf of the City of Inglewood, the Successor Agency to the Inglewood Redevelopment Agency and the Inglewood Parking Authority. Therefore, references to "City" in this letter include the Successor Agency and the Parking Authority.

Authority). The Agenda stated the following item would be considered at the City's special meeting:

> Economic and Community Development Department. Staff report recommending approval of an Exclusive Negotiating Agreement (ENA) by and among the City, the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency (Successor Agency), the Inglewood Parking Authority (Authority), and Murphy's Bowl LLC, a Delaware Limited Liability Company (Developer).

It is hard to imagine a less descriptive notice for a hearing to consider the development of an NBA arena for the Los Angeles Clippers on more than 80 acres of land that contemplated the use of eminent domain to take hundreds of residences and dozens of businesses, which would result in the eviction of hundreds (if not thousands) of residents as well as the loss of jobs. The ENA was explicit as to the possible use of eminent domain by the City to acquire people's homes and businesses. Properties containing homes, apartments and businesses were identified on a map attached to the ENA and designated for possible "acquisition…by eminent domain." Nowhere in the Agenda item is there a hint that people's homes and livelihood could be taken by the City and conveyed to Murphy's Bowl for the Clippers' arena.[2]

Nowhere in the Agenda notice do the words Clippers, NBA, basketball, or arena occur. Nowhere in the agenda does it even suggest the subject matter of the ENA. If a member of the public were able to figure out that the item somehow related to development, there is no indication of where this development might occur. There is no physical description of the area -- not a street name or intersection. The people in the community affected by this decision to "approve" the ENA had no clue what the City was considering.

We now know, because the City was ordered to produce the emails by the Court, that the City and Murphy's Bowl intentionally omitted this information from the Agenda.

We understand that the violation of the Brown Act is a serious matter so we do not make this request lightly. However, in light of evidence we have obtained as a result of a Court Order it is now clear that the City and Murphy's Bowl worked together to violate the Brown Act and frustrate its purpose.

---

[2] At later hearings on the scope of this Arena Project, the City reduced the area of eminent domain due to community protests.

I. THE CITY VIOLATED THE BROWN ACT ON JUNE 15, 2017 AND AFTERWARDS.

A. The City's Special Meeting Notice Was Designed to Minimize Public Notice of and Interest in the Substance of the Matter Under Consideration.

The Brown Act requires agenda drafters to "give the public a fair chance to participate in matters of particular or general concern by providing the public with more than mere clues from which they must then guess or surmise the essential nature of the business to be considered by a local agency." (*San Diegans for Open Government v. City of Oceanside* (2016) 4 Cal.App.5th 637, 643.) Contrary to this legal requirement, the City and the project developer, Murphy's Bowl, actively deprived the public of the most basic information about what the City Council would consider.

As noted above, the Agenda provided no meaningful information as to what was actually to be considered by the City Council, Successor Agency and the Parking Authority. The public had no way to know from the Agenda that these public entities would be considering a proposed new arena for the Clippers and possibly condemn and evict hundreds if not thousands of residents.

In connection with the June 15, 2017 hearing, we and others objected to clear Brown Act violations. We demanded that the City cease and desist from its efforts to defeat the public transparency purposes of the Brown Act. What we did not know at that time was that the violations of the Brown Act were the result of knowing collaboration between the City and Murphy's Bowl.

B. The City and the Clippers Organization Hid the Ball About What Was Being Proposed for Approval.

This past Monday, March 12, 2018, because of a Court Order in *Inglewood Residents Against Takings And Evictions v. City of Inglewood*, we received from the City's attorneys a disclosure of previously-withheld communications between the City and Murphy's Bowl. These communications provide clear evidence of "collaboration" by the City and Murphy's Bowl LLC to violate the Brown Act prior to the June 15, 2017 meeting. (Enclosure 2.)

On June 9, 2017, Chris Hunter, representing Muphy's Bowl, told Royce Jones, who was representing the City, that "Our entity [i.e., Murphy's Bowl LLC] ***will have a generic name so it won't identify the proposed project.***" (Enclosure 2, page ING-251, emphasis added.) The name "Murphy's Bowl LLC," as stated by Mr. Hunter, was chosen to deprive the public of relevant information. As stated by Mr. Hunter, the development entity, "Murphy's Bowl," was so named so it would have a "generic name" that "won't

identify the proposed project." The email exchange shows that City officials actively participated in that misinformation campaign.

Mr. Steven Ballmer, owner of the Clippers professional basketball team for whom the Arena Project would be built, is the sole member of Murphy's Bowl LLC. (Enclosure 3 [page ING -285], Murphy's Bowl LLC formation papers.) Therefore, the effort by the City and Murphy's Bowl appears to have been designed to misinform the public about the entity that would participate in the ENA and defeat the government openness and transparency purposes of the Brown Act.

In fact, Mr. Hunter goes as far as to make clear that his client, presumably Murphy's Bowl, wants to minimize the time of the release of the ENA to just before the City Council hearing because "My client is trying to time its out reach to the various players." So apparently, it was important for Murphy's Bowl to tell "various players" about the Council meeting and the ENA. The public clearly does not qualify as a "player" as far as Murphy's Bowl and Mr. Hunter are concerned. This rare and uncensored glimpse into the real views of Murphy's Bowl and the City about the community is beyond shocking. Murphy's Bowl and the City had no concern for the people whose lives they were about to affect. No wonder the City fought so hard to prevent the disclosure of these revealing documents.

C. The City and the Clippers Gamed the System by Depriving the Public of As Much Notice as Possible.

A public agency must normally provide 72 hours' notice of a matter prior to a regularly scheduled public hearing:

> The Brown Act ... is intended to ensure the public's right to attend the meetings of public agencies. (*Freedom Newspapers, Inc. v. Orange County Employees Retirement System* (1993) 6 Cal.4th 821, 825, 25 Cal.Rptr.2d 148, 863 P.2d 218.) To achieve this aim, the Act requires, inter alia, that an agenda be posted at least 72 hours before a regular meeting and forbids action on any item not on that agenda. (§ 54954.2, subd. (a); *Cohan v. City of Thousand Oaks* (1994) 30 Cal.App.4th 547, 555, 35 Cal.Rptr.2d 782.)

(*International Longshoremen's and Warehousemen's Union v. Los Angeles Export Terminal, Inc.* (1999) 69 Cal.App.4th 287, 293.) A notice period of 24 hours is allowed for special meetings, but this obviously provides less time for the public to become aware of the meeting and attend.

In response to Mr. Hunter's questioning whether the ENA had to be posted with the agenda for a public hearing, Mr. Jones, the City's attorney, answered that the

"document has to be posted with the agenda. ***That is why we elected to just post 24 hours versus the normal 72 hours.***" (Enclosure 2, p. ING-252, emphasis added.)

This is an email exchange on June 9, 2017, discussing the agenda for the June 15, 2017 meeting. So the City, along with the Clippers, purposefully decided to give only 24 hours' notice rather than the normal 72 hours' notice, so the public would have less notice about the ENA. This is an outrageous attempt to deprive the public of adequate notice when the City very easily could have given the normal 72 hours' notice for such an important matter for the City's residents' future.

Even earlier, in a June 5, 2017 email, Mr. Jones tells Mr. Hunter "the Mayor wants to schedule the meeting ***approving*** the ENA during the middle of June." (Enclosure 2, p. ING-169, emphasis added.) It is clear from the City Attorney's email that the ENA would be approved—that the Mayor and City officials had predetermined the matter before it was even presented to the City Council. Clearly the public didn't matter given that the City and Murphy's Bowl knew the City would provide an agenda item that gave no clue as to what was going to be considered and the City would provide only 24 hours' notice for people to figure it out. They also knew long beforehand they wanted to have the ENA at a public hearing on June 15, 2017, rendering 72 hour notice more than feasible. Instead, the City elected to deprive the public of the "normal" notice period, as noted by the City Attorney. The community was not one of the "players."

It is noteworthy that this limited public notice was provided for an Arena Project that resulted in intense public interest and packed public hearings with extensive public objections to the proposal ***after*** the Los Angeles Times ran a story about it and after the initial June 15 special meeting. (Enclosure 4 [LA Times Article entitled "Possible Clippers Arena has many Inglewood residents worried they may lose their homes or businesses"].)

II. INGLEWOOD HAS A HISTORY OF VIOLATING THE BROWN ACT WHICH YOUR OFFICE HAS INVESTIGATED AND DOCUMENTED.

The Brown Act violation set forth here is not an isolated incident in the City of Inglewood. On November 12, 2013, you sent a letter to the City of Inglewood in Case No. P13-0230 stating that actions by Mayor Butts at meetings on August 27, 2013 and September 24, 2013 "violated the Brown Act." (Enclosure 5.) We ask that you consider Inglewood's history of violating the Brown Act and frustrating public participation as part of the factual circumstances in evaluating our request to investigate the City's more recent Brown Act violations in connection with the Arena Project ENA.

III. CONCLUSION.

Because of the Court-ordered release of documents, we now know that the City and Murphy's Bowl worked together to provide a meaningless agenda description and only 24 hours' notice so that the project would not be known to the general public. The clear and unambiguous intent of the City and Murphy's Bowl was to deprive the public with meaningful notice as required by law.

We urge you to investigate the City's actions in intentionally violating the Brown Act and take appropriate steps to hold the City's leaders accountable.

Sincerely,

Douglas P. Carstens

Subject:	RE: NBA Arena Draft ENA

Good evening Chris. Sorry I missed your call. I tried your office number and instead of leaving a voicemail message I thought I'd shoot you this email to let you know that I am available tomorrow morning to discuss the next steps in the City's process and the mechanics generally associated with moving forward. So please let me know what times work for you and I will make myself available and call you.

As I have not had an opportunity to discuss the revised ENA with the City team, I will obviously not be in a position to discuss the revisions with you tomorrow. However, I do plan to speak with the City team in the next day or so and will definitely promptly provide a response to you once the review is completed.

I look forward to working with you on this very important transaction for our clients.

Subject: NBA Arena Draft ENA

Good afternoon Chris,

My name is Royce Jones and my law firm serves as special counsel to the City of Inglewood. At the request of Mayor James T. Butts, Jr., of the City of Inglewood and Dennis Wong of the Los Angeles Clippers, I have prepared and attached for your review a draft of a proposed Exclusive Negotiating Agreement (ENA) in accordance with discussions held last Friday (April 21, 2017) at Inglewood City Hall in which Mayor Butts and Mr. Wong along with certain other City and Clipper representatives were in attendance. The draft ENA generally details the potential deal points and negotiating parameters established for the preparation of a potential disposition and development agreement by the parties providing for the proposed development of an NBA arena and related uses on real property located within the City of Inglewood.

Please note that the draft ENA has not been reviewed or discussed with my clients and I am therefore reserving the right to make future revisions to the ENA based upon such review and discussions with my clients.

I look forward to working with you on the ENA. I can be reached at either the email address shown above or the Los Angeles telephone number listed below for my office.

Good morning Chris,

I had a chance to go over your revised draft of the ENA over the weekend and made what I hope will bring us really close to finalizing the ENA. As you will see that I made just a few changes that dealt with the acquisition of the Participating Parcels if the parties wanted to do commence acquisition efforts before the DDA and the payment of the $1.5M non-refundable deposit within 24 hours following City approval of the DDA since the Mayor wants to schedule the meeting approving the ENA during the middle of June. I also made a few minor clean up items. I will be available to talk anytime today except 1 pm to 2 pm to discuss the ENA. Hope you had a good weekend.

HI Royce

Following up on my call, attached is the ENA with a couple of clarifications, each highlighted in yellow. Two of the changes revised "DDA approval" to "DDA approval and execution" and the other change incorporates the business point that had been agreed to by the parties that the FMV of the City and Agency Parcels will be determined as of the Effective Date of the ENA.

Let's touch base today and finalize.

Thanks

Chris

Subject: Question

HI Royce

What are the city's requirements for when the ENA document has to be posted. I understand The agenda has to go out 24 hours in advance but the question that I was asked was whether the document must be part of the public agenda or if it can be down loaded shortly before the hearing. My client is trying to time it out reach to the various players. Our entity will have a generic name so it won't identify the proposed project

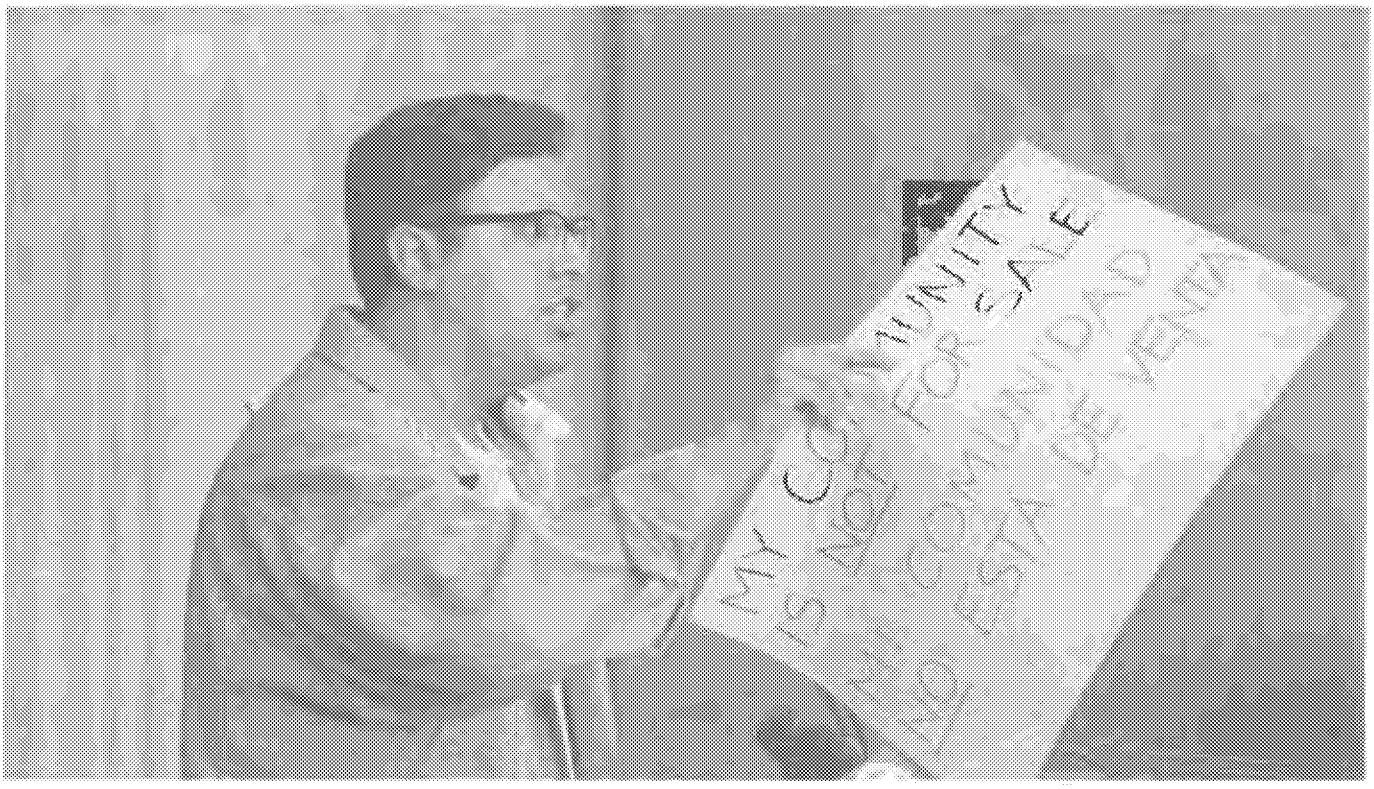
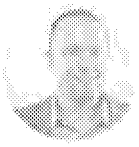
ENCLOSURE 4

Possible Clippers arena has many Inglewood residents worried they may lose their homes or businesses



Ricardo Ramirez, 20, of Inglewood, who is against the proposal for a new arena for the L.A. Clippers in Inglewood, speaks to Mayor James T. Butts and city council members at a special city council meeting held on July 21. (Gary Coronado / Los Angeles Times)



By Nathan Fenno

AUGUST 13, 2017, 6:00 AM

When construction started on the $2.6-billion stadium for the Rams and Chargers last year, Bobby Bhagat figured his family's commitment to Inglewood would finally pay off.

For more than 40 years, they've owned the Rodeway Inn and Suites on busy Century Boulevard. The tidy 36-room property sits across the street from the 298 acres where the vast sports and entertainment district is starting to take shape.

"We've got a gold mine now that the stadium is coming," said Bhagat, whose father and uncle originally purchased the building. "This is what we worked for. We've been waiting for something like this to happen. Now with the Clippers project, it's all up in the air."

The family's gold mine could face a bulldozer.

When a Clippers-controlled company and Inglewood agreed in June to explore building an arena, the 22-page deal sent panic through the neighborhood. Some residents are praying for the project to fail, losing sleep, participating in protests, consulting lawyers.

All this because of the legalese buried in the agreement broaching the possibility of using eminent domain to supplement land already owned by the city. The site map attached to the document shows 100 "potential participating parcels" over a four-block area where the arena might be built. Eminent domain allows cities and other government agencies to pay fair market value to take private property from residents or business owners against their wishes for public uses.

The map doesn't indicate there are an estimated 2,000 to 4,000 people, predominately Latino, who live in the four-block area. Same for the scores of children — schools are a short walk away — and blue-collar residents who have been in the same houses for decades. Many residences include multiple generations of the same family. The median income hovers around $30,000.

The area includes the Inglewood Southside Christian Church, more than 40 single-family homes, apartment buildings with about 500 units, several businesses and the Rodeway Inn and Suites.

The city owns large parcels of land in the area around the business, making it one of the most plausible arena sites.

"It's not an eyesore, it's not blighted, it's well-kept, well-maintained and we don't want to go anywhere," Bhagat said. "We're going to fight tooth and nail to stop the project."

He is among a growing number of business owners and residents pushing back against Clippers owner Steve Ballmer's proposal to construct the "state of the art" arena with 18,000 to 20,000 seats alongside a practice facility, team offices and parking. Ballmer, worth an estimated $32 billion, has said the team will honor its lease to play at Staples Center through the 2024 season.

The Inglewood deal isn't final — some speculate it could be a negotiating ploy by Ballmer to wangle a better deal from the Anschutz Entertainment Group-owned Staples Center — but that hasn't slowed opposition.

One community group sued Inglewood last month in Los Angeles County Superior Court alleging the project should have been reviewed under California's Environmental Quality Act before the council

approved the agreement. The group also distributed fliers urging Inglewood Mayor James T. Butts Jr. to "stop this land grab." Another group, Uplift Inglewood, organized community meetings and protests. The Madison Square Garden Co., which owns the nearby Forum, issued a sharply-worded statement, accused the city of fraud in a claim for damages (usually the precursor to a lawsuit) and sued to obtain public records about the project.

In an email to The Times, Butts described the litigation as "frivolous" and said negotiations for the arena are "proceeding well."

At an Inglewood City Council meeting last month, the mayor insisted "no one is being displaced with the sales of these parcels." But opponents question how enough space exists to build an arena in four blocks without seizing private property. About 20 acres of city-controlled parcels are scattered across the 80-acre area.

The arena and associated structures would likely require at least 20 connected acres — and possibly more. That doesn't include any ancillary development or larger roads to handle increased traffic. The largest contiguous piece of land controlled by the city in the four-block area is only five acres. More would be needed for the project.

"In my opinion, there will not be any eminent domain proceedings of residential property or of church property," Butts wrote in an email. "As negotiations continue, there will be an opportunity for the City Council to make that clear at some point in the near future. That is not the intent of the project. I personally will not support the use of eminent domain proceedings to take any residential property."

But the response by some residents is a contentious departure from the groundswell of support 2½ years ago for Rams owner Stan Kroenke's plan to build his stadium on the site of the old Hollywood Park racetrack. Kroenke isn't involved with the Clippers project, though Wilson Meany, the sports and entertainment district's development manager, is filling the same role for the possible arena.

"This is something more than just bulldozing houses, this is a network of people and relationships that would also be destroyed," said Douglas Carstens, a Hermosa Beach land use attorney who sued Inglewood on behalf of the group Inglewood Residents Against Taking and Eviction that goes by the acronym IRATE. "It may be lower income and underserved, but they have a sense of community that's thriving."

One person who works with neighborhood residents was blunt: "They're sitting on poverty."

On the second Saturday of each month, the church gives away clothing and food to neighbors in need — food usually runs out at each event — and hosts 30 to 40 people for a free breakfast every Friday.

The church owns about two acres along West 104th Street, the largest single parcel in the four-block area that's not controlled by the city or a business. Herbert Botts, pastor of the church for 17 years, said the congregation doesn't want to move, but they're waiting until more details emerge before deciding on what, if any, action to take.

"We will do what we can to fight it, of course we will," Botts said. "But right now we're just keeping our eyes and ears open."

A half-block away, Gracie Sosa has witnessed the neighborhood's evolution from a two-bedroom home on Doty Avenue where she's lived with her parents since 1985. Crime and violence in the area have dwindled in recent years, replaced by a calmer, family-oriented atmosphere.

Sosa, who works for the American Red Cross, learned of the potential arena from a friend. No representatives of the city or team have contacted the family. She takes care of her disabled parents who are in their 70s. The family has no intention of leaving.

"It's about the money," Sosa said. "Let's just say it like it is. They're not thinking about how many people would lose their homes. I don't think our voices are heard. We're not billionaires. We're just residents of a not-so-great neighborhood. But it's our neighborhood.

"We're saying 'No, no, no' until the end."

Irma Andrade agrees. The concession stand manager at Staples Center has lived on Yukon Avenue for 20 years.

"It's unfair for people like us who worked really hard to buy our houses," she said. "I pray for it not to happen. But the money and power is really, really strong. We don't have that power."

Nicole Fletcher resides nearby in an apartment on 104th Street. She walks around the block at night and sees a neighborhood that's come a long way, but holds the potential for more improvement. In her eyes, that doesn't include an arena.

"My biggest concern is how it will impact the families," Fletcher said. "I would hate to see a lot of people move out because they want to build a sports arena."

But little is known about the project other than that Ballmer would fund it himself. The agreement between Inglewood and the Clippers-controlled company, which included the team giving the city a $1.5-million nonrefundable deposit, runs for three years with the possibility of a six-month extension. No renderings have been made public, usually the first step in any public campaign for a new venue. Even the possible location of the arena on the four-block site is a mystery.

A Clippers spokesman declined comment about the project or opposition.

The uncertainty hasn't helped many of the residents, business owners and landlords. There are worried conversations with neighbors. Trips to organizing meetings. And, most of all, questions.

"In our experience with eminent domain, they never give you fair market value," said Bhagat, whose pride in the family business is reflected in his preference to call it a hotel instead of a motel. "We already know we're going to be shortchanged."

He's concerned about the potential lost income from the business that advertises "fresh, clean guest rooms" and touts its proximity to L.A. International Airport. His cousin who operates the business, John Patel, lives on site with his wife and two young children. What would happen to them?

Airplanes descend over the palm tree-lined parking lot. Cranes sprout across the street from the sports and entertainment district scheduled to open in 2020.

"How are we going to replace this business with another business in Southern California with that great of a location?" Bhagat said. "It literally is impossible."

AUGUST 14, 2017, 6:25 PM

Inglewood's City Council will vote Tuesday on a revised deal with a Clippers-controlled company to shrink the four-block area where the team could build an arena so residences and a church aren't displaced.

The reworked agreement, quietly added to the meeting's agenda after it was first posted online Friday, follows protests by worried residents and at least two lawsuits related to the potential project.

owl LLC during a special meeting in June,
about whether proper notice was given for
where the arena, practice facility, team

headquarters and parking could be constructed — and broached the possibility of using eminent domain to acquire some of the property.

The impacted area is home to an estimated 2,000 to 4,000 people with a median income around $30,000, as well as the Inglewood Southside Christian Church.

The new agreement eliminates the possibility of removing single-family homes and apartment buildings and narrows the possible arena area to two blocks along West Century Avenue. They're occupied by a variety of businesses, including the family-owned Rodeway Inn and Suites, a warehouse used by UPS, Church's Chicken and an auto detailing shop. The deal also includes about six acres of city-owned land along West 102nd Street, butting up against the church and apartment buildings in addition to more city-owned land off South Prairie Avenue.

The agreement leaves open the possibility of acquiring property for the arena through eminent domain "provided such parcel of real property is not an occupied residence or church."

Douglas Carstens, a Hermosa Beach land use attorney who sued Inglewood in July on behalf of the group Inglewood Residents Against Taking and Eviction, believes the move is a step in the right direction, but wants more action by the city.

"Even without displacing resident owners or a church, there could still be a significant disruption of long-established businesses and apartment dwellers, and the significant impacts to everyone of the large arena complex next door," Carstens wrote in an email.

The upcoming vote isn't enough for nearby Forum, which has been vocal in its opposition to the arena plan.

"The City is all over the map, changing course with the shifting political winds," a statement issued by a Forum spokesman said. "Yet the City remains committed to eminent domain to take over people's land for the benefit of a private arena. Plus, redrawing the boundaries now does not preclude the City from changing those boundaries back in the future.

"Until the city outright prohibits the use of eminent domain for a new Clippers arena, no owner of private property in the area is safe."

Inglewood Mayor James T. Butts Jr. told The Times last week that he wouldn't support any effort to use eminent domain on residences or the church.

on for why the residential areas were
ange, other than it came "as a
ions ... requested by the parties."

The negotiating agreement between Inglewood and the Clippers-controlled company runs for 36 months.

Uplift Inglewood, a community group that's protested the arena plan, claimed the vote as a victory, but said more action is needed.

"We want them to take eminent domain off the table, pledge not to use it at all and build affordable housing in the community so we can stay here," a statement on behalf of the group said. "We want homes before arenas."

The Honorable Members of the Council
Inglewood City Council
One Manchester Blvd.
Inglewood, CA 90301

Re: Alleged Violations of Brown Act
Case No. P13-0230

Dear Honorable Members of the Council,

Our office received complaints of violations of the Brown Act by the Inglewood City Council affecting the right of members of the public to make comments at City Council meetings. We reviewed recordings of City Council meetings on August 27, 2013 and September 24, 2013, and observed that Mayor Jim Butts interrupted a member of the public who was making public comments and then ordered that person to be excluded from the meetings. As explained below, we conclude that the actions at both meetings violated the Brown Act. We hope that our explanation will assist the Council to better understand the permissible scope of regulating public comments and ensure that the Council does not repeat these violations.

At the City Council meeting on August 27, 2013, Joseph Teixeira, a member of the public, spoke during the time scheduled for open comments. He began by requesting that the Council remove Mayor Butts as council chair based on allegations that Mayor Butts misled and lied to the public through the Inglewood Today newspaper which is published by Willie Brown, an associate of Mayor Butts. Mayor Butts interrupted Mr. Teixeira several times to rebut the accusations. Mr. Teixeira responded by calling Mayor Butts a liar. At that time, Mayor Butts interrupted again and declared that Mr. Teixeira was "done" making comments. When Mr. Teixeira asked why, Mayor Butts replied that Mr. Teixeira was going to stop calling people names. Mayor Butts instructed a uniformed officer to escort Mr. Teixeira out of the meeting. A few minutes later, after comments were received from other members of the public, Mayor Butts made additional comments to rebut Mr. Teixeira's allegations. Mayor Butts added that he had allowed Mr. Teixeira to call him a liar at almost every City Council meeting recently, but asserted that Mr. Teixeira does not have the right to call people liars at City Council meetings. Mayor Butts then declared, "I'm not going to let anyone, from this point on, yell at the Council, yell at people in this room, call people names. That's not an exercise of free speech. That's just not going to happen anymore."

766 Hall of Records
320 West Temple Street
Los Angeles, CA 90012
(213) 974-6501
Fax: (213) 620-9648

At the City Council meeting on September 24, 2013, Mr. Teixeira spoke during the time scheduled for public comments regarding agenda items. He represented that his comments were in objection to the warrant register payment to the Inglewood Today newspaper, an item which was listed on the agenda. He opposed the Council using Inglewood tax dollars to pay Inglewood Today to assist them in their bids for re-election by regularly praising them and hiding their mistakes, misconduct and serious problems in the city. As specific examples, he asserted that Inglewood Today had never reported on apparently well known allegations of past misconduct, including violating civil rights of citizens, by Mayor Butts while he was the Santa Monica Chief of Police. Mayor Butts then cut off Mr. Teixeira stating that the comments were not properly related to the warrant register agenda item and that Mr. Teixeira would have to come back at the end to continue his comments during the open comments period. Mr. Teixeira responded that he was speaking about the warrant register, but Mayor Butts declared that he was "done." Mr. Teixeira responded that he would talk about the warrant register and Mayor Butts warned him that he would be "done" if he said one more word about anything other than what was listed on the agenda. Mr. Teixeira then resumed his comments by asserting that Willie Brown had not reported important stories to the people of the community. At that point, Mayor Butts cut off Mr. Teixeira and declared that he was "done." He then instructed a uniformed officer to escort Mr. Teixeira out and added that he could come back at the end when open comments would be received. Indeed, Mr. Teixeira resumed his critical remarks later in the meeting during the open comments period.

The Brown Act protects the public's right to address local legislative bodies, such as a city council, on specific items on meeting agendas as well as any topic in the subject matter jurisdiction of the body. The Act permits a body to make reasonable regulations on time, place and manner of public comments. Accordingly, a body may hold separate periods for public comments relating to agenda items and for open comments. Also, a "legislative body may exclude all persons who willfully cause a disruption of a meeting so that it cannot be conducted in an orderly fashion." (*The Brown Act, Open Meetings for Local Legislative Bodies* (2003) California Attorney General's Office p. 28.; Gov. Code § 54957.9.) But exclusion of a person is justified only after an *actual* disruption and not based on a mere anticipation of one. (*Acosta v. City of Costa Mesa* (2013) 718 F.3d 800, 811; *Norse v. City of Santa Cruz* (2010) 629 F.3d 966, 976.) A speaker might disrupt a meeting "by speaking too long, by being unduly repetitious, or by extended discussion of irrelevancies." (*White v. City of Norwalk* (1990) 900 F.2d 1421, 1426; *Kindt v. Santa Monica Rent Control Board* (1995) 67 F.3d 266, 270.) However, "personal, impertinent, profane, insolent or slanderous remarks" are not per se actually disruptive. Exclusion for such speech is not justified unless the speech actually caused disruption of the meeting. (*Acosta, supra*, 718 F.3d at 813.) Furthermore, a "legislative body shall not prohibit a member of the public from criticizing the policies, procedures, programs, or services of the agency, or of the acts or omissions of the legislative body." (*The Brown Act, Open Meetings for Local Legislative Bodies, supra*, at 28.; Gov. Code § 54954.3(c).)

The question of when particular conduct reaches the threshold of actual disruption to justify excluding a member of the public "involves a great deal of discretion" by the

moderator of the meeting. (*White, supra*, 900 F.2d at 1426.) Nonetheless, a moderator may not "rule[ ] speech out of order simply because he disagrees with it, or because it employs words he does not like." (*Id.*) Conduct which courts have found amounted to actual disruption includes yelling and trying to speak out of turn during a meeting. (*Kindt, supra*, 67 F.3d at 271.) Actual disruption was also found when a member of the public incited the audience to stand in support of his stated position and approximately 20 to 30 people stood up in response and some started clapping. Additional disruption was found when the inciting member resisted attempts by officers to escort him out of the meeting. (*Acosta, supra*, 718 F.3d at 808-809.) Actual disruption, however, can not be based on the reaction of a member of a legislative body who is criticized or verbally attacked. (*Norse, supra*, 629 F.3d at 979 (CJ Kozinski concurring.))

Applying the case law above to the conduct captured in the recordings, we find that Mr. Teixeira did not cause any actual disruption at either meeting at issue. Thus, excluding him from each meeting was unlawful. In the August 27, 2013 meeting, it is clear that Mayor Butts cut off Mr. Teixeira's comments in response to Mr. Teixeira calling Mayor Butts a liar. Mayor Butts even explained to Mr. Teixeira that he was going to stop calling people names. Mayor Butts' additional commentary to the audience after he had Mr. Teixeira escorted out of the meeting confirms his purpose to not allow members of the public to yell or call people names at meetings. Mayor Butts' declaration that the conduct he was curtailing was "not an exercise of free speech" is incorrect. As cited above, personal remarks such as name calling is protected by the Brown Act and First Amendment and is not in and of itself a justification for cutting off a speaker or having the person removed. Mr. Teixeira's words did not cause a disruptive reaction from the audience or otherwise impede the proceedings. And, while it is true that Mr. Teixeira raised his voice during his emotional comments, we do not believe that it is accurate to describe him as yelling during his comments. Regardless, justification for interrupting and excluding a member of the public does not hinge on when a raised voice reaches a certain level. Rather, the actions are justified only to address an actual disruption. Mr. Teixeira did not cause any disruption at this meeting. Therefore, it was unlawful to cut short his comments and exclude him from the meeting.

Likewise, Mr. Teixeira did not cause any disruption at the meeting on September 24, 2013. On this occasion, Mayor Butts based his actions on the view that Mr. Teixeira's comments had veered off course and were no longer relevant to the specific agenda item involving the warrant register to pay Inglewood Today. We disagree. Mr. Teixeira's comments remained relevant to the specific warrant register. The basis of his objection to the warrant register was his assertion that the newspaper repeatedly failed to report on alleged misconduct by Mayor Butts. To support his assertion, Mr. Teixeira offered multiple examples of such alleged misconduct. Citing such examples had the additional effect of criticizing Mayor Butts which is a topic reserved for the open comments period later in the meeting. However, the additional effect did not strip the comments of their relevance to the initial issue of the warrant register. Exceeding the standard time allotted for speakers might amount to a disruption, but Mr. Teixeira's time was cut short. Furthermore, his comments did not incite a disruptive reaction from the audience. Again, it was unlawful to cut off Mr. Teixeira's comments and have him excluded.

It must also be noted that even if Mr. Teixeira's comments had strayed off topic, exclusion was still unjustified. The appropriate response would have been to interrupt the comments and instruct Mr. Teixeira to leave the podium and be seated. Nothing of his conduct was disruptive. When he was told that he could no longer speak at that time, even though unlawfully, and that he must wait until the open comment period, he did not persist in his comments. Nor did he resist the officer who escorted him out of the meeting.

Finally, interruptions of Mr. Teixeira's comments by Mayor Butts at the August 27, 2013 meeting raise another concern regarding a speaker's allotted time for making comments. Legislative bodies may limit the time each speaker is allotted and it appears that the Inglewood City Council does. But caution must be taken by the Council that interruptions by its members do not cut short the allotted time. Mayor Butts interrupted several times to rebut accusations made by Mr. Teixeira. Because Mr. Teixeira's comments were cut short by unlawfully removing him, it remains unclear whether or not the interruptions by Mayor Butts would have affected the time limit. It is understandable that members of the Council might not want to leave accusations unanswered. But it must be ensured that such interruptions by members do not take away from the time allotted any individual speaker. The Council has the prerogative to set its procedures, but one way of protecting the allotted time would be to reserve responses by members of the Council until after an individual's public comments or after the general period for public comments.

We hope that our explanation will assist your understanding of permissible action under to the Brown Act and expect that from this point forward you will fully respect the rights of any member of the public to lawfully address the Council. Please feel free to contact us if you have any questions.

Truly yours,

JACKIE LACEY

Documents Show How Inglewood Clippers Arena Deal Stayed Secret

March 15, 2018

Inglewood City Council | Lawrence K. Ho / Los Angeles Times via Getty Images

Inglewood city officials were secretly negotiating an agreement to build an arena for the Clippers basketball team for months before giving a carefully guarded notice to the public, according to newly released documents.

Now there is a request for the Los Angeles District Attorney's Office to investigate.

Residents learned about the project on June 15, 2017, at a special meeting of the city council. The documents suggest that backers of the arena may have purposely used a special meeting because it required just 24 hours public notice, while a regular meeting requires 72 hours notice. The meeting agenda didn't mention the arena or the Clippers, but gave an obscure name of a related company negotiating the deal.

A judge ordered the documents be made public earlier this month as part of ongoing litigation involving the city and a community group. The Inglewood Residents Against Taking and Eviction, or IRATE, is suing Inglewood, claiming the city did not follow the California Environmental Quality Act, or CEQA, before it approved the exclusive negotiating agreement to build the arena.

On Thursday, Doug Carstens, an environmental attorney representing IRATE sent a letter to the Los Angeles District Attorney Jackie Lacey asking her office to investigate the city for intentional Brown Act violations. The Brown Act is a state law guaranteeing the public's right to attend meetings held by local legislative bodies.

"These actions are exactly contrary to the government openness and transparency purposes of the Brown Act and the California Environmental Quality Act," said Carstens.

The state's oldest environmental law, CEQA, requires local and state agencies to do environmental reviews before approving certain projects. An environmental impact report evaluating the arena is currently underway, according to city officials. Should the project be approved, some local business owners and residents have voiced concern the city may use eminent domain to acquire property to develop the arena.

Carstens sought documents, including emails, related to the agreement. The city had argued the emails were protected by attorney-client privilege. Los Angeles Superior Court Judge Amy Hogue partially disagreed and ordered attorneys defending Inglewood to release over 200 pages of draft agreements and emails Monday.

In an April 2017 email from Royce Jones, an attorney for Inglewood, to Chris Hunter, the attorney negotiating for the project, Jones confirms a draft of the agreement was prepared based on discussions earlier in the month with Mayor James Butts and "certain other City and Clipper representatives."

IRATE contends that the documents show the secrecy was maintained illegally.

In a June 9 email, Hunter asked Jones if the agreement must be part of the city council's public agenda or could be downloaded "shortly before the meeting" because his client wanted to reach out to "various players." Jones responded that the agreement must be part of the agenda and "that is why we elected to just post 24 hours versus the normal 72 hours."

Hello Chris,

The document has to be posted with the agenda. That is why we elected to just post 24 hours versus the normal 72 hours.

Royce

Sent from my iPhone

June 9 email between lawyers for Inglewood and the Clippers.

Hunter added that the entity he is representing "will have a generic name so it won't identify the proposed project." Residents would see only that the meeting involved Murphy's Bowl LLC, an entity formed in January 2017 in Delaware. It has one member, Steven Ballmer, the owner of the Clippers, according to court records.

The Inglewood City Council's regular meetings are held on alternate Tuesdays, but there wasn't one on Tuesday, June 13. Instead, there was a special meeting on Thursday, which only required the agenda to be posted 24 hours in advance.

The timing is more than suspect, Carstens believes.

"Each of these actions individually and collectively shows an ongoing and illegal pattern of gaming the system, depriving the public of notice, and hiding the ball," said Carstens.

In the Mayor's newsletters, Butts acknowledged negotiations with the Clippers began in January 2017.

Butts and City Attorney Ken Campos did not respond to a request for comment.

The negotiations are characterized as "secret meetings" in a lawsuit filed March 5 by the Madison Square Garden Co., which owns the Forum. MSG is suing the city of Inglewood including Butts, the city council and the parking authority, claiming they violated a contractual agreement involving a 15-acre parking lot. Inglewood leased the lot to MSG for seven years starting in 2014 to use for overflow parking.

MSG says in the lawsuit that it invested $100 million into the Forum property based on agreements with the city, including the parking lot lease. The lawsuit also claims that in January 2017 the city pressured MSG to back out of the parking lease agreement and that the mayor claimed the city needed the land to create a "technology park."

Butts is at the center of what MSG calls a "fraudulent scheme" to let the Clippers use the land to build a facility that would compete with the Forum. The mayor told MSG officials use his personal email and not his official city account to communicate, according the complaint.

The Forum was acquired by MSG in 2012 and has been a venue for concerts and sporting events.

By early April MSG terminated the parking lease agreement. At the time, MSG did not know Inglewood officials were already well underway in drafting an agreement with the owners of the Clippers to sell them the parking lot in order to build an arena for the basketball team. MSG claims it would not have broken the lease had it known of the city's "true intentions." The company learned about the plan on June 14 when Butts broke the news in a telephone call to an MSG executive, the same day the public agenda was posted.

Enclosure 3

In Possible Brown Act Violation, Inglewood Called Special Meeting to Minimize Public Involvement – Warren Szewczyk

Letter Requesting Investigation of Inglewood Sent to LA County District Attorney

The City of Inglewood attempted to minimize transparency as they planned to ratify a negotiating agreement with representatives of the Los Angeles Clippers, freshly released emails reveal. The documents may even show evidence of criminal activity.

I've reported on the City's dubious effort to hide over 100 emails written while preparing an Exclusive Negotiating Agreement (ENA) between the City and Murphy's Bowl, a shell corporation possessed by Clippers owner Steve Ballmer. After a court order to release the contents of these emails, we now have an idea of why neither Inglewood nor Murphy's Bowl wanted them public.

"What are the city's requirements for when the ENA has to be posted," asks Chris Hunter, a lawyer representing Murphy's Bowl, just six days before a special City Council meeting to approve the ENA. "I understand The agenda has to go out 24 hours in advance but the question I was asked was whether the document must be part of the public agenda or can it be down loaded shortly before the hearing" (sic).

He goes on to say, "Our entity" – a reference to Murphy's Bowl – "will have a generic name so it won't identify the proposed project."

Royce Jones, a lawyer hired by the City, replies: "The document has to be posted with the agenda. That is why we elected to just post 24 hours versus the normal 72 hours."

> >
> > Sent from my iPhone
> >
> > Chris Hunter
> >

A June 9 email exchange between Chris Hunter, representing the Clippers, and Royce Jones, representing the City of Inglewood, that shows an attempt to minimize public involvement in the Clippers arena negotiation process.

Jones is referring to the City's decision to hold a special meeting, requiring 24 hours advanced notice, versus bringing the issue to a regular city council meeting, which would require 72 hours notice. In other words, Inglewood and the Clippers purposefully chose to hold a special meeting for no other reason than to reduce the amount of notice required.

This short exchange fits into a continued pattern of keeping the public at arms length with respect to the arena proposal. Nowhere in the communications between Mr. Hunter and Mr. Jones – which wouldn't even be public if not for a lawsuit and court order within that lawsuit – is there any suggestion of ensuring or soliciting public involvement.

According to Doug Carstens, a lawyer suing the City on behalf of an Inglewood community group, the conversation between Mr. Hunter and Mr. Jones proves the City breached a 1953 California transparency law known as the Brown Act.

In a March 15 letter to Jackie Lacey, the Los Angeles County District Attorney, Carstens requested the office investigate Brown Act violations.

"The violations of the Brown Act were so egregious it didn't seem like we could just let them go," he said in a phone interview. "It seemed like something the DA should be involved in."

> "One of the core principles of the Brown Act is that the public has a right to hear and discuss anything that a legislative body subject to the Brown Act is going to discuss ... If the goal here was to make sure the public didn't know what they were actually going to talk about ... that's contrary to the letter and the spirit of the Brown Act." – Dan Snyder, First Amendment Coalition

Among other provisions, the Brown Act requires city meeting agenda descriptions to "give the public a fair chance to participate ... by providing the public with more than mere clues from which they must then guess or surmise the essential nature of the business to be considered by a local agency." Carstens argues Inglewood willfully obfuscated the purpose of the June 15 2017 meeting to ensure as little public scrutiny as possible.

Dan Snyder, a lawyer with the First Amendment Coalition who has pursued many Brown Act suits, says there's a strong case to be made.

"The Brown Act is clear in that agenda items have to be described in a way that is both accurate and not misleading," he told me by phone. "The fact that this agenda item doesn't mention anything about the NBA, or an arena, or the Clippers, or any of the [items] that are actually at issue here makes it misleading."

It's not the first time Inglewood has come under scrutiny related to the Brown Act. In fact, the same DA who received Mr. Carstens allegations penned a 2013 letter to the Inglewood City Council informing the Council that Mayor Butts had violated the Brown Act by unlawfully removing members of the public from council meetings simply for disagreeing with the Mayor's opinions.

Despite a documented history of Brown Act violations by the Inglewood city government, Mr. Snyder believes it's unlikely the District Attorney's office will follow through with any significant action.

"I don't know of a single instance where a DA has brought charges based on the Brown Act," he said. "It is authorized under the law, but to my knowledge it's never happened."

Mr. Snyder said the letter to the DA may just be a form of "saber-rattling."

For his part, Mr. Carstens said he simply hopes the DA will provide "accountability" in whatever form they deem most appropriate.

Beyond criminal proceedings, Inglewood could be held accountable in civil court. But since a Brown Act suit must be brought within 90 days of the alleged violation, it seems to be too late for such a case.

Regardless, Mr. Snyder believes the letter is purposeful and important.

"It's good to bring to the public's attention Brown Act violations," he said. "Even after the window for civil litigation has passed that doesn't mean the window for criticizing the city government has passed."

The Honorable Members of the Inglewood City Council
City of Inglewood
1 Manchester Boulevard
Inglewood, California 90301

Re: Alleged Brown Act Violations by City of Inglewood, P18-0132

Dear Members of the City Council,

The Public Integrity Division received a complaint alleging that the Inglewood City Council violated the Ralph M. Brown Act (Brown Act) at a special meeting on June 15, 2017. After reviewing the agenda, we have concluded that the City Council did violate the Act by failing to provide a sufficient agenda description of Item 1, which involved an Exclusive Negotiating Agreement (ENA) between the City of Inglewood and Murphy's Bowl LLC.

The Brown Act, in Government Code section 54954.2(a)(1), requires that a local agency "post an agenda containing a brief general description of each item of business to be transacted or discussed at the meeting." That section further states, "A brief general description of an item generally need not exceed 20 words." Courts have held that although the description need not include every detail of a matter, it must be sufficient to give the public "fair notice of the essential nature of what an agency will consider," and not leave the public "to speculation." (*San Diegans for Open Government v. City of Oceanside* (2016) 4 Cal. App. 5th 637, 645; *San Joaquin Raptor Rescue Center et al. v. County of Merced et al.* (2013) 216 Cal. App. 4th 1167, 1178.)

The agenda for the special meeting listed Item 1, the only item for open session, as follows:

> **ECONOMIC AND COMMUNITY DEVELOPMENT DEPARTMENT**
> Staff report recommending approval of an Exclusive Negotiating Agreement (ENA) by and among the City, the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency (Successor Agency), the Inglewood Parking Authority (Authority), and Murphy's bowl LLC, a Delaware Limited Liability Company (Developer).
> Recommendation:
> 1) Approve Exclusive Negotiating Agreement.

Hall of Justice
211 West Temple Street, Suite 1000
Los Angeles, CA 90012
(213) 257-2475
Fax: (213) 633-0985

Notably omitted from the agenda description was any information of the location and scope of the contemplated development project. Per the report from the Economic and Community Development Department and the ENA itself, the undisclosed potential project involved construction of a professional basketball arena on parcels of real property owned by the city as well as private citizens and businesses. Under the ENA, the city was obligated "to use its best efforts to acquire the parcels of real property" owned by private parties by voluntary sale, or possibly by exercising eminent domain. Information of the location and scope of the potential project was only made available to the public in the Economic and Community Development Department's report to the mayor and city council, as well as in the ENA itself. Those two documents were presumably attached to the agenda electronically on the city's web site. However, the Brown Act requires that a sufficient description be listed on the agenda itself to give the public fair notice. The public does not bear the burden to inspect related documents to glean the essential nature of what the city council will consider. Therefore, the agenda description did not comply with the requirements of the Brown Act.

It should be noted that the deficiency of the agenda description appears to have been part of concerted efforts between representatives of the city and the Murphy's Bowl LLC to limit the notice given to the public. Evidence reveals that the matter was set for a special meeting rather than a regular meeting to reduce the time required to give public notice from 72 hours to 24 hours before the meeting. Furthermore, the generic name of Murphy's Bowl LLC was used intentionally to obfuscate the identity of the proposed project and those associated with it. Although these tactics were not violations per se of the Brown Act, they indicate concerted efforts to act contrary to the spirit of the Brown Act. Although the evidence is not sufficient to prove that any member of the city council participated in these efforts to obfuscate, the city council bears the ultimate responsibility to comply with the Brown Act.

Violations relating to the agenda description of an item of business could render action by the city council null and void. However, because the complaint was received after the time limits to remedy the violation, no action will be taken at this time. Nonetheless, we sincerely hope that this letter will assist the city council in ensuring that such violations will not recur in the future.

Very truly yours,

JACKIE LACEY
District Attorney

Re: Comments on the Draft Environmental Impact Report for the Inglewood Basketball and Entertainment Center (IBEC), SCH 2018021056

Dear Ms. Wilcox:

On behalf of the Natural Resources Defense Council and our members in Inglewood and throughout California, we submit the following comments on the Draft Environmental Impact Report (DEIR) prepared for the basketball arena project proposed by applicant Murphy's Bowl on behalf of the Clippers Basketball team (the "Project").

Introduction

As a preliminary matter, we note that the Project is materially different from that approved by CARB under AB 987. This is so because the projected GHG emissions for the Project are much higher and there is less in the way of mitigation proposed. In short, net operating GHG emissions increased by 63% comparing the DEIR to the AB 987, to 496,745 MTCO2e from 304,683 MTCO2e, while proposed mitigation measures are not as robust. Accordingly, the timing and other project proponent benefits of AB 987 should not apply to the Project.

In addition, the Project relies heavily on statements of overriding considerations to mask the 41 significant adverse environmental impacts that ostensibly cannot be mitigated to insignificance. This is ludicrous in connection with a project that has little or no social utility for the residents of Inglewood who will bear the brunt of these impacts – including more air pollution in an already heavily-polluted area – and who are not the target audience for expensive professional basketball tickets.

NATURAL RESOURCES DEFENSE COUNCIL

1314 2ND STREET | SANTA MONICA, CA | 90401 | T 310.434.2300 | F 310.434.2399 | NRDC.ORG

Inadequacies in the DEIR

A. *Failure To Address Environmental Justice Impacts.*

There is no analysis of environmental justice throughout entire DEIR, except for two passages claiming that no analysis is needed: DEIR p. 3.2-16: "As described above, in general CEQA does not require analysis of socioeconomic issues such as gentrification, displacement, environmental justice, or effects on "community character." And 3.14-56: "There are no applicable federal regulations that apply directly to the Proposed Project. However, federal regulations relating to the Americans with Disabilities Act, Title VI, and Environmental Justice relate to transit service."

This is incorrect because, among other things, there is a significant federal approval needed for the Project in the form of an FAA approval because of the Project's proximity to Los Angeles International Airport. Moreover, the California Attorney General has opined that local governments have a role under CEQA in furthering environmental justice; see https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/ej_fact_sheet.pdf (accessed March 20, 2020). The remedy for this failure is recirculation of a DEIR that includes an environmental justice analysis.

B. *Use Of Improper GHG Baseline*

In its initial application under AB 987, the Project proponent attempted to increase the GHG CEQA baseline by assuming that the venues from which events would move to the Project would remain unused forever on the dates of the transferred events. After pushback from CARB and others, including NRDC, the Project proponent abandoned this irrational approach and conceded that the venues would be in use on those dates.

But the original theory has resurfaced in the DEIR. Having obtained the benefits of AB 987 by changing its initial (unjustified) position, the Project proponent should not now be allowed to revert to that position in order to raise the CEQA baseline and reduce its GHG mitigation requirement.

C. *Failure To Properly Analyze And Mitigate GHG And Air Quality Impacts*

The South Coast air basin is in extreme nonattainment for ozone, with a 2024 attainment deadline. Failure to meet the attainment deadline can lead to federal sanctions that will effectively shut down the local economy. The South Coast AQMD

NATURAL RESOURCES DEFENSE COUNCIL

1314 2ND STREET | SANTA MONICA, CA | 90401 | T 310.434.2300 | F 310.434.2399 | NRDC.ORG

plan to reach ozone attainment relies on an enormous level of reductions in oxides of nitrogen (NOx), mostly from mobile sources such as cars and trucks. But the Project's projected emissions go in the opposite direction and the DEIR fails to require sufficient mitigation.

The DEIR admits this. For example,

> Impact 3.2-1: Construction and operation of the Proposed Project would conflict with implementation of the applicable air quality plan.
>
> Impact 3.2-2: Construction and operation of the Proposed Project would result in a cumulatively considerable net increase in NOx emissions during construction, and a cumulatively considerable net increase in VOC, NOx, CO, PM10, and PM2.5 during operation of the Proposed Project.
>
> Impact 3.2-5: Construction and operation of the Proposed Project, in conjunction with other cumulative development, would result in inconsistencies with implementation of applicable air quality plans.

In addition, the DEIR bases its calculations of criteria pollutants from motor vehicles on the EMFAC 2017 model developed and maintained by the California Air Resources Board (CARB). But EMFAC 2017 is now obsolete because the federal government has purported to rescind the EPA waiver for California's zero-emission vehicle program, and that program's effects are baked into EMFAC 2017. The result is that EMFAC will underreport emissions. That problem will be exacerbated when, as expected, NHTSA promulgates the so-called SAFE rule which will reduce the corporate average fuel emission (CAFE) standards in California and nationwide. This change, which is not reflected in EMFAC 2017, will make the projections in the DEIR substantially too low. This problem is true for transportation-related GHG emissions as well because the zero-emission waiver revocation and lower fleet mileage requirement will result in more GHGs from cars and trucks than the DEIR and EMFAC 2017 assume. Thus, the DEIR underreports projected criterial pollutant and GHG emissions, and that problem will get worse over time.

D. *Failure To Implement All Feasible Air Quality and GHG Mitigation*

Even if the DEIR air quality and GHG projections were accurate, which they are not, the mitigation measures in the DEIR are inadequate, especially given the number of ostensibly unmitigatable impacts.

NATURAL RESOURCES DEFENSE COUNCIL

1314 2ND STREET | SANTA MONICA, CA | 90401 | T 310.434.2300 | F 310.434.2399 | NRDC.ORG

For example, the Project could and should require:

Shuttle buses should be zero-emission vehicles, starting on Day 1. ZE buses are available today from a number of vendors, including BYD in Los Angeles County.

The emergency generators should be electrically powered, and the Project should install more solar panels, and storage for solar power, to power them.

Aspirational mitigation measures and "incentives" to reduce emissions of NOx should be replaced with mandatory measures. The DEIR adopts Mitigation Measure 3.2-1(d), requiring the Project to provide "[i]ncentives for vendors and material delivery trucks to use ZE or NZE trucks during operation." (DEIR, p. 3.2-71.) Similarly, Mitigation Measure 3.2-(c)(3) only requires the Project to " shall strive to use zero-emission (ZE) or near-zero-emission (NZE) heavy-duty haul trucks during construction, such as trucks with natural gas engines that meet CARB's adopted optional NOX emissions standard of 0.02 g/bhphr." (DEIR, p. 3.2-88.) In contrast, Mitigation Measure 3.2-2(c) specifies that use of Tier 4 off-road diesel-powered equipment rated at 50 horsepower or greater "shall be included in applicable bid documents, and the successful contractor(s) shall be required to demonstrate the ability to supply compliant equipment prior to the commencement of any construction activities." (DEIR, p. 3.2-88.) There is no showing in the DEIR that making Measures 4.3-1(d) and 3.2(c)(3) is infeasible. Given the significant impact on the AQMP, either such a showing of infeasibility must be made and supported by substantial evidence, or the measures must be made mandatory.

Electric vehicle parking for the Project must be provided. The electric vehicle parking needs to conform with applicable building code requirements in place at the time of construction. Electric vehicle charging stations must be included in the project design to allow for charging capacity adequate to service all electric vehicles that can reasonably be expected to utilize this development.

Each building should include photovoltaic solar panels.

The Transportation Demand Management (TDM) program must be revised to quantify the criterial pollutant and GHG reductions expected from the TDM measures.

The GHG reduction plan also must be revised so as not to defer development of mitigation measures, and to quantify the measures selected.

NATURAL RESOURCES DEFENSE COUNCIL

1314 2ND STREET | SANTA MONICA, CA | 90401 | T 310.434.2300 | F 310.434.2399 | NRDC.ORG

As it stands, the exact content of the GHG Reduction Plan cannot be known from reading the DEIR. Further, the DEIR states that the GHG reductions will Reduction Plan will be modified in a Verification procedure if there are shortfalls in GHG reductions, providing that the methodology for the modification "shall include a process for verifying the actual number and attendance of net new, market-shifted, and backfill events." (DEIR, p. 3.7-64.) That process is unacceptably vague and indeed the verification process may itself be subject to CEQA as a discretionary project.

Purchase and use of GHG offsets must meet CARB standards for cap and trade offsets. The DEIR's entire description of this potential mitigation measure is:

> Carbon offset credits. The project applicant may purchase carbon offset credits that meet the requirements of this paragraph. Carbon offset credits must be verified by an approved registry. An approved registry is an entity approved by CARB to act as an "offset project registry" to help administer parts of the Compliance Offset Program under CARB's Cap and Trade Regulation. Carbon offset credits shall be permanent, additional, quantifiable, and enforceable.

Having a CARB-approved registry is not the same thing as requiring CARB-approved offset credits, which are limited in scope and strictly regulated. The residents of Inglewood should not be subjected to a lesser standard.

Additional local, direct measures that should be required before offsets are used include the following:

1. Urban tree planting throughout Inglewood.
2. Mass transit extensions.
3. Subsidies for weatherization of homes throughout Inglewood.
4. Incentives for carpooling throughout Inglewood.
5. Incentives for purchase by the public of low emission vehicles.
6. Free or subsidized parking for electric vehicles throughout Inglewood.
7. Solar and wind power additions to Project and public buildings, with subsidies for additions to private buildings throughout Inglewood.
8. Subsidies for home and businesses for conversion from gas to electric throughout Inglewood.

NATURAL RESOURCES DEFENSE COUNCIL

1314 2ND STREET | SANTA MONICA, CA | 90401 | T 310.434.2300 | F 310.434.2399 | NRDC.ORG

9. Replacement of gas water heaters in homes throughout Inglewood.
10. Creation of affordable housing units throughout Inglewood.
11. Promotion of anti-displacement measures throughout Inglewood.

E. *Displacement Will Be Accelerated By The Project And Must Be Mitigated*

The economic activity and growth inducing impacts created by the Project will foreseeably result in displacement of current residents while rents increase and rental units are taken off the market to be put to alternative uses. However, the DEIR denies that indirect displacement will occur. (DEIR 3.12-16 to -17.)

California courts have acknowledged the human health impacts of proposed actions must be taken into account, *e.g. Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1219–1220; *see also* CEQA Guidelines § 15126.2 subd. (a) [EIR must identify "relevant specifics of ... health and safety problems caused by the physical changes."]). Human health impacts from displacement are real and are not merely speculation or social impacts. There have been numerous cases where health effects to people were inadequately analyzed. (*Communities for a Better Environment v. City of Richmond* (2010) 184 Cal.App.4th 70, 81, 89 [EIR inadequately addressed health risks of refinery upgrade to members of surrounding community]; *Bakersfield Citizens for Local Control, supra*, 124 Cal.App.4th at 1219–1220 [EIR was inadequate because it failed to discuss adverse health effects of increased air pollution]. Here, the DEIR needs to address the effects on the environment and human health reasonably forseeable as results of construction and operation of the Project.

Conclusion

The DEIR must be revised and recirculated to account for its many deficiencies.

Thank you for your consideration.

EXHIBIT 4

CALIFORNIA LEGISLATURE

STATE CAPITOL
SACRAMENTO, CALIFORNIA
95814

June 28, 2019

Kate Gordon, Director
Governor's Office of Planning and Research
1400 Tenth Street
Sacramento, CA 95814

Mary D. Nichols, Chair
California Air Resources Board
1001 I Street
Sacramento, CA 95814

Director Gordon and Chair Nichols:

We write to convey concerns with the Inglewood Basketball and Entertainment Center (IBEC) application, submitted for certification pursuant to AB 987 (Kamlager-Dove), Chapter 961, Statutes of 2018.

AB 987 was the product of more than a year of intensive legislative deliberations. Following the failure of a predecessor bill in 2017, we participated in negotiations and hearings where testimony was taken, commitments were made, and amendments were adopted. We supported the final version of AB 987 specifically because it raised the bar compared to existing requirements of AB 900 and the California Environmental Quality Act (CEQA) generally. In particular, AB 987 requires the applicant to achieve more stringent and specific standards for mitigation of traffic and greenhouse gas (GHG) emissions.

We have reviewed the IBEC application and are disappointed to find that it meets neither the letter nor the spirit of AB 987. The application claims to meet AB 987's standards, but falls short in several significant respects. The result is a project that may not even meet minimum standards for mitigation under CEQA, much less represent an "environmental leadership" project meeting extraordinary standards that justify expedited judicial review.

Specifically, the applicant's GHG analysis greatly overestimates baseline emissions in order to reduce the project's net GHG emissions. By making novel and unsubstantiated assumptions about the project drawing events away from existing venues, the application contrives net emissions for construction and 30 years' operation of 156,643-158,631 tons. This estimate stands in sharp contrast to the estimated net emissions of 595,000 tons offered by the applicant's consultants when the GHG conditions were negotiated last August. The approach used in the application stands the argument the applicant used last year against GHG neutrality requirements – that Inglewood is transit starved compared to Staples Center – on its head.

To mitigate this artificially low estimate of net GHG emissions, the applicant proposes the Transportation Demand Management (TDM) program/targets (47-48% of total) and 50% of the reductions attributable to the LEED Gold certification (2.5% of total), both required by the bill. They claim this gets to 49.5-50.1% of required reductions, conveniently achieving AB 987's local GHG mitigation floor of 50%. By lowballing net GHG emissions, the applicant circumvents the need to make any of the local GHG mitigation investments, and associated community benefits, touted when the bill was before the Legislature.

To achieve zero net GHG on paper, the application projects the balance of emission reductions (47-48% of total) from unspecified offset projects and potential GHG co-benefits attributed to the required $30 million clean air investment. Though AB 987 requires offsets to be local if feasible, and limited to projects in the United States in any case, the application includes no details on how these requirements will be met.

Because nearly half of the GHG reduction obligation is attributed to the TDM program, it is all the more important that the measures in the TDM program are real commitments that will reduce the millions of new vehicle trips generated by the project. However, the TDM program consists of a vague array of unenforceable goals, not real commitments to invest in traffic reduction.

If the project proceeds as proposed, the result will be more local traffic and air pollution in Inglewood and surrounding communities in the Los Angeles region, and none of the local investment to reduce GHG emissions that AB 987 would require based on a realistic accounting of the project's net emissions. This will shortchange the very communities the project purports to benefit.

Certification of a substandard project also would be unfair to other applicants and may set a precedent which undermines meaningful GHG mitigation and long-term climate goals.

Just as we supported AB 987, we are prepared to support a project that meets its requirements. Unfortunately, in its current form, the IBEC application is not that project.

The application should not be certified as submitted. We ask you to direct the applicant to withdraw the application, so that it may be revised, resubmitted, and promptly reviewed.

Sincerely,

Assemblymember Al Muratsuchi, 66th District

Assemblymember Laura Friedman, 43rd District

Assemblymember Cristina Garcia, 58th District

Assemblymember Kevin McCarty, 7th District

Clippers will buy The Forum for $400 million so they can build a $1.2 billion arena in Inglewood

Legal battles between Madison Square Garden Co. and the NBA team threatened to derail the $1.2 billion project

The Forum on Wednesday, October 16, 2019 in Inglewood, California. (Photo by Keith Birmingham, Pasadena Star-News/SCNG)

By Jason Henry | jhenry@scng.com and Mirjam Swanson | mswanson@scng.com | Pasadena Star News
PUBLISHED: March 24, 2020 at 4:58 p.m. | UPDATED: March 24, 2020 at 6:38 p.m.

The owners of the Los Angeles Clippers will buy The Forum concert venue in Inglewood for $400 million as part of a settlement agreement with Madison Square Garden Co..

The agreement ends years of legal battles that threatened the feasibility of a proposed $1.2 billion Clippers arena in the city that soon will be home to an adjacent $5 billion NFL stadium for the Los Angeles Rams and Chargers. That 18,000-seat arena just south of the new NFL stadium will still move forward.

Under the newly formed CAPSS LLC, the Clippers' owners will continue to operate the historic Forum — the former home of the Los Angeles Lakers and Kings — as a music venue and has offered to hire all of current employees, according to a press release Tuesday.

"This is an unprecedented time, but we believe in our collective future," said Steve Ballmer, the chairman of the L.A. Clippers. "We are committed to our investment in the City of Inglewood, which will be good for the community, The Clippers, and our fans."

Ballmer and the Clippers previously offered to spend an additional $100 million on a community benefit package, including $75 million to support affordable housing. The exact terms of the package are still under negotiation.

Traffic concerns

The new ownership of the Forum will alleviate potential traffic congestion in the corridor by allowing the two venues to coordinate programming, according to the Clippers.

"We know traffic is something that many Inglewood residents worry about. While we have gone to great lengths to provide an unprecedented traffic-management plan for the new basketball arena, this acquisition provides a much greater ability to coordinate and avoid scheduling events at the same time at both venues," said Chris Meany, a principal of Wilson Meany, the developer overseeing the new basketball arena project.

An environmental impact report released in December estimated a simultaneous concert at The Forum and a basketball game at the arena could impact 61 intersections and eight freeway segments. The arena is expected to contribute to a "significant and unavoidable" increase in traffic, noise and pollutants, according to the report.

Millions spent on lawsuits

Madison Square Garden Co., which bought The Forum for $23.5 million in 2012 and invested $100 million in renovations, has waged an all-out war to try to stop the Clippers from coming to the city. MSG sued Inglewood and its mayor, James T. Butts Jr., in 2018, alleging he tricked the company's executives into giving up their rights to the land needed for the proposed arena.

The Forum's owners claimed their fight was not about stopping the competition and instead was an attempt to protect Inglewood residents from a project that would "inflict severe traffic congestion, pollution and many other harms" on the city.

Both sides spent millions on the war, with the two parties heavily lobbying state and local officials for support. MSG's opposition stalled efforts to fast-track the arena by nearly a year.

As part of the settlement agreement, MSG will drop its lawsuit against the city and others challenging the environmental review of the project at the corner of Century Boulevard and Prairie Avenue, just across the street from SoFi Stadium.

"This is the best resolution for all parties involved and we wish the new owners every success," the company said in a statement.

With MSG out of the way, the Clippers will have eliminated the last of the arena's roadblocks.

Smiling mayor signs settlement

The Inglewood City Council approved the settlement at its meeting Tuesday. Butts, smiling ear to ear, paused the agenda so he could sign the document immediately. A copy of the agreement was not available Tuesday.

"The city of Inglewood is overjoyed to welcome Steve Ballmer as the new owner and operator of the Fabulous Forum," Butts said in a statement Tuesday. "He's a true community partner."

The purchase is expected to close during the second quarter of 2020, according to the Clippers. The team, which currently plays at Staples Center, wants the arena ready by the 2024 season.

Inquiry for March 24, 2020 City Council Hearing

2 messages

Veronica T. <vt03398@gmail.com> Thu, Apr 9, 2020 at 5:46 PM
To: yhorton@cityofinglewood.org

Dear City Clerk:

I have tried to find on the City's websites and in the City Council agenda for March 24, 2020 the settlement agreement that Mayor Butts was going to sign, and did sign, at the streamed March 24 Council Meeting, but I could not. I also searched on the web and City's online archives, but I could not find it.

Earlier this week, on April 7, 2020, I contacted your office to ask about where the settlement agreement is posted. The staff member walked me through locating the posted March 24, 2020 agenda and said that a link to a .PDF should be included. She said it should be located under agenda item A-2, but then she saw that it wasn't. I then called yesterday, and spoke to Jacqueline. She also checked, confirmed it isn't linked in the agenda, and told me she would try to find it and contact me. I gave her my phone number, but I haven't heard back from your office yet.

Please email me the settlement agreement. Also, please put it online so others can see it too.

I look forward to hearing from you.

Thank you.

Sincerely,
Veronica

Veronica T. <vt03398@gmail.com> Tue, Apr 14, 2020 at 12:12 PM
To: yhorton@cityofinglewood.org

Dear City Clerk:

I'm following up on my below e-mail to you on April 9. I haven't yet received a response, or even an acknowledgment.

Please email me the settlement agreement Mayor Butts signed during the March 24, 2020 City Council hearing. Also, please put it online so others can see it too.

I look forward to hearing from you. Please confirm receipt of this e-mail.

Thank you.

Sincerely,
Veronica

COUNCIL INITIATIVE

CI. MAYORAL

Initiative by Mayor James T. Butts Jr., recommending the adoption of Executive Order No. 20-01 to declare the following:

1. The Local Emergency is extended and remains in effect to the maximum extent authorized by state law;
2. Any order promulgated by the Mayor to provide for the protection of life and property, pursuant to Government Code section 8634, shall be ratified by the City Council at the earliest practicable time;
3. No landlord shall evict a residential or commercial tenant in the City of Inglewood during this local emergency who's financial hardship is directly linked to the COVID-19 pandemic (as outlined in the proclamation);
4. The passage of this Executive Order does not relieve a tenant of the obligation to pay rent, nor restrict a landlord's ability to recover rent due; and

Tenants have six months from the termination of the local emergency by the City of termination of the State emergency (whichever is later) to pay back the rent owed.

PUBLIC COMMENTS REGARDING OTHER MATTERS

Persons wishing to address the City Council on any matter connected with City business not elsewhere considered on the agenda may do so at this time. Persons with complaints regarding City management or departmental operations are requested to submit those complaints first to the City Manager for resolution.

MAYOR AND COUNCIL REMARKS

The members of the City Council will provide oral reports, including reports on City related travels where lodging expenses are incurred, and/or address any matters they deem of general interest to the public.

ADJOURNMENT CITY COUNCIL

In the event that today's meeting of the City Council is not held, or is concluded prior to a public hearing or other agenda item being considered, the public hearing or non-public hearing agenda item will automatically be continued to the next regularly scheduled City Council meeting. If you will require special accommodations, due to a disability, please contact the Office of the City Clerk at (310) 412-5280 or FAX (310) 412-5533, One Manchester Boulevard, First Floor, Inglewood City Hall, Inglewood, CA 90301. All requests for special accommodations must be received 72 hours prior to the day of the Council Meetings.

RE: Response to Letter of April 23, 2020

Dear Mr. Silverstein:

The City of Inglewood ("City") is in receipt of your letter addressed to Ms. Yvonne Horton and Ms. Mindy Wilcox dated April 23, 2020 that was captioned "Brown Act Violations; Cure and Correct Demand in Connection with Public Meeting on March 24, 2020 and Demand to Cease and Desist, Including Under Govt. Code § 54960.2; IBEC Project SCH 2018021056, and *Request to Include this letter in Admin Record for IBEC DEIR*; Public Records Act Request for March 24, 2020 Council's Closed Session *Audio/Video Recording and Notes, Minutes, Records*."

Your letter is referred to herein as the "April 23 Request."

The City proudly believes in transparency and compliance with all applicable laws, including the Ralph M. Brown Act ("Brown Act"), codified at Section 54950 *et seq.* of the California Government Code, and the California Public Records Act ("CPRA"), codified at California Government Code Section 6250 *et seq.*[1] Accordingly, this letter promptly responds to your April 23 Request by providing disclosable documents responsive to that request.

In addition, the April 23 Request was based on several erroneous factual assumptions.[2] With this letter we are clarifying the facts, including most significantly that the Tri-Party Agreement that was approved by the Council in open session on March 24, 2019 is not a settlement agreement. The Tri-Party Agreement and the settlement discussions were each properly noticed in full compliance with the Brown Act. Additionally, the Tri-Party Agreement was first made available to the Council at the March 24th meeting and would have been available to anyone who attended the meeting and asked for it. Because the requests made of the City Clerk asked for a "settlement agreement" not the "Tri-Party Agreement" that caused confusion. Pursuant to Section 54957.1(a)(3) no reportable event with respect to settlement has occurred. A more detailed response is provided below.

---

[1] All further section references are to the California Government Code unless otherwise indicated.

[2] In the interest of providing a prompt response, we have not been able to address all of the apparent misunderstandings of fact contained in your April 23 Request.

This letter also serves as the City's timely response to your CPRA Request as required by Section 6253(c).

A. CONDUCT OF THE MARCH 24, 2020 MEETING

Section III of your April 23 Request misstates the actions taken at the March 24, 2020 City Council meeting.

1. Closed Session

As indicated on the March 24, 2020 agenda, the members of the City Council convened into closed session to conference with the City's legal counsel regarding pending litigation, as authorized by paragraph (1) of subdivision (d) of Section 54956.9 to discuss the following cases: (1) *MSG Forum, LLC v. City of Inglewood, et al.* (Case No. YC072715); (2) *MSG Forum, LLC v. City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, et al.* (Case No. BS174710); (3) *Inglewood Residents Against Takings and Evictions v. City of Inglewood, et al.* (Case No. B296760); and (4) *Inglewood Residents Against Takings and Evictions v. City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, et al.* (Case No. BS174709).

No reportable action was taken following the closed session pursuant to Section 54957.1(a)(3) or otherwise.

2. Agenda Item A-2

After the public was given opportunity to comment in accordance with Section 54954.3 (members of the public were in attendance, but none spoke), the City Council took up the items listed in the City Attorney / General Counsel Office's section of the Agenda in open session, and the City Council took action on two agreements under an entry entitled:

> Consideration of and possible action on one or more agreements with MSG Forum, LLC; Inglewood Residents Against Takings and Evictions; Murphy's Bowl LLC; and other entities and individuals in furtherance of a potential settlement of claims arising from the proposed development of, and CEQA review for, the Inglewood Basketball and Entertainment Center Project, as well as obligations of the landowner of the Forum.

The Agenda entry then indicated that the City Attorney's recommendation was to "Consider and Act on the following agreements," both of which were expressly named on the agenda, as follows.

Release and Substitution of Guarantor Under Development Agreement by and among MSG Forum, LLC, MSGN HOLDINGS, L.P., POLPAT LLC, and the City of Inglewood; and

Tri-Party Agreement by and among MSG Forum, LLC, MSG Sports & Entertainment, LLC, Murphy's Bowl LLC, and the City of Inglewood.

Contrary to statements made in your April 23 Request, the agenda entry, viewed in its entirety, specified exactly which agreements the City Council would consider and possibly act on, and identified all the entities that are parties to those agreements.

Also contrary to statements made in your April 23 Request, the Tri-Party Agreement is not a settlement agreement. In fact, and as indicated on the agenda entry, the agreement is simply intended to allow for further discussions that could ultimately lead to the resolution of claims arising from the proposed development of, and CEQA review for, the Inglewood Basketball and Entertainment Center Project ("IBEC"). To that end, the Tri-Party Agreement actually ensures that no action be taken by the City Council to approve the IBEC while a potential settlement of claims could potentially be underway. In addition, he Tri-Party Agreement expressly reserves to the City all discretion to consider the IBEC consistent with all applicable laws. Thus, the Tri-Party Agreement bears no resemblance to the agreement at issue in the *Trancas Property Owners Association v. City of Malibu* (2006) 138 Cal.App.4th 172 case referenced in your April 23 Request.

3. Public Availability of Tri-Party Agreement

The Tri-Party Agreement and the Release and Substitution of Guarantor were completed and distributed to Councilmembers on March 24, 2020. Because no exceptions under the CPRA apply, both became a public record under Section 54957.5(a) on March 24, 2020. As such, pursuant to Section 54957.5(b), the City was obligated to make the record available for public inspection at that time.

The City complied with this obligation: Contrary to the statements made in your April 23 Request (and some press accounts of the meeting), both documents were available at the City Council meeting to any member of the public who requested a copy of the agreements.

The e-mail your colleague ("Veronica T.") sent to the City Clerk (attached as Exhibit 6 to your April 23 Request) was ambiguous because it referenced a "settlement agreement" signed by Mayor Butts at the City Council meeting. The public documents signed by the mayor at that City Council meeting were the Tri-Party Agreement and the Release and Substitution of Guarantor.

Nevertheless, in accordance with the spirit of the CPRA and Section 6253.1 thereof, we are enclosing a copy of both the Tri-Party Agreement and the Release and Substitution of Guarantor with this letter, now that your April 23 Request clarified the true nature of Ms. T's e-mail request.

B. PUBLIC RECORDS ACT REQUEST

Section VII of your April 23 Request is expressly made under the CPRA and requests that "the City provide the audio and video recordings of the closed sessions, as well as any minutes, notes, or records made or exchanged by anyone present at the meeting re [*sic*] same."

Please accept this response as the City's response and determination to your Public Records Act Request as required by Sections 6253(c) (which, as stated in your April 23 Request, is due by May 3, 2020):

First, no audio or video recordings of the closed session exist (and none are required under the Brown Act or any other provision of law).

Second, as discussed above, the City Council convened in closed session to confer with its legal counsel regarding pending litigation in which the City is involved. Accordingly, the requested documents constitute privileged communications between an attorney and client under California

Evidence Code Section 954. Therefore, please be advised that pursuant to Section 6255 the documents requested (to the extent they exist) are exempt from disclosure under Section 6254(k).

C. CONCLUSION

We trust that the enclosed documents and factual corrections address your concerns. At the same time, we expressly reserve the City's right to further respond to your April 23 Request, including without limitation by responding in greater detail to the assertions regarding the City's compliance with the Brown Act made in your April 23 Request.

Sincerely,

Encl.

Tri-Party Agreement by and among MSG Forum, LLC, MSG Sports & Entertainment, LLC, Murphy's Bowl LLC, and the City of Inglewood

Release and Substitution of Guarantor Under Development Agreement by and among MSG Forum, LLC, MSGN HOLDINGS, L.P., POLPAT LLC, and the City of Inglewood

RELEASE AND SUBSTITUTION OF GUARANTOR UNDER DEVELOPMENT AGREEMENT

This RELEASE AND SUBSTITUTION OF GUARANTOR UNDER DEVELOPMENT AGREEMENT (this "**Agreement**") is made as of May ____, 2020 (the "**Effective Date**"), by and among MSG FORUM, LLC, a Delaware limited liability company ("**Developer**"); MSGN HOLDINGS, L.P., formerly known as MSG Holdings, L.P., a Delaware limited partnership (such entity and its successors and assigns are referred to herein as the "**Original Guarantor**"); POLPAT LLC, a Delaware limited liability company ("**New Guarantor**"), and the CITY OF INGLEWOOD, a municipal corporation ("**City**"), with reference to the following facts:

A. City and Developer entered into that certain Development Agreement effective June 25, 2012 and recorded July 12, 2012 as Instrument No. 20121033769 of Official Records of Los Angeles County (the "**Development Agreement**"), pertaining to, among other things, the development and operation of certain real property owned by Developer and located in the City of Inglewood, California (the "**Property**"), and more particularly described on **Exhibit A** attached hereto and incorporated herein by this reference.

B. Original Guarantor, an affiliate of Developer, previously executed that certain Joinder and Guaranty attached to the Development Agreement guaranteeing the obligations of Landowner (as defined in the Development Agreement) thereunder (the "**Guaranty**").

C. The ownership interests in the Developer are being transferred to a third party, and in connection therewith, each of the third party, Developer, Original Guarantor, and New Guarantor have requested that (1) Original Guarantor be released from the Guaranty and the Development Agreement, and (2) New Guarantor be substituted as the counterparty to the Guaranty.

D. City now desires to (1) unconditionally and irrevocably release the Original Guarantor from any and all liabilities under the Development Agreement and the Guaranty, and (2) substitute the New Guarantor as the counterparty to the Guaranty.

E. City also wishes to clarify certain commitments made with respect to public benefits to be provided pursuant to the Development Agreement.

NOW THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, each of Developer, Original Guarantor, New Guarantor, and City hereby agrees as follows:

1. City hereby consents and agrees that, as of the Effective Date, (a) Original Guarantor is hereby unconditionally and irrevocably released from any and all liabilities under the Development Agreement and the Guaranty, and (b) New Guarantor is hereby substituted as the counterparty to the Guaranty. In consideration for the release of Old Guarantor, Developer agrees that it shall provide community benefits not to exceed a total of $1 million, pursuant to a program mutually agreed upon between City and Developer within 90 days after the Effective Date, to be memorialized in a Minor Amendment to Section 14 of the Development Agreement (as such Minor Amendment is provided for in Section 20.4 thereof).

2. As of the Effective Date, there are no outstanding claims under the Guaranty.

3. This Agreement may be executed in counterparts which taken together shall constitute one and the same instrument.

4. The provisions of this Agreement shall be binding upon and inure to the benefit of the parties hereto and their respective successors and assigns. Nothing in this Agreement, express or implied, is intended to or will confer upon any person other than the Parties and their respective successors and assigns any legal or equitable right, benefit or remedy of any nature under or by reason of this Agreement.

5. Each of the parties hereto hereby covenants and agrees that it will, at any time and from time to time, execute any documents and take such additional actions as the other, or its respective successors or assigns, shall reasonably require in order to more completely or perfectly carry out the release intended to be accomplished by this Agreement.

6. This Agreement supersedes all prior written or oral agreements of the Parties relating to the matters covered hereby, constitutes a final written expression of all the terms of this Agreement, and is a complete and exclusive statement of those terms.

7. This Agreement shall be construed and interpreted in accordance with the laws of the State of California.

[SIGNATURE PAGES FOLLOW]

IN WITNESS WHEREOF, each of Developer, Original Guarantor, New Guarantor, and City have executed this Agreement as of the Effective Date.

APN: 4025-001-002

TRI-PARTY AGREEMENT

This Tri-Party Agreement ("Agreement"), is entered into by and among MSG Forum, LLC, a Delaware limited liability company ("MSG Forum"), MSG Sports & Entertainment, LLC, a Delaware limited liability company ("MSGSE"), Murphy's Bowl LLC, a Delaware limited liability company ("Murphy's Bowl"), and the City of Inglewood, a municipal corporation ("City"), effective as of March 24, 2020 ("Effective Date"). MSG Forum and MSGSE are collectively referred to in this Agreement as "MSG". MSG, Murphy's Bowl and City are each referred to in this Agreement individually as a "Party" and collectively as the "Parties".

RECITALS

A. MSG Forum operates a venue in the City of Inglewood commonly known as The Forum. MSGSE owns 100% of the membership interests of MSG Forum.

B. Murphy's Bowl has proposed the development of the Inglewood Basketball and Entertainment Center project in the City of Inglewood (the "IBEC Project"). Attached at Exhibit "A" is a detailed description of the IBEC Project.

C. Pursuant to the California Environmental Quality Act, the City is the "Lead Agency" for the IBEC Project. On February 20, 2018, the City issued a Notice of Preparation of a Draft Environmental Impact Report and Public Scoping Meeting for the IBEC Project. As used herein, "CEQA" shall mean the California Environmental Quality Act (*Public Resources Code Section 21000-21189.57*) and the Guidelines for California Environmental Quality Act (*Title 14, California Code of Regulations, Sections 15000-15387*).

D. On December 27, 2019, the City issued a Notice of Availability ("NOA") of a Draft Environmental Impact Report ("EIR"), State Clearing House Number 2018021056, for the IBEC Project, notifying that the Draft EIR for the IBEC Project was available for public review and comment pursuant to CEQA ("Public Comment Period") through February 10, 2020. On February 5, 2020, the City issued a revised NOA notifying that the Public Comment Period was extended through March 10, 2020. On March 4, 2020, the City issued a further revised NOA notifying that the Public Comment Period was extended through March 17, 2020. On March 13, 2020 the City issued a further revised NOA notifying that the Public Comment Period was extended through March 24, 2020.

E. Under CEQA, including but not limited to Guidelines Section 15088, the City may respond to comments submitted after the close of the Public Comment Period.

F. The Parties are involved in various disputes related to the IBEC Project and the Parties are working toward a settlement of the disputes.

G. To facilitate discussions that could resolve issues among the Parties, including regarding potential impacts of the IBEC Project, and allow additional time for the negotiation

and potential final resolution of the Parties' disputes, including potential claims regarding CEQA compliance, the Parties now desire to enter into this Agreement to provide for the (i) submittal and consideration of EIR comments submitted by MSG and Inglewood Residents Against Takings ("IRATE") after the close of the Public Comment Period on March 24, 2020 and (ii) the deferral of the issuance of the Final EIR and noticing of public hearings with respect to any governmental approvals for the IBEC Project during the pendency of the settlement discussions as set forth herein.

AGREEMENT

In consideration of the foregoing and the mutual covenants and agreements set forth in this Agreement, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties agree as follows:

1. Whenever used in this Agreement, the following words or phrases shall have the following meanings:

    a. "Standstill Period" shall mean the period from the Effective Date until the Close of Standstill Period.

    b. "Close of Standstill Period" shall mean ten (10) days after a Standstill Period Event.

    c. "Standstill Period Event" shall mean the earliest to occur of (i) receipt by the City and MSG of written notice duly executed by Murphy's Bowl terminating the Standstill Period and (ii) July 28, 2020, which date shall be extended to the date specified in any written notice of such extension signed by MSG and Murphy's Bowl and sent to the City pursuant to Paragraph 11 below.

2. Murphy's Bowl agrees that during the Standstill Period it shall not and shall direct its consultants, counsel, advisors, agents and representatives not to, directly or indirectly, request, encourage, or facilitate the City to take, or support or assist the City with taking, any actions or decisions contrary to the provisions of this Agreement. The foregoing notwithstanding, nothing in this Paragraph 2 shall prevent Murphy's Bowl from facilitating the preparation and/or posting of documents, technical materials and/or reports for the IBEC Project so long as any such documents, materials or reports are not finalized or approved by the City during the Standstill Period.

3. The City agrees that during the Standstill Period it shall not take any of the following actions or decisions regarding the IBEC Project: public release of the Final EIR; consideration of the Final EIR by any City decision-making body; consideration or adoption of a CEQA exemption for the IBEC Project; certification of the Final EIR; adoption or approval of any findings, including any "statement of overriding considerations" by any City decision-making body regarding the IBEC Project; adoption or approval of any discretionary actions required for development of the IBEC Project; filing of any "notice of determination" or "notice of exemption" under CEQA for the IBEC Project; or seeking or supporting any potential CEQA exemption for the IBEC Project. Notwithstanding the foregoing, nothing in this Paragraph 3 shall prevent the City

from performing any staff level activities prior to the public release of the Final EIR in order to continue the preparation of materials and draft documents related to consideration of the IBEC Project, and/or comply with CEQA Section 21168.6.8.

4. Prior to a Standstill Period Event, MSG and IRATE shall not submit to the City any comments on the Draft EIR ("Comments") and the City shall not be obligated to respond to any Comments received from MSG or IRATE during that period.

5. The Parties agree that following a Standstill Period Event and through the Close of Standstill Period, MSG and IRATE may submit Comments ("Timely Comments") to the City to the addressee provided for in the NOA.

6. As permitted by CEQA, including but not limited to Guidelines Section 15088, the City agrees that it shall accept and evaluate Timely Comments submitted in accordance with Paragraph 5, acknowledge in the Final EIR that it is obligated to respond to such Timely Comments, and prepare written responses to such Timely Comments, consistent with the requirements of CEQA, in the same manner as if the Timely Comments had been submitted prior to the close of the Public Comment Period, without regard to the fact that the Timely Comments were submitted and accepted after the close of the Public Comment Period, including without limitation: inclusion of the Timely Comments and the responses thereto in the Final EIR and inclusion of the Timely Comments in the record of proceedings prepared by the City pursuant to CEQA Section 21168.6.8.

7. City and Murphy's Bowl expressly agree that neither the City nor Murphy's Bowl shall, directly or indirectly, raise or object to, or support or join in any third party's objection to, and shall defend against any objection to, the timeliness of the Timely Comments submitted to the City by MSG and IRATE within the period between a Standstill Period Event and the Close of Standstill Period in any action or proceeding, including any action or proceeding brought to attack, review, set aside, void or annul the certification of the EIR. City and Murphy's Bowl expressly agree that neither the City nor Murphy's Bowl shall, directly or indirectly, claim or assert, or support or join in any third party's claim or assertion, and shall defend against any claim or assertion, that this Agreement is invalid or otherwise unenforceable in any action or proceeding, including any action or proceeding brought to attack, review, set aside, void or annul the certification of the EIR.

8. In the event that Murphy's Bowl or the City takes any action inconsistent with this Agreement, then immediately upon written notice from MSG the City shall cease processing (or rescind, as applicable) any approvals, adoptions, certifications or other actions for the IBEC Project taken or granted in violation of this Agreement, and bring its actions into compliance with this Agreement. Murphy's Bowl agrees that if the City (a) does not accept Timely Comments, (b) releases the Final EIR without including Timely Comments submitted by MSG or IRATE or responses to such Timely Comments, (c) certifies the Final EIR prior to the Close of Standstill Period, or (d) adopts or approves any discretionary actions required for development of the IBEC Project without certification of the Final EIR, then Murphy's Bowl shall withdraw its application for the IBEC Project within two (2) business days of MSG's notice. In the event that thereafter Murphy's Bowl files a new application for the IBEC Project, the City agrees that it shall

issue a new NOP based on the new application for the refiled IBEC Project and, after following all applicable CEQA procedures, issue a new NOA of a Draft EIR for the refiled IBEC Project for public review and comment. Notwithstanding the foregoing, if the City has accepted and responded to the Timely Comments in accordance with Paragraphs 5 and 6, to the extent that MSG and IRATE assert that responses provided by the City to the Timely Comments do not comply with the requirements of CEQA, those assertions shall be resolved in accordance with CEQA Section 21167, et seq., subject to the provisions of Paragraph 7.

9. The Parties understand and agree that following a Standstill Period Event nothing herein precludes or limits MSG or IRATE from submitting comments and/or providing testimony at or before any public meetings, hearings or proceedings that the City or any other governmental agency may hold regarding the IBEC Project. Nothing herein shall require the City to consider Comments submitted after the Close of Standstill Period or otherwise contrary to the provisions of this Agreement.

10. This Agreement shall terminate on the earlier of (i) the effective date of a written settlement agreement among the Parties in regard to all CEQA claims relative to the IBEC Project or (ii) thirty (30) days after the date that any and all litigation challenging the IBEC Project has been finally and unappealably resolved or, if no such litigation is commenced, thirty (30) days after the applicable statute of limitations period for such challenge.

11. All notices under this Agreement will be in writing and will be deemed duly given (a) on the date of delivery if delivered personally or by facsimile or email, receipt acknowledged, (b) on the first (1st) business day following the date of dispatch if delivered utilizing a next-day service by a recognized next-day courier or (c) on the earlier of confirmed receipt or the fifth Business Day following the date of mailing if delivered by registered or certified mail, return receipt requested, postage prepaid. All notices under this Agreement will be delivered to the addresses set forth below, or pursuant to such other instructions as may be designated in writing by the Party to receive such notice:

12. In the event of any actual or threatened default in, or breach of, any of the terms, conditions and provisions of this Agreement, including without limitation the obligation of Murphy's Bowl to withdraw its application for the IBEC Project in accordance with Paragraph 8, the Parties agree that the Party to this Agreement who is or is to be thereby aggrieved shall have the right to specific performance and injunctive relief, including without limitation a temporary restraining order, or other equitable relief, of its rights under this Agreement in addition to any and all other rights and remedies at law or in equity, other than monetary damages, (including without limitation the right to require withdrawal of the IBEC application as required by Paragraph 8), and all such rights and remedies shall be cumulative. The Parties agree that the remedies at law for any breach or threatened breach of this Agreement, including monetary damages, are inadequate compensation for any loss (and therefore no monetary damages, whether direct or consequential, are allowed), and that any defense in any action for specific performance that a remedy at law would be adequate is hereby waived, and that any requirements for the securing or posting of any bond with such remedy are hereby waived.

13. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

14. Other than as expressly set forth herein, the City retains the absolute sole discretion to make decisions under CEQA with respect to the IBEC Project, which discretion includes: (i) deciding not to proceed with development of the IBEC Project, (ii) deciding to proceed with development of the IBEC Project, (iii) deciding to proceed with any alternative development of the IBEC Project, and (iv) deciding to modify the IBEC Project as may be necessary to comply with CEQA. There shall be no approval or commitment by the City regarding the IBEC Project unless and until the City undertakes environmental review as required in compliance with CEQA. MSG expressly agree that neither MSG nor IRATE shall, directly or indirectly, raise or object to, or support or join in any third party's objection to the existence of this Agreement as evidence of a pre-judgment of the merits of the IBEC Project, in any action or proceeding, including any action or proceeding brought to attack, review, set aside, void or annul the certification of the EIR. MSG expressly agree that neither MSG nor IRATE shall, directly or indirectly, claim or assert, or support or join in any third party's claim or assertion, that this Agreement is evidence of a post-hoc rationalization in any action or proceeding,

including any action or proceeding brought to attack, review, set aside, void or annul the certification of the EIR.

15. This Agreement may be executed in counterparts, each of which shall be deemed an original and all of which shall constitute one agreement. Photocopies and portable document format (PDF) copies of executed originals of this Agreement may be used as originals.

16. The City represents and warrants that it has taken all actions that may be required under law to approve and execute this Agreement and by executing this Agreement in the manner provided below the City is formally bound to the provisions of this Agreement. Each signatory to this Agreement represents and warrants that (a) he or she is authorized to sign and deliver this Agreement on behalf of the Party for which he or she is signing, and thereby to bind that Party fully to the terms of this Agreement, (b) entering into this Agreement does not violate any provision of any other agreement to which the Party is bound or, to the Party's knowledge, any provision of law, and (c) there is no litigation or legal proceeding which would prevent the Parties from entering into this Agreement.

17. No amendments or modifications to this Agreement shall be of any force, value or effect unless the amendment or modification is in writing and signed by the Parties to be bound thereto.

18. No waiver of any provision of this Agreement shall be effective unless in writing and signed by a duly authorized representative of the Party against whom enforcement of a waiver is sought and refers expressly to this Paragraph. No waiver of any right or remedy with respect to any occurrence or event shall be deemed a waiver of any right or remedy with respect to any other occurrence or event.

19. Any exhibits attached to this Agreement are incorporated herein by reference.

20. This Agreement shall not be construed more strictly against any Party merely by virtue of the fact that the same has been prepared by such Party or its counsel, it being recognized that each of the Parties have contributed substantially and materially to the preparation of this Agreement. "Including" means "including without limitation".

IN WITNESS WHEREOF, the Parties have caused this Agreement to be executed.

Subject: Follow-up California Public Records Act Request | IBEC Project SCH 2018021056; Billboard Project Case No. EA-MND-2019-102

. ttac mePti : 4-23-20 [SCAN] Brown Act Violation Cure and Correct Demand to City of Inglewood re SCH 2018021056; CPRA Request.PDF

Dear Mayor, Councilmembers, and City Clerk and City officials:

Please include this communication in the administrative record for the IBEC Project and its EIR, SCH 2018021056.

This is a follow-up on our Public Records Act (CPRA) request on April 22, 2020 to Public Works (below), as well as our CPRA requests as part of our Brown Act Cure and Correct letter dated April 23, 2020 (attached).

As part of our Cure and Correct request at p. 2, we requested the settlement agreement(s) that was/were signed by Mayor Butts during the March 24, 2020 Council meeting.

Also, at p. 9 of the same April 23, 2020 letter, under a separate CPRA section, we requested records related to the closed door session at the March 24, 2020 Council meeting. We stated:

> "In view of the above-noted violations, where the Mayor and City improperly discussed the settlement agreement and related "CEQA review" issues and lawsuits during the closed session instead of in the open session as required by law, **, ewenuei t** that the City provide the audio and video recordings of that closed session, as well as any minutes, notes, or records made or exchanged by anyone present at the meeting re same." (Emph. added.)

More than 10 days have passed since our requests on April 22 and April 23, 2020, without response by the City to our document requests, and without producing a single document.

The City is in violation of the CPRA, including Govt. Code Sec. 6253(c), for failure to respond to our CPRA requests within the statutory 10-day deadline. Please immediately comply. We reserve all rights to file a petition for writ of mandate to compel disclosure of these documents and recordings, and to seek award of attorney fees and costs, including pursuant to Govt. Code Sec. 6259(d).

Thank you.

Subject: California Public Records Act Request | IBEC Project SCH 2018021056; Billboard Project Case No. EA-MND-2019-102

Dear Public Works Officials:

This is a public records request made pursuant to Government Code § 6250, et seq.

Please provide the following documents:

1) All documents and communications - from January 1, 2020 through the date of your compliance with this request - which relate or refer to the public works, construction, or improvements on **S10ra22v8t1-bet, eePWBEBB'I BEI Ev810ra22v8t1** or within 300 feet of same in each direction, including but not limited to the purpose of these ongoing improvements and or construction, the associated projects and applicants that the construction/improvement work is related to, as well as any road or sidewalk widening plans for the noted area on S. Prairie St.;

2) All documents and communications - from January 1, 2018 through the date of your compliance with this request - which relate or refer to the **§(kCW rojectMyahawy ur' l)i ψ o, I8&C5 VBI 6BEI BdA** proposed signage, or signage that would be used, in whole or in part, in connection with events at the proposed IBEC project including but not limited to communications from the planner, the City's various departments, Mayor Butts and Council members, as well as the Applicant Murphy's Bowl, LLC and its representatives and agents;

3) All documents and communications - from January 1, 2018 through the date of your compliance with this request - which relate or refer to the **ψ 2lboar9W roject k. 'EBI WI BEvbl v0 v O wy e92a-vPc1w** nd the installation of motion billboard signs on S. Prairie St. between 10200-10204 S. Prairie St., including but not limited to communications from the planners, the City's various departments, Mayor Butts and Council members, as well as WOW Media, Inc. and its representatives and agents.

Govt. Code § 6253.9(a) requires that the agency provide documents in their native format, when requested. Pursuant to that code section, **' I4ai evlllowroq2ew ewenuei te9W ocumePti -vPcl49 2Pgvalllr' ' I2cat2Pi -vPw e2vPat2jewP9velctroP2c format1**

Because I am emailing this request on April 22, 2020, please ensure that your response is provided to me by no later than **y al E-vBEB1** Thank you.

Also, **' I4ai evPcl49ew** his correspondence and CPRA request in the administrative record and council files for both the IBEC Project and the Billboard Project, as described above.

Thank you.

Subject: California Public Records Act Request

Dear Ms. Horton:

Please ensure that this communication is included in the administrative record for the IBEC Project matter (SCH 2018021056).

This is a public records request pursuant to Govt. Code Sec. 6250 et seq.

Please provide:

1) a copy of the complete and original unedited video and audio recordings of the Council Hearing on March 24, 2020. In view of COVID-19, we would appreciate if such recordings be provided to us via a dropbox link or an attachment to an email;

2) all documents signed by Mayor Butts on March 24, 2020, during both the closed and open sessions. Please ensure those are the signed copies.

Govt. Code § 6253.9(a) requires that the agency provide documents in their native format, when requested. Pursuant to that code section, please also provide the requested records in their native and electronic format.

We do not expect that the City will have unusual circumstances to produce the requested few and fairly recent public records.

Because I am emailing this request on June 4, 2020, please ensure that your response is provided to me by no later than **June 14, 2020**. Please confirm receipt. Thank you.

Re: California Public Records Act Requests re IBEC Project, State Clearinghouse No. 2018021056.

Dear Ms. Horton:

This request is made under the California Public Records Act pursuant to Government Code § 6250, et seq. Please provide copies of the following from the City (as "City" is defined below).

Please also include this correspondence in the running administrative record for the IBEC Project.

For ease of reference in this document, please refer to the following **defined terms**:

The "City" shall refer to the City of Inglewood, its City Council, the Mayor and all members of the City Council, all members, officials, employees, consultants, and agents of the City commissions, boards, offices, departments, divisions, the City Attorney's office and any and all outside counsel retained by the City, for your respective office, division, or Department.

"Project" shall refer to State Clearinghouse No. 2018021056, "IBEC Project," "Inglewood Basketball and Entertainment Center Project," "Murphy's Bowl," or "Clippers Arena," or APNs or Project Addresses, as listed below:

APN 4032-001-005: 10022 S. Prairie Ave., Inglewood, CA 90303

APN 4032-001-035: 3900 W. Century Blvd., Inglewood, CA 90303

APN 4032-001-039: 10004 S. Prairie Ave., Inglewood, CA 90303

APN 4032-001-048: 3915 W. 102nd St., Inglewood, CA 90303

APN 4032-001-049: 3940 W. Century Blvd., Inglewood, CA 90303

APN 4032-001-902: 3901 W. 102nd St., Inglewood, CA 90303

APN 4032-001-903: 3939 W. 102nd St., Inglewood, CA 90303

APN 4032-001-904: 10116 S. Prairie Ave., Inglewood, CA 90303

"Project Applicant" shall refer to Murphy's Bowl, LLC or Steve Ballmer, and their officers, principles, employees, representatives, agents, attorneys, experts and consultants.

"Email" includes, but is not limited to, correspondence to or from any email account through which any City business is being conducted, including but not limited to email accounts assigned by the City's Information Technology Agency to City officials, employees or consultants, and consistent with City of San Jose v. Superior Court of Santa Clara County, each and every personal email account outside the City's email system upon which any City business has been conducted.

"Text messages" includes, but is not limited to, correspondence to or from any communications device of the City or a City official, employee or consultant's personal communications device over which text messages may have been sent or received and stored which are City business.

"Meeting Notes" includes, but is not limited to any personal handwritten or electronic notes maintained by any City employee, contractor, or agent, regardless of the ownership of the media.

"Exchanged between" shall mean the passing of a document from one person to another by any means of transmission or delivery.

"Document," as defined in Govt. Code § 6252(g), shall mean any handwriting, typewriting, printing, photostating, photographing, photocopying, transmitting by electronic mail, message texting or facsimile, and every other means of recording upon any tangible thing any form of communication or representation, including letters, words, pictures, sounds, or symbols, or combinations thereof, and any record thereby created, regardless of the manner in which the record has been stored.

Please note that Documents and Emails includes, but is not limited to, correspondence to or from any email account through which any public business is conducted, including but not limited to **personal or otherwise private email accounts belonging to government officials, employees or consultants**, pursuant to the California Supreme Court's recent decision in City of San Jose v. Superior Court (2017) 2 Cal.5th 608. This also includes text messages on any public or private device on which discussions about the Project and other public matters was discussed. **Please ensure that you have secured and produced all such personal or otherwise private emails and texts.** Therefore, we are also requesting that all relevant officials, employees and agents **preserve intact under a litigation hold** all such "personal" and official emails and text messages, and not to destroy, delete, allow to be automatically purged, or otherwise to engage in or permit spoliation of such evidence. To the extent that such emails or texts have been deleted, purged or otherwise spoliated, we demand that the holders of these devices immediately be informed that they must take all efforts to retrieve any deleted or otherwise purged emails and texts, and make all efforts to retrieve and preserve them. **Please confirm that you will do so.**

The public records requests include:

(1) All documents that refer or relate to historic oil well operations on any portion of the Project site (defined above), including but not limited to contamination issues, properly or improperly capped or abandoned oil wells, and any and all communications that refer or relate thereto, including

but not limited to with Division of Oil, Gas, and Geothermal Resources ("DOGGR") and California Geological Energy Management ("CalGEM").

(2) All documents that refer or relate to hazardous wastes generation, hauling, disposal, recognized environmental conditions (REC), remedial actions, cleanups, contamination, No Further Action letters, Underground Storage Tanks and/or leaks at the Project site and within ½-mile radius of any point of the Project site, including but not limited to communications with the Department of Toxic Substances Control ("DTSC").

(3) All documents from January 1, 2016 through the date of your response to this request that refer or relate to or are communications with the Inglewood Unified School District concerning the Project, including but not limited to communications with the City, Project Applicant, ESA (preparer of the Project EIR) and other environmental consultants, their agents, attorneys, experts, and representatives.

(4) All documents that refer or relate to methane zone or methane buffer zone, methane testing or methane leaks at the Project site and within a 1000-foot radius thereof.

(5) All documents that are, refer, or relate to Phase I, Phase II, or any supplemental Environmental Site Assessment or soil testing of any and all lots within the Project site.

(6) All daily calendars of meetings of the Mayor and Councilmembers, and City Manager, from January 1, 2016 through the date of your response to this request.

(7) All documents that are, refer or relate to communications about the potential use of eminent domain for or in furtherance of the Project, including but not limited to all such documents between, among and/or including the City on the one hand, and the Project Applicant [as defined above] on the other hand, from January 1, 2016 through the date of your response to this request. Please note that Citizens for Ceres holds that communications between the City and the Applicant, and/or their respective counsel, are not privileged and must be produced. Citizens for Ceres v. Superior Court (2013) 217 Cal.App.4th 889, 922. Accordingly, you may

not withhold any documents exchanged between, to/from or including the City and the Project Applicant.[1]

(8) All documents that are, refer or relate to communications about vacant and or cleared land within the Project site and their acquisition by the City, from January 1, 2015 through the date of your response to this request.

(9) All documents that are, refer or relate to communications about Federal Aviation Administration (FAA) noise mitigation grant, conditions and requirements for the grant, and any of the Project sites that the City purchased with the FAA grant funds.

(10) All documents that are, refer or relate to communications about noise reduction projects and funding therefor within a ½-mile radius of the Project site, from January 1, 2016 through the date of your response to this request.

(11) All documents, from January 1, 2020 through the date of your response to this request, that are, refer, or relate to communications with Metro, CalDOT, Caltrans, and LA Public Works, including but not limited to issues related to the Crenshaw Line operation, metro stations, timelines and delays in their construction, grade separation activities, and shuttle services and/or bus/shuttle schedules to/from the Project site.

(12) All documents, from January 1, 2017 through the date of your response to this request that are, refer, or relate to CA Public Records Act requests and/or FOIA requests, and responses and document productions in response thereto, related to the IBEC Project and/or Murphy's Bowl, filed or requested by or on behalf of MSG (and all affiliated persons and entities), IRATE, or any other person or entity, as well as all records responsive to any outstanding CPRA requests to the City that were otherwise

---

[1] This principle and admonition applies to ALL documents and communications between the City, as broadly defined above, and the Applicant, as broadly defined above. No pre-Project-approval documents to, from, between, among, or including them may be withheld. This applies to all of the requests contained in this letter.

Please confirm that you are not withholding or redacting any such documents and/or communications, or parts of such documents and/or communications.

resolved/ended pursuant to the Settlement Agreement authorized by the City Council on March 24, 2020 during the closed-door session.

(13) All documents, contracts, communications about or with or including Overland, Pacific and Cutler related to the IBEC project.

(14) All documents (and communications) from January 1, 2019 through the date of your response to this request, that are, refer, or relate to documents or records that were flagged or requested to be removed from the administrative record by any person or entity, [redacted] and further all documents that were actually removed from the draft/running administrative record.

(15) All documents and communications that refer or relate to the City's practices and procedures regarding the editing of the recordings, including audio and video, of City Council and other City government hearings or meetings.

(16) All documents and communications that refer or relate to the editing of video- and/or audio-recordings of the City Council and other administrative hearings related to the IBEC Project, including but not limited to the recording of the March 24, 2020 City Council hearing.

(17) All documents – in their unredacted form – that were ordered sealed in MSG Forum, LLC v. City of Inglewood, et al., Case No. YC072715, as well as all other documents that were sealed, including the discovery referee's reports.

(18) All documents from January 1, 2016 through the date of your compliance with this request which refer, relate to, or are any communications exchanged between or including any member of the City Planning Department, including but not limited to the planner(s) assigned to this Project, and any principal, owner, employee, agent, consultant or attorney representing Murphy's Bowl, LLC or ESA (or any entity linked to the IBEC Project), including but not limited to any and all staff reports, including drafts and documents in Planner "working files," "screen check EIR documents and drafts, studies, photographs, memoranda and internal

memoranda, agenda items, agenda statements, correspondence, emails, attachments to emails, notes, photos, and audio and/or video recordings.

(19) All documents from January 1, 2016 through the date of your compliance with this request, that are not currently posted online in the draft/running administrative record, which refer or relate to the Project, including but not limited to any and all staff reports, including drafts and documents in Planner "working files," studies, photographs, memoranda and internal memoranda, agenda items, agenda statements, correspondence, emails, attachments to emails, notes, photos, and audio and/or video recordings.

(20) All objection and/or comment letters, emails and other communications through the date of your compliance with this request, that are not currently posted online in the draft/running administrative record, regarding the Draft Environmental Impact Report for the Inglewood Basketball and Entertainment Center (IBEC) project at any time, including but not limited to all objection and/or comment letters, emails or other communications related to or in response to any and all Notices of Preparation and any other preliminary CEQA documents for the Inglewood Basketball and Entertainment Center (IBEC) project.

(21) All documents from January 1, 2016 through the date of your compliance with this request that (i) are, refer or relate to, and/or that (ii) are communications with, between, among and/or including the City on the one hand, and the Project Applicant [as defined above], including ESA (the IBEC EIR preparer) on the other hand, which refer or relate to:

(a) The Project;

(b) The Project Draft EIR and Final EIR;

(c) The Project's land use applications and review;

(d) The Forum, Madison Square Garden, MSG Forum, LLC, and any of their officers, owners, members, principals, attorneys, agents, or representatives;

(e) Kenneth or Dawn Baines, and/or Let's Have a Cart Party, and/or

(f) 10212 S. Prairie Ave., Inglewood;

(g) APN No. 4032-008-035;

(h) Robert Silverstein or The Silverstein Law Firm;

(i) Latham & Watkins, including but not limited to Benjamin Hanelin and Maria Pilar Hoye;

(j) Chatten, Brown & Carstens, including but not limited to Douglas Carstens;

(k) Nielsen, Merksamer, Parrinello, Gross & Leoni, including but not limited to Arthur G. Scotland, Sean P. Welch, Kurt R. Oneto, Hilary J. Gibson;

(l) Document(s) the Mayor signed on March 24, 2020,, including but not limited to the tri-party and/or settlement agreements (**signed** versions), as well as staff reports, communications, internal and external memo, correspondence and other documents that refer or relate to said settlement agreement;

(m) Federal Aviation Administration noise mitigation grant, conditions and requirements for the grant, and documents related to the City's purchase of any lots included in the Project with that grant;

(n) Capitol building annex project, annex project related work, or the state office building project, environmental leadership development project, or leadership project;

(o) Requests for extension of public comment period due to the COVID 19 situation; communications re publishing of the notice of extension or its circulation;

(p) All unredacted versions of letters or text messages, which are redacted in the public record, including but not limited to those dated March 24, 2020 and thereafter;

(q) Leases or any types of agreements between the Project Applicant and the City, including exclusive negotiating agreements and their amendments;

(r) Amendments to the General Plan, including but not limited to amendments to the Land Use, Circulation, Safety Elements and adoption of the Environmental Justice Element, as well as the Project's inconsistency with the General Plan;

(s) Amendments to the Inglewood International Business Park Specific Plan, including but not limited to the exclusion of Project parcels from the Specific Plan, the Project's inconsistency with the Specific Plan, and the Specific Plan itself.

(22) All documents that are, refer or relate to communications about the Billboard Project, Case No. EA-MND-2019 or its MND, its Applicant WOW Media, Inc., PlaceWorks environmental document preparer, their representatives, IBEC Project Applicant, their agents, officers, attorneys, from January 1, 2016 through the date of your compliance with this request. The requested records include records about any and all approvals, notices of approvals or determination, as well as records about the lots on which the billboard signs are proposed to be installed and communications about vacating any of those lots or City/public right of way and including those in or part of the IBEC Project.

(23) The administrative record (AR) certified by the City and lodged in the Case of Inglewood Residents Against Takings and Evictions v. Successor Agency To The Inglewood Redevelopment Agency, et al., LASC Case No. BS174709.

Please produce all responsive documents to each item in the same organization as listed above.

I draw your attention to Government Code § 6253.1, which requires a public agency to assist the public in making a focused and effective request by: (1) identifying records and information responsive to the request; (2) describing the information technology and physical location of the records; and (3) providing suggestions for overcoming any practical basis for denying access to the records or information sought.

If you determine that any information is exempt from disclosure, I ask that you reconsider that determination in view of Proposition 59 which amended the State Constitution to require that all exemptions be "narrowly construed." Proposition 59 may modify or overturn authorities on which the City has relied in the past.

If you determine that any requested records are subject to a still-valid exemption, I request that you exercise its discretion to disclose some or all of the records notwithstanding the exemption and with respect to records containing both exempt and non-exempt content, you redact the exempt content and disclose the rest. Should you deny any part of this request, you are required to provide a written response describing the legal authority on which you rely.

Please be advised that Government Code § 6253(c) states in pertinent part that the agency "shall promptly notify the person making the request of the determination **and the reasons therefore**." (Emphasis added.) Section 6253(d) further states that nothing in this chapter "shall be construed to permit an agency to delay or obstruct the inspection or copying of public records. The **notification of denial** of any request for records required by Section 6255 shall set forth the names and titles or positions of each person responsible for the denial."

Additionally, Government Code § 6255(a) states that the "agency shall justify withholding any record by demonstrating that the record in question is exempt under expressed provisions of this chapter or that on the facts of the particular case the public interest served by not disclosing the record clearly outweighs the public interest served by disclosure of the record." (Emphasis added.) This provision makes clear that the agency is required to justify withholding any record **with particularity as to "the record in question.**" (Emphasis added.)

Please clearly state in writing pursuant to Section 6255(b): (1) if the City is withholding any documents; (2) if the City is redacting any documents; (3) what documents the City is so withholding and/or redacting; and (4) the alleged legal bases for withholding and/or redacting as to the particular documents. It should also be noted that to the extent documents are being withheld, should those documents also contain material that is not subject to any applicable exemption to disclosure, then the disclosable portions of the documents must be segregated and produced.

Govt. Code § 6253.9(a) requires that the agency provide documents in their native format, when requested. Pursuant to that code section, please also provide the requested documents, including all applications, in their electronic format (i.e., pdf soft copies).

I further request that **no** IBEC Project approvals or EIR certification occur **until** we have been provided all records responsive to our CPRA requests herein, as well as to our prior CPRA requests on April 22 (to Public Works) and April 23, 2020 (re minutes and notes of the closed session), June 4, 2020 (March 24, 2020 hearing video/audio recordings and all signed documents) and on June 8, 2020 (re redevelopment plan issues) **with sufficient advance time** to review the produced records.

If the documents exist in electronic form, we ask that you provide copies on a disk or flashdrive at cost. For any non-electronic documents, if the copy costs for those documents do not exceed $500, please make the copies and bill this office. If the copy costs exceed $500, please promptly contact us in advance to arrange a time and place where we can inspect the records.

As required by Government Code § 6253, please respond to this request within ten days. Because we are emailing this request on June 11, 2020, please ensure that your response is provided to us by no later than **June 21, 2020**. Thank you.

Very truly yours,

/s/ Robert Silverstein

EXHIBIT 1

CITY OF INGLEWOOD

OFFICE OF THE CITY ATTORNEY

Inglewood All-America City 2009

DATE: May 19, 2020

TO: Mayor and Council Members

FROM: Office of the City Attorney

SUBJECT: **Fourth Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl LLC, to Fund the Costs of certain Legal Activities and Services Required or Contemplated by that certain Amended and Restated Exclusive Negotiating Agreement (ENA) Performed by Remy Moose Manley, LLP at the Request and on the Behalf of the City with Regard to the Proposed Development of a National Basketball Association Arena and Associated Facilities (Project) Near the Intersection of Prairie Avenue and Century Boulevard**

RECOMMENDATION:

It is recommended that the Mayor and Council Members take the following actions:

1. Approve the Fourth Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl, LLC to include an additional $96,133.59 to cover costs of certain Legal activities and services (Phase II) provided by third party consultant at the request and on behalf of the City with regard to the proposed development of a National Basketball Association Arena and associated facilities (Project) near the intersection of Prairie Avenue and Century Boulevard; necessary to provide certain environmental and legal services on behalf of the City as required and/or contemplated by the Exclusive Negotiating Agreement;
2. Approve the Fourth Amendment to Agreement No. 18-058 with Remy Moose Manley, LLP (RMM) to include an additional $96,133.59 for Phase II scope of services performed outside of the agreement; and
3. Adopt a resolution amending the Fiscal Year 2019-2020 Budget.

BACKGROUND:

On August 15, 2017, the City Council, the City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, and the Inglewood Parking Authority approved an Amended and Restated Exclusive Negotiating Agreement (ENA) with Murphy's Bowl LLC.

On December 19, 2017, the City Council approved CEQA Funding Agreement No. 18-055 (Murphy's Bowl LLC), Professional Services Agreement No. 18-058 (Remy Moose Manley, "RMM") and other third party consultants agreements, which were necessary to fund certain costs of environmental implementation activities and environmental legal services with regard to the proposed development of a National Basketball Association arena and associated facilities (the "Project").

On April 10, 2018, the City Council approved a First Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl LLC, and other third party consultants for certain environmental work being done on the City's behalf and requested by the City.

On July 23, 2019, the City Council approved a Second Amendment to CEQA Funding Agreement No. 18-055 and other third party consultants for certain environmental work being done on the City's behalf and requested by the City.

On November 19, 2019, the City Council approved an Amended and Restated Second Amendment to CEQA Funding Agreement No. 18-055, along with a Second Amendment to Agreement No. 18-058 (RMM), and other third party consultants for certain environmental work being done on the City's behalf and requested by the City.

On December 17, 2019, the City Council approved a Third Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl LLC to include an additional $1,616,958.60 to cover certain City costs and activities associated with the Phase III Scope of Services provided by third party consultants necessary to provide certain environmental and legal services on behalf of the City as required and/or contemplated by the ENA.

DISCUSSION:
Pursuant to the terms of the ENA, the City is charged with performing certain implementation activities with respect to the negotiation and preparation of a disposition and development agreement for the proposed development of the Project. When the City does not have the specific expertise to carry out all of its ENA obligations, it hires certain third party consultants to perform or provide such implementing obligations.

Pursuant to such third party hiring and assistance, City staff and the consultant team began preparation of the environmental documentation in December 2017. On February 20, 2018, the City released the Notice of Preparation of an Environmental Impact Report for the Project.

As indicated above, on November 19, 2019, City Council approved an Amended and Restated Second Amendment to the CEQA Funding Agreement to cover certain additional consultant costs associated with the Phase II work. This fourth amendment is needed to cover work authorized by the City for certain environment services, requested by the City, and provided by Remy Moose Manley but exceeded the allotted compensation of Agreement No. 18-058, in the amount of $96,133.59.

FINANCIAL/FUNDING ISSUES AND SOURCES:
Based upon approval of this Fourth Amendment to CEQA Funding Agreement and adoption of the resolution amending the Fiscal Year 2019-2020 budget for $96,133.59; Murphy's Bowl LLC will deliver funds in the amount of $96,133.59 to be deposited into Fund Account Code No. 300.100.A002. Consultant invoices will continue to be paid from Account No. 300.1 00.A002.44860 (Contract Services).

LEGAL REVIEW VERIFICATION:
Administrative staff has verified that the legal documents accompanying this report have been reviewed and approved by the Office of the City Attorney.

BUDGET REVIEW VERIFICATION:
Administrative staff has verified that this report in its entirety, has been submitted to, reviewed and approved by the Budget Division.

FINANCE REVIEW VERIFICATION:
Administrative staff has verified that this report in its entirety, has been submitted to, reviewed and approved by the Finance Department.

DESCRIPTION OF ANY ATTACHMENTS:
Attachment No. 1 - Fourth Amended Agreement with Murphy's Bowl
Attachment No. 2 - Fourth Amended Agreement with Remy Moose Manley, LLP
Attachment No. 3 - Resolution

APPROVAL VERIFICATION SHEET

PREPARED BY:
Kenneth R. Campos, City Attorney

COUNCIL PRESENTER:
Kenneth R. Campos, City Attorney

DEPARTMENT HEAD APPROVAL: _____
Kenneth R. Campos, City Attorney

CITY MANAGER APPROVAL: _____
Artie Fields, City Manager

THIS FOURTH AMENDMENT TO AGREEMENT NO.: 18-058 is made and entered into this _____ day of_____, 2020, by and between the CITY OF INGLEWOOD (hereinafter referred to as the "City"), a municipal corporation, located at One Manchester Boulevard, Inglewood, California 90301; and REMY MOOSE MANLEY, LLP (hereinafter referred to as "Special Counsel") a law firm with its principal place of business located at 555 Capitol Mall, Suite 800, Sacramento, California 95814.

RECITALS

WHEREAS, on December 19, 2017, the City entered into Agreement No.: 18-058 with Special Counsel to provide certain legal services with respect to the preparation of environmental documentation pertinent to that certain Amended and Restated ENA dated August 15, 2017 by and among the City of Inglewood, City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, the Inglewood Parking Authority and Murphy's Bowl and the proposed development of the Clippers arena project (the "Project"); and

WHEREAS, on April 9, 2019, the City and Special Counsel requested that Special Counsel provide additional legal service pursuant to that certain First Amendment to Agreement No.: 18-058; and

WHEREAS, on November 19, 2019, the City and Special Counsel entered into that certain Second Amendment to Agreement No.: 18-058 extending the term of Agreement No.: 18-058; and

WHEREAS, on December 17, 2019, the City and Special Counsel entered into a Third Amendment to Agreement No.: 18-058 which expanded the scope of services and correspondingly increased the amount of compensation necessary for Special Counsel to provide the expanded legal services requested and required for the Project.

WHEREAS, in its effort to completely perform this expanded work, Special Counsel was requested and required by the City to do additional work which resulted in it exceeding the total amount of l compensation provided for in the Agreement No.:18-058, as amended; and

WHEREAS, this Fourth Amendment to Agreement No.: 18-058 will authorize the payment of additional compensation for said additional services (as listed in the attached Exhibit A).

NOW THEREFORE, the City, and the Special Counsel (hereinafter referred to collectively as the "Parties") hereto mutually agree as follows:

SECTION: 1

ARTICLE 5 - COMPENSATION

Agreement **No.: 18-058** shall be amended to add an additional not-to-exceed amount of ninety-six thousand one hundred and thirty-three dollars and fifty-nine cents ($96,133.59) for legal services provided to the City as identified in Exhibit "A." Said Exhibit is incorporated herein by this reference as if set forth in full. The total amount to date for Agreement **No.: 18-058** is:

AGREEMENT	AMOUNT
Agreement **No.: 18-058**	$325,000.00
Amendment One	$225,000.00
Amendment Two	$352,000.00
Amendment Three	$432,000.00
Amendment Four	$96,133.59
Grand Total	$1,430,133.59

SECTION: 2

Except as changed by this Fourth Amendment, all other terms and provisions of Agreement **No.: 18-058**, its Exhibits and Attachments, shall remain unchanged and in full force and effect.

///

///

///

///

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement as of the date and year first above written.

AMENDED AND RESTATED FOURTH AMENDMENT

TO CEQA FUNDING AGREEMENT NO.: 18-055

THIS AMENDED AND RESTATED FOURTH AMENDMENT TO CEQA FUNDING AGREEMENT ("Fourth Amendment") is made and entered into this _____ day of April, 2020, by and between the City of Inglewood (hereinafter referred to as the "City"), a municipal corporation, One Manchester Boulevard, Inglewood, California 90301; and MURPHY'S BOWL LLC, a Delaware limited liability company (hereinafter referred to as the "Developer"), whose address is P.O. Box 1558, Bellevue, WA 98009-1558. Initially capitalized terms not defined herein shall have the same meaning as such terms are defined in the Amended and Restated Exclusive Negotiating Agreement, dated as of August 15, 2017 (the "ENA"), by and among the City, the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, a public body, corporate and politic, the Inglewood Parking Authority, a public body, corporate and politic, and Developer, and/or defined in that certain CEQA Funding Agreement, dated as of December 19, 2017 by and between the City and Developer, as amended by a First Amendment to CEQA Funding Agreement, dated April 10, 2018 (collectively, the "CEQA Funding Agreement").

RECITALS

WHEREAS, the Developer and the City entered into the CEQA Funding Agreement providing for the advance of certain funds by the Developer to the City enabling the City to perform certain of its obligations and duties as set forth in the ENA and required by the California Environmental Quality Act ("CEQA"), California Public Resources Code §§ 21000 et seq. (as amended, and including any successor statutes and regulations promulgated pursuant thereto)(collectively, the CEQA Requirements"), with respect to the proposed creation and development of a premier and state of the art National Basketball Association ("NBA") professional basketball arena, as well as related landscaping, parking and various other ancillary uses related to and compatible with the operation and promotion of a state-of-the-art NBA arena (the "Development"); and

WHEREAS, pursuant to the CEQA Funding Agreement, both the Developer and City

acknowledged and agreed that certain of the funds would be used by the City to hire and pay certain third party consultants (the "CEQA Consultants") required to assist the City in performing its duties and obligations relative to the CEQA Requirements (the "CEQA Work"); and

WHEREAS, the Developer has previously advanced funds pursuant to the CEQA Funding Agreement to specifically pay for the Phase I and Phase II Scope of Services to be performed by the CEQA Consultants which are specifically delineated and described in the CEQA Funding Agreement; and

WHEREAS, the need for additional Phase II Scope of Services arose and the parties now desire to enter into this Fourth Amendment to amend the CEQA Funding Agreement to provide for additional funds by the Developer to the City in the amount of Ninety-Six Thousand, One Hundred Thirty-Three Dollars and Fifty-Nine Cents ($96,133.59) to pay the costs of the additional Phase II Scope of Services provided at the request of the City by the City's CEQA Consultant Remy Moose Manley in accordance with the Additional Phase 2 Scope of Work. The Additional Phase 2 Scope of Work is more specifically detailed and described in the attached Exhibit "A," (invoices) to this Fourth Amendment. Reference to the aforementioned Exhibit is fully incorporated into this Fourth Amendment.

NOW, THEREFORE, the City and Developer (hereinafter referred to individually as "Party" and collectively as the "Parties") hereto mutually agree as follows:

SECTION: 1.

ARTICLE 1 – MODIFICATION OF THE CEQA FUNDING AGREEMENT

As contemplated in the ENA and the CEQA Funding Agreement, the Parties hereby agree that the CEQA Funding Agreement is hereby amended to provide for the reimbursement by the Developer to the City in accordance with the terms and conditions of this Fourth Amendment.

SECTION: 2.

ARTICLE 2 – DEVELOPER REIMBURSEMENT OF FUNDS

1. The Developer agrees to fully reimburse funds in the amount of Ninety-Six

Thousand, One Hundred Thirty-Three Dollars and Fifty-Nine Cents ($96,133.59) representing the total invoices for the additional Phase II work outstanding and unpaid (Exhibit "A,") within fourteen (14) business days following the approval and execution of this Fourth Amendment by the Parties;

2. All reimbursement funds shall be used exclusively by the City to pay the cost of the CEQA Work as incurred by the City in accordance with Exhibit "A," (the "CEQA Costs").

SECTION: 3.

ARTICLE 3 – TERM

The term of this Fourth Amendment shall be the same as the term of the CEQA Funding Agreement.

SECTION: 4.

Except as changed by this Fourth Amendment and all previously approved amendments (the "Amendments"), all terms and provisions of Agreement **No.: 18-055**, its Amendments, exhibits and attachments, shall remain unchanged and in full force and effect.

RESOLUTION NO.: _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF INGLEWOOD AMENDING THE 2019-2020 ANNUAL BUDGET TO PAY CERTAIN INVOICES ASSOCIATED WITH ADDITIONAL PHASE II ENVIRONMENTAL WORK REQUIRED FOR THE PREPARATION AND REVIEW OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT REPORT AND OTHER RELATED SERVICES.

WHEREAS, on August 15, 2017, the City Council, the City of Inglewood as Successor Agency to the Former Redevelopment Agency, and the Inglewood Parking Authority approved an Exclusive Negotiating Agreement with Murphy's Bowl, LLC; and

WHEREAS, on December 19, 2017, the City Council approved a funding agreement with Murphy's Bowl, LLC to provide certain funding for the phased preparation of a California Environmental Quality Act report ("Environmental Impact Report") with regard to the proposed development of a National Basketball Association arena and associated facilities; and

WHEREAS, Phase I environmental work has concluded and Phase II environmental work has commenced but required additional Phase II environmental work ("Phase II Augment Work") necessary for the timely completion of the Environmental Impact Report and associated documents related to a professional basketball arena; and

WHEREAS, Phase II Augment Work has been completed; pursuant to which, the costs of which exceeded the available contract funding amount for the Phase II environmental work; and

WHEREAS, this budget amendment will ensure that the additional funds are available to pay the invoices for the City-requested and approved Phase II Augment Work; and

WHEREAS, sufficient funds are available and identified in Exhibit "A."

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of Inglewood, California, does hereby:

SECTION 1. Amend the City's 2019-2020 fiscal year budget to reflect the adjustments as shown in Exhibit "A."

BE IT FURTHER RESOLVED that the City Clerk certify to the adoption of this Resolution and the same shall be in full force and effect immediately upon adoption.

Passed, approved and adopted this _____ day of _____, 2020

Subject: Request to Clarify and Confirm Rescission of June 9, 2020 Approvals of PH-1 and PH-2, and Public Records Request

Dear Ms. Horton:

Please include this communication in the administrative record for the IBEC EIR and project (SCH No. 2018021056).

We are in receipt of the City Council's June 16, 2020 Hearing Agenda, where Item Nos. SPH-2 and SPH-3, respectively, state:

"Staff report requesting that a public hearing be set to reconsider adoption of a Categorical Exemption EA-CE-2020-36 and General Plan Amendment GPA 2020-01 to Adopt an Environmental Justice Element of the General Plan. "

"Staff report requesting that a public hearing be set to reconsider adoption of a Categorical Exemption EA-CE-2020-37 and General Plan Amendment GPA 2020-02 to amend the Land Use Element of the Inglewood Comprehensive General to clarify existing population density and building intensity allowances for all land use designations."

The Staff Reports for each item merely summarize the prior staff reports in 4 pages, and provide the following identical explanation for re-noticing the items to reconsider the approvals for both items:

"However, during the City Council meeting, staff received a comment letter pertaining to the public's ability to provide comment during the meeting. To address the comments outlined in the letter and to ensure adequate opportunity for public comment, the General Plan Amendment will be re-noticed and presented for the City Council's reconsideration."

Based on the hyperlinked staff reports for both items - not accessible to those without internet access - the new hearing for both General Plan amendments and their Exemptions will be set on June 30, 2020.

Please clarify and confirm:

1) Whether any and all approvals of Item Nos. PH-1 and PH-2 on June 9, 2020 were rescinded, and - if so - then based on which action or mechanism, and at when public hearing. The mere statement now that the approvals will be reset and reconsidered does not mean that the City's notice of same cannot, or will not, be withdrawn. In other words, how do we know that the June 9, 2020 approval are actually already rescinded, or actually will be?;

2) Whether a City Council hearing on June 30, 2020 will indeed take place and will include both items re General Plan approvals and their Exemptions, as mentioned in the staff reports.

Please note that the City's failure to rescind the June 9, 2020 approvals related to PH-1 and PH-2 make the City and City Council subject to both CEQA, State Planning and Zoning Laws, and Brown Act violation claims.

Further, please revise, re-issue and re-publish the June 16, 2020 Council Hearing agenda to ensure:

1) The brief description for both Items SPH-2 and SPH-3 includes the "June 30, 2020" date on which the public hearing re General Plan amendments will be set;

2) The agenda's font type and size related to the "public participation" are not reduced but are in the same large and legible size as the rest of the agenda's first page.

Finally, pursuant to Govt' Code Sec. 6250 et seq., please provide the following public records:

1) All resolutions and or motions that were adopted on June 9, 2020 related to the General Plan Amendments Item Nos. PH-1 and PH-2, in their signed form;

2) Any and all revisions and modifications of the text of the resolutions or notices of exemption for Items Nos. PH-1 and PH-2 that occurred at any time and especially during the City Council Hearing, *after* the staff reports for each item were published in the June 9, 2020 agenda via hyperlinked agenda package;

3) Any public comments - apart from those from this firm - that were received by City staff and/or officials that relate to Items PH-1 and/or PH-2, from January 1, 2018 through the time of your compliance with this request;

4) Any public comments that were received by the City staff and/or officials related to the deprived public participation, incorrect

access code, Brown act violation, or inability to make comments at the June 9, 2020 hearing.

5) All documents and communications which relate or refer to or are agreements, fee arrangements, indemnification, reimbursement or invoices of any attorney or environmental consultant retained by the City or consulted with for the purposes of drafting or amending the General Plan Land Use and Environmental Justice Elements.

We request your prompt attention to all the above-noted issues and CPRA requests. In any event, please respond to the CPRA requests no later than **June 22, 2020**. Thank you

Subject: California Public Records Act Request

Dear Ms. Horton:

Please ensure that this communication is included in the administrative record for the IBEC Project matter (SCH 2018021056).

This is a public records request pursuant to Govt. Code Sec. 6250 et seq.

Please provide:

1) a copy of the complete and original unedited video and audio recordings of the Council Hearing on March 24, 2020. In view of COVID-19, we would appreciate if such recordings be provided to us via a dropbox link or an attachment to an email;

2) all documents signed by Mayor Butts on March 24, 2020, during both the closed and open sessions. Please ensure those are the signed copies.

Govt. Code § 6253.9(a) requires that the agency provide documents in their native format, when requested. Pursuant to that code section, please also provide the requested records in their native and electronic format.

We do not expect that the City will have unusual circumstances to produce the requested few and fairly recent public records.

Because I am emailing this request on June 4, 2020, please ensure that your response is provided to me by no later than **June 14, 2020**. Please confirm receipt. Thank you.

Subject: RE: California Public Records Act Request | Follow-up to June 4, 2020 Request

Dear Mr. Brenneman:

Thank you for your response to our June 4, 2020 CPRA request.

This link contains the video we had downloaded directly from the City's Facebook site on May 27, 2020: https://www.dropbox.com/sh/549c6afkp2fc2qs/AAB_q2iCD9XN7wa9CLZBOpJga?dl=0&preview=2020-03-24_Inglewood+City+Council_Video+1.mp4

Please confirm it is a true, accurate, complete and unedited recording of the City Council hearing on March 24, 2020.

Moreover, please inform us the custodian's name for the public records and video/audio records of the City Council hearings.

Also, pursuant to Govt. Code Sec. 6253.9, please also provide us the true, accurate, complete and unedited recording of the City Council Hearing on March 24, 2020 in its native format.

Finally, the signed Tri-Party Agreement you sent is missing the dates of execution despite the placeholders for same. In view of multiple signatories and yet only Mayor Butts apparently signing the agreement at the March 24, 2020 City Council Hearing, please advise when Mr. Butts and each party signed those agreements, and send us the complete versions with the dates.

Thank you.

(Please keep all cc'd here in your response.)

1) a copy of the complete and original unedited video and audio recordings of the Council Hearing on March 24, 2020. In view of COVID-19, we would appreciate if such recordings be provided to us via a dropbox link or an attachment to an email;

2) all documents signed by Mayor Butts on March 24, 2020, during both the closed and open sessions. Please ensure those are the signed copies.

Govt. Code § 6253.9(a) requires that the agency provide documents in their native format, when requested. Pursuant to that code section, please also provide the requested records in their native and electronic format.

We do not expect that the City will have unusual circumstances to produce the requested few and fairly recent public records.

Because I am emailing this request on June 4, 2020, please ensure that your response is provided to me by no later than **June 14, 2020**. Please confirm receipt. Thank you.

CITY OF INGLEWOOD

OFFICE OF THE CITY ATTORNEY

Inglewood All-America City 2009

DATE: May 19, 2020

TO: Mayor and Council Members

FROM: Office of the City Attorney

SUBJECT: **Fourth Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl LLC, to Fund the Costs of certain Legal Activities and Services Required or Contemplated by that certain Amended and Restated Exclusive Negotiating Agreement (ENA) Performed by Remy Moose Manley, LLP at the Request and on the Behalf of the City with Regard to the Proposed Development of a National Basketball Association Arena and Associated Facilities (Project) Near the Intersection of Prairie Avenue and Century Boulevard**

RECOMMENDATION:

It is recommended that the Mayor and Council Members take the following actions:

1. Approve the Fourth Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl, LLC to include an additional $96,133.59 to cover costs of certain Legal activities and services (Phase II) provided by third party consultant at the request and on behalf of the City with regard to the proposed development of a National Basketball Association Arena and associated facilities (Project) near the intersection of Prairie Avenue and Century Boulevard; necessary to provide certain environmental and legal services on behalf of the City as required and/or contemplated by the Exclusive Negotiating Agreement;
2. Approve the Fourth Amendment to Agreement No. 18-058 with Remy Moose Manley, LLP (RMM) to include an additional $96,133.59 for Phase II scope of services performed outside of the agreement; and
3. Adopt a resolution amending the Fiscal Year 2019-2020 Budget.

BACKGROUND:

On August 15, 2017, the City Council, the City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency, and the Inglewood Parking Authority approved an Amended and Restated Exclusive Negotiating Agreement (ENA) with Murphy's Bowl LLC.

On December 19, 2017, the City Council approved CEQA Funding Agreement No. 18-055 (Murphy's Bowl LLC), Professional Services Agreement No. 18-058 (Remy Moose Manley, "RMM") and other third party consultants agreements, which were necessary to fund certain costs of environmental implementation activities and environmental legal services with regard to the proposed development of a National Basketball Association arena and associated facilities (the "Project").

On April 10, 2018, the City Council approved a First Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl LLC, and other third party consultants for certain environmental work being done on the City's behalf and requested by the City.

DR-1

On July 23, 2019, the City Council approved a Second Amendment to CEQA Funding Agreement No. 18-055 and other third party consultants for certain environmental work being done on the City's behalf and requested by the City.

On November 19, 2019, the City Council approved an Amended and Restated Second Amendment to CEQA Funding Agreement No. 18-055, along with a Second Amendment to Agreement No. 18-058 (RMM), and other third party consultants for certain environmental work being done on the City's behalf and requested by the City.

On December 17, 2019, the City Council approved a Third Amendment to CEQA Funding Agreement No. 18-055 with Murphy's Bowl LLC to include an additional $1,616,958.60 to cover certain City costs and activities associated with the Phase III Scope of Services provided by third party consultants necessary to provide certain environmental and legal services on behalf of the City as required and/or contemplated by the ENA.

DISCUSSION:
Pursuant to the terms of the ENA, the City is charged with performing certain implementation activities with respect to the negotiation and preparation of a disposition and development agreement for the proposed development of the Project. When the City does not have the specific expertise to carry out all of its ENA obligations, it hires certain third party consultants to perform or provide such implementing obligations.

Pursuant to such third party hiring and assistance, City staff and the consultant team began preparation of the environmental documentation in December 2017. On February 20, 2018, the City released the Notice of Preparation of an Environmental Impact Report for the Project.

As indicated above, on November 19, 2019, City Council approved an Amended and Restated Second Amendment to the CEQA Funding Agreement to cover certain additional consultant costs associated with the Phase II work. This fourth amendment is needed to cover work authorized by the City for certain environment services, requested by the City, and provided by Remy Moose Manley but exceeded the allotted compensation of Agreement No. 18-058, in the amount of $96,133.59.

FINANCIAL/FUNDING ISSUES AND SOURCES:
Based upon approval of this Fourth Amendment to CEQA Funding Agreement and adoption of the resolution amending the Fiscal Year 2019-2020 budget for $96,133.59; Murphy's Bowl LLC will deliver funds in the amount of $96,133.59 to be deposited into Fund Account Code No. 300.100.A002. Consultant invoices will continue to be paid from Account No. 300.1 00.A002.44860 (Contract Services).

LEGAL REVIEW VERIFICATION:
Administrative staff has verified that the legal documents accompanying this report have been reviewed and approved by the Office of the City Attorney.

BUDGET REVIEW VERIFICATION:
Administrative staff has verified that this report in its entirety, has been submitted to, reviewed and approved by the Budget Division.

FINANCE REVIEW VERIFICATION:
Administrative staff has verified that this report in its entirety, has been submitted to, reviewed and approved by the Finance Department.

DESCRIPTION OF ANY ATTACHMENTS:
Attachment No. 1 - Fourth Amended Agreement with Murphy's Bowl
Attachment No. 2 - Fourth Amended Agreement with Remy Moose Manley, LLP
Attachment No. 3 - Resolution

THIS FOURTH AMENDMENT TO AGREEMENT NO.: 18-058 is made and entered into this _____ day of_____, 2020, by and between the CITY OF INGLEWOOD (hereinafter referred to as the "City"), a municipal corporation, located at One Manchester Boulevard, Inglewood, California 90301; and REMY MOOSE MANLEY, LLP (hereinafter referred to as "Special Counsel") a law firm with its principal place of business located at 555 Capitol Mall, Suite 800, Sacramento, California 95814.

RECITALS

WHEREAS, on December 19, 2017, the City entered into Agreement No.: 18-058 with Special Counsel to provide certain legal services with respect to the preparation of environmental documentation pertinent to that certain Amended and Restated ENA dated August 15, 2017 by and among the City of Inglewood, City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, the Inglewood Parking Authority and Murphy's Bowl and the proposed development of the Clippers arena project (the "Project"); and

WHEREAS, on April 9, 2019, the City and Special Counsel requested that Special Counsel provide additional legal service pursuant to that certain First Amendment to Agreement No.: 18-058; and

WHEREAS, on November 19, 2019, the City and Special Counsel entered into that certain Second Amendment to Agreement No.: 18-058 extending the term of Agreement No.: 18-058; and

WHEREAS, on December 17, 2019, the City and Special Counsel entered into a Third Amendment to Agreement No.: 18-058 which expanded the scope of services and correspondingly increased the amount of compensation necessary for Special Counsel to provide the expanded legal services requested and required for the Project.

WHEREAS, in its effort to completely perform this expanded work, Special Counsel was requested and required by the City to do additional work which resulted in it exceeding the total amount of l compensation provided for in the Agreement No.:18-058, as amended; and

WHEREAS, this Fourth Amendment to Agreement No.: 18-058 will authorize the payment of additional compensation for said additional services (as listed in the attached Exhibit A).

NOW THEREFORE, the City, and the Special Counsel (hereinafter referred to collectively as the "Parties") hereto mutually agree as follows:

SECTION: 1

ARTICLE 5 - COMPENSATION

Agreement **No.: 18-058** shall be amended to add an additional not-to-exceed amount of ninety-six thousand one hundred and thirty-three dollars and fifty-nine cents ($96,133.59) for legal services provided to the City as identified in Exhibit "A." Said Exhibit is incorporated herein by this reference as if set forth in full. The total amount to date for Agreement **No.: 18-058** is:

AGREEMENT	AMOUNT
Agreement **No.: 18-058**	$325,000.00
Amendment One	$225,000.00
Amendment Two	$352,000.00
Amendment Three	$432,000.00
Amendment Four	$96,133.59
Grand Total	$1,430,133.59

SECTION: 2

Except as changed by this Fourth Amendment, all other terms and provisions of Agreement **No.: 18-058**, its Exhibits and Attachments, shall remain unchanged and in full force and effect.

///

AMENDED AND RESTATED FOURTH AMENDMENT

TO CEQA FUNDING AGREEMENT NO.: 18-055

THIS AMENDED AND RESTATED FOURTH AMENDMENT TO CEQA FUNDING AGREEMENT ("Fourth Amendment") is made and entered into this _____ day of April, 2020, by and between the City of Inglewood (hereinafter referred to as the "City"), a municipal corporation, One Manchester Boulevard, Inglewood, California 90301; and MURPHY'S BOWL LLC, a Delaware limited liability company (hereinafter referred to as the "Developer"), whose address is P.O. Box 1558, Bellevue, WA 98009-1558. Initially capitalized terms not defined herein shall have the same meaning as such terms are defined in the Amended and Restated Exclusive Negotiating Agreement, dated as of August 15, 2017 (the "ENA"), by and among the City, the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, a public body, corporate and politic, the Inglewood Parking Authority, a public body, corporate and politic, and Developer, and/or defined in that certain CEQA Funding Agreement, dated as of December 19, 2017 by and between the City and Developer, as amended by a First Amendment to CEQA Funding Agreement, dated April 10, 2018 (collectively, the "CEQA Funding Agreement").

RECITALS

WHEREAS, the Developer and the City entered into the CEQA Funding Agreement providing for the advance of certain funds by the Developer to the City enabling the City to perform certain of its obligations and duties as set forth in the ENA and required by the California Environmental Quality Act ("CEQA"), California Public Resources Code §§ 21000 et seq. (as amended, and including any successor statutes and regulations promulgated pursuant thereto)(collectively, the CEQA Requirements"), with respect to the proposed creation and development of a premier and state of the art National Basketball Association ("NBA") professional basketball arena, as well as related landscaping, parking and various other ancillary uses related to and compatible with the operation and promotion of a state-of-the-art NBA arena (the "Development"); and

WHEREAS, pursuant to the CEQA Funding Agreement, both the Developer and City

acknowledged and agreed that certain of the funds would be used by the City to hire and pay certain third party consultants (the "CEQA Consultants") required to assist the City in performing its duties and obligations relative to the CEQA Requirements (the "CEQA Work"); and

WHEREAS, the Developer has previously advanced funds pursuant to the CEQA Funding Agreement to specifically pay for the Phase I and Phase II Scope of Services to be performed by the CEQA Consultants which are specifically delineated and described in the CEQA Funding Agreement; and

WHEREAS, the need for additional Phase II Scope of Services arose and the parties now desire to enter into this Fourth Amendment to amend the CEQA Funding Agreement to provide for additional funds by the Developer to the City in the amount of Ninety-Six Thousand, One Hundred Thirty-Three Dollars and Fifty-Nine Cents ($96,133.59) to pay the costs of the additional Phase II Scope of Services provided at the request of the City by the City's CEQA Consultant Remy Moose Manley in accordance with the Additional Phase 2 Scope of Work. The Additional Phase 2 Scope of Work is more specifically detailed and described in the attached Exhibit "A," (invoices) to this Fourth Amendment. Reference to the aforementioned Exhibit is fully incorporated into this Fourth Amendment.

NOW, THEREFORE, the City and Developer (hereinafter referred to individually as "Party" and collectively as the "Parties") hereto mutually agree as follows:

SECTION: 1.

ARTICLE 1 – MODIFICATION OF THE CEQA FUNDING AGREEMENT

As contemplated in the ENA and the CEQA Funding Agreement, the Parties hereby agree that the CEQA Funding Agreement is hereby amended to provide for the reimbursement by the Developer to the City in accordance with the terms and conditions of this Fourth Amendment.

SECTION: 2.

ARTICLE 2 – DEVELOPER REIMBURSEMENT OF FUNDS

1. The Developer agrees to fully reimburse funds in the amount of Ninety-Six

Thousand, One Hundred Thirty-Three Dollars and Fifty-Nine Cents ($96,133.59) representing the total invoices for the additional Phase II work outstanding and unpaid (Exhibit "A,") within fourteen (14) business days following the approval and execution of this Fourth Amendment by the Parties;

2. All reimbursement funds shall be used exclusively by the City to pay the cost of the CEQA Work as incurred by the City in accordance with Exhibit "A," (the "CEQA Costs").

SECTION: 3.

ARTICLE 3 – TERM

The term of this Fourth Amendment shall be the same as the term of the CEQA Funding Agreement.

SECTION: 4.

Except as changed by this Fourth Amendment and all previously approved amendments (the "Amendments"), all terms and provisions of Agreement **No.: 18-055**, its Amendments, exhibits and attachments, shall remain unchanged and in full force and effect.

RESOLUTION NO.: _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF INGLEWOOD AMENDING THE 2019-2020 ANNUAL BUDGET TO PAY CERTAIN INVOICES ASSOCIATED WITH ADDITIONAL PHASE II ENVIRONMENTAL WORK REQUIRED FOR THE PREPARATION AND REVIEW OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT REPORT AND OTHER RELATED SERVICES.

WHEREAS, on August 15, 2017, the City Council, the City of Inglewood as Successor Agency to the Former Redevelopment Agency, and the Inglewood Parking Authority approved an Exclusive Negotiating Agreement with Murphy's Bowl, LLC; and

WHEREAS, on December 19, 2017, the City Council approved a funding agreement with Murphy's Bowl, LLC to provide certain funding for the phased preparation of a California Environmental Quality Act report ("Environmental Impact Report") with regard to the proposed development of a National Basketball Association arena and associated facilities; and

WHEREAS, Phase I environmental work has concluded and Phase II environmental work has commenced but required additional Phase II environmental work ("Phase II Augment Work") necessary for the timely completion of the Environmental Impact Report and associated documents related to a professional basketball arena; and

WHEREAS, Phase II Augment Work has been completed; pursuant to which, the costs of which exceeded the available contract funding amount for the Phase II environmental work; and

WHEREAS, this budget amendment will ensure that the additional funds are available to pay the invoices for the City-requested and approved Phase II Augment Work; and

WHEREAS, sufficient funds are available and identified in Exhibit "A."

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of Inglewood, California, does hereby:

SECTION 1. Amend the City's 2019-2020 fiscal year budget to reflect the adjustments as shown in Exhibit "A."

BE IT FURTHER RESOLVED that the City Clerk certify to the adoption of this Resolution and the same shall be in full force and effect immediately upon adoption.

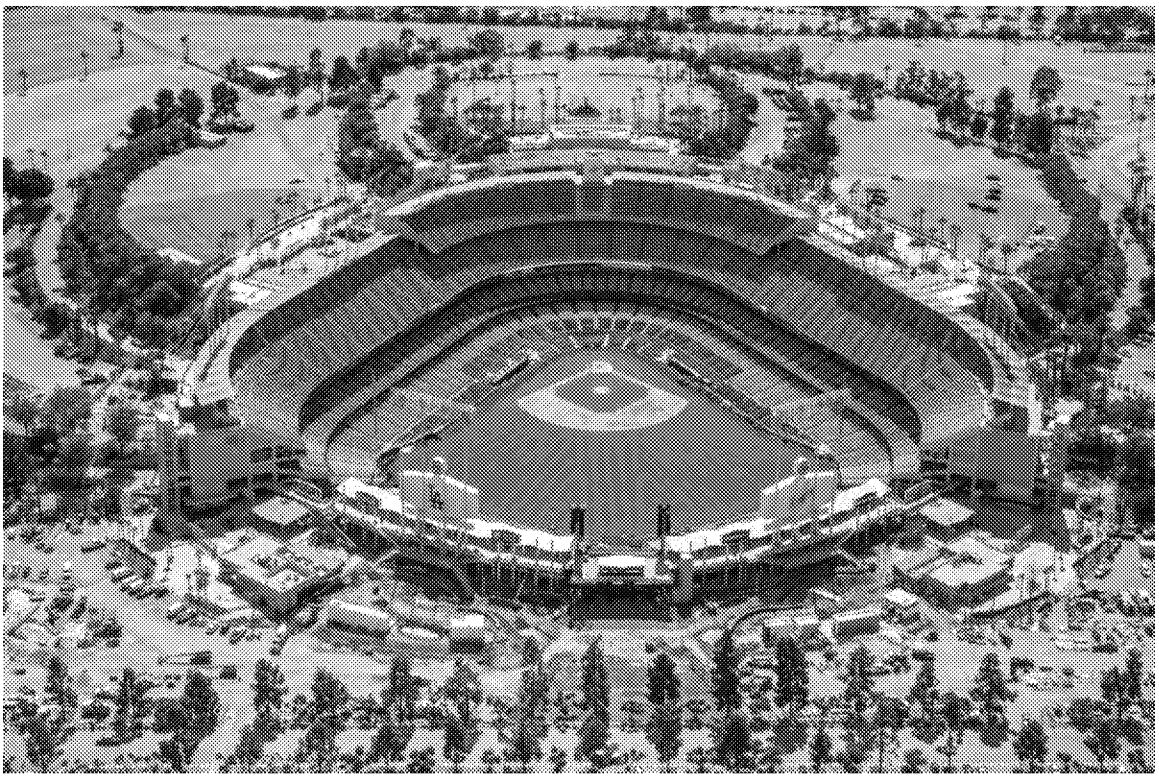
Coronavirus could halt L.A. concerts, sporting events until 2021, Garcetti says



Dodger Stadium sits empty. (Robert Gauthier / Los Angeles Times)

By Dakota Smith, Ben Welsh
April 15, 2020 | 10:05 AM UPDATED6:37 PM

Los Angeles may hold off on allowing big gatherings until 2021 because of the coronavirus threat, according to an internal Los Angeles Fire Department email reviewed by The Times.

Mayor Eric Garcetti raised the issue during his weekly briefing Monday with a group of high-level staff from several departments, including Fire Chief Ralph Terrazas. Garcetti indicated during the conference call that "large gatherings such as concerts and sporting events may not be approved in the city for at least 1 year," according to the email.

LAFD Deputy Chief Trevor Richmond wrote the email summarizing Terrazas' meeting with Garcetti and others and sent it Tuesday to several fire department staffers. The email was reviewed by The Times.

Fire Department spokesman Peter Sanders said Tuesday that Terrazas was "paraphrasing information he received from the mayor regarding possible scenarios for reopening timelines across a range of events."

Garcetti spokesman Alex Comisar confirmed the mayor's comments at the meeting. "The mayor was generally referencing studies of current and historical data and best practices for safely reopening our economy," Comisar said.

Comisar said the mayor doesn't have a timeline for Los Angeles to begin resuming large-scale events. Garcetti himself has repeatedly told Angelenos during his nightly press briefings that it would be a mistake to reopen businesses and stores before the pandemic can be controlled.

"It's difficult to imagine us getting together in the thousands any time soon. I think we should be prepared for that this year. I think we all have never wanted science to work so quickly. But until there's either a vaccine, some sort pharmaceutical intervention or herd immunity, the science is the science," Garcetti said on CNN Wednesday.

Garcetti also talked during the conference call with his staff about reopening the economy, starting with "essential businesses and small businesses ... phased in over a period of time (6-10 months)," according to Richmond's email.

The coronavirus pandemic has caused the cancellation of sporting, music and cultural events across the globe.

California Gov. Gavin Newsom said Tuesday that events that draw hundreds or thousands of strangers will be off limits for the near future, based on current guidelines. The state needs to boost testing, protect high-risk residents from infection and expand hospital capacity before the stay-at-home order imposed last month can be modified, he said.

"The prospect of mass gatherings is negligible at best until we get to herd immunity and we get to a vaccine," Newsom said.

Absent a vaccine, Newsom said that Californians should expect to continue to wear face coverings or masks, and to visit restaurants with fewer tables, disposable menus and waiters wearing masks and gloves as the state slowly transitions back to normal.

His administration suggested the state will introduce guidelines for businesses to conduct "health checks" when employees return to work.

He also discussed the possibility of staggering school start times throughout the day for students if they return to campus in the fall.

Experts say stay-at-home orders could persist until the end of May or mid-June.

Dr. Robert Kim-Farley, a UCLA medical epidemiologist and infectious disease expert, said by that time, places that have effectively maintained physical distancing measures will see significant reductions in the numbers of cases. In the nation's worst-hit areas, hospitals may start to see relief.

Also at that time, Kim-Farley suspects there will be enough capacity to offer tests for the virus and antibodies — to determine whether people are immune — to meet the demand.

In the early summer, perhaps in the middle of June to the end of July, there may be some nuanced, tailored approaches for getting people back to work and easing stay-at-home orders, he said.

Elsewhere, New Orleans Mayor LaToya Cantrell has recommended that large events in that city be pushed off until 2021, according to a local news report.

Hi Perla,

Can we provide our comments to you after the deadline? We have some very preliminary comments but because all staff is dealing with COVID-19, we will not be able to complete our review today.

Thank you,
Kaitlyn

NOTICE OF AVAILABILITY OF A DRAFT ENVIRONMENTAL IMPACT REPORT

Comment Period Extended to March 24, 2020

2020 064684
FILED
Mar 18 2020

DATE: ~~December 27, 2019 February 5, 2020 March 4, 2020~~ March 13, 2020

TO: Responsible Agencies, County Clerk, and Interested Parties

NOTICE IS HEREBY GIVEN that the City of Inglewood (City or Inglewood) has prepared a Draft Environmental Impact Report (EIR) for the Inglewood Basketball and Entertainment Center (Proposed Project). The Draft EIR is being distributed for public review. Pursuant to the California Public Resources Code and the California Environmental Quality Act (CEQA) Guidelines, the City of Inglewood is the Lead Agency for the Proposed Project.

Project Title: Inglewood Basketball and Entertainment Center (IBEC)

State Clearinghouse Number: 2018021056

Project Location

The Project Site is located in the southwestern portion of the City of Inglewood within Los Angeles County, approximately 10 miles south/southwest of downtown Los Angeles. The Project Site is approximately 28 acres, divided into four sites. The main portion of the Project Site (the Arena Site) is approximately 17 acres and is bounded by West Century Boulevard on the north, South Prairie Avenue on the west, South Doty Avenue on the east, and an imaginary straight line extending east from West 103rd Street to South Doty Avenue to the south. The Project Site includes three additional areas: the West Parking Garage Site on an approximately 5-acre site bounded by West Century Boulevard to the north, hotel and residential uses to the west, South Prairie Avenue to the east, and West 102nd Street to the south; the East Transportation and Hotel Site on an approximately 5-acre site bounded by West Century Boulevard to the north, industrial and commercial uses to the east and west, and West 102nd Street to the south; and the Well Relocation Site on an approximately 0.2-acre parcel located at 3812 West 102nd Street, surrounded by vacant land to the west and south and bounded by residential uses to the east. The Project Site is located immediately to the south of the Hollywood Park Specific Plan (HPSP) area.

Project Description

The Proposed Project is a Public/Private partnership between Murphy's Bowl LLC, a private applicant, and the City, and would consist of an approximately 915,000-square foot (sf) Arena Structure designed to host the LA Clippers basketball team with up to 18,000 fixed seats for National Basketball Association (NBA) games. The arena could also be configured with up to 500 additional temporary seats for events such as family shows, concerts, conventions and

corporate events, and non-LA Clippers sporting events. The Arena Structure would include an approximately 85,000-sf team practice and athletic training facility; approximately 71,000-sf of LA Clippers team office space; and an approximately 25,000 sf sports medicine clinic. Development on the Arena Site would also include an outdoor plaza with approximately 80,000 sf of circulation and gathering space, approximately 48,000 sf of retail/restaurant uses on two levels, up to 15,000 sf of community uses that could accommodate community and youth-oriented programing, and an outdoor stage. A parking garage with 650 spaces would be located immediately south of the Arena Structure within the Arena Site. An existing City of Inglewood groundwater well that is located within the Arena Site would be relocated to the Well Relocation Site as part of the Proposed Project.

The LA Clippers currently play their games at the Staples Center in downtown Los Angeles, and the LA Clippers' team offices are currently located at 1212 South Flower Street within two blocks of Staples Center. The team's existing practice and athletic training facilities are located in the Playa Vista neighborhood of Los Angeles, at 6854 South Centinela Avenue. Upon completion of the Proposed Project, those uses would be relocated to the Project Site.

Annually, it is expected that the LA Clippers would host up to five preseason games in October; 41 regular season games from October to mid-April; and an average of three playoff games from April to June based on the team's average. Other events such as concerts, family shows, conventions and corporate or civic events at which the LA Clippers staff or exhibit would take place in the Arena throughout the year, with attendance ranging from small events up to 2,000 attendees (average of 300 attendees) to full Arena capacity.

A six-story parking structure containing 3,110 parking spaces would be located within the West Parking Garage Site. A 17-foot-high pedestrian bridge would span South Prairie Avenue, connecting the West Parking Garage to the Arena Site to provide pedestrian access between the second floor of the parking garage and the Arena Site to the westernmost building in the plaza.

The East Transportation and Hotel Site would include a parking garage (365 spaces) and transportation hub to accommodate private vehicle parking, private or charter bus staging, and Transportation Network Company staging, pick-up and drop-off. The Proposed Project would also include a limited-service hotel use with up to 150 rooms on an approximately 1.3-acre portion of the East Transportation and Hotel Site. The hotel could include amenities such as a lobby, business center, a fitness room, a guest laundry facility, a market pantry, and/or an outdoor gathering area. The hotel would be approximately six stories, with a maximum height of approximately 100 feet.

Circulation improvements including driveways, signals, a crosswalk, bicycle parking, relocation of two bus stops, improved sidewalks, and a 17-foot tall pedestrian bridge crossing South Prairie Avenue would be included as part of the Proposed Project. A portion of West 102nd Street between South Prairie Avenue and South Doty Avenue would be vacated and included within the Arena Site. Approximately 350 linear feet of West 101st Street would be vacated and developed as part of the West Parking Garage Site. The primary vehicular access to the Project Site would be provided along the major corridors of South Prairie Avenue and West Century Boulevard. Before, during, and after LA Clippers basketball games and other large events, the Proposed Project would provide shuttle service that would connect the Project Site to the Metro Green Line's Hawthorne/Lennox Station and the Metro Crenshaw/LAX Line's La Brea/Florence

Station. The shuttle service would drop off and pick up attendees at the proposed shuttle pick-up and drop-off location on the west side of the Arena Site along South Prairie Avenue. The Proposed Project would also include identification and advertising signage, graphic display panels or systems, potential illuminated rooftop signage, and wayfinding signage.

The EIR also considered the potential environmental impacts associated with two Project Variants to circulation infrastructure: the West Century Boulevard Pedestrian Bridge Variant and the Alternate Prairie Access Variant. These Project Variants are proposed in order to provide flexibility to allow the City to approve them as part of the Proposed Project, if desired. Each Project Variant would include the same land use program, parking/loading, mechanical equipment, vehicular circulation, streetscape improvements, and sustainability features as the Proposed Project.

Environmental Topics Evaluated/Potentially Significant Impacts

The Draft EIR examines the potential impacts that would be generated by the Proposed Project in relation to the following environmental topics: Aesthetics; Air Quality; Biological Resources; Cultural & Tribal Cultural Resources; Energy Demand & Conservation; Geology & Soils; Greenhouse Gas Emissions; Hazards & Hazardous Materials; Hydrology & Water Quality; Land Use & Planning; Noise; Public Services; Transportation & Circulation; and Utilities & Service Systems. Potentially significant impacts have been identified in these topics except for Energy Demand & Conservation; Land Use & Planning; Population, Employment, & Housing; and Public Services.

In addition, the Draft EIR evaluates seven project alternatives: No Project, Reduced Project Size, City Services Center Alternative Site, Baldwin Hills Alternative Site, The District at South Bay Alternative Site, The Hollywood Park Specific Plan Alternative Site, and The Forum Alternative Site.

The Project Site was included on the following list compiled pursuant to Section 65962.5 of the California Government Code: (1) "Various City Properties", 3900 West 102nd Street, National Pollutant Discharge Elimination System (NPDES) database for discharges associated with demolition and construction activities; (2) Well No. 6, 3901 West 102nd Street, State Water Resources Control Board (SWRCB) Enforcement Action and SWRCB Waste Discharge System databases; (3) Inglewood Redevelopment Agency, 3901 West 102nd Street, DTSC Hazardous Waste Manifest database; (4) Well No. 1NA 2NA 4 & 6, 3901 West 102nd Street, Facility Index System (FINDS) database for water supply well or wells; (5) E & M German Car Repair, 10220 South Prairie Avenue, 1990–1992 historical EDR (proprietary) auto databases (further review determined this to be erroneous, and the auto repair facility is associated with the 10223 South Prairie Avenue property to the west, outside of project boundary); and (6) Omega Carpet & Uphl Stm Cleaning, 3822 West Century Boulevard, EDR (proprietary) historical cleaner database from 1992.

Public Comment Period

The EIR and its technical appendices are available for the public review and comment period required under Section 15105 of the CEQA Guidelines from December 27, 2019 through ~~February 10, 2020~~ ~~March 10, 2020~~ ~~March 17, 2020~~ March 24, 2020.

Written comments on the Draft EIR and technical appendices must be received **no later than 5:00 p.m. on ~~February 10, 2020~~ ~~March 10, 2020~~ ~~March 17, 2020~~ March 24, 2020**. Submit written comments to:

Subject: Request for Online Publication (IBEC)

Good day Mr. Brown,
We would like to request that you place the attached Notice in the online version of Inglewood Today at your earliest opportunity. Please let me know if you need any additional information. I will send a follow-up email to confirm if we want to run it in your hardcopy version next Thursday. Thanks very much and please confirm receipt.

Respectfully,

Mindy Wilcox, AICP : Planning Manager : City of Inglewood
Economic and Community Development Department
Planning Division : One Manchester Boulevard : Inglewood, CA 90301
V(310) 412-5230 : mwilcox@cityofinglewood.org

EXCELLENCE in Public Service. COMMITMENT to Problem Solving. DETERMINATION to Succeed.

PLEASE CONSIDER THE ENVIRONMENT BEFORE PRINTING THIS EMAIL.

EXHIBIT 9

EXECUTIVE DEPARTMENT
STATE OF CALIFORNIA

EXECUTIVE ORDER N-33-20

WHEREAS on March 4, 2020, I proclaimed a State of Emergency to exist in California as a result of the threat of COVID-19; and

WHEREAS in a short period of time, COVID-19 has rapidly spread throughout California, necessitating updated and more stringent guidance from federal, state, and local public health officials; and

WHEREAS for the preservation of public health and safety throughout the entire State of California, I find it necessary for all Californians to heed the State public health directives from the Department of Public Health.

NOW, THEREFORE, I, GAVIN NEWSOM, Governor of the State of California, in accordance with the authority vested in me by the State Constitution and statutes of the State of California, and in particular, Government Code sections 8567, 8627, and 8665 do hereby issue the following Order to become effective immediately:

IT IS HEREBY ORDERED THAT:

1) To preserve the public health and safety, and to ensure the healthcare delivery system is capable of serving all, and prioritizing those at the highest risk and vulnerability, all residents are directed to immediately heed the current State public health directives, which I ordered the Department of Public Health to develop for the current statewide status of COVID-19. Those directives are consistent with the March 19, 2020, Memorandum on Identification of Essential Critical Infrastructure Workers During COVID-19 Response, found at: https://covid19.ca.gov/. Those directives follow:

ORDER OF THE STATE PUBLIC HEALTH OFFICER
March 19, 2020

To protect public health, I as State Public Health Officer and Director of the California Department of Public Health order all individuals living in the State of California to stay home or at their place of residence except as needed to maintain continuity of operations of the federal critical infrastructure sectors, as outlined at https://www.cisa.gov/identifying-critical-infrastructure-during-covid-19. In addition, and in consultation with the Director of the Governor's Office of Emergency Services, I may designate additional sectors as critical in order to protect the health and well-being of all Californians.

Pursuant to the authority under the Health and Safety Code 120125, 120140, 131080, 120130(c), 120135, 120145, 120175 and 120150, this order is to go into effect immediately and shall stay in effect until further notice.

The federal government has identified 16 critical infrastructure sectors whose assets, systems, and networks, whether physical or virtual, are considered so vital to the United States that their incapacitation or

destruction would have a debilitating effect on security, economic security, public health or safety, or any combination thereof. I order that Californians working in these 16 critical infrastructure sectors may continue their work because of the importance of these sectors to Californians' health and well-being.

This Order is being issued to protect the public health of Californians. The California Department of Public Health looks to establish consistency across the state in order to ensure that we mitigate the impact of COVID-19. Our goal is simple, we want to bend the curve, and disrupt the spread of the virus.

The supply chain must continue, and Californians must have access to such necessities as food, prescriptions, and health care. When people need to leave their homes or places of residence, whether to obtain or perform the functions above, or to otherwise facilitate authorized necessary activities, they should at all times practice social distancing.

2) The healthcare delivery system shall prioritize services to serving those who are the sickest and shall prioritize resources, including personal protective equipment, for the providers providing direct care to them.

3) The Office of Emergency Services is directed to take necessary steps to ensure compliance with this Order.

4) This Order shall be enforceable pursuant to California law, including, but not limited to, Government Code section 8665.

IT IS FURTHER ORDERED that as soon as hereafter possible, this Order be filed in the Office of the Secretary of State and that widespread publicity and notice be given of this Order.

This Order is not intended to, and does not, create any rights or benefits, substantive or procedural, enforceable at law or in equity, against the State of California, its agencies, departments, entities, officers, employees, or any other person.

IN WITNESS WHEREOF I have hereunto set my hand and caused the Great Seal of the State of California to be affixed this 19th day of March 2020.

GAVIN NEWSOM
Governor of California

ATTEST:

ALEX PADILLA
Secretary of State

EXECUTIVE ORDER N-60-20

WHEREAS on March 4, 2020, I proclaimed a State of Emergency to exist in California as a result of the threat of COVID-19; and

WHEREAS on March 19, 2020, I issued Executive Order N-33-20, which directed all California residents to immediately heed current State public health directives; and

WHEREAS State public health directives, available at https://covid19.ca.gov/stay-home-except-for-essential-needs/, have ordered all California residents stay home except for essential needs, as defined in State public health directives; and

WHEREAS COVID-19 continues to menace public health throughout California; and

WHEREAS the extent to which COVID-19 menaces public health throughout California is expected to continue to evolve, and may vary from place to place within the State; and

WHEREAS California law promotes the preservation of public health by providing for local health officers—appointed by county boards of supervisors and other local authorities—in addition to providing for statewide authority by a State Public Health Officer; and

WHEREAS these local health officers, working in consultation with county boards of supervisors and other local authorities, are well positioned to understand the local needs of their communities; and

WHEREAS local governments are encouraged to coordinate with federally recognized California tribes located within or immediately adjacent to the external geographical boundaries of such local government jurisdiction; and

WHEREAS the global COVID-19 pandemic threatens the entire State, and coordination between state and local public health officials is therefore, and will continue to be, necessary to curb the spread of COVID-19 throughout the State; and

WHEREAS State public health officials have worked, and will continue to work, in consultation with their federal, state, and tribal government partners; and

WHEREAS the State Public Health Officer has articulated a four-stage framework—which includes provisions for the reopening of lower-risk businesses and spaces ("Stage Two"), to be followed by the reopening of higher-risk businesses and spaces ("Stage Three")—to allow Californians to gradually resume various activities while continuing to preserve public health in the face of COVID-19; and

WHEREAS the threat posed by COVID-19 is dynamic and ever-changing, and the State's response to COVID-19 (including implementation of the four-stage framework) should likewise retain the ability to be dynamic and flexible; and

WHEREAS to preserve this flexibility, and under the provisions of Government Code section 8571, I find that strict compliance with the Administrative Procedure Act, Government Code section 11340 et seq., would prevent, hinder, or delay appropriate actions to prevent and mitigate the effects of the COVID-19 pandemic.

NOW, THEREFORE, I, GAVIN NEWSOM, Governor of the State of California, in accordance with the authority vested in me by the State Constitution and statutes of the State of California, and in particular, Government Code sections 8567, 8571, 8627, and 8665; and also in accordance with the authority vested in the State Public Health Officer by the laws of the State of California, including but not limited to Health and Safety Code sections 120125, 120130, 120135, 120140, 120145, 120150, 120175, and 131080; do hereby issue the following Order to become effective immediately:

IT IS HEREBY ORDERED THAT:

1) All residents are directed to continue to obey State public health directives, as made available at https://covid19.ca.gov/stay-home-except-for-essential-needs/ and elsewhere as the State Public Health Officer may provide.

2) As the State moves to allow reopening of lower-risk businesses and spaces ("Stage Two"), and then to allow reopening of higher-risk businesses and spaces ("Stage Three"), the State Public Health Officer is directed to establish criteria and procedures—as set forth in this Paragraph 2—to determine whether and how particular local jurisdictions may implement public health measures that depart from the statewide directives of the State Public Health Officer.

   In particular, the State Public Health Officer is directed to establish criteria to determine whether and how, in light of the extent to which the public health is menaced by COVID-19 from place to place within the State, local health officers may (during the relevant stages of reopening) issue directives to establish and implement public health measures less restrictive than any public health measures implemented on a statewide basis pursuant to the statewide directives of the State Public Health Officer.

   The State Public Health Officer is further directed to establish procedures through which local health officers may (during the relevant stages of reopening) certify that, if their respective jurisdictions are subject to proposed public health measures (which they shall specify to the extent such specification may be required by the State Public Health Officer) that are less restrictive than public health measures implemented on a statewide basis pursuant to the statewide directives of the State Public Health Officer, the public health will not be menaced. The State Public Health Officer shall additionally establish procedures to permit, in a manner consistent with public health and

safety, local health officers who submit such certifications to establish and implement such less restrictive public health measures within their respective jurisdictions.

The State Public Health Officer may, from time to time and as she deems necessary to respond to the dynamic threat posed by COVID-19, revise the criteria and procedures set forth in this Paragraph 2. Nothing related to the establishment or implementation of such criteria or procedures, or any other aspect of this Order, shall be subject to the Administrative Procedure Act, Government Code section 11340 et seq. Nothing in this Paragraph 2 shall limit the authority of the State Public Health Officer to take any action she deems necessary to protect public health in the face of the threat posed by COVID-19, including (but not limited to) any necessary revision to the four-stage framework previously articulated by the State Public Health Officer.

3) Nothing in this Order shall be construed to limit the existing authority of local health officers to establish and implement public health measures within their respective jurisdictions that are more restrictive than, or that otherwise exist in addition to, the public health measures imposed on a statewide basis pursuant to the statewide directives of the State Public Health Officer.

IT IS FURTHER ORDERED that as soon as hereafter possible, this Order be filed in the Office of the Secretary of State and that widespread publicity and notice be given of this Order.

This Order is not intended to, and does not, create any rights or benefits, substantive or procedural, enforceable at law or in equity, against the State of California, its agencies, departments, entities, officers, employees, or any other person.

IN WITNESS WHEREOF I have hereunto set my hand and caused the Great Seal of the State of California to be affixed this 4th day of May 2020.

Stay home except for essential needs

Last updated May 6, 2020 at 9:20 AM

Menu

The Director of the California Department of Public Health is **ordering all individuals living in the State of California to stay home or at their place of residence**, except as needed to maintain continuity of operation of the federal critical infrastructure sectors.

Read the Executive Order (pdf)

See the list of Essential jobs

Frequently asked questions

When does the stay home order go into effect and how long will we stay home? What areas of the state are

The order went into effect on Thursday, March 19, 2020. The order is in place until further notice. It covers the whole state of California, and it exempts activity as needed to maintain continuity of operation of the federal critical infrastructure sectors, critical government services, schools, childcare, and construction, including housing construction.

Six key health and scientific indicators will be considered before modifying the state's stay home order.

What's open?

Essential services will remain open, such as:

- Gas stations
- Pharmacies
- Food: Grocery stores, farmers markets, food banks, convenience stores, take-out and delivery restaurants
- Banks
- Laundromats/laundry services
- Essential state and local government functions will also remain open, including law enforcement and offices that provide government programs and

What's closed?

- Dine-in restaurants
- Bars and nightclubs
- Entertainment venues
- Gyms and fitness studios

- Public events and gatherings
- Convention Centers
- Hair and nail salons

Can the Order be changed?

Yes. The Director of the California Department of Public Health may issue orders as needed – for example if more information emerges about the public health situation – and issue new orders and directives as

How does this order interact with local orders to shelter in place? Does it supersede them?

This is a statewide order.

What about voting?

Elections are an essential activity, and the Governor has issued executive orders specifically addressing election procedures. The Secretary of State and the California

Department of Public Health are working on additional guidance to ensure that all Californians are able to participate in elections safely. Of course, whenever you engage in any permissible activity—including the

Business and taxes

What businesses and organizations are exempt?

Businesses and organizations that provide critical infrastructure for the state are exempted, including health care and public health, public safety, food and agriculture and media. See the full list of exempt

I run/work at an exempted business or organization, as defined by the Order. Do I need to get an official letter of authorization from the state to operate?

No. If your business or organization is in the list of exempt sectors, it may still operate. You do not need to obtain any specific authorization from the state to do so.

Do I need to pay my taxes?

Yes, state and federal deadlines have been extended and are now due on July 15.

Schools and childcare

My school is providing free grab-and-go meals and childcare. Are those still open?

Yes. It is essential to keep children fed and educated. School employees should report to work and focus on distance learning, school meals, and childcare/supervision.

Are daycares still open? Can my babysitter still come to the house?

Yes. Many child care centers and family child care homes are still open. Those that remain open should employ heightened cleaning and distancing requirements. Babysitters may also come to the house

Can I get child care during the stay home order?

Child care options are available if you are still reporting to work at an essential job. If you are not working an essential job, it is important to keep children at home.

Health care and helping sick relatives

What if I need to visit a health care provider?

If you are feeling sick with flu-like symptoms, please first call your doctor, a nurse hotline, or an urgent care center.

If you need to go to the hospital, call ahead so they can prepare for your arrival. If you need to call 911, tell the 911 operator the exact symptoms you are experiencing

What about routine, elective or non-urgent medical appointments?

Preventive care services and non-emergency surgeries, like organ replacements and tumor removals, can take place if hospitals have enough capacity and protective equipment to do so safely. Eye exams, teeth cleanings, and elective procedures should be cancelled or rescheduled. If possible, health care visits should be done remotely. Contact your health care provider to see

Can I still go out to get my prescriptions?

Yes. You may leave your home to obtain prescriptions or get cannabis from a licensed cannabis retailer.

How can I make sure the older Californians in my life are safe and healthy during the stay home order?

You should check in on your older neighbors and loved ones with a call, text or physically distanced door knock to make sure they are okay. You can also teach them how to FaceTime, Zoom, Google Duo or use Facebook video to communicate. The most important thing you can do is to keep in touch with older loved ones for their

I am an older Californian who is isolating at home and I need non-urgent assistance. What can I do?

You can call the statewide hotline for older Californians 1-833-544-2374 for your non-urgent medical needs, to get meals delivered, track down prescriptions and more. The most important thing you can do is stay home for your health and wellbeing. If you are experiencing an

Can I leave home to care for my elderly parents or friends who require assistance to care for themselves? Or a friend or family member who has disabilities?

Yes. Be sure that you protect them and yourself by following social distancing guidelines such as washing hands before and after, using hand sanitizer, maintaining at least six feet of distance when possible, and coughing or sneezing into your elbow or a tissue and then washing your hands. If you have early signs of

Can I visit loved ones in the hospital, nursing home, skilled nursing facility, or other residential care facility?

Generally no. There are limited exceptions, such as if you are going to the hospital with a minor who is under 18 or someone who is developmentally disabled and needs assistance. For most other situations, the order prohibits visitation to these kinds of facilities. This is difficult, but necessary to protect hospital staff and other patients. Check the frequently asked questions for

Outdoor recreation

NEW! Can I still exercise? Take my kids to the park for fresh air? Take a walk around the block?

It's okay to go outside to go for a walk, to exercise, and participate in healthy activities as long as you **maintain a safe physical distance of six feet and gather only with members of your household.** Below is a non-exhaustive list of those outdoor recreational activities.

*Parks may be closed to help slow the spread of the virus. Check with local officials about park closures in your area.

- Athletics
- Badminton (singles)
- Throwing a baseball/softball
- BMX biking
- Canoeing (singles)
- Crabbing
- Cycling
- Exploring Rock Pools
- Gardening (not in groups)
- Golf (singles, walking – no cart)
- Hiking (trails/ paths allowing distancing)
- Horse Riding (singles)
- Jogging and running
- Kite Boarding and Kitesurfing
- Meditation
- Outdoor Photography
- Picnics (with your stay-home household members only)
- Quad Biking
- Rock Climbing
- Roller Skating and Roller Blading
- Rowing (singles)
- Scootering (not in groups)
- Skateboarding (not in groups)
- Soft Martial Arts – Tai Chi, Chi Kung (not in groups)

- Table Tennis (singles)
- Throwing a football, kicking a soccer ball (not in groups)
- Trail Running
- Trampolining
- Tree Climbing
- Volleyball (singles)
- Walk the dog

Can I walk my dog? Take my pet to the vet?

Can people still go hiking or visit State Parks?

State Parks, campgrounds, museums, and visitor centers have been closed to help slow the spread of the virus. A list of all closures can be found at www.parks.ca.gov/flattenthecurve.

Californians can walk, run, hike and bike in their local neighborhoods as long as they continue to practice social distancing of 6 feet. This means avoiding crowded trails & parking lots.

Government Services

Can I go to the Department of Motor Vehicles (DMV)?

No. All DMV field offices are temporarily closed to the public (beginning March 27). All appointments have been canceled and no appointments are currently available. You can access many DMV services online, including driver's license renewals, vehicle registrations, title changes, and more. Governor

Newsom signed an executive order to accommodate DMV service changes.

DMV service changes inlcude:

- Licenses for drivers younger than 70 years of age that expire between March and May 2020 will be valid through May 31, 2020.
- Licenses for seniors 70 years of age and older that expire between March and May 2020 will receive a 120-day extension in the mail.
- You can now request a duplicate driver license online if it does not expire within 30 days.
- In-person renewals are temporarily waived for vehicle registrations that expire between the dates of March 16, 2020, and May 31, 2020.
- Those with safe driving records whose last DMV visit was 15 years ago will not be required to renew

Attorneys for Petitioner
INGLEWOOD RESIDENTS AGAINST TAKINGS AND EVICTIONS

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF LOS ANGELES

INGLEWOOD RESIDENTS AGAINST TAKINGS AND EVICTIONS, Plaintiff and Petitioner, v. CITY OF INGLEWOOD, a municipal corporation; CITY OF INGLEWOOD CITY COUNCIL; SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; GOVERNING BOARD OF THE SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; THE INGLEWOOD PARKING AUTHORITY; THE INGLEWOOD PARKING AUTHORITY BOARD OF DIRECTORS; OVERSIGHT BOARD TO THE SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; and DOES 1-10; Defendants and Respondents, MURPHY'S BOWL LLC, a Delaware Limited Liability Company; ROES 10-20; Real Parties in Interest.	CASE NO.: BS170333 **VERIFIED FIRST AMENDED PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR INJUNCTIVE RELIEF PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT** (Code Civ. Proc. §§ 1085, 1094.5 and 526; Pub. Resources Code §§ 21000 et seq.) Department: 86 Judge: Hon. Amy D. Hogue Petition filed: July 20, 2017 Trial Setting Conference: November 1, 2017

Petitioner and Plaintiff Inglewood Residents Against Takings And Evictions ("Petitioner") hereby petitions for a writ of mandamus and brings a complaint for declaratory and injunctive relief and for attorneys' fees against Respondents and Defendants the City of Inglewood ("City"), the Inglewood City Council ("City Council"), the Successor Agency to the Inglewood Redevelopment Agency ("Successor Agency"), the Governing Board of the Successor Agency ("Successor Agency Board"), the Inglewood Parking Authority ("Parking Authority"), the Parking Authority Board of Directors ("Parking Authority Board"), (collectively, "Respondents"), the Oversight Board To The Successor Agency To The Inglewood Redevelopment Agency ("Oversight Board"), and against Real Party in Interest Murphy's Bowl LLC (the "Developer"), and alleges as follows.

INTRODUCTION

1. Respondents have forced the filing of this action by ignoring California's procedural rules and laws designed to ensure environmental protection, ignoring the interests of the community, and rushing into a sports arena development that could displace families and businesses, small and large, for a billionaire's benefit. This dispute arises from Respondents' purported approval of an Exclusive Negotiating Agreement ("ENA")[1], among the City, the Successor Agency, the Authority and the Developer to facilitate the development of a sports arena (the "Arena Project"). The ENA must be set aside because the City approved the ENA in violation of the California Environmental Quality Act ("CEQA") and without providing a fair and impartial hearing.

2. Petitioner is informed and believes and thereon alleges that Respondents first publicly signaled their intent to proceed with the Arena Project by noticing a special meeting to approve the detailed 22-page ENA less than 24 hours before it was approved at a mid-week special meeting. Respondents rushed to a hearing even though, according to the Mayor's announcement on June 17, 2017, the "Clippers open[ed] negotiations with the City" on January

[1] The ENA was amended and restated on August 15, 2017 but its essential terms remained the same and was approved by the Oversight Board on September 7, 2017. Therefore, this Petition refers throughout to "the ENA" and, where relevant, "the Revised ENA."

15, 2017. (Exhibit D [June 17, 2017, email from Mayor Butts announcing Inglewood Clippers ENA].) So, despite the Mayor's announcement that negotiations had been ongoing for six months, Respondents only noticed the hearing on the ENA with less than 24 hours' notice. At Respondents' joint special meeting on June 15, 2017, Respondents unanimously committed to moving forward with an arena that would displace two to four thousand Inglewood residents, shutter dozens of businesses and a church and create massive impacts to the surrounding community.

3. Following objections from Petitioner and others to the City's violation of the Brown Act, Respondents held a second joint special meeting on July 21, 2017. Respondents unanimously reaffirmed their commitment to moving forward with an arena project at a joint special meeting on July 21, 2017. The impacted residents and business owners received no notice of the City's intention to take their homes or businesses prior to any of the meetings.

4. Following publication of articles in the Los Angeles Times including one entitled "Possible Clippers arena has many Inglewood residents worried they may lose their homes or businesses" on August 13, 2017, the Inglewood City Council held a third meeting on August 15, 2017. At the August hearing, the City Council approved a "Revised ENA" which contained many of the same terms as the prior two versions of the ENA and a revised map of the project area purporting to reduce the area of potential eminent domain use.

5. The ENA sets forth and specifically details the Arena Project's scope and even defines it as a "Project." The level of detail the ENA and staff report contain on the Arena Project was more than enough to complete environmental review. The ENA states that Respondents will convey property "to the Developer for development as a premier and state of the art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats as well as related landscaping, parking and various other ancillary uses related to and compatible with the operation and promotion of a state-of-the-art NBA arena on the Site." (ENA, at pp. 1-2.) The staff report for the June 15, 2017, special meeting also confirms that the ENA's purpose is to "facilitate the development of a premier and state-of-the-art National Basketball Association ('NBA') professional basketball arena consisting

of approximately 18,000 to 20,000 seats." The Arena Project's size and location are all that is needed for the City to conduct environmental review as they establish the parameters of the project's impacts. No additional information is needed to study the Arena Project's environmental impacts, yet the Respondents seem to have kicked the proverbial can down the road and decided to possibly do environmental review later. CEQA requires more and Respondents' decision to ignore their obligations under state law cannot and should not be countenanced.

6. Despite specifically defining the Arena Project in the ENA, Respondents have prepared no environmental review for the Arena Project although already committing themselves to moving forward with the Arena Project. Respondents' commitment to the Arena Project is manifest. For example, Respondents promised that they will use "best efforts to acquire the parcels of real property" underlying the proposed Arena Project not already in Respondents' possession. (ENA, at § 2(b).) The Revised ENA changed this to state Respondents "may elect" to obtain relevant parcels by eminent domain but the clear expression of intention remained. The Revised ENA changes the phrase "shall use its best efforts to acquire" to "shall consider acquisition of" but the overarching predetermination to acquire property remains. Respondents have already agreed that for three years they "shall not negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding a Disposition and Development Agreement for the sale, lease, disposition, and/or development of the Site." (ENA, at § 2(a).) Moreover, Respondents have already requested detailed financial information and site plans for the Arena Project, but have not sought analysis of any other potential development options. After approving the Revised ENA, officials from the City of Inglewood also vociferously and aggressively pursued state legislation that would have amended CEQA for the Arena Project once the City got around to actually doing environmental review for it. This included amending CEQA so that the City would not have to analyze alternatives to the Arena Project, normally a key component of environmental impact reports.

7. These commitments, planning efforts, and pursuit of amendments to CEQA to facilitate the Arena Project are clear evidence that Respondents have committed to a definitive course of action with respect to the Arena Project and have already decided to proceed with the Arena Project which will impact over 1,000 residents and badly needed housing, and destroy many operating businesses that provide jobs to Inglewood's residents.

8. Respondents' decision to enter into the ENA violates the CEQA. CEQA prohibits a government entity from taking actions that foreclose alternatives or potential mitigation measures before performing the requisite environmental review. The ENA creates significant commitments to and momentum for the Arena Project. As such, Respondents will undoubtedly ignore the environmental impacts that any future environmental review may uncover, and potentially superior alternative projects, in pursuit of the Arena Project. Indeed, the ENA itself will have significant impacts on the environment. The ENA will create urban decay and blight conditions. Specifically, the pall cast by the Arena Project over the several blocks identified as the potential site for the arena will cause near-term investment, leasing, and other business activities in the area to disappear. It will drive residents to leave and force businesses to close in anticipation of the Arena Project. The ENA's de facto moratorium on development of the Arena Project site will also eliminate any contemplated development projects or improvements in the area. The ENA will result in significant environmental impacts that must be analyzed in an Environmental Impact Report ("EIR"), disclosed to the public and considered by Respondents prior to approving the ENA. Respondents' failure to do so violated CEQA.

9. On September 7, 2017, the Oversight Board of the Successor Agency to the Inglewood Redevelopment Agency, chaired by the Mayor of Inglewood, voted to approve the ENA. The City's unwavering commitment to the Arena Project without undertaking any environmental review violated CEQA.

10. Respondents' disregard for the community's and the City's well-being, of their obligations under CEQA, for how the ENA and the Arena Project will significantly impact the environment, and the requirement to provide a fair hearing necessitates this challenge to

Respondents' June 15, 2017, July 21, 2017 and August 15, 2017 versions of the ENA and Arena Project approval and the Oversight Board's approval of those actions.

PARTIES TO THIS PROCEEDING

11. Petitioner Inglewood Residents Against Takings And Evictions is an unincorporated association that opposes the ENA and the City's, Successor Agency's, Parking Authority's, and Oversight Board's approval of the development of an Arena Project by Developer in a residential area and the use of eminent domain to acquire property to develop the Arena Project. Petitioner and its members will be adversely impacted by the ENA as it will result in significant impacts to the environment including blight and urban decay, the loss of existing businesses and jobs, and will facilitate development that is inconsistent with the City's Zoning and General Plan. Petitioner and its members will also be adversely impacted by the environmental impacts created by the Arena Project's construction and operation, including impacts to air quality, traffic congestion, nighttime lighting, and noise. Petitioner's members participated in the City's, Successor Agency's, Parking Authority's, and Oversight Board's administrative processes and fully exhausted all available administrative remedies.

12. Respondent and Defendant City is a municipal corporation and a charter city organized and existing under the laws of the State of California, with the capacity to sue and be sued. The term "City" includes, but is not limited to, City employees, agents, officers, boards, commissions, departments, and their members, all equally charged with complying with duties under the City Charter and with the laws of the State of California.

13. Respondent and Defendant City Council is the duly-elected legislative body that represents the citizens of Inglewood. The City Council was the final decisionmaking body for the ENA.

14. Respondent and Defendant Successor Agency is responsible for overseeing the winding down of redevelopment activity at the local level under the Redevelopment Law, including managing existing redevelopment projects, making payments on enforceable obligations, and disposing of redevelopment assets and properties. On or about January 10, 2012, pursuant to the Redevelopment Law dissolution legislation (AB Xl 26 as amended by AB

1484), the City elected to be the Successor Agency to the Redevelopment Agency of the City of Inglewood. The Redevelopment Agency was officially dissolved on or about February 1, 2012.

15. Respondent and Defendant Successor Agency Board is the governing body of the Successor Agency. Mayor Butts is the chair of the Successor Agency Board.

16. Respondent and Defendant Parking Authority is a subdivision and parking agency of the City.

17. Respondent and Defendant Parking Authority Board is the governing body of the Parking Authority, empowered to adopt bylaws and resolutions and direct the work of the Parking Authority. Mayor Butts is the chair of the Parking Authority Board.

18. Respondent and Defendant Oversight Board To The Successor Agency To The Inglewood Redevelopment Agency is the governing body of the entity that under the Health and Safety Code must approve Successor Agency agreements with the City of Inglewood prior to the Successor Agency approving those agreements.

19. Real Party in Interest, Murphy's Bowl LLC, is a Delaware Limited Liability Company. Real Party is the designated developer of the Arena Project under the ENA.

20. Petitioner does not know the true names or capacities, whether individual, corporate, associate or otherwise, of Respondent Does 1 through 10, or of Real Parties in Interest Roes 10-20, inclusive, and therefore sues said Respondents and Real Parties in Interest under fictitious names. Petitioner will amend this Petition to show their true names and capacities when and if the same has been ascertained.

JURISDICTION AND VENUE

21. This Court has jurisdiction over this proceeding pursuant to California Code of Civil Procedure section 1085 and 1094.5 and Public Resource Code sections 21168 and 21168.5.

22. Venue in this Court is proper pursuant to Code of Civil Procedure section 394, in that Respondents are located within the County of Los Angeles.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

23. The California Environmental Quality Act, found at Public Resources Code Section 21000 et seq., is based on the principle that "the maintenance of a quality environment

for the people of this state now and in the future is a matter of statewide concern." (Pub. Resources Code, § 21000, subd. (a).)[2]

24. In CEQA, the Legislature has established procedures designed to achieve these goals, principally the EIR. These procedures provide both for the determination and for full public disclosure of the potential adverse effects on the environment of discretionary projects that governmental agencies propose to approve, and require a description of feasible alternatives to such proposed projects and feasible mitigation measures to lessen their environmental harm. (Pub. Resources Code § 21002.)

25. The Guidelines require "all phases of project planning, implementation, and operation" to be considered in the Initial Study for a project. (Guidelines §15063, subd. (a)(1).) CEQA defines a project as "the whole of an action, which has a potential for resulting in either a direct physical change to the environment, or a reasonably foreseeable indirect physical change in the environment." (Guidelines § 15378, subd. (a).)

26. CEQA is not merely a procedural statute. CEQA imposes clear and substantive responsibilities on agencies that propose to approve projects, requiring that public agencies not approve projects that harm the environment unless and until all feasible mitigation measures are employed to minimize that harm. (Pub. Resources Code§§ 21002, 21002.1, subd. (b).)

27. The alternatives analysis is the "core of the EIR." (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.) The purpose of a CEQA alternatives analysis is to identify and analyze alternatives to a project that will avoid or substantially lessen its significant environmental impacts. (Pub. Resources Code § 21002.) Thus, "before conducting CEQA review, agencies must not 'take any action' that significantly furthers a project 'in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project.'" (*Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116, 138.)

---

[2] CEQA authorizes and directs the State Office of Planning and Research to adopt guidelines for the implementation of CEQA by public agencies. (Pub. Resources Code §21083.) These guidelines are found at title 14, California Code of Regulations, Section 15000 et seq. ("Guidelines") and are binding on all state and local agencies, including Respondents.

28. Agencies may not undertake discretionary actions that could have a significant adverse effect on the environment, or limit the choice of alternatives or mitigation measures, before complying with CEQA. (Guidelines §15004, subd. (b)(2).) The "lead agency," which is the public agency that has the principal responsibility for carrying out the project, is responsible for conducting an initial study to determine, in consultation with other relevant state agencies, whether an environmental impact report, a negative declaration, or a mitigated negative declaration will be prepared for a project. (Pub. Resources Code §§ 21067; 21080.1, subd. (a); 21083, subd. (a).) Accordingly, public agencies may not "take any action" that furthers a project "in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project." (*Save Tara*, *supra*, 45 Cal.4th at 138.)

29. Thus, CEQA does not permit the postponement of environmental review "to the point where the 'bureaucratic and financial momentum'" has built up "irresistibly behind a proposed project 'thus providing a strong incentive to ignore environmental concerns.'" (*Save Tara*, *supra*, 45 Cal.4th at 135.)

30. Failure either to comply with the substantive requirements of CEQA or to carry out the full CEQA procedures so that complete information as to a project's impacts is developed and publicly disclosed constitutes a prejudicial abuse of discretion that requires invalidation of the public agency action regardless of whether full compliance would have produced a different result. (Pub. Resources Code § 21005.)

GENERAL ALLEGATIONS

31. On June 15, 2017, the City, the City Council, the Successor Agency, and the Parking Authority each purported to hold a special meeting (the "Special Meeting") pursuant to Government Code Section 54956. At the Special Meeting, Respondents purported to approve the ENA among the City, the Successor Agency, the Authority and the Developer "to facilitate the development of a premier and state-of-the-art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats."

32. On July 14, 2017, Petitioner objected to the City's violation of the Brown Act in connection with its action purporting to approve the ENA at the June 15, 2017 Special Meeting.

33. On July 20, 2017, Respondents issued a staff report for a cure and correction pursuant to Government Code section 54960.1, reconsideration, and ratification of the action purporting to approve the ENA at the June 15, 2017 special meeting.

34. On July 20, 2017, Petitioner filed the original petition.

35. On July 21, 2017, Respondents held a special meeting at which they re-approved the ENA.

36. On August 13, 2017, the Los Angeles Times published a story entitled "Possible Clippers arena has many Inglewood residents worried they may lose their homes or businesses." This story described the plight of local residents faced with the possibility of eminent domain who had very little or no information about the proposed arena project. One such resident described in the story is John Patel, who operates a local motel and lives onsite with his wife and two young children. Another resident described in the story is Gracie Sosa, who learned of the potential arena from a friend since no representatives from the City or sports team potentially occupying the arena contacted her. Resident Nicole Fletcher reportedly stated "My biggest concern is how it will impact the families. . . I would hate to see a lot of people move out because they want to build a sports arena."

37. The Inglewood City Council held a meeting on August 15, 2017. At the August hearing, the City Council approved a "Revised ENA" which contained many of the same terms as the prior two version of the ENA and a revised map of the project area purporting to reduce the area of potential eminent domain use. City councilmembers stated it was not the City's intention to take houses or a church by eminent domain. A map attached to the Revised ENA removed many residences from the boundaries of the project area. However, the Mayor and other councilmembers refused to forego the use of eminent domain altogether.

38. On September 7, 2017, Inglewood's Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency, which is chaired by the Mayor of Inglewood, approved

the Revised ENA as consistent with a long range property management plan and Redevelopment Dissolution Law.

39. Less than two weeks after the City approved the Revised ENA, on August 24, 2017, the newspaper Inglewood Today reported efforts were afoot in the California Legislature to facilitate the arena development:

> Inglewood Mayor James T. Butts, Jr. confirmed that he is leading the lobbying efforts to amend time and environmental review restraints in order to move the project along. "I have been asking that our representatives now provide the residents and children of Inglewood with the same legal tool to spur economic growth that has been provided to AEG (Farmers Field), the Sacramento Kings (NBA arena) and the Golden State Warriors (NBA arena) to expedite construction of those facilities by limiting the time period in which CEQA challenges must be filed and resolved," he told an L.A. Times reporter. . . . Citing job creation as part of the motivation behind the proposed bill, Butts said the legislation will "shorten the wait for quality, prevailing wage construction jobs and full-time employment opportunities that our residents and the Los Angeles County region have waited decades for."

40. In cooperation with Inglewood elected officials, on September 1, 2017, less than three weeks after the Revised ENA's approval, State Senator Steven Bradford introduced SB 789 in the California Legislature. SB 789 as originally introduced would create an unnecessary, sweeping exemption from CEQA for Olympic infrastructure, for a "fixed guideway project" to benefit the arena and other projects in Inglewood, would severely reduce the requirements of EIRs for the Arena Project and any project in a one mile square area, limit judicially available remedies for potential plaintiffs in a CEQA suit, and authorize eminent domain proceedings for a project which had not yet been defined for public review. Both projects the bill was intended to benefit, the Arena and Olympic Games, will not occur for years.[3] The Clippers have a lease for Staples Center until 2024 and the Olympic Games are not commencing until 2028.

41. In some ways, SB 789 was similar to legislation known as AB 900 that required expedited review of certain projects designated as environmental leadership projects and

[3] In fact, the Olympic Committee publicly stated that it did not need SB 789 for the Olympic Games and requested that any references to the Olympic Games be removed from the bill.

certified by the Governor as meeting various criteria including those addressing greenhouse gas (GHG) emissions. SB 789, however, would allow a much more expansive evasion of CEQA's requirements than does AB 900 and would not require similar environmental protections, as set forth in the table below:

Issue	AB 900	Proposed Amended SB 789
1. Requires Comprehensive Environmental Review?	**Yes.** A full EIR is required.	**No.** Full EIR not required for the Clippers arena project, the 125,000 square feet of commercial development, and any other project located within a 1 mile square area. SB 789 specifically provides for the following core requirements of CEQA to be eliminated. • Eliminates analysis of traffic impacts on the residential community. • Eliminates requirement to mitigate impacts from nighttime lighting, glare and other visual impacts on the residential community. • Eliminates requirements to look at any alternative site that might be better suited for the arena location (such as vacant lot across the street next to a casino). • Eliminates requirements to look at alternative size, height and configurations of arena, parking structures, retail and offices located next to homes (are there alternatives to building a 100 to 150 foot tall arena next to a single story home). • Eliminates requirements to mitigate any parking impacts on the residential community (for example, if the project provides insufficient parking, no requirement to analyze parking in residential community). • Limits analysis of greenhouse gas emissions impacts.
2. Requires Review to Confirm Applicability?	**Yes.** Requires application to the Governor for certification that the project is eligible for streamlining prior to start of EIR process. Must provide evidence to support determination that project meets minimum investments, skilled jobs and GHG standards.	**No.** No requirement to submit application to the Governor for certification. By passes AB 900 altogether. Not required to confirm that the project will provide a particular level of investment or job creation or GHG reduction before it avails itself of SB 789.

3. Requires LEED silver certification?	**Yes.** Must be certified as LEED silver or better. Pub. Resources Code § 21183.	**No.** LEED silver not required for the Clippers arena and 125,000 square feet commercial elements. A lower LEED standard is applied. All other projects within the one mile square project area covered by SB 789 are not required to meet LEED certification.
4. Protects public participation?	**Yes.** AB 900 includes public participation requirements. AB 900 includes comment opportunities to the Governor and for the California Air Resources Board	**No.** Reduces public participation. SB 789 permits Inglewood to ignore environmental comments made during public hearing process inconsistent with current CEQA requirements and court decisions.
5. Requires Environmental Review Before Condemnation?	**Yes.** No change in existing law. Currently law requires environmental review to be completed before condemning a private property.	**No.** SB 789 would allow Inglewood to take possession of private property and businesses within a 30 acre area before even starting environmental review or defining the project.
6. Protects full rights to seek legal remedies?	**Yes.** Expedites judicial review but does not limit the remedies available to the court.	**No.** Under SB 789, Inglewood may violate CEQA and fail to mitigate significant impacts and the courts are not permitted to stop the projects' construction or operation.
7. Requires environmental review of ancillary transportation projects?	**Yes.** No change in existing law which requires environmental review to be completed.	**No.** SB 789 would exempt from CEQA an undefined new busway/light rail/street car/monorail system. This "Guideway project" is fully exempt from CEQA regardless of its alignment or impacts– no review at all is done. The "Guideway project" has not been approved by MTA.

42. SB 789 would limit the ability of courts to grant injunctive relief, meaning that flawed analysis and public harms cannot be adequately stopped. Finally, SB 789 would allow Respondents to begin eminent domain proceedings before environmental review is completed. Eminent domain proceedings are costly and controversial. As it was introduced, compared to the Revised ENA, SB 789 set more extensive project area boundaries as it described an area that included properties south of West 102nd Street. SB 789 also included an exemption for a guideway project for a busway, railcar, or monorail transportation system. Environmental review may require changes to projects that may make some parcel acquisition unnecessary making eminent domain before environmental review premature. Not only does Inglewood

officials' advocacy for SB 789 show a complete commitment to the Arena Project but the text of the legislation itself shows that the proposal is sufficiently defined to allow for meaningful environmental review. SB 789 demonstrates that Arena Project boundaries, size, and elements have been defined.

43. SB 789 stated: "The sports and entertainment project will result in construction of a new state-of-the-art multipurpose event center and surrounding infill development in the City of Inglewood as described in the City of Champions Revitalization Initiative approved by the City of Inglewood on February 24, 2015, and the agreement entered into by the City of Inglewood with Murphy's Bowl LLC on June 15, 2017." (SB 789, Section 1 (c).) SB 789 was later amended to refer to both the original version of the ENA, which was approved on June 15, 2017, and to its subsequent August 15, 2017 amendment.

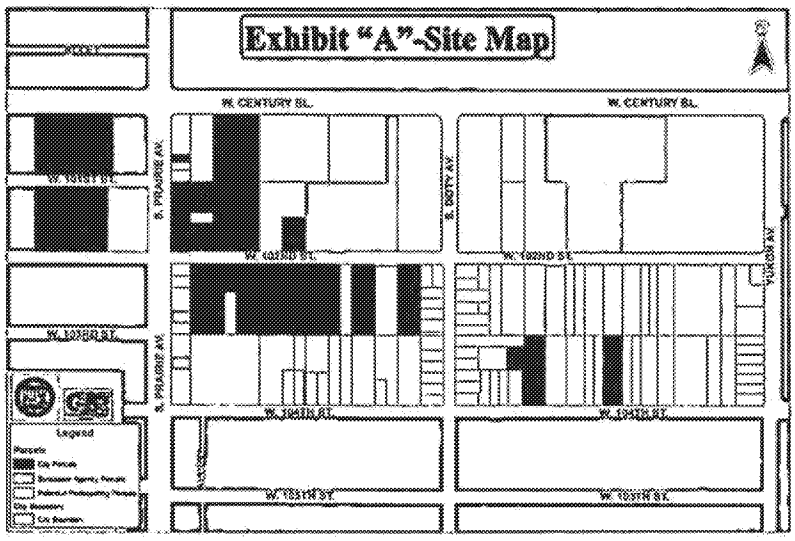
44. On September 1, 2017, Los Angeles 2028, the Olympics organizing committee for the City of Los Angeles, sent a letter stating it had only that day heard of the SB 789 bill, believed the CEQA exemption for the Olympics was unnecessary, and asked that the references to the Olympics be deleted from the bill.

45. SB 789 was heard by the Assembly Natural Resources Committee on September 8, 2017. Mayor Butts testified in favor of SB 789. Among other statements, he said "All transportation components for the football season, super bowl, Clippers, and the Olympics have to be in place," "We have to make this two mile connection between the Green Line . . . to the arena. . .," "We are up against a deadline." The committee voted against passage of the bill in a 5-4 vote. SB 789 was subsequently amended to remove provisions related to the Olympics and eminent domain proceedings, among other amendments. However, as of September 16, 2017, the bill still contained provisions limiting CEQA review and restricting judicial remedies. By the end of the legislative session in September 2017, the amended bill had not been heard by committee or passed by the Legislature despite Mayor Butts' and the City of Inglewood's substantial lobbying in support of the bill.

46. In fact, even after SB 789 failed to move forward in the state legislature, Mayor Butts issued a statement in favor of its passage.

47. SB 789 originally described boundaries for an "Inglewood Sports and Entertainment project area" that were more expansive than the boundaries set forth in the August 15, 2017 Revised ENA approved by the Inglewood City Council. (SB 789 section 4, proposing Public Resources Code section 21168.6.7 (a)(6)(B).) The boundaries described in the original version of SB 789 included residential property on the west side of Doty Avenue and two residential properties on the east side of Prairie north of 103rd. The described boundary included residential uses, but the eminent domain section of SB 789 stated that it will not apply to "eminent domain actions based on a finding of blight or involving lawfully occupied residential housing uses." (Section 21168.6.7(c)(2).) The amendment to SB 789 changed the project boundaries to exclude legally occupied residences.

48. The ENA provides for the conveyance of certain real property within a defined "Site"—including property owned by the City ("City Parcels"), by the Successor Agency ("Agency Parcels") and by third parties ("Potential Participating Parcels")—to the Developer, for the Arena Project. The real property subject to the ENA is shown below, as excerpted from Exhibit A to the ENA. The Revised ENA includes boundaries that exclude properties south of West 102nd Street, but SB 789 describes boundaries that include properties south of West 102nd Street and north of West 103rd Street. (See Exhibit E to this Amended Petition, providing a map.)



49. The originally proposed Arena Project area appears to comprise over 80 acres of land that is currently occupied by homes and businesses and a church. Many of the residences,

both single and multi-family, appear to offer affordable housing opportunities for Inglewood's residents. As shown below, there are many homes, both single and multi-family, within the original ENA site. These homes and their residents, plus many more, would be impacted by the ENA and the Arena Project. Even if the ENA area has been reduced and does not include homes, the Arena Project will impact the adjacent residential neighborhood and could lead to displacement. The boundaries of the Amended ENA area include numerous businesses and are directly bordered by numerous residences. Exhibit E to this petition provides a map and pictures of the properties within and adjacent to the Amended ENA boundaries.

50. The ENA's terms commit Respondents to a definitive course of action with respect to the Arena Project. Specifically, the ENA commits Respondents to an *exclusive* three-year negotiating period, during which Respondents and the Developer *shall* negotiate a Disposition and Development Agreement regarding conveyance of property within the Site. The ENA specifically contemplates that the parcels within the Site will be conveyed to the Developer "concurrently" and not piecemeal, further evidencing Respondents' commitment to the Arena Project.

51. The ENA includes a 36-month "Exclusive Negotiating Period". (ENA, § 4.) The Exclusive Negotiating Period may be extended by six months. (*Id.*)

52. The ENA's concrete obligations imposed on Respondents with respect to the Arena Project further evidence Respondents' commitment to a definite course of action. In

addition to the above, the ENA demonstrates Respondents' ***commitment*** to the Arena Project in a number of other ways.

53. For example, during this "Exclusive Negotiating Period," the ENA requires that Respondents "shall not negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding a Disposition and Development Agreement for the sale, lease, disposition, and/or development of the Site." (ENA, § 2(a).)

54. For further example, the City has committed to "use its best efforts to acquire the parcels of real property comprising" the proposed Arena Project site. Indeed, the City originally proposed that it will pursue acquisition through eminent domain, if necessary. (ENA, § 2(b).) Specifically, the ENA provides that in the event that the City and the Authority are unable to acquire these parcels voluntarily, "the City or the Authority, as applicable, may elect, in its sole discretion, to give legal notice and schedule a public hearing to consider the adoption of a resolution of necessity authorizing the acquisition of the Potential Participating Parcels by eminent domain." (ENA, § 2(b).) The Revised ENA added the phrase "and without any obligation or commitment to do so" after the phrase "in its sole discretion" but the overall predetermination to pursue property for the arena project remained.

55. The ENA also requires that within 180 days of the "Effective Date" of the ENA, "the Developer shall deliver to the City a sketch and legal description of the portions of the property which the Developer would like to acquire for development of the Project (which property shall constitute the 'Site')[.]" (ENA, § 3(d).)

56. With respect to Potential Participating Parcels voluntarily acquired by the City and/or Authority, the ENA provides that "the Developer shall fully advance to the City and/or Authority, as applicable, all costs associated with the acquisition of these parcels including, but not limited to, the payment of the negotiated purchase price for these parcels and all legally required relocation costs associated with the acquisitions[.]" (ENA, § 3(g).)

57. With respect to properties acquired by eminent domain, the ENA provides that the Developer shall "advance to the City and/or Authority, as applicable, all costs associated with the exercise of such eminent domain authority (including all court costs and reasonable legal fees),

as well as all acquisition costs including, but not limited to, the payment of fair market value for each of the condemned parcels as determined by the Court, or pursuant to a negotiated acquisition or settlement agreement, as approved by the Developer." (ENA, § 3(g).)

58. Upon the City's approval of the ENA, Developer was to pay the City $1,500,000 as a "Non-Refundable Deposit." (ENA, § 5.) "All proceeds of the Non-Refundable Deposit shall be the sole property of the City upon submittal by Developer[.]" (*Id.*)

59. The ENA does not limit or otherwise restrict how the City may spend the $1,500,000 payment.

60. In approving the ENA, Respondents did not consider the environmental impacts of either the ENA or the Arena Project. No environmental review was conducted with respect to the ENA's approval. The ENA is a project under CEQA that has the potential to result in significant physical changes in the environment. Respondents erred by not conducting environmental review for the ENA.

61. In regards to the Arena Project, the ENA impermissibly defers Respondents' environmental review of the Arena Project to a future, undefined date. The ENA and the circumstances surrounding its adoption establish that Respondents have already committed to a plan to build an arena at the defined site and have foreclosed additional development options and alternatives. For instance, the ENA states: "It is proposed by the Parties that certain fee title and/or leasehold title to [the parcels comprising] the Site will be conveyed to the Developer for development as a premier and state of the art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats[.]" In line with their clearly stated goal, Respondents have taken concrete steps to pursue the development of the Arena Project to the exclusion of other development opportunities. Respondents have committed not to transfer their existing interests in certain parcels of land underlying the proposed arena's site and have also promised to use "best efforts" to acquire the remaining land necessary for the Arena Project. (ENA, §§ 2(b), 11.) The Revised ENA changes the phrase "shall use its best efforts to acquire" to "shall consider acquisition of" but the overarching predetermination to acquire property remains. Respondents have also agreed that for three years they "shall not

negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding a Disposition and Development Agreement for the sale, lease, disposition, and/or development of the Site." (ENA, §§ 2(a)(ii), 4.) Respondents' long-term promises not to negotiate or transact with third parties regarding the Arena Project's proposed site and their commitment to acquire additional real estate indicate that Respondents have already committed to a definite course of action regarding the Arena Project at the location defined in the ENA.

62. The ENA lays out detailed steps by which Respondents and Developer will advance the Arena Project. For instance, within 150 days of the ENA's Effective Date the developer must provide detailed financial information, including "a narrative describing the fundamental economics of the proposed [Arena] Project." (ENA, § 3(b).) In addition, within 180 days of the ENA's Effective Date, the Developer is required to submit a "conceptual site plan and basic architectural renderings for the development of the proposed [Arena] Project." (ENA, § 3(d).) These specific steps, which contemplate only analysis and consideration of the Arena Project in any potential future environmental review, also demonstrate that Respondents have already committed to the Arena Project and are no longer open to other development options.

FAILURE TO EVALUATE THE ENA'S ENVIRONMENTAL IMPACTS

63. In approving the ENA, Respondents did not evaluate the potential environmental impacts of the ENA. Respondents' failure to consider the ENA's potential environmental impacts violated CEQA.

64. The ENA is a "project" under CEQA, as defined by Guidelines section 15378. Respondents' approval of the ENA is an "approval" under CEQA as defined by Guidelines section 15352. The ENA may cause a direct and/or reasonably foreseeable indirect environmental change. Therefore, the ENA is subject to CEQA review.

65. In failing to subject the ENA to CEQA review, Respondents ignored the impact that the three-year exclusive negotiating period will have on the environment. During this period, Respondents are prohibited from engaging in negotiations with anyone other than the Developer regarding the potential development of the Site. (ENA, § 2(a).) Further, the ENA

prohibits Respondents from selling or otherwise transferring to third parties their interests in any property on the Site. (ENA, § 11.)

66. These significant restrictions during the course of the three-year exclusive negotiating period (plus a possible six-month extension) amount to a development moratorium for properties within the Site. The City has foreclosed its ability to approve development within the Site by third parties who actually own parcels within the Site. These onerous restrictions create insecurity for existing businesses who own and/or lease property and existing residents who own and/or lease housing.

67. In failing to subject the ENA to CEQA review, Respondents did not consider, and did not inform the public of, direct and reasonably foreseeable indirect environmental impacts that will occur as a result of the ENA, including but not limited to land use consistency and urban decay and blight.

68. The approval of the ENA is subject to CEQA because it will result in significant land use impacts.

69. A "City's General Plan is its constitution for development. It is the foundation upon which all land use decisions in the City are based." (*Lesher Communications, Inc. v. City of Walnut Creek* (1990) 52 Cal.3d.531, 540.) All approved projects must be consistent with the General Plan. "[T]he propriety of virtually any local decision affecting land use and development depends upon consistency with the applicable general plan and its elements." (*Pfeiffer v. City of Sunnyvale City Council* (2011) 200 Cal.App.4th 1552, 1562 (citations omitted) (quoting *Friends of Lagoon Valley v. City of Vacaville* (2007) 154 Cal.App.4th 807, 815).) A project that is inconsistent with a general plan is deemed to have a significant impact under CEQA.

70. The ENA is not consistent with the General Plan and, therefore, would have a significant environmental impact. The ENA materially conflicts with the following Goals and Policies from the Housing Element of the Inglewood General Plan.

> **Goal 1.** Promote the construction of new housing and new housing opportunities.

Policy 1.1: Provide adequate sites for all types of housing.

Policy 1.2: Maintain development standards that promote the development of special needs housing, such as affordable senior, accessible, or family housing, while protecting quality of life goals.

Policy 1.4: Continue to assess and revise, where appropriate, City regulatory requirements.[4]

Goal 3: Encourage the Production and Preservation of Housing for All Income Categories, particularly around high quality transit, including workers in the City that provide goods and services.[5]

71. The ENA also materially conflicts with the following Goals and Policies from the Land Use Element of the Inglewood General Plan:

A. General. Maximize the use and conservation of existing housing stock and neighborhoods and also facilitate development of new housing to meet community needs.

B. Residential. Encourage neighborhood stability and conservation by reducing the amount of land designated for high density development.

Promote the maintenance, rehabilitation, and modernization of the City's housing stock.

Encourage the preservation of Inglewood's fair share of housing for low and moderate income persons.

Safeguard the city's residential areas from the encroachment of incompatible uses.

C. Commercial. Protect local businessmen and encourage the importance of maintaining a strong commercial district in the downtown.

Improve the visual appearance and economic condition of the existing arterial commercial development along Inglewood's major streets.[6]

72. The ENA is inconsistent with the above Goals and Policies because the ENA in effect constitutes a moratorium on development within the Site.

73. The ENA is inconsistent with the City's zoning for the subject properties.

---

[4] (Inglewood General Plan, Housing Element, p. 3-1.)

[5] (Inglewood General Plan, Housing Element, p. 3-4.)

[6] (Inglewood General Plan, Land Use Element, p. 6-7.)

74. The ENA's approval is subject to review under CEQA because the ENA will cause urban decay and blight. CEQA requires public agencies to evaluate changes to the environment caused by a project's economic effects, including urban decay and blight. (14 Cal. Code Regs §§15064, subd. (e), 15131(a).) For purposes of CEQA, "urban decay" refers to extensive and widespread physical deterioration of properties or structures in an area caused by business closures and multiple long-term vacancies. (*See Joshua Tree Downtown Bus. Alliance v. County of San Bernardino* (2016) 1 Cal.App.5th 677, 685.)

75. As a result of the ENA, residents and business owners will likely cease investment in their properties. It is reasonably foreseeable that this decline in investment will cause the existing properties to fall into disrepair and degrade. Petitioner is informed and believes and thereon alleges that urban blight and decay will follow. Respondents have not studied this potential impact or any other potential environmental impacts of the ENA.

76. In sum, Respondents have failed to consider the ENA's potential and reasonably foreseeable environmental impacts, including:

- Effects on land use inconsistent with the City's General Plan; and
- Increases in urban decay and blight.

THE ENA COMMITS RESPONDENTS TO A DEFINITE COURSE OF ACTION AND HAS IMMEDIATE BINDING EFFECT

77. Petitioner is informed and believes and thereon alleges that Respondents' staff wrongly asserts that the ENA does not commit Respondents to a course of action. To the contrary, the ENA firmly commits Respondents to multiple future courses of action, including the development of the proposed Arena Project.

78. Petitioner is informed and believes and thereon alleges that the ENA also creates irrevocable momentum toward a definite course of action. It is so specific and creates so many mandates on Respondents' future conduct that, as a practical matter, it puts Respondents on an unchangeable course to the adoption of the ENA's preferred future action, i.e. the Arena Project, and forecloses alternatives and mitigation measures.

79. Petitioner is informed and believes and thereon alleges that this is exactly what the parties to the ENA intended. Indeed, the Mayor explicitly told the media that the City Council voted to enter into an ENA with the Developer "***with the intent to build an NBA spec basketball arena in Inglewood***..."[7] Further evidence of Respondents' commitment to the proposed Arena Project is Mayor Butts' claims that he is already arranging for who will operate the Arena.[8] As the Mayor is already planning and coordinating operators, it is apparent that Respondents are committed to the Arena Project.

80. Numerous statements made by public officials of Respondents reflect pre-commitment to the proposed Arena Project including, but not limited to, the following:

a. "'This is like a promise ring that we hope will lead to an engagement that we hope will lead to a marriage,' said Inglewood Mayor James Butts . . . 'Our expectation is it will culminate in an NBA arena in the city of Inglewood,' he said."[9]

b. "And, you know, I hear this thing about calling Special Meetings. The reason that cities have trouble competing economically is because elected types, for the most part, don't understand the necessity to be decisive and swift in seizing opportunities. . . . Every time there's been an opportunity in front of the City, we were prepared and positioned ourselves to seize it. And when this deal came together, were we going to await for another Tuesday to do it? No, we weren't. We're going to do the deal."[10]

[10] *Id.*

c. "[Mayor] Butts said he expects the arena to be built within five years. 'This, to me, changes the center of gravity in Los Angeles County to Inglewood,' Butts said."[11]

d. Mayor Butts said in an email: "Now that there is a commitment of interest, (there's) plenty of time to engage the community if we decide it necessary."[12]

e. Councilman Alex Padilla announced the ENA in an email to his district: "Today the Mayor and the Council approved an exclusive negotiating agreement to build a state of the art NBA professional arena consisting of approximately 18,000 to 20,000 seats with Murphy's Bowl LLC. . . . This [*sic*] a 36 month agreement with the anticipation of having the NBA arena built within the next 5 years."

f. In an interview from July 15, 2017, Mayor Butts said: "I've spoken to Mr. Ballmer, and Mr. Ballmer loves the site."[13]

g. On July 21, 2017, Mayor Butts said:
"The City Council's first responsibility is to ensure continued progress of this city, to provide job opportunities to our residents. To clarify, no one is being displaced with the sales of these parcels."[14]

h. On August 15, 2017, Mayor Butts said:
"We're arguing over whether or not we're going to build another arena, employ probably 6,000 more people in construction work, and provide

probably 5 or 600 more jobs for the community on that land that has looked just like that for 25 to 30 years. Are you kidding me?" [15]

i. On October 3, 2017, Mayor Butts stated during a City Council hearing that any suggestion that the relevant property could be used for housing or other uses is a "total sham" and "ridiculous" and that he will not "entertain another use on the property for one minute."

81. Petitioner is informed and believes and thereon alleges that the ENA is a firm, current commitment to a definite course of action that eliminates Respondents' discretion to consider alternate locations and mitigation measures for the proposed Arena Project besides the location the ENA identifies, or alternative uses for the site.

82. On September 7, 2017, Mayor Butts on behalf of the City of Inglewood sent a letter to Senator Bradford supporting SB 789.

83. On September 14, 2017, Mayor Butts was reported by Inglewood Today to be "absent from the [City Council] meeting, and lobbying in support of the [SB 789] bill in Sacramento."

84. On September 15, 2017, Mayor Butts issued a Mayor's message providing a link to a television interview in which he stated that "certainty" was required in order to proceed with the Arena Project.

FIRST CAUSE OF ACTION

(Failure to Comply with CEQA: Failure to Conduct Initial Study and/or Environmental Assessment)

85. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

86. CEQA applies "to discretionary projects proposed to be carried out or approved by public agencies. . . ." (Pub. Resources Code, § 21080, subd. (a).)

[15] *City Council Hearing:* https://www.youtube.com/watch?v=ENsKMNGwZl0

87. CEQA defines a "project" as "an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment. . . ." (Pub. Resources Code, § 21065.) The Guidelines define "project" as "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment." (Guidelines, § 15371, subd. (a).)

88. The Guidelines define "approval" to mean "the decision by a public agency which commits the agency to a definite course of action in regard to a project intended to be carried out by any person." (Guidelines § 15352, subd. (a).)

89. Respondents' approval of the ENA constitutes a discretionary project that will cause foreseeable, adverse physical changes to the environment and is, therefore, subject to CEQA review. (*See City of Livermore v. LAFCO* (1986) 184 Cal.App.3d 531 (adoption of revisions to sphere-of-influence guidelines constitute a "project" subject to CEQA review because the revisions reflected a major policy shift relating to where growth would occur and what the focus of urban development would be).)

90. "Obviously it is desirable that the precise information concerning environmental consequences which an EIR affords be furnished and considered at the earliest possible stage. The Guidelines express this principle in a variety of ways. Thus, 'EIR's should be prepared as early in the planning process as possible to enable environmental considerations to influence project, program or design.' [citation.]." (*Bozung v. Local Agency Formation Com.* (1975) 13 Cal.3d 263, 282.) "Decisions reflecting environmental considerations could most easily be made when other basic decisions were being made, that is, during the early stage of project conceptualization, design and planning." (*Citizens for Responsible Gov't v. City of Albany* (1997) 56 Cal.App.4th 1199, 1221 (quotations omitted).)

91. Respondents failed to consider, avoid or mitigate the individual and cumulative impacts of reasonably foreseeable environmental impacts resulting from the approval of the ENA. Such impacts include land use inconsistency, urban decay and blight.

92. Respondents have violated CEQA and failed to proceed in the manner required by law, committed a prejudicial abuse of discretion, and acted arbitrarily and capriciously in their approval of the ENA because, without limitation, Respondents failed to subject the ENA to an Initial Study or other environmental assessment as required by CEQA.

93. Petitioner has served the California Attorney General with a copy of this amended verified petition, along with a notice of its filing, in compliance with Public Resources Code section 21167.7. A true and correct copy of that notice and proof of service is attached as Exhibit A hereto.

94. Petitioner has provided written notice of the commencement of this action to Respondents, in compliance with Public Resources Code section 21167.5. A true and correct copy of that notice and proof of service is attached as Exhibit B hereto.

95. Petitioner has performed any and all conditions precedent to filing a CEQA action against Respondents, and has exhausted any and all available administrative remedies to the extent required by law.

SECOND CAUSE OF ACTION

(Failure to Comply with CEQA: Improper Deferral of Environmental Analysis)

96. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

97. Petitioner is informed and believes and thereon alleges that Respondents have deferred analysis under CEQA for the Arena Project.

98. Petitioner is informed and believes and thereon alleges that the ENA commits Respondents to a definite course of action with respect to the Arena Project by, for example, defining now, before any CEQA studies occur, which parts of the City should be considered for the proposed Arena Project and the acceptable size of the proposed Arena Project.

99. The ENA commits Respondents to a definite course of action that will cause numerous adverse environmental effects that should have been studied in an EIR before the ENA

was approved. The detail and specificity contained in the ENA, including identification of the site, size of arena, number of seats, and overall project components, establish that there is more than enough information to prepare an EIR now.

100. By approving the ENA, Respondents have displayed a level of commitment to the Arena Project that is more than sufficient to constitute a "project approval."

101. By committing themselves to the obligations set forth in the ENA, Respondents have circumscribed or limited their discretion with respect to future environmental review, mitigation measures, project alternatives and alternative locations.

102. The Guidelines are clear that Respondents are barred from taking actions "that would have a significant adverse effect or *limit the choice of alternatives or mitigation measures*, before completion of CEQA compliance." (Guidelines § 15004, subd. (b)(2)(emphasis added).)

103. Petitioner is informed and believes and thereon alleges that Respondents' adoption of the ENA constitutes such an unauthorized action because it limits Respondents' choices of methods to eliminate and/or mitigate adverse environmental impacts generated by the ENA.

104. Petitioner is informed and believes and thereon alleges that the ENA constitutes a prejudgment by Respondents on the proposed Arena Project and the proposed Site.

105. Petitioner is informed and believes and thereon alleges that the ENA commits Respondents to a definite course of action and so constrains Respondents' exercise of police power such that the future CEQA review envisioned by the ENA is rendered an unlawful post hoc rationalization for decisions and commitments already made in the ENA.

106. Developer has also committed significant resources toward shaping the Arena Project, including without limitation the detail of design specified in the ENA and the payment of $1.5 million to the City.

107. Any later-performed environmental analysis will be influenced in its discussion of impacts, mitigation and alternatives by the significant funds already given to the City by the Developer.

108. Respondents have violated CEQA and failed to proceed in the manner required by law, committed a prejudicial abuse of discretion, and acted arbitrarily and capriciously in their approval of the ENA because Respondents committed themselves to a definite course of action, i.e. the Arena Project, before complying with CEQA, and improperly deferred CEQA analysis of the Arena Project to a later time.

THIRD CAUSE OF ACTION

(Violation of CEQA - Pattern and Practice of Approving Projects without Environmental Review)

109. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

110. Respondents have engaged in, and continue to engage in, a pattern and practice of approving the environmental review of projects separate and apart from their decision on the underlying project. Respondents' pattern and practice purports to bar the public from administratively appealing any decision based on noncompliance with CEQA.

111. This improper pattern and practice of segregating approval of the environmental review from the approval of the project or permit at issue violates Guidelines section 15090, which requires that "[t]he final EIR was presented to the decisionmaking body of the lead agency and that the decisionmaking body reviewed and considered the information contained in the final EIR prior to approving the project."

112. Respondents' pattern and practice is to separate CEQA review from the final project decision, which violates CEQA. (E.g., *POET, LLC v. State Air Resources Bd.* (2013) 218 Cal.App.4th 681, 731 ["CEQA is violated when the authority to approve or disapprove the project is separated from the responsibility to complete the environmental review."].)

113. Unless Respondents are enjoined, the public, including Petitioner, will suffer irreparable harm as a result of Respondents' approval of projects and their refusal to consider CEQA noncompliance.

FOURTH CAUSE OF ACTION

(Petition for Writ of Mandate Under CCP §§ 1094.5 and/or 1085

Denial of Due Process - Denial of Fair Hearing)

114. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

115. Basic legal principles governing public hearings require that all participants be provided a fair hearing and that their right to due process not be violated.

116. A public hearing participant's rights to a fair hearing and due process are violated when one of the public agency participants has an illegal conflict of interest but nevertheless participates in the decision-making process—even when the conflicted public agency participant's participation was not determinative to the outcome of the public hearing. Fair-hearing and due-process requirements also dictate that members of the public be given reasonable prior notice of a public hearing or of any meeting that is the substantive equivalent of a public hearing but not labeled a "public hearing." Such requirements also prohibit decisionmakers from participating in ex parte communications with applicants and appellants concerning the subject matter of the public hearing. If such communications do occur; their substance must be disclosed fully, accurately, and on the record so that all members of the public know what information was communicated to and from the decisionmakers.

117. Respondents failed to provide a fair hearing before impartial decisionmakers. Petitioner is informed and believes and thereon alleges that the decisionmakers of Respondents had personal interests in the approval of the Project and the ENA, became personally invested in the approval process and pre-judged the merits of the Project and the ENA.

118. This litigation, if successful, will result in enforcement of important rights affecting the public interest, including the public's right to compel the decision-making bodies of Respondents to comply with City and state law and the rights of the residents and property owners of the City, among other things.

FIFTH CAUSE OF ACTION

(Injunction Against Further Pursuit of the ENA Until Respondents Comply with CEQA)

119. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

120. Respondents failed to comply with CEQA prior to approving the Arena Project and the ENA. Petitioner therefore prays for a preliminary and permanent injunction against Respondents and any of their agents from further pursuing the ENA and/or commencing work upon the Arena Project and the ENA unless and until such time as Respondents comply with their mandatory duties under CEQA and all other applicable environmental rules, regulations and procedures.

121. Petitioner has no adequate remedy other than that prayed for herein in that the subject matter is unique and monetary damages would therefore be inadequate to fully compensate Petitioner for the consequences of Respondents' actions in their continued failure to comply with CEQA with respect to the Project and the ENA. Petitioner therefore seeks, and is entitled to, injunctive relief under Code of Civil Procedure section 526 et seq., and to a stay, preliminary and/or permanent injunction.

PRAYER FOR RELIEF

WHEREFORE, Petitioner and Plaintiff prays for relief as follows:

1. For a peremptory writ of mandate:

a. directing Respondents and the Oversight Board, and each of them, to rescind and set aside their approval of the ENA, their adoption of the ENA, and all other approvals, if any, of the Arena Project; and

b. enjoining Respondents and the Oversight Board, their respective officers, employees, agents, boards, commissions, and all subdivisions from granting any authority, permits, or entitlements as part of the Arena Project or the ENA pursuant to the City's approval of the ENA; and

c. commanding Respondents and the Oversight Board, and each of them, to immediately suspend all activities in furtherance or implementation of the ENA until such time as environmental review has been completed in compliance with CEQA.

2. For a preliminary and permanent injunction against Respondents and the Oversight Board, and each of them, and any of their agents, enjoining them from further pursuing the ENA and/or commencing work under the ENA unless and until such time as Respondents comply with their mandatory duties under CEQA and all other applicable environmental rules, regulations and procedures.

3. For an award of its costs of suit and litigation expenses, including, without limitation, attorneys' fees incurred herein as permitted or required by law.

4. For such other relief as the Court deems just and proper.

Re: Challenge to City of Inglewood, City of Inglewood City Council, Successor Agency to the Inglewood Redevelopment Agency, Governing Board of the Successor Agency to the Inglewood Redevelopment Agency, the Inglewood Parking Authority, and the Ingle wood Parking Authority Board of Director's approval of the Exclusive Negotiating Agreement with Murphy's Bowl LLC, *Inglewood Residents Against Takings And Evictions v. City of Inglewood, et al.*

Honorable Attorney General:

Pursuant to Public Resources Code section 21167.7 and Code of Civil Procedure section 388, please find enclosed a copy of Plaintiff and Petitioner the Inglewood Residents Against Takings And Evictions' ("Petitioner") Verified First Amended Petition for Writ of Mandate and Complaint for Injunctive Relief Pursuant to the California Environmental Quality Act ("Petition") against Defendants and Respondents City of Inglewood, City of Inglewood City Council, Successor Agency to the Inglewood Redevelopment Agency, Governing Board of the Successor Agency to the Inglewood Redevelopment Agency, the Inglewood Parking Authority, the Inglewood Parking Authority Board of Directors, and the Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency (collectively, "Respondents") and Real Party in Interest Murphy's Bowl LLC, filed in Los Angeles Superior Court, Stanley Mosk Courthouse, located at 111 N. Hill Street, Los Angeles, CA 90012.

Petitioner challenges Respondents' approval of an Exclusive Negotiating Agreement regarding the construction of a professional sports arena in the City of Inglewood. Among other causes of action, Petitioner challenges Respondents' failure to adhere to the requirements of the California Environmental Quality Act, including proper preparation of an Environmental Impact Report, and to provide a fair hearing.

INGLEWOOD RESIDENTS AGAINST TAKINGS AND EVICTIONS

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF LOS ANGELES

INGLEWOOD RESIDENTS AGAINST TAKINGS AND EVICTIONS, Plaintiff and Petitioner, v. CITY OF INGLEWOOD, a municipal corporation; CITY OF INGLEWOOD CITY COUNCIL; SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; GOVERNING BOARD OF THE SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; THE INGLEWOOD PARKING AUTHORITY; THE INGLEWOOD PARKING AUTHORITY BOARD OF DIRECTORS; and DOES 1-10; Defendants and Respondents, MURPHY'S BOWL LLC, a Delaware Limited Liability Company; ROES 10-20; Real Parties in Interest.	CASE NO.: **NOTICE OF ELECTION TO PREPARE THE ADMINISTRATIVE RECORD PURSUANT TO PUBLIC RESOURCES CODE § 21167.6(b)(2)**

Pursuant to Public Resources Code section 21167.6(b)(2), Plaintiff and Petitioner Inglewood Residents Against Takings and Evictions ("Petitioner") hereby elects to prepare the administrative record and the record of proceedings in connection with this action. Petitioner therefore requests that Defendants and Respondents City of Inglewood, City of Inglewood City Council, Successor Agency to the Inglewood Redevelopment Agency, Governing Board of the Successor Agency to the Inglewood Redevelopment Agency, the Inglewood Parking Authority, and the Inglewood Parking Authority Board of Directors ("Respondents") notify Petitioner's attorneys of record in writing when the items constituting the administrative record are available for inspection and photocopying. To the extent necessary to facilitate a prompt response to this notice, Petitioner's request should be deemed a request to inspect public records under the California Public Records Act.

Petitioner reserves the right to request that Respondents prepare any portion of the record that is not otherwise reasonably available except from one or more of Respondents. However, nothing in this notice shall be construed as Petitioner's express or implied agreement to make any payment to Respondents for their assembly of the items that constitute the administrative record or for any other expense incurred by Respondents in providing Petitioner with access to the items constituting the record. In the absence of Petitioner's express written acknowledgement to the contrary, this notice asks Respondents to do nothing more than provide access to the items constituting the record.

Mayor's Message
Inglewood Clippers(?)

June 15th 2017, the day the City Council of Inglewood voted to open exclusive negotiations (ENA) with the Los Angeles Clippers to ***explore*** building an 18,000 to 20,000 seat arena on 22 acres City controlled land at Century and Prairie. Some of these parcels have sat vacant and unused for as long as 30 years. The Clippers as part of the negotiations agreement have deposited 1.5 million dollars with the City. Details of the ENA will be found below in text, audio and video.

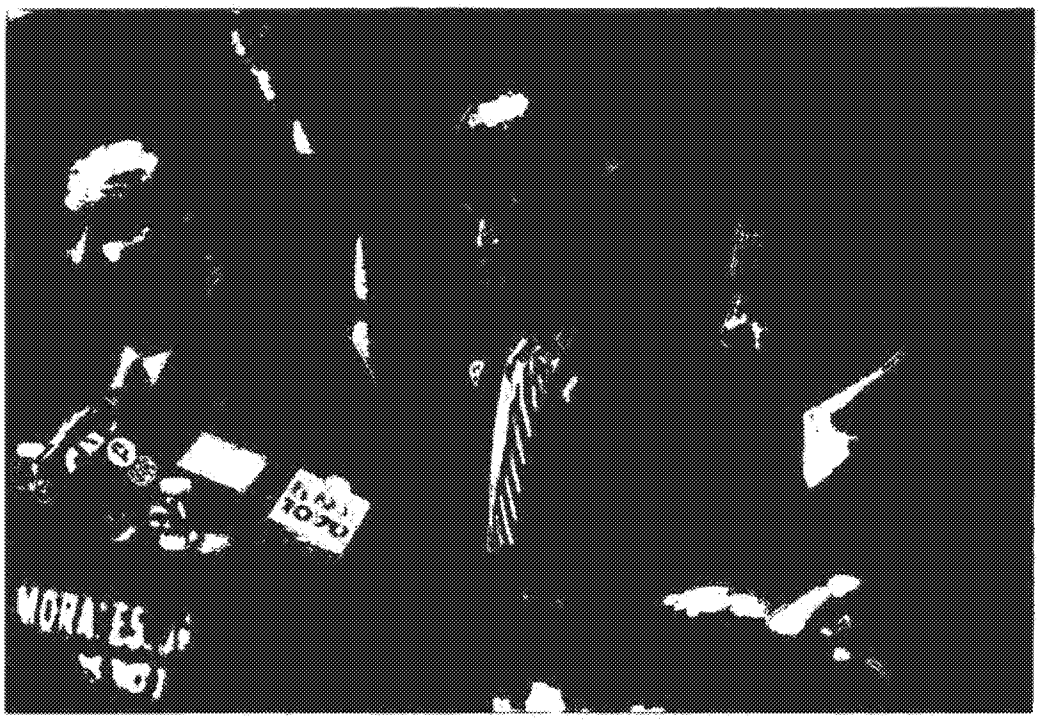
Clippers, city of Inglewood negotiate on proposed new arena



The Inglewood City Council unanimously approved an exclusive negotiating agreement with the Los Angeles Clippers on Thursday that could lead to the construction of an arena for the NBA team across the street from the future home of the NFL's Chargers and Rams.

The arena would be privately funded and no public money would be used for the project, said Gillian Zucker, Clippers president of business operations.

"I have said from day one that we need to plan for the future," team owner Steve Ballmer wrote in a letter to Clippers fans. "This agreement helps us do that by expanding our options."

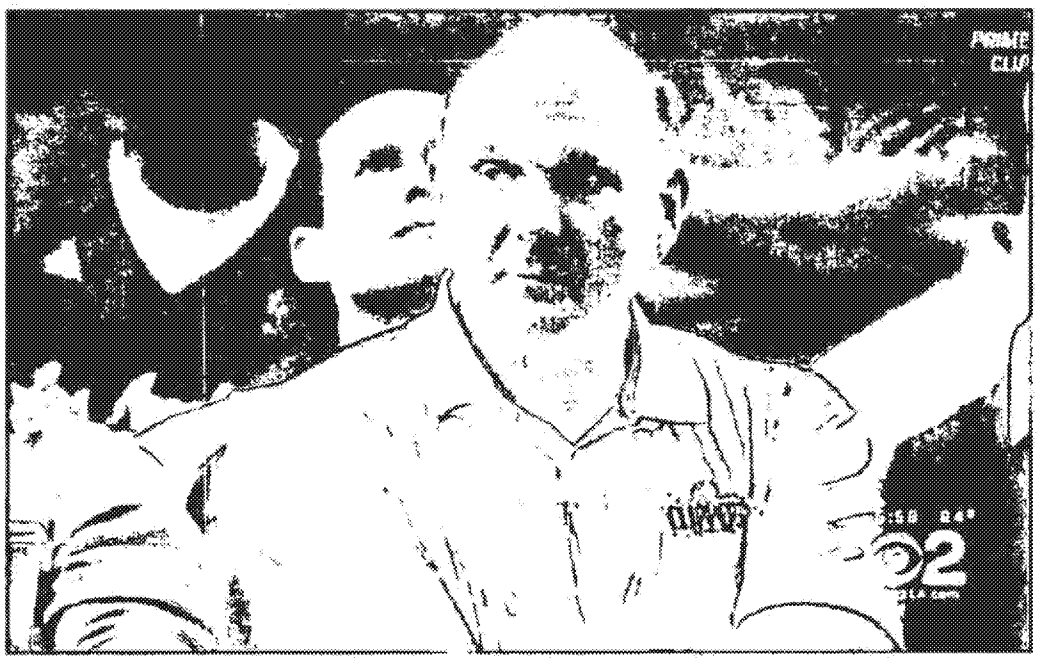
KFWB 980 NEWSRADIO

Inglewood City Council Approves Clippers Arena Project



The Inglewood City Council Thursday morning unanimously approved an exclusive negotiating agreement for development of an NBA basketball arena for the Los Angeles Clippers on a 22-acre plot of city-owned land.

According to city council documents, the agreement outlines a three-year negotiating period with a developer planning to build "a premier and state-of- the-art National Basketball Association professional basketball arena consisting of approximately 18,000 to 20,000 seats."

That window also gives the Clippers three years to conduct an environmental review of the project.

Inglewood Mayor James Butts described the council's approval to CBS2 as a "promise ring."

Los Angeles Times

Inglewood will vote on deal for Clippers to explore new arena

As round-the-clock construction continues on the $2.6-billion stadium for the Rams and Chargers in Inglewood, the resurgent city is moving toward adding another team.

Inglewood's City Council will vote Thursday on an exclusive negotiating agreement for a Clippers-controlled company to build an arena for the team, according to a copy of the document.

The 22 acres for the arena are across the street from the 298-acre site where Rams owner Stan Kroenke is building the stadium as part of a sprawling mixed-use development.

The Rams aren't involved in the Clippers' arena project, according to a person with direct knowledge of the situation, though representatives of Kroenke and the Clippers had multiple discussions about the team joining the Rams' project that's scheduled to be completed in 2020 or building on an adjacent parcel.

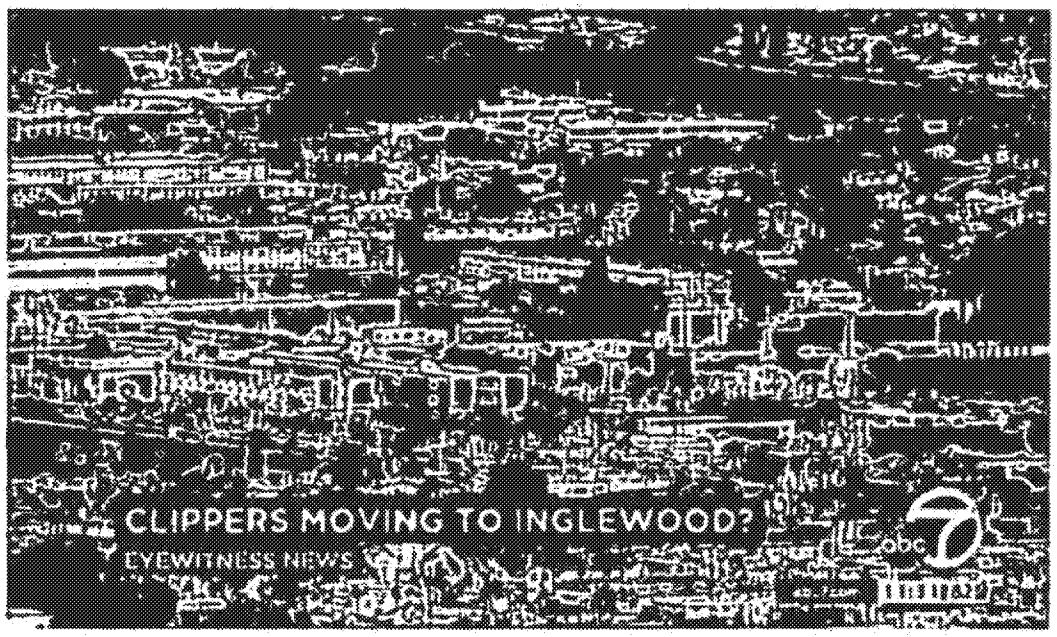
Inglewood City Council OKs negotiations

for new Clippers arena



Inglewood City Council unanimously voted in favor Thursday of a negotiating agreement on the development of a "premier and state-of-the-art" basketball arena with seating capacity of 18,000 to 20,000.

The property is located on about 22 acres of land between Prairie and Yukon Avenue and bordered on the north by Century Boulevard. Much of the land is owned by the city of Inglewood, according to city documents.

Inglewood City Council members spoke almost universally in favor of the plan. "Inglewood is not going to be the place to drive through, but the place to drive to, and this is part of that," one Inglewood city councilman said.

Inglewood in talks to build new Clippers arena across from NFL stadium

Maybe sharing a stadium is okay for the Rams and Chargers, but the Clippers appear to be getting fed up with sharing their venue. ABC7 reports that the Inglewood City Council voted unanimously Thursday to start negotiating an agreement with the basketball team that would bring an 18,000- to 20,000-seat basketball arena to the city.

The news station reports the property that Inglewood is considering for the Clippers arena measures 22 acres and is located just across the street from LA's future NFL stadium site. The land, located between Prairie and Yukon Avenue south of Century Boulevard, is mostly owned by the city. The Clippers would put a new arena, plus offices and a training facility on the site.

7 Residents in the ENA Area Speak Out in the **Los Angeles Times**

Excerpts from "Inglewood Residents Speak Out Against the Proposed Clippers Arena," August 13, 2017

The city owns large parcels of land in the area around the business, making it one of the most plausible arena sites. "It's not an eyesore, it's not blighted, it's well-kept, well-maintained and we don't want to go anywhere," Bhagat said. **"We're going to fight tooth and nail to stop the project.**

He is among a growing number of business owners and residents pushing back against Clippers owner Steve Ballmer's proposal to construct the "state of the art" arena with 18,000 to 20,000 seats alongside a practice facility, team offices and parking. "How are we going to replace this business with another business in Southern California with that great of a location?" Bhagat said. "It literally is impossible."

# # #

A half-block away, Gracie Sosa has witnessed the neighborhood's evolution from a two-bedroom home on Doty Avenue where she's lived with her parents since 1985. Crime and violence in the area have dwindled in recent years, replaced by a calmer, family-oriented atmosphere.

Sosa, who works for the American Red Cross, learned of the potential arena from a friend. No representatives of the city or team have contacted the family.

"It's about the money," Sosa said. "... I don't think our voices are heard. We're not billionaires. We're just residents of a not-so-great neighborhood. But it's our neighborhood. "We're saying 'No, no, no' until the end."

# # #

Nicole Fletcher resides nearby in an apartment on 104th Street. She walks around the block at night and sees a neighborhood that's come a long way, but holds the potential for more improvement. In her eyes, that doesn't include an arena.
"My biggest concern is how it will impact the families," Fletcher said.

PROOF OF SERVICE

I am employed by Chatten-Brown & Carstens LLP in the County of Los Angeles, State of California. I am over the age of 18 and not a party to the within action. My business address is 2200 Pacific Coast Highway, Ste. 318, Hermosa Beach, CA 90254 . October 23, 2017, I served the within documents:

VERIFIED FIRST AMENDED PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR INJUNCTIVE RELIEF PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

☒ **VIA UNITED STATES MAIL.** I am readily familiar with this business' practice for collection and processing of correspondence for mailing with the United States Postal Service. On the same day that correspondence is placed for collection and mailing, it is deposited in the ordinary course of business with the United States Postal Service in a sealed envelope with postage fully prepaid. I enclosed the above-referenced document(s) in a sealed envelope or package addressed to the person(s) at the address(es) as set forth below, and following ordinary business practices I placed the package for collection and mailing on the date and at the place of business set forth above.

☐ **VIA OVERNIGHT DELIVERY.** I enclosed the above-referenced document(s) in an envelope or package designated by an overnight delivery carrier with delivery fees paid or provided for and addressed to the person(s) at the address(es) listed below. I placed the envelope or package for collection and overnight delivery at an office or a regularly utilized drop box of the overnight delivery carrier.

☐ **VIA MESSENGER SERVICE.** I served the above-referenced document(s) by placing them in an envelope or package addressed to the person(s) at the address(es) listed below and provided them to a professional messenger service for service. (A declaration by the messenger must accompany this Proof of Service or be contained in the Declaration of Messenger below.)

☐ **VIA FACSIMILE TRANSMISSION.** Based on an agreement of the parties to accept service by fax transmission, I faxed the above-referenced document(s) to the persons at the fax number(s) listed below. No error was reported by the fax machine that I used. A copy of the record of the fax transmission is attached.

☐ **VIA ELECTRONIC SERVICE.** I caused the above-referenced document(s) to be sent to the person(s) at the electronic address(es) listed below.

I declare that I am employed in the office of a member of the bar of this court whose direction the service was made. I declare under penalty of perjury under the laws of the State of California that the above is true and correct. Executed on October 23, 2017, at Hermosa Beach, California 90254.

PUBLIC RESOURCES CODE

CEQA Guidelines

I. INTRODUCTION

The main purpose of the California Environmental Quality Act, found at Public Resources Code sections 21000, et seq. ("CEQA") is to ensure that public entities make decisions with environmental considerations in mind, and that where those decisions may harm the environment, that the agencies take all feasible steps to avoid such harm. (Pub. Resources Code §§ 21002, 21081 subd. (a).) CEQA is also intended to inform the public of the environmental values of its elected officials, through the CEQA process, in which the lead agency analyzes and discloses the potential environmental consequences of actions the agency intends to takes, the public comments on those consequences, and the agency responds. In that way, "the public will know the basis on which its responsible officials either approve or reject environmentally significant action, and the public, being duly informed, can respond accordingly to action with which it disagrees. The EIR process protects not only the environment, but informed self-government." (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 376, 393 ("*Laurel Heights*").)

Here, in their single-minded determination to attract the construction of a professional basketball arena, officials of the City of Inglewood, the Successor Agency to the Inglewood Redevelopment Agency, and the Inglewood Parking Authority (collectively, herein "the City") have violated the main principles and purposes of CEQA and the environmental impact report (EIR) process, committing the City to approval of a project before a single CEQA analysis was prepared, and precluding any meaningful consideration of alternatives to the arena. The City entered an Exclusive Negotiating Agreement (ENA) with Real Party in Interest Murphy's Bowl LLC, a corporation owned by Steve Ballmer, the owner of the Clippers basketball team, to develop a basketball arena for the Clippers ("Project"). The ENA binds the City to exclusive negotiations with Real Party (Developer), and bans any discussion by the City with any other developer as to any property within the Project site for the three-year term of the ENA.[1]

The location and scope of the proposed Project are clear from the ENA: an arena of 18,000-20,000 seats, with a precise location in the City delineated on a detailed map, abutting residential areas and containing many existing businesses. The proposed Project site also contains City-owned parcels, and the ENA contains detailed procedures for transferring them to

[1] The original ENA was approved by the City Council on June 15, 2017 (AR 33-57), and is referred to herein as "June ENA." A somewhat revised ENA was approved on August 15, 2017 (AR 5-26), and is referred to herein as "Revised ENA."

the Developer, as well as an expressed intention for the City to acquire other parcels in the site and transfer them to the Developer. (Administrative Record (AR) 38-39 and 41 [Recitals B and C, § 2(b)]; and AR 6, 8-9 [Recitals C and D, § 2(b)].) Moreover, the City requested detailed financial information and plans for the Arena Project, but did not request information about any alternative site options.

The City has leant considerable momentum and political clout to the proposed Project, but has done so without any prior CEQA compliance whatsoever. The City's actions have ignored CEQA's substantive and procedural requirements, and have turned any eventual EIR on this Project from "a document of public accountability" (*Laurel Heights*, *supra*, 47 Cal.3d at 392), into a document of public irrelevance and impermissible "post hoc rationalization" condemned by the Supreme Court.

II. STATEMENT OF FACTS.

A. City Actions Prior To Environmental Review.

The record shows that the City of Inglewood began negotiations with one or more entities associated with Steve Ballmer, owner of the L.A. Clippers professional basketball team, that eventually became formed as Murphy's Bowl LLC (AR 279, 285). The negotiations began in January 2017, with the mutual desire of City officials and Ballmer for the Clippers to build and occupy a National Basketball Association basketball arena in Inglewood. (AR 564.) As stated in communications between the Developer and the City on June 9, 2017, the entity (Murphy's Bowl LLC) was given "a generic name so it won't identify the proposed project." (AR 824.)

The existence of the negotiations was not revealed to the public, however, until June 14, when the Inglewood City Council rushed to issue a notice that it would hold a special joint meeting the very next day, together with the Successor Agency to the Inglewood Redevelopment Agency (Successor Agency) and the Parking Authority, in order to consider the ENA that is the subject of this case. This meeting was called with even less than 24-hours' notice required by the Brown Act (Govt. Code § 54956 subd. (a)) for a "special" meeting. (AR 149-151; AR 152.) City officials considered giving the normal 72 hours notice but deliberately decided against it. (AR 825 [having to include ENA with the agenda was "why we elected to just post 24 hours versus the normal 72"].) At the June 15 special meeting, the governing boards of the three Respondent entities all voted to formally enter the ENA, a complex, 22-page agreement that had already been prepared, and that binds the City to a three-year period of exclusive negotiations with a recently-formed corporation with the innocuous and unrevealing name of Murphy's Bowl,

"to facilitate the development of a premier and state-of-the-art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats." (AR 161, AR 160; AR 560.)

On July 14, 2017, Petitioner objected to the inadequacy of the June 15 meeting's 22-hour notice (AR 252-253) and it filed the original petition herein a week later on July 21, 2017. In a hasty response, and again at a "special" meeting on the minimum 24-hours' notice (AR 141-142), the City held a second joint meeting on July 21, 2017, where all three Respondent City agencies recommitted the City to the ENA. (AR 146-147.) Following publication of two articles in the Los Angeles Times, including one entitled "*Possible Clippers arena has many Inglewood residents worried they may lose their homes or businesses*" on August 13, 2017 (AR 79; Req. For Jud. Ntc., Exh. I) and a second on August 14, 2017 (*Id.*, Exh. J), the City Council held a third meeting on August 15, 2017. At the August hearing, the City Council approved a "Revised ENA" which tweaked some of the terms of the prior two versions of the ENA, added new window-dressing language to respond to Petitioner's arguments that CEQA was violated, and attached a revised map of the project area purporting to exclude private homes and churches from the area of potential eminent domain use. (AR 123-125; AR 16, 17, 19 [Revised ENA §§ 7, 10, and 13]; AR 4 [site map].) The City, however, made clear that eminent domain to obtain land for the Proposed Arena was still an option. (AR 78 [Mayor Butts stated "why would you want us to not be able to use a power that every city in this country has to improve our economic position? Why would you want that?"])

On September 7, 2017, the Oversight Board of the Successor Agency to the Inglewood Redevelopment Agency[2], chaired by Inglewood's Mayor Butts[3], voted to approve the Revised ENA as approved by the City Council on August 15, 2017. (AR 559-561.)

B. City Officials Lobbied For Special Legislative Treatment For The Proposed Project.

On September 1, 2017, less than three weeks after the Revised ENA's approval and after lobbying by City officials, State Senator Steven Bradford introduced SB 789 in the California Legislature. (AR 521 et seq.) The bill would have curtailed public participation in review of the Project, exempt such vital environmental analyses as examination of traffic impacts, parking

---

[2] In 2012, pursuant to the Redevelopment Law, the City itself elected to be the Successor Agency to the Redevelopment Agency of the City of Inglewood. The Redevelopment Agency was dissolved on or about February 1, 2012.

[3] Mayor Butts also chairs the governing body of Respondent Parking Authority. (AR 24-25.)

impacts, and alternative size, height, and configuration of the proposed basketball arena and surrounding buildings, would allow the City to use eminent domain *before* completing CEQA review, and would divest the courts the authority to impose injunctive relief for violations of CEQA as to the proposed project. (AR523-526, 529-536.) Inglewood sent a letter stating it "strongly supports SB 789" (AR 182) and its Mayor testified emphatically in support of SB 789 before the Assembly Natural Resources Committee on September 8, 2017 in his official capacity. (Motion to Augment the Administrative Record or For Judicial Notice (hereinafter "Req. Jud. Not."), Exh. A, pp. 2-3, 14.) The committee rejected SB 789. (*Id.*, p. 18.)

C. The City Mayor Publicly and Extensively Advocated In Favor of the Project.

Inglewood's Mayor James Butts has made repeated public statements in public media asserting in strong terms the City's commitment to the proposed basketball arena, including referring to the ENA during the June 15, 2017 City Council meeting as "a promise ring that we hope will lead to an engagement that will lead to a marriage, and we have a pretty good track records (sic) in consummating those marriages." (AR 164.)[4] A press packet distributed by the City in June 2017 included similar statements from the Mayor in various newspapers. (Req. For Jud. Ntc., Exhs. E, G, H.) During the October 3, 2017 City Council hearing, Mayor Butts characterized any suggestion from the public that the relevant property could be used for housing or any other alternative uses as a "total sham" and "ridiculous" and stated that he would not "entertain another use on the property for one minute." (Req. For Jud. Ntc., Exh. B, p. 22.)

D. The Terms of the Exclusive Negotiating Agreement (ENA) Foreclose the Consideration of Alternatives.

The ENA commits the City to a definite course of action as to the proposed Project. Respondents committed themselves to at least a three year period (with a possible six-month extension (AR 11-12 [ENA § 4]) during which the City will negotiate with Real Party Murphy's Bowl, LLC – and during which the City has affirmatively agreed not to negotiate with anyone else – about a "proposed DDA [Disposition and Development Agreement] for the sale, lease, disposition and/or development" of any parcels within the site for the proposed arena. (AR 8 [§ 2(a)].) Not only does the ENA forbid negotiations with anyone except Real Party for three years, but it also forbids the City, the Successor Agency, and the Parking Agency from voluntarily transferring their interest in any portion of the proposed arena site to anyone except the City or

---

[4] Reciprocating the Mayor's statement of devotion to the Project, Clippers owner Steve Ballmer has been "open about his desire for a new arena" (Req. For Jud. Ntc., Exh. D), including stating "We're moving to Inglewood come hell or high water" (Req. For Jud. Ntc., Exh. K).

the Parking Authority during the three-year term of the ENA. (AR 18, [§ 11].) None of those entities may even discuss or negotiate as to any alternative disposition or use of its public property within the Site during that time. (AR 8 [§ 2(a)].) In essence, ownership and use of City, Successor Agency, and Parking Authority land within the proposed arena site is frozen for three years, possibly more.[5] The boundaries of the Proposed Project Site are shown in the map attached to the Revised ENA (AR 4). The original Project Site includes numerous businesses and hundreds of units of housing (AR 57), and directly borders many residences that are outside the Site but would be affected by noise and traffic from the operation of the Proposed Project.

The June ENA contemplated an agreement between the City and Developer, *prior* to entering a DDA, that would have allowed the City to "use[] its best efforts to acquire" parcels within the proposed arena site that the City and the Developer identified "as necessary for the development of the proposed project," and would have obligated the Developer to advance the money for such purchases to the City; thus, the June ENA even contemplated the City's use of eminent domain to acquire these "necessary" parcels while the parties were still negotiating. (AR 43, June ENA § 3(g).) After Petitioner filed the present action on July 20, 2017, that provision was softened.[6] Several other changes were made between the June and August ENAs, including several additions that asserted the City's discretion to take certain actions, and that enlarged the discussion of CEQA. (Compare, e.g., AR 39– June ENA Recital E [City "has selected the Developer *for conveyance and development* of the Agency parcels"], with AR 6 August ENA Recital E [City "has selected and *agreed to negotiate with the Developer for the potential conveyance and development* of the Agency parcels", emphasis added.) While the August ENA adds verbiage specifically stating that "the Public Entities retain absolute discretion" to require mitigation measures, consider alternatives, or disapprove the proposed project (AR 16 [§ 7]), Recital 1 of the Revised ENA precludes an alternative site for the Project, since it limits the parcels that may be used for the Project to parcels shown on the Site Map. (AR

---

[5] The Revised ENA does allow the City to negotiate with current private property owners and tenants about the rehabilitation or development of their property within the proposed arena site. (AR 8, Revised ENA, § 2(a).) However, any such negotiation, let alone actual rehabilitation or development, would obviously be conducted in the looming shadow of the proposed arena and the possibility that any such rehabilitated or developed property might be taken by eminent domain if the ENA negotiations were successful.

[6] Pursuant to *Save Tara v. City of West Hollywood* (2008) 45 Cal.th 116, 141 (*Save Tara*), courts may look to a previous version of the agreement to judge the intent of the City and the depth of its commitment to the proposed Project, since the previous version may demonstrate the City's "willingness to give up" full control of the CEQA process, in furtherance of the Project.

5 [Recital A].) In addition, the ENA forbids the City from negotiating or discussing use of the Site with anyone except the Developer, precluding consideration of alternative projects at the Site sponsored by other parties or entities. (AR 8 [§ 2(a)].)

The ENA provides that a party may terminate the ENA if another party fails to perform or fails to negotiate in good faith (AR 17 [§8(a)]), but may not terminate if the failing party cures the failure after being given notice. (*Id.*) Contradictorily, while it must give prompt notice of its intent to do so, the Developer "may at any time and for any reason during the ENA period elect not to proceed with the Proposed Project." (AR 17 [§8(b)].) Thus, the City has bound itself to the ENA except if the Developer fails to proceed or to negotiate in good faith, but the Developer may walk away at any time, for any reason.

The Developer is obligated to provide the City both with financial information, including a financial pro forma (AR 9 [§3(a)]) and information on equity investors in the project (*id.*), and must provide the City with a "Non-Refundable Deposit" of $1.5 million. (AR 12 [§ 5].) The Developer must also provide funding for the environmental review, although the budget is subject to the Developer's reasonable consent (AR 9 [§ 3(a)]), and must pay for land transferred to it by the City, including any land the City acquires by eminent domain. (AR 10-011 and AR 13 [§§ 3(g), 6(c), respectively].) Six months after the ENA's effective date the Developer must provide the City with a description of the parcels the Developer wants to acquire, a conceptual site plan, and architectural renderings for the proposed project. (AR 10 [§ 3(d)].)

Entrance by the City into the ENA was not made the subject of any CEQA analysis, not even an Initial Study (Cal.Admin.Code, tit. 14 ("Guidelines") § 15063), before the City approved it. Not until February 20, 2018, did the City issue a Notice of Preparation of an EIR for the proposed Inglewood Basketball and Entertainment Center. (AR 168 et seq.)

III. STANDARD OF REVIEW.

Agency decisions pursuant to CEQA are reviewed for abuse of discretion. (Pub. Resources Code §§ 21168, 21168.5.) In determining whether an agency has abused its discretion, courts apply two different standards. Questions of law, involving no factual determinations, are reviewed *de novo*, with the court exercising independent judgement as to the legal validity of the action. (*Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116, 131 ("*Save Tara*").) Determinations of fact by the public agency are reviewed under the substantial evidence test, with the court looking chiefly to whether substantial evidence, in light of the entire record, supports the agency's factual determinations. (*Vineyard Citizens for Responsible*

Growth, Inc. v. City of Rancho Cordova (2007) 40 Cal 4th 412, 435. ["*Vineyard.*"])

Here, Petitioner has challenged the decision by the City, the Successor Agency to the Inglewood Redevelopment Agency, and the Inglewood Parking Authority to enter into an ENA with Real Party in Interest Murphy's Bowl LLC regarding the construction of a major project with potential environmental impacts, namely a basketball sports arena and related facilities in the City of Inglewood, without first complying with CEQA. Such a claim is reviewed de novo. (*Save Tara, supra,* 45 Cal.4th 116, 131 ["A claim . . . that the lead agency approved a project with potentially significant environmental effects *before* preparing and considering an EIR 'is predominantly one of improper procedure' . . . to be decided by the courts independently." Emphasis in original].) In addition, the public agencies here made no formal findings or determinations of fact in connection with approval of the ENA. Therefore, this case presents only legal issues of the agencies' compliance with CEQA and, as such, the applicable standard of review is the non-deferential issue of law standard. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.)

IV. ARGUMENT: THE CITY VIOLATED CEQA BY APPROVING A PROJECT THAT MAY HARM THE ENVIRONMENT WITHOUT PERFORMING ANY CEQA ANALYSIS WHATSOEVER.

A. CEQA Requires Public Agencies to Consider the Environmental Consequences of Actions That Could Harm the Environment *Before* Approving a Project.

The Legislature has declared that CEQA and its procedures form "an integral part of any public agency's decision making process. (Pub. Resources Code § 21006). The CEQA analysis, and any EIR "should be prepared as early in the planning process as possible to enable environmental considerations to influence project, program, or design." (*Bozung v. LAFCo.* (1975) 13 Cal.3d 263, 282 ("*Bozung*").) Where an approval is "an essential step leading to ultimate environmental impact [] it is therefore … a 'project' within the scope of CEQA. (*Fullerton Joint Union High School Dist. v. State Bd. of Education* (1982) 32 Cal.3d 779, 797, distinguished on other grounds by *Board of Supervisors v. Local Agency Formation Com.* (1992) 3 Cal.4th 903, 909.) The Supreme Court has also held "that the later the environmental review process begins, the more bureaucratic and financial momentum there is behind a proposed project." (*Laurel Heights, supra,* 47 Cal.3d 376, 395.) For those reasons, the CEQA Guidelines at section 15004 subdivision (b)(2)(B), provide that public agencies should not "take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives

or mitigation measures that would ordinarily be part of CEQA review of that public project." CEQA and long-standing precedent make clear that CEQA review must *precede*, and not follow, public agency action to move forward with a planned project. The Guidelines define a project as "the whole of an action, which has a potential for resulting in either a direct physical change to the environment, or a reasonably foreseeable indirect physical change in the environment (Guidelines § 15378 subd. (a)), and require "all phases of project planning, implementation, and operation" to be considered in the Initial Study for a project (Guidelines, § 15063 subd. (a)(1)). CEQA review and the application of CEQA procedures must be followed at all stages of project consideration, to carry out the legislative intent "to compel government at all levels to make decisions with environmental consequences in mind." (*Bozung, supra,* 13 Cal.3d 263, 283.)

The Guidelines are clear that a "project" may require multiple government approvals, but that it is the overall activity, and not each individual approval, that is the "project" for CEQA purposes. (Guidelines § 15378 subd. (c).) CEQA's requirements become applicable with the taking of the first significant step towards overall approval of the project, rather than solely at final project approval; the first step in the approval process, not the last step, is when the CEQA process first applies: "'EIR's should be prepared as early in the planning process as possible to enable environmental considerations to influence project, program or design.' [citation]." (*Bozung, supra,* 13 Cal.3d 263, 282.) Any other approach could result in the freezing in place of project characteristics without examining or mitigating their potential to harm the environment, and the locking out of consideration of project alternatives that are identified by later environmental review. "Decisions reflecting environmental considerations could most easily be made when other basic decisions were being made, that is, during the early stage of project conceptualization, design and planning." (*Citizens for Responsible Government v. City of Albany* (1997) 56 Cal.App.4th 1199, at 1221 (quotations omitted) ("*City of Albany*").)

In *City of Albany*, Albany prepared a 95- page development agreement with a developer to establish and operate card games at a race track, and submitted the development agreement to the City electorate for approval; the Development Agreement provided for a CEQA review *after* voter approval. The Court of Appeal struck down the approval, holding that "the appropriate time to introduce environmental considerations into the approval process was during the negotiation of the development agreement. . . . Any later environmental review might call for a burdensome reconsideration of decisions already made and would risk becoming the sort of 'post hoc rationalization[] to support action already taken' which the Supreme Court disapproved in

Laurel Heights, supra, 47 Cal.3d 376, 394." (*Id.* at 1221.) The ENA has fixed in place such pre-CEQA decisions here.

As *Save Tara* holds:

> We apply the general principle that before conducting CEQA review, agencies must not "take any action" that significantly furthers a project "in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project."

(*Save Tara*, *supra*, 45 Cal.4th at 138.)

Here, the City Council and Mayor have significantly furthered the proposed Project, foreclosed consideration of alternatives (AR 8, [§ 2(a)]), advocated for the project in the press and in the Legislature (AR 164, 182, 569-572; Req. For Jud. Not., Exh. A, pp. 2-3, Exhs. C, E, G, H), and forcefully declared alternatives will not be considered (Req. For Jud. Not., Exh. B, p. 22), all without CEQA review. Failure to comply with CEQA's procedural requirements so that complete information as to a project's impacts is publicly disclosed constitutes a prejudicial abuse of discretion that requires invalidation of the agency's action, regardless of whether full compliance would have produced a different result. (Pub. Resources Code § 21005.)

B. The City Has Committed Itself to Reaching a Development Agreement for a Project That May Harm the Environment.

In *Save Tara, supra,* 45 Cal.4th 116, the Supreme Court recognized that it does not require the issuance of a formal permit or entitlement by a public agency to trigger CEQA. In some cases, the public agency's conduct towards a proposed project can show a commitment as a practical matter to the project that is so clear and pronounced that the conduct, taken together with surrounding circumstances such as public officials' statements, may be sufficient to require prior CEQA review. As *Save Tara* holds:

> A public entity that, in theory, retains legal discretion to reject a proposed project may, by executing a detailed and definite agreement with the private developer and by lending its political and financial assistance to the project, have as a practical matter committed itself to the project. When an agency has not only expressed its inclination to favor a project, but has increased the political stakes by publicly defending it over objections, putting its official weight behind it, devoting substantial public resources to it, and announcing a detailed agreement to go forward with the project, the agency will not be easily deterred from taking whatever steps remain toward the project's final approval.

(*Save Tara, supra,* 45 Cal.4th at 133.) Courts evaluating a claim of improper precommitment view the "core issue" as "whether the agency has taken any steps foreclosing alternatives, including that of not going forward, or has otherwise created bureaucratic or financial momentum sufficient to incentivize ignoring environmental concerns." (*John R. Lawson Rock & Oil, Inc. v. State Air Resources Bd.* (2018) 20 Cal.App.5th 77, 100.)

Here, the range, number, and specificity of City commitments in the ENA as to the design of the DDA and the project itself, the vociferous advocacy of the project by Inglewood officials in public meetings, in the press, and in the state Legislature, and the commitment by the City of what the Revised ENA describes as "substantial time and effort" of City staff, the hiring of consultants and attorneys by the Public Entities, and providing "aid and assistance to the Developer in connection with the Proposed Project" (AR 7 [Recital I]) shows that the City has "as a practical matter committed itself to the project." (*Save Tara, supra* 45 Cal.4th at 133.) Add to this the repeatedly stated goal of the ENA is a DDA that will require the City to sell significant amounts of public land to the Developer for the Project, and potentially use eminent domain to obtain other property for the Project (AR 8-11 [§§ 2(a), 2(b), 3(g)], AR 13-14 [§6(c), 6(l)], and AR 5-6 [Recitals A, C, D, E, and F]), and it is clear that the City took a significant step towards approval of the overall Project in approving the ENA.

Equally clear is that the proposed basketball arena could have significant adverse impacts on the environment. The Revised ENA describes the Proposed Project as "a premier and state of the art National Basketball Association ("NBA") professional basketball arena consisting of approximately 18,000-20,000 seats as well as related landscaping, parking and various other ancillary uses" that will "bolster the economic revitalization of Inglewood" and "expan[d] the City's presence as a major sports and economic center." (AR 6-7 [Recital E].) The original proposed project site would have comprised about 80 acres (AR 4; First Amended Petition, ¶ 49), including a substantial amount of publicly owned land that would be conveyed out of public ownership to the Developer for the Project. The City plainly viewed the Proposed Project as a major facility that would attract the kind of attendance at the Project, and its attendant stimulation of business in Inglewood, that would in turn increase air pollution, congestion, and noise.[7] The City has demonstrated its belief that the Project may have significant environmental impacts by issuing a Notice of Preparation of an EIR on the Project (AR 168), albeit too late.

Further, Inglewood is also home to the football stadium for the Rams that the NFL and the Rams committed in 2016 to build (AR 569), and would join the existing Forum in Inglewood

[7] Inglewood is the already the home of the Forum (AR 415), an analogous sports facility that serves as a major sports and event venue, and therefore its residents are familiar with the adverse effects on the environment, including increased traffic caused by professional sporting events, the increased air pollutant emissions resulting from that traffic, increased noise levels at and around the sports facility, and all the impacts of constructing the facility.

(*id.*) as its third major sports facility. In comparison, Mayor Butts estimated event traffic drawn to the Forum at 17,658 vehicles for a given event. (AR 165.) Cumulative impacts from three such major sporting arenas, described by Mayor Butts as "three times the size of Century City, three and a half times the size of Disneyland, and twice as big as the Vatican City" (AR 570) would likely be significant. Cumulative impacts from the addition of the Proposed Project added to the impacts on, e.g., traffic congestion and resulting increases in automotive air pollutant emissions, are reasonably foreseeable, and need to be examined for potential significance.

C. The ENA's Terms Improperly Pre-Determine Most of the Parameters of the Proposed Project, Far in Advance of CEQA Compliance.

The ENA purports to be only an agreement to negotiate a development agreement (DDA). (AR 5 [Recital A].) However, it is far more than that. The ENA itself cabins and pre-determines any DDA that the negotiations may produce by providing multiple and detailed parameters for such a DDA. The Revised ENA provides that "the subject matter of this Agreement involves certain *negotiation parameters* established by the Parties with respect to a proposed development of an NBA professional basketball facility[.]" (AR 5 [Recital A], emphasis added) It also states that "*No* entitlements required or requested by the Developer for the development of the Proposed Project will be considered for approval or approved by the Public Entities *until the requirements of this Agreement have been satisfied*" (AR 7 [Recital F], emphasis added), i.e., until a DDA that complies with the parameters in the ENA is reached.

The terms and parameters set by the ENA for the DDA are comprehensive, and "*shall include*, but not be limited to" (AR 13 [§ 6], emphasis added) terms ranging from the Project's scope, including everything from the total square feet and number of parking spaces and building height (AR 13 [§ 6(a)]), to a detailed Schedule of Performance for building the Project (AR 13 [§ 6(d)]), to provision of job opportunities to local residents (AR 15 [§ 6(q)]), to specifying point of purchase for tax purposes of "materials, fixtures, furniture, machinery, equipment and supplies" as being within Inglewood (AR 16 [§ 6(r)]), and many others. While the Revised ENA states that "[e]xecution of a DDA shall be subject to compliance with the California Environmental Quality Act" (AR 16 [§ 7]), and that "nothing in this Agreement shall obligate the Public Entities to approve a DDA nor any proposed development within the Study Site" (AR 19 [§ 13]), it is clear that if any DDA is approved, its scope and terms will have largely been pre-determined by the ENA negotiations.

D. ENA Negotiations Will Be Outside the Public Process That CEQA Requires.

Despite the wealth of information available to the City about the proposed Project before

the ENA was executed, including its size, use, and precise location, the first notice of preparation of a CEQA document for the proposed arena was not issued by the City until it issued a Notice of Preparation of an EIR on February 20, 2017 (AR 168-179), a full six months after the Revised ENA was approved. (AR 123-125.) Given that the EIR for such a major project as this one would likely take at least one to two years to complete[8], the EIR cannot be expected to be completed until the ENA negotiation period is one-half to two-thirds over, a time at which the information in the EIR is unlikely to shape the parameters of the project being negotiated.

The ENA does not incorporate CEQA review as part of the parties' negotiating process. While the Revised ENA requires that the City and the Developer enter into an agreement within 30 days of signing the ENA that specifies funding for "environmental review" (AR 9 [§ 3(a)]), the ENA only requires that CEQA be complied with prior to "execution" of the DDA and that it applies only to "the consideration and potential approval of any DDA by the Public Entities relating to the Proposed Project." (AR 16 [§7].) In other words, the ENA contemplates compliance with CEQA *after* the terms of the DDA are agreed upon through the ENA process, and not prior to, or even contemporaneous with, development and negotiation of the DDA. Although the City issued a Notice of Preparation for an EIR on the arena, no provision in the ENA requires the coordination or synchronization of the CEQA process and the ENA negotiating process. Decisions on the environmentally critical aspects of Project design and operation—crucial parts of a development agreement – may well be reached by the parties in their negotiations on the DDA *without* the benefit of the information on environmental impacts that an EIR is intended to provide. (Pub. Resources Code § 21002.1 subd. (a).) Conversely, decisions made during the ENA process – decisions that will define the actual design and features of the DDA and Project – may not be reflected in the EIR for the public.

The CEQA process is intended, in part, to "demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action." (*No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 86.) The ENA process is not. The only provision in the ENA that mentions the giving of any information to the public during the three-year negotiations period is the requirement that the Developer make two "presentations of the

[8] Mayor Butts estimated "two, two and a half years for the EIR" in a radio interview concerning the Proposed Project. (AR 571.) If the Mayor proves correct, the ENA negotiation period could be concluded before the EIR is finished and momentum will have built up over three long years of detailed negotiations.

proposed Project at community meetings" noticed by the City. (AR 13-14 [§§ 6(d) and (e)].) These two "presentations," one six months after the signing of the ENA, and the other six months later (*id.*), with "the express purpose of allowing community residents to review the plans and drawings" for the Project (AR 13 [§ 6(d)]), cannot substitute for the open, public process CEQA mandates. "Public participation is an essential part of the CEQA process." (Guidelines § 15201; *Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agricultural Assn.* (1986) 42 Cal.3d 929, 935.) In particular, they do not provide a mechanism for receipt of public comment, nor do they require the "good faith, reasoned" responses from the City to public and public agency comments that CEQA requires in a final EIR. (Guidelines §15088 subd. (c).) The ENA deprives the public of important procedural safeguards that contribute to the EIR's function as a "document of accountability" that "protects not only the environment but also informed self-government." (*Laurel Heights*, *supra*, 47 Cal.3d at 392.)

The Legislature declared that CEQA "is an integral part of any agency's decision making process" (Pub. Resources Code § 21006), and that the CEQA process should be integrated with local agency planning processions. (Pub. Resources Code § 21003 subd. (a).) The City's entrance into the ENA flouts these requirements. Both substantively and procedurally, going through the CEQA process separately from the DDA negotiation process risks making the CEQA process little more than a procedural charade that lacks meaning, and would almost certainly result in the kind of "post hoc rationalization" of critical decisions already made on the project that the Supreme Court has repeatedly and expressly forbidden. (*Laurel Heights*, *supra*, 47 Cal.3d at 395.) While the City belatedly added language in Section 7 of the Revised ENA about the "absolute discretion" of the City to require mitigation, select feasible alternatives, and even to reject the Proposed Project, that late addition, made *after* Petitioner filed its initial Petition, changes nothing. It corresponds to the similar action of the City of West Hollywood in *Save Tara, supra,* 45 Cal.4th at 141. There, also *after* being sued, the City of West Hollywood executed a new agreement that beefed up the provisions regarding CEQA compliance, but the Supreme Court remarked that "the City's 'apprehensive citizenry' . . . could be forgiven if they were skeptical" as to the City's late-added requirements regarding CEQA. (*Save Tara*, *supra*, 45 Cal.4th at 141, quoting *No Oil, Inc. v. City of Los Angeles*, *supra*, 13 Cal.3d at 86.) Similarly, the post-suit addition to the ENA of a recognition of the City's powers under CEQA (AR 16 [§ 7]) did not create an open, effective CEQA process, particularly since the ENA did not require CEQA compliance to precede the negotiation of the DDA.

Our Supreme Court has repeatedly cautioned against delaying the CEQA process, noting that "the later the environmental review process begins, the more bureaucratic and financial momentum there is behind a proposed project. . . . For that reason, 'EIRs should be prepared as early in the planning process as possible to enable environmental considerations to influence project, program, or design.'" (*Laurel Heights*, *supra*, 47 Cal.4th, 395, quoting Guidelines § 15004 subd. (b).) Here, the approximately six months of negotiations with the Developer before the ENA was presented to the public, and the multiple City Council, Successor Agency, Parking Authority, and Inglewood Oversight Board meetings in June, July, August, and September 2017 at which the ENA was repeatedly approved created significant momentum for the Project. Add to that the momentum that will have built up over three long years of detailed negotiations and additional City official advocacy for the Project, and it is clear that any DDA reached under the ENA would come to the City for formal consideration with a powerful head of steam. It is more than reasonably foreseeable that when any such DDA comes before the City, virtually every aspect of project location, design, and operation that would affect the environment will already have been argued and established, and that the City will already hold firmly entrenched positions on these various aspects, views improperly reached entirely outside the CEQA review process.

E. The Terms of the ENA, Considered Together With the Totality of the Circumstances Surrounding the City's Adoption of the ENA, Show That Entering the ENA Required Formal CEQA Review.

In *Save Tara*, the Supreme Court recognized that actions that trigger CEQA are not confined to the formal approval of a permit or entitlement, but can also occur "[w]hen an agency reaches a binding, detailed agreement with a private developer and publicly commits resources and government prestige to that project[.]" (*Save Tara*, *supra*, 45 Cal.4th at 136.) When the City entered the ENA, it took the kind of significant step and made the kind of public commitment to the Project that is sufficient to require prior CEQA compliance.

Save Tara holds that statements by City officials, and their public advocacy for a proposed project can be weighed "as one circumstance shedding light on the degree of City's commitment." (*Save Tara*, *supra*, 45 Cal.4th at 142.) Here, Mayor Butts likened the ENA process to entering into a process that would lead to marriage between the City and the Developer. (AR 164.) The City's behavior paralleled the Mayor's words: the City entered a long-term, exclusive relationship with the Developer, and foreclosed itself from even talking with anyone else about the Site property for three years. (AR 8 [§2a].) Further, in *Save Tara*, West Hollywood's housing manager said that while there were options to consider regarding

project design, "options for other uses of the property (as a park, library, or cultural center) had already been ruled out." (*Save Tara*, *supra*, 45 Cal.4th at 141-142, footnote omitted.) Here, Inglewood's Mayor Butts stated clearly and forcefully that any alternate use of the Site except for the Clippers' arena was a "sham," and that the City would not "entertain another use on the property for one minute." (Req. Jud. Not. Exh. B, p. 22.) Consideration of alternatives is central to a CEQA analysis. (Pub. Resources Code §§ 21001 subd. (g), 21002; *Citizens of Goleta Valley v. Board of Supervisors*, *supra*, 52 Cal.3d 553, 564 ["The core of an EIR is the mitigation and alternatives sections."]) The Mayor's vehemently expressed antipathy to any consideration of alternatives during a City Council hearing demonstrates a deep commitment by the City to the Project. The Mayor also lobbied for, and forcefully testified to the Legislature in favor of, a bill to grant significant exemptions from CEQA's requirements to the City for the Project. (Req. Jud. Not., Exh. A, pp. 2-3, 14.) Under the Supreme Court's analysis in *Save Tara*, the cumulative effect of such repeated and forceful public advocacy for a project on the part of a public agency contributes to the overall "surrounding circumstances [that] commits the public agency as a practical matter to the project." (*Save Tara*, *supra*, 45 Cal.4th at 132.)

The hurried and ill-publicized process of adopting the ENA, the content of the ENA, the public statements, and the conduct of City officials show decisively that the City took steps to move the Project forward that were essential for the Project, and required a CEQA analysis before, not after, these steps were taken.

V. CONCLUSION

As a practical matter, the City approved a portion of the Arena Project when it approved the ENA for it in June and August 2017. The ENA's terms prove the City has foreclosed feasible alternatives, and conduct by City officials has confirmed the overwhelming political and bureaucratic momentum created for the Project by the ENA. Environmental review pursuant to CEQA should have been conducted prior to the ENA approval. To prevent a heavy thumb on the scale during further Project evaluation, the ENA approval must be set aside.

MEMORANDUM OF POINTS AND AUTHORITIES.

I. INTRODUCTION

The City[1] does a lot of hand waving to avoid the evident conclusion that the exclusive negotiating agreement ("ENA") it entered with Murphy's Bowl LLC committed the City to a definite course of action with respect to the Clippers' basketball arena project ("Project"). The record makes this clear. It is undisputed that:

- The City ***accepted $1.5 million dollars from the Clippers*** to do whatever it pleased with in exchange for merely entering into the ENA;
- The ENA ***precludes the City from considering alternative projects*** for dozens of parcels of City-owned property for three years;
- The Clippers' arena's location, size, and purpose were all ***set and known***;
- The City added substantial new language to the ENA ***after*** this suit was filed in a failed attempt to cure its initial violation of the California Environmental Quality Act ("CEQA")[2]; and
- The City ***actively lobbied*** for legislation that would have effectively exempted the ENA from CEQA, including by eliminating the consideration of Project alternatives.

Mayor Butts admitted that the City had no intention of delaying anything for CEQA. "When this deal came together were we gonna wait for another Tuesday to do it? No we weren't. We're gonna do the deal." (Administrative Record ("AR") 165.)

The reason the City did not want to wait to conduct environmental review before accepting $1.5 million from the Clippers and committing itself to a definite course of action with respect to the 18,000-seat arena is clear from contemporaneous events. The City's plan was never to comply with CEQA as it existed in 2017. Rather, the City intended to and did run to Sacramento to change the law. The City wanted special treatment for the Clippers' arena – special legislation (SB 789) that would have (1) allowed the City to take property for the Project without first complying with CEQA, (2) severely restricted remedies in the event of a CEQA violation, and (3) explicitly allowed the City to ignore alternatives that would have avoided the Project's significant impacts on a low-income community. (AR 534.) The City's 2017 effort to

---

[1] Respondents are collectively referred to as "City." Non-City of Inglewood Respondents' actions are indistinguishable from the City of Inglewood's. The chairperson of each of the non-City Respondents is the Mayor of Inglewood.

[2] This fact alone makes Petitioner Inglewood Residents Against Takings and Evictions ("IRATE") a prevailing party as the City changed its position in direct response to IRATE's allegations in this lawsuit.

win such legislative special treatment failed. However, the City's bureaucratic momentum for the Project was so strong that after failing the first time, the City made a second run at special legislation in 2018 (AB 987). This time the City succeeded and now any future CEQA challenge to the Project must be resolved within 270 days. (Pub. Resources Code § 21168.6.8 subd. (f).)

The City does not confront these facts. Rather, the City repeatedly and misleadingly misconstrues a single passage from *Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116 ("*Save Tara*") to suggest that the Supreme Court has given blanket approval of exclusive negotiating agreements adopted before environmental review. (Joint Memorandum in Opposition to Petition for Writ of Mandate ("Opp."), p. 7 [arguing the Supreme Court recognized agencies often agree to ENAs]; Opp., 17; Opp., p. 30 [stating ENAs are one of the "paradigmatic types of agreements" the Court said could be executed before environmental review].) It did not. The Court mentioned ENAs as part of a list in an amicus brief of arrangements that were not before the Court as it considered the *Save Tara* case. The Court stated "we express no opinion on whether any particular form of agreement other than those involved in this case, constitutes project approval…." (*Save Tara, supra,* 45 Cal.4th at p. 137.)

The City violated CEQA when it approved the ENA three times without conducting environmental review. The ENA must be set aside.

II. SUMMARY OF RELEVANT FACTS.

A. ENAs Are Unusual Arrangements for Public Agencies; MOUs Are Typical.

The City claims that ENAs for development of large and environmentally impactful projects while deferring CEQA review are "typical." (Opp. 10.) There is no evidence in the record or otherwise of the typicality of ENAs in public agency evaluation of major projects. On the contrary, in extensive California caselaw encompassing thousands of cases, there is mention of the words "Exclusive Negotiating Agreement" or ENAs in only nine published cases.[3] Only

[3] *San Bruno Committee for Economic Justice v. City of San Bruno* (2017) 15 Cal.App.5th 524, 527 ["authorized the city manager to enter into an exclusive negotiating rights agreement"], *Rend Resources, LLC v. City of Carson* (2016) 247 Cal.App.4th 1080, 1084 [ENA for sports entertainment complex in Carson]; *City of Santee v. County of San Diego* (2010) 186 Cal.App.4th 55, 63 [quoting Save Tara]; *Save Tara, supra,* 45 Cal.4th 116, 137 [stating "As amicus curiae League of California Cities explains, cities often reach purchase option agreements, memoranda of understanding, exclusive negotiating agreements, or other arrangements with potential developers"]; *Inglewood Redevelopment Agency v. Aklilu* (2007) 153 Cal.App.4th 1095, 1115; *Citizens for Better Streets v. Board of Supervisors* (2004) 117 Cal.App.4th 1, 4 [ENA for low income housing]; *Tuchscher Development Enterprises, Inc. v. San Diego Unified Port Dist.* (2003) 106 Cal.App.4th 1219, 1227 [ENA for bayfront project]; *Pacific States Enterprises, Inc. v. City of Coachella* (1993) 13 Cal.App.4th 1414; *Dusek v. Redevelopment Agency* (1985) 173 Cal.App.3d 1029.

two of these nine cases involve CEQA review. (*Save Tara, supra,* 45 Cal.4th 116 and *City of Santee v. County of San Diego* (2010) 186 Cal.App.4th 55.) They do not actually involve ENAs. In none of the cases mentioning ENAs did a court uphold an ENA against a challenge that it unlawfully foreclosed alternatives to a project under CEQA. ENAs with exclusive negotiating provisions as involved in the present case are unusual. A memorandum of understanding ("MOU"), which normally does not involve an exclusivity provision, is a far more typical form of arrangement through which public entities negotiate about major projects. [4]

B. Petitioner Opposes Eviction of Residents to Make Way for The Project.

The City insinuates that Petitioner does not have standing to bring this action, claiming there is "substantial doubt" about standing as it criticizes Petitioner's choice of a name and alleges the narrowing of the proposed Project's footprint excludes all residential property. (Opp., p. 7, fn. 1.) This line of argument is demonstrably wrong. Contrary to Respondents' implications, there still remain at least two residential parcels that are within the proposed Project area as shown on the proposed Project area map included with the ENA (AR 4), namely parcels with Los Angeles County Assessor parcel numbers 4032-008-002 and 4032-008-006. (Pub. Resource Code § 21168.6.8 subd. (a)(5)(A); Request for Judicial Notice in Support of Reply ("RJN") Exhibits A, B, C, D and E.) In AB 987, now codified as Public Resources Code section 21168.6.8, there are two parcels of residentially-used property that are specifically identified for inclusion within Project boundaries: "(5) 'Project area' means real property in the City of Inglewood consisting of approximately 35 acres, including without limitation areas generally described as follows: … *4032-008-002, 4032-008-006*, …, inclusive." (Pub. Resources Code § 21168.6.8 subd. (a)(5)(A), emphasis added.) There are three residential units on the property at APN 4032-008-002. (RJN, Exh. A.) There is a house on the property at APN 4032-008-006 that is being used for residential purposes. (RJN, Exh. B.) Documents from the County Assessor confirm these properties are residential properties. (RJN, Exhs. C and D.) Residents of one property objected to inclusion of their property in AB 987. (RJN, Exh. E.)

Furthermore, Petitioner's interests go beyond opposing the taking of residential property through eminent domain, and also encompass prevention of environmental impacts such as urban blight and decay, displacement, increased traffic congestion and air pollution, increased noise,

---

[4] In contrast with the rarity of ENA cases, the words "memorandum of understanding" ("MOU") appear in hundreds of cases, including CEQA cases. (E.g., *San Bernardino Valley Audubon v. Metropolitan Water Dist.* (1999) 71 Cal.App.4th 382; *Nelson v. City of Kern* (2010) 190 Cal.App.4th 252.)

and development that is in violation of the City's General Plan. (First Amended Petition, ¶ 11.) Standing under CEQA is broad, including any person who made an oral or written objection. (Pub. Resources Code § 21177 subds. (a) and (c).) Petitioner repeatedly presented its objections to the City in what little administrative review process was provided. (E.g., AR 180 and 214.)

III. APPROVAL OF THE ENA IS A PROJECT SUBJECT TO CEQA.

The City asserts the issue in this case is simply "Did the City's execution of the ENA constitute an approval of the Project." (Opp., p. 13.) The issues in this case are not quite that simple. Rather, as stated in Petitioner's Opening Brief ("OB"), recent controlling authority articulates the "core issue" as "whether the agency has *taken any steps* foreclosing alternatives, including that of not going forward, *or has otherwise created bureaucratic or financial momentum* sufficient to incentivize ignoring environmental concerns." (OB, p. 10, quoting *John R. Lawson Rock & Oil, Inc. v. State Air Resources Bd.* (2018) 20 Cal.App.5th 77, 100 ("*Lawson Rock*")[5], emphasis added.) The answer to each of the questions embedded within the statement of the core issue is affirmative. Because the City foreclosed alternatives and created bureaucratic and financial momentum before environmental review, the City violated CEQA.

A. The Earliest Exercise of City's Discretion to Approve the ENA Triggered CEQA Because That Decision Foreclosed Alternatives.

The City argues that agreeing to the ENA was not a project approval that required environmental review. (Opp., p. 30.) A project approval is not the ***final*** step that allows the project to proceed. Rather, it is an agency's earliest commitment to a definite course of action in carrying out a project. The Code of Regulations define a project "approval" in part as occurring "upon the earliest commitment to issue … a discretionary contract … for use of the project." (Admin. Code, tit. 14 ("Guidelines") § 15352, subd. (a).) The Court reiterated the breadth of this definition of project "approval" in *Save Tara*, stating:

> City [of West Hollywood] and Laurel Place apparently would limit the "commit[ment]" that constitutes approval of a private project for CEQA purposes (Cal. Code Regs., tit. 14, § 15352, subd. (a)) to unconditional agreements irrevocably vesting development rights. In their view, "[t]he agency commits to a definite course of action . . . by agreeing to be

[5] Petitioner cited *Lawson Rock* in its Opening Brief (OB, p. 10). The City ignores it. In *Lawson Rock*, the court held that approvals under CEQA such as State Air Resources Board's issuance of a public regulatory advisory stating that fleet operators could take advantage of proposed regulatory modifications are not dependent on final action by the lead agency, but by conduct that prejudices further fair environmental analysis. The court stated "[t]his 'opening the way' can trigger CEQA where it constitutes an approval." (*Id.* at 98.) "Approvals under CEQA, therefore, are not dependent on 'final' action by the lead agency, but by conduct detrimental to further fair environmental analysis." (*Id.* at 99.) Guaranteeing not to consider alternative proposals for the Project site and other actions the City took in the present case are fundamentally "detrimental to further fair environmental analysis."

> legally bound to take that course of action." (*City of Vernon v. Board of Harbor Comrs.*, *supra*, 63 Cal.App.4th at p. 688.) On this theory, any development agreement, no matter how definite and detailed, even if accompanied by substantial financial assistance from the agency and other strong indications of agency commitment to the project, falls short of approval so long as it leaves final CEQA decisions to the agency's future discretion. Such a rule would be inconsistent with the CEQA Guidelines' definition of approval as the agency's "*earliest* commitment" to the project. (Cal. Code Regs., tit. 14, § 15352, subd. (b), italics added.) Just as CEQA itself requires environmental review before a project's approval, not necessarily its final approval (Pub. Resources Code, §§ 21100, 21151), so the guideline defines "approval" as occurring when the agency first exercises its discretion to execute a contract or grant financial assistance, not when the last such discretionary decision is made.

(*Save Tara*, *supra*, 45 Cal.4th at 134, emphasis in original.) The ENA here foreclosed alternatives and was accompanied by other strong indications of the City's commitment to the Project so as to constitute Project approval despite the City's claims that it left future potential CEQA decisions to the City's discretion. Under *Save Tara*, the ENA's conditioning of final approval of the Project on CEQA compliance does not exempt it from CEQA review; such a provision "is relevant but not determinative." (*Save Tara, supra,* 45 Cal.4th at 139.)

The Supreme Court did not limit the need for prior environmental review to where a public agency "commits" to a project. Rather an agency may not "take any action" that "significantly furthers a project" in a way that forecloses alternatives before environmental review:

> [W]e apply the general principle that before conducting CEQA review, agencies must not "take any action" that significantly furthers a project "in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project." (Cal.Code Regs., tit. 14, § 15004, subd. (b)(2)(B); … *Citizens for Responsible Government, supra,* 56 Cal.App.4th at p. 1221, 66 Cal.Rptr.2d 102 [development agreement was project approval because it limited city's power "to consider the full range of alternatives and mitigation measures required by CEQA"].)

(*Save Tara, supra,* 45 Cal.4th at 138.)

The Supreme Court established that when an agency takes an "essential step" toward project approval, that step must be preceded by environmental review. (OB, p. 8, citing *Fullerton Joint Union High School District v. State Board of Education* (1982) 32 Cal.3d 779, 795 and 797-798 ("*Fullerton*"); *Bozung v. Local Agency Formation Com.* (1975) 13 Cal.3d 263, 279 ("*Bozung*") [approval of annexation required an environmental impact report as it was a necessary step in a chain of events which would culminate in physical impact on the environment *even though it was not an irreversible commitment to a particular project*].)

Respondents' distinction of *Fullerton* is ineffectual (Opp., pp. 17-18) and the City fails to address *Bozung* at all. *Fullerton* involved a plan to create a new school (cf. Opp., p. 17) in the same way the present case involves a plan to construct a Clippers basketball arena. Even though the plan in *Fullerton* had not progressed to the point of creating direct environmental impacts, the Court held the public agency should have initiated environmental review before approving an essential step in the process that would culminate in such impacts. The Court in *Bozung, supra,* 13 Cal.3d 263 eloquently rejected the narrow view espoused by the City of requiring a project approval to cause direct physical harm to the environment before necessitating review:

> The notion that the project itself must directly have such an effect was effectively scotched in *Friends of Mammoth* [*v. Board of Supervisors* (1972) 8 Cal.3d 247]. The granting of a conditional use permit - a piece of paper - does not directly affect the environment any more than an annexation approval - another piece of paper. *Friends of Mammoth*, of course, said that the word "'project' appears to emphasize activities *culminating* in physical changes to the environment, ..." (*Id.* at p. 265. Italics added.) In response to that concept, the Guidelines refer to "physical impact on the environment, directly or *ultimately*." (Cal. Admin. Code, tit. 14, § 15037. Italics added.)

(*Bozung, supra,* 13 Cal.3d 263, 279, original emphasis.) Favorably citing *Bozung, supra,* 13 Cal.3d 263 and *Fullerton, supra*, 32 Cal.3d 779 the Court in *Save Tara* stated "we have held an agency approved a project even though further discretionary governmental decisions would be needed before any environmental change could occur." (*Save Tara, supra,* 45 Cal.4th at 134.)

Save Tara expanded upon the concept discussed in *Citizens for Responsible Government* that a public agency may not foreclose alternatives before environmental review. (*Save Tara, supra*, 45 Cal.4th at 138.) Respondents attempt to distinguish *Citizens for Responsible Government, supra,* 56 Cal.App.4th at p. 1221, as involving a better-defined project. (Opp. pp. 14-15; cf. OB, p. 9.) While a development agreement is different from an ENA, the important similarity is that each form of agreement has the potential to improperly foreclose alternatives. Just as in *Citizens for Responsible Government* the public agency impermissibly constrained its discretion to review alternatives, the City here constrained its discretion as it guaranteed it would not entertain offers for alternative uses of the Project site for at least three years (AR 8), agreed not to dispose of parcels needed for the Project (AR 18), reserved discretion only conditionally by reserving it only *if* the Project would have significant adverse impacts and only *if* the benefits of the Project did not outweigh the impacts (AR 16). Furthermore, the City foreclosed an alternative by ending an existing lease for parking on parcels needed for the Project (AR 447).

The Court in *Save Tara, supra*, 45 Cal.4th 116 discussed *Citizens for Responsible*

Government at length and favorably[6], as it further developed the concept of the impermissibility of foreclosing alternatives:

> The development agreement in *Citizens for Responsible Government,* once approved by the voters, vested the developer with the right to build and operate a card room within particular parameters set out in the agreement. The city had thus "contracted away its power to consider the full range of alternatives and mitigation measures required by CEQA" and had precluded consideration of a "no project" option. (*Citizens for Responsible Government, supra,* 56 Cal.App.4th at pp. 1221–1222 ….) "Indeed, the purpose of a development agreement is to provide developers with an assurance that they can complete the project. After entering into the development agreement with [the developer], the City is not free to reconsider the wisdom of the project in light of environmental effects." (*Id.* at p. 1223 ….)

(*Save Tara, supra*, 45 Cal.4th 116, 138.)

B. A Term Contemplating Future Compliance With CEQA Does Not Insulate the ENA From CEQA Compliance.

The City argues that approval of the ENA did not require CEQA compliance because "any future approval of the Project is explicitly conditioned on compliance with CEQA" (Opp., p. 15), and incorrectly states that the Supreme Court in *Save Tara* expressly ruled that "execution of an exclusive negotiating agreement is *not* a project approval that must be preceded by environmental review." (Opp, p.17; also Opp., pp. 7 and 30.) In fact, the Court declined to adopt a bright-line test for when a public agency approves a project, holding:

> *[W]e express no opinion on whether any particular form of agreement, other than those involved in this case, constitutes project approval. . . .*In applying this principle to conditional development agreements, courts should look not only to the terms of the agreement but to the surrounding circumstances to determine whether, as a practical matter, the agency has committed itself to the project as a whole or to any particular features, so as to effectively preclude any alternatives or mitigation measures that CEQA would otherwise require to be considered, including the alternative of not going forward with the project. (See Cal. Code Regs, tit. 14, § 15126.6, subd. (e).)

(*Save Tara*, 45 Cal.4th at 137, emphasis added.)

Far from establishing a bright-line rule that exempts ENAs from CEQA (Opp., pp. 17, 30), the Court made clear that the facts of a case, not any particular form of agreement, determine whether CEQA applies. "It is axiomatic that cases are not authority for propositions

---

[6] In contrast with its approval of *Citizens for Responsible Government*, the Court disapproved of three other cases including *City of Vernon v. Board of Harbor Comm'rs* (1998) 63 Cal.App.4th 677 for failing to correctly apply CEQA. The Court stated "To the extent these opinions contradict our determination that postponement of an EIR until after project approval constitutes procedural error that is independently reviewable, we disapprove them." (*Save Tara, supra,* 45 Cal.4th at 131, fn. 10.)

not considered." (*People v. Ault* (2004) 33 Cal.4th 1250, 1268, fn. 10.)

Subsequent cases applying the *Save Tara* analysis have recognized the Court's refusal to adopt the bright-line rule the City posits. (*Cedar Fair, L.P. v. City of Santa Clara* (2011) 194 Cal.App.4th 1150, 1161 ("*Cedar Fair*") [the Supreme Court "rejected any 'bright-line rule defining when approval (of a project) occurs….'"]; *City of Santee, supra,* 186 Cal.App.4th 55, 62; *RiverWatch v. Olivenhain* (2009) 170 Cal.App.4th 1186, 1210 ("*RiverWatch*").) The City's quotation of *Save Tara* stating "*Not all such efforts* require prior CEQA review" (Opp., at p. 16, quoting *Save Tara*, *supra*, 45 Cal.4th at 136, emphasis added) undercuts its arguments as the Court's statement clearly implies some such efforts *do* require prior CEQA review.

C. The City's Modification of the ENA in Response to Litigation Does Not Insulate Approval of the ENA From Violating CEQA.

The City claims the June and August ENAs are the same or similar in their treatment of CEQA review. (Opp., p. 28.) The City further claims the revised August ENA only reduces the Project's size and eliminates some eminent domain provisions. (Opp., p. 29.) However, the revised and original ENAs must be read together, as in *Save Tara* the May 2004 and August 2004 forms of an agreement were both useful to the Court's analysis. (*Save Tara, supra,* 45 Cal.4th at 141-142.)

Contrary to the City's assertions, the June ENA and the revised August ENA differ significantly in their treatment of CEQA compliance. After Petitioner sued the City in July 2017, the City rushed to beef up section 7 of the ENA, relating to CEQA. Where the June ENA only provided that the City "***may conduct an Initial Study***" to support approval of the ENA (AR 295, emphasis added), the August ENA suddenly added additional language stating that the City "in its absolute discretion" could comply with CEQA, and reject or modify the proposed Project, depending on the outcome of a CEQA analysis. (Compare section 7 in AR 295 with AR 16.) Even this term attempting to confirm the City's discretion was conditional. (AR 16 [allowing rejection "If" the Project is found to "cause significant adverse impacts that cannot be mitigated."]) Whereas the City emphasizes the phrase "absolute discretion" (Opp., p. 11 and 21), it overlooks the import of the preceding prepositional phrase starting with the conditional word "If." This conditional term sets considerable contractual limits on the City's discretion. That discretion is not absolute.

Save Tara, supra, 45 Cal.4th at 141 considered a similar situation, in which the City of West Hollywood, after local citizens filed suit against it for failure to perform a CEQA analysis prior to approving a development agreement, quickly changed the agreement to emphasize the

City's discretion, transparently to bolster its defense against a court challenge. The Court observed:

> After Save Tara sued, alleging some of these same flaws in the May 3 draft agreement, City staff revised the agreement to repair them. Under the August 9 executed agreement, the city manager no longer had authority to determine or waive CEQA compliance, and City's "complete discretion" over CEQA matters was expressly acknowledged. But the city council had already approved the May 3 draft agreement, by which it had shown a willingness to give up further authority over CEQA compliance in favor of dependence on the city manager's determination. Given that history, as well as the other circumstances discussed below, City's "apprehensive citizenry" (*No Oil, Inc., supra*, 13 Cal.3d at p. 86) could be forgiven if they were skeptical as to whether the city council would give adverse impacts disclosed in the EIR full consideration before finally approving the project.

(*Save Tara, supra*, 45 Cal.4th at 141.) The City characterizes the City of West Hollywood's actions as "too little, too late." (Opp. p. 30.) In fact, its own ENA revisions are too little and too late under the ENA's terms and in light of the surrounding circumstances.

IV. SURROUNDING CIRCUMSTANCES COMPEL THE CONCLUSION THAT THE CITY HAS COMMITTED TO A DEFINITE COURSE OF ACTION.

Creating overwhelming bureaucratic momentum for a project is a critical factor in evaluating if an agency has impermissibly approved a project prior to environmental review. (*Save Tara, supra,* 45 Cal.4th at 135 ["When an agency has not only expressed its inclination to favor a project, but has increased the political stakes by publicly defending it over objections, putting its official weight behind it, devoting substantial public resources to it, and announcing a detailed agreement to go forward with the project, the agency will not be easily deterred from taking whatever steps remain toward the project's final approval."]) The Court concluded that "the City of West Hollywood's conditional agreement to sell land for private development, *coupled with financial support, public statements, and other actions by its officials committing the city to the development*, was, for CEQA purposes, an approval of the project...." (*Id.* at pp. 121–122, emphasis added.)[7]

The City seeks to focus solely on the words of ENA as it was changed following the

[7] Considering surrounding circumstances to analyze the meaning of contracts comports with other areas of the law generally, where courts faced with an agreement that is ambiguous may consider the "circumstances under which the agreement was made (Code Civ. Proc. § 1860; and Civ. Code §§ 1636 and 1647) including custom and usage, (Code Civ. Proc. §§ 1861 and 1870(12); and Civ. Code §§ 1644, 1646 and 1655), and the practical construction placed on the contract by the acts and conduct of the parties under this contract before any controversy arose as to its meaning." (*Kerr Land & Timber Co. v. Emmerson* (1965) 233 Cal.App.2d 200, 219-220.)

filing of the present case. Litigating positions formulated after litigation is filed must be regarded with skepticism. (*Culligan Water Conditioning v. State Bd. of Equalization* (1976) 17 Cal.3d 86, 93.) The Court in *Save Tara*, 45 Cal.4th at 132, also held that it is not merely the literal words of an agreement that matter. *Save Tara* examined the question of whether "the agreement, *viewed in light of all the surrounding circumstances*, commits the public agency as a practical matter to the project…." (*Ibid.*, emphasis added.) Here, the circumstances surrounding Inglewood's approval of the ENA reveal the earmarks of bureaucratic momentum contributing to such a commitment as a practical matter. The City's professed non-commitment to the Project is belied by its actions evident in the surrounding circumstances.

A. The Circumstances Under Which the ENA Was Made Show the City's Commitment to the Project Adverse to Public Involvement.

The City incorrectly asserts that Petitioner's claims about the City hindering public participation and violating the Brown Act as it approved the ENA are baseless. (Opp., p. 31-33.) Petitioner's claims that the City provided scant notice or information to the public about the ENA are supported by evidence in the record. They are part of the totality of circumstances surrounding the ENA approval that provide evidence of the City's commitment to the Project as a practical matter.

The level of secrecy the City and Murphy's Bowl mutually acted to preserve about the ENA and the Project is evidence of their mutual commitment to the Project. Before a project is fully approved, the public agency and project proponent should stand at arm's length and negotiate in a way that does not convey favoritism or an impression that the project has already been decided upon. (*Citizens for Ceres v. Superior Court* (2013) 217 Cal.App.4th 889, 918 ("*Citizens for Ceres*").) The *Citizens of Ceres* court explained how *Save Tara* "applied a concept that is common in CEQA cases. This is the concept that a primary purpose and effect of CEQA is to require agencies to confront environmental impacts *before* deciding in favor of applicants' projects." (*Citizens for Ceres, supra,* 217 Cal.App.4th 889, 918.) The court viewed a public agency's duty to impartially review an applicant's proposal and "the applicant's primary interest in … having the agency produce a *favorable* EIR that will pass legal muster" as interests that "are fundamentally at odds." (*Ibid.*) Similarly, Real Party in Interest Murphy's Bowl's clear interest in preventing the City from considering alternative proposals for the Project site is "fundamentally at odds" with the City's duty to consider alternatives to both the location and design of the proposed Project.

The City claims public participation will be encouraged (Opp., p. 31) but its surreptitious

actions to develop and approve the ENA belie this promise. Instead of negotiating the ENA at arm's length, the City began by negotiating the ENA in secret for months before making it public. Its negotiations over the ENA lasted for a length of time that neither the City nor Murphy's Bowl has yet disclosed, but reportedly began on January 15, 2017 (AR 963), if not earlier. The City maintained secrecy about the existence, let alone the terms, of the ENA from the public until less than 24 hours before the June 15, 2017 hearing to consider the ENA. (AR 150-51.)[8] The City then sprang the ENA on the public at the eleventh hour through attaching it to the notice of the meeting (*ibid.*), a notice posted so late that the City violated the Brown Act and had to reaffirm the ENA a month later at a July 15, 2017 joint meeting.[9] (AR 27-29.)

At the June meeting, despite the magnitude of the proposed Project, and despite the brevity of the notice of the consideration of the ENA, there was a brief (little more than three minute) oral staff report on the ENA that comprises only twenty lines of the transcript (AR 161). This was followed by an immediate and unanimous vote by the City jointly approving the ENA without any discussion or questions. (AR 161.) Public participation was hindered as little notice or information was provided to inform that participation.

B. The City's Conduct After the June ENA Approval Demonstrates Its Commitment to the Project as a Practical Matter.

The City's planning for the EIR it belatedly decided to prepare also demonstrates its commitment to the Project. Respondents claim the City may negotiate with other parties after the ENA expires or is terminated. (Opp., p. 22.) However, during the three-year period in which the City would be conducting CEQA review including preparing and reviewing the EIR, it would not be able to consider alternative proposals. The ENA has a term of 36 months. (AR 8, ENA, §1.) The revised ENA was approved at the August 15, 2017 joint City Council and other Respondents' meeting, starting the 36-month period. (AR 115.) Therefore, the expiration date

---

[8] The record shows that the Clippers/Murphy's Bowl were trying to mask the identity of the project proponent until the latest possible moment, and that City condoned that masking effort. The legal counsel for the Project proponent (Chris Hunter) told the City's outside counsel (Royce Jones) that the entity being formed would have a "generic name so it won't identify the proposed project" and asked whether the ENA had to be part of the agenda, "or can it be down loaded shortly before the hearing" (AR 825). In a reply e-mail, the City's outside counsel advised that "[t]he document has to be posted with the agenda. *That is why we elected to just post 24 hours* versus the normal 72 hours." (*Ibid*, emphasis added.) Not only is this exchange the antithesis of the open, public process prior to a decision that CEQA requires, but it demonstrates the strong mutual commitment to the Project and close coordination between the parties to the ENA to ensure as little public attention to it as possible.

[9] Petitioner does not here assert a legal claim to enforce the Brown Act by making a factual assertion about timing that is relevant to its CEQA claim.

of the ENA would be on September 1, 2020. Thus, while the ENA is in effect, the City bound itself to "not negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding a proposed [Disposition and Development Agreement] for the sale, lease, disposition, and/or development of" the proposed Project site (AR 8, ENA § 2(a)) or to dispose of the parcels needed for the Project (AR 18). I.e., until after September 2020, no alternative uses for the Project site would be considered or allowed.

After approving the ENA, on February 20, 2018, the City issued a Notice of Preparation (NOP) of an EIR for the proposed Project. (AR 168-179.) The City announced that the draft EIR was projected to be complete by the summer of 2019. (RJN Exh. F [Scoping Meeting Handout], p. 9.]) Therefore, the draft EIR will be ready for public review at least a full year before the ENA will expire. ***Any review of the Project and certification of the EIR would be conducted while the ENA is still in effect.*** This improperly constrains the City's discretion. The timing of the EIR review and the ENA expiration shows that, as a practical matter, the City has prevented itself from even considering any alternative use of the publicly owned property proposed as the Project site until it has decided about the Clippers' arena. The arrangement of these dates is evidence of a practical commitment to the arena Project.

C. The City Is Directly Financially Interested In the Clippers' Arena.

Respondents wrongly argue the City has not invested in the Project. (Opp., p. 24.) This is not true. The City expended political capital and incurred enormous opportunity costs by entering the ENA. Additionally, the City is actively invested monetarily in the Project in many ways through its expenditure of extensive staff time and its acceptance of a large payment from Murphy's Bowl merely for entering the ENA.

1. The Mayor's Fervent Advocacy in His Official Capacity Is Evidence of the City's Strong Commitment to the Project.

The City has invested extensive political capital and staff time in the Project. In *Save Tara*, the Court found it highly significant that City officials advocated publicly for the project and defended the project against criticism. (*Save Tara, supra,* 45 Cal.4th at 141.) Similarly, City officials here publicly supported and defended the Project. Mayor Butts' statements in his official capacity[10] are powerful evidence of commitment as a practical matter to the Project, as in *Save Tara*. Respondents argue against using the Mayor's various statements as evidence of pre-commitment by the City. (Opp., p. 25-28.) The City's commitment to the Project is shown by

[10] The City of Inglewood's Mayor Butts is also Chair of the Parking Authority and the Successor Agency (AR 24-25) and chairman of the Oversight Board (AR 59).

its officials' fervent advocacy of legislative special treatment under CEQA for the Project. (AR 182-83.) In its letter "strongly support[ing]" proposed SB 789, the City refers to "a new basketball arena *to be built* in Inglewood for the LA Clippers…. (AR 182, emphasis added.) The City's letter speaks of the arena as "to be built," not "proposed to be built," showing that as far as the City was concerned, approval of the arena was a foregone conclusion. The City was "gonna do the deal." (AR 165.)

The Mayor emphatically supported legislation - SB 789 - that would have approved special treatment of the arena Project by reducing and limiting public review of it in various ways. Contrary to the Mayor's statement the "bill does not relieve [the City] from any obligations under CEQA" (AR 934; Opp., p. 28) and the City's assertion the legislation "would have only affected challenges to the Project *after* the EIR had been certified" (Opp., p. 28, fn. 18, citing AR 539-540), this legislation would have *eliminated* several of CEQA's key requirements including the requirement to study alternatives to the proposed Project. (AR 534 [subsection (h), exempting the EIR for the Project from considering alternative locations, alternative densities, aesthetic impacts, and parking impacts].)[11]

The City quotes a portion of the *Save Tara* case referring to not equating approval of a project with an agency's "mere interest in, or inclination to support" a project. (Opp., p. 26; also citing *Cedar Fair, supra,* 194 Cal.App.4th at 1173.) However, the Mayor's very public and aggressive advocacy for the arena Project was not an expression of "mere interest" or "inclination to support" the Project. Rather, it was zealous and public advocacy for the Project approval and defense of it against opposition of the type identified as indicative of an impermissible commitment as a practical matter to a project in *Save Tara*.

The Court in *Save Tara* noted the City of West Hollywood's mayor's role in supporting a project there, and defending it in public, was part of the totality of circumstances providing evidence that West Hollywood had impermissibly committed as a practical matter to approval of a project prior to conducting environmental review. (*Save Tara*, *supra*, 45 Cal.3d at 141-142 ["City's Mayor announced 'it [a federal grant] *will* be used'" for project, and City newsletter stated "City and Laurel Place '*will* redevelop the property.'"] Emphasis added.) The Court in *Save Tara* emphasized that "one of the statements on which we rely was a communication from

[11] SB 789 was rejected in legislative committee (AR 938), which may be interpreted as a reaffirmation that alternatives to the Project design and location must be vetted in a properly conducted CEQA review process. (*Sterling v. City of Oakland* (1962) 208 Cal.App.2d 1, 6.)

City's mayor, another appeared in an official City newsletter." (*Save Tara, supra,* 45 Cal.3d at 142, fn. 13.) This newsletter promulgated by West Hollywood in *Save Tara* is analogous to the City's press packet in the present case. (AR 962-978.) The City claims public servants would not be able to do their job of promoting development if they are constrained in what they can do and say. (Opp., p. 26.) However, the City fails to recognize support for and interest in a proposed project differ significantly from conducting active and aggressive advocacy to the exclusion of all other possible alternatives.

2. The City's Acceptance of Murphy's Bowl's $1.5 Million for Merely Entering the ENA Contributed to Considerable Bureaucratic Momentum.

The City received $1.5 million just for entering into the ENA. (AR 12.) The City can use the money for anything it wants. In *Save Tara*, the Supreme Court found that the commitment of a loan of under $500,000 was evidence of West Hollywood's commitment to the project. Here, the City received $1.5 million as an incentive to enter into and, ultimately, approve the Project. The City negotiated the payment by Murphy's Bowl of $1.5 million as a "non-refundable deposit" that the City has the absolute right to retain regardless of the outcome of the ENA negotiating period, and has "the right, but *not* the obligation" to use for any types of costs related to the proposed Project and the ENA. (AR 12, ENA § 5, emphasis added.) For a city of Inglewood's size to accept $1.5 million dollars from the Project proponent with no contractual limits on what it can be spent on must inevitably create intense goodwill, a feeling of obligation, and intense "bureaucratic momentum" in favor of the Project proponent and its proposed Project. (*Laurel Heights, supra*, 47 Cal.3d at 395.) The negotiation and acceptance of this very substantial, non-refundable, and, per Mayor Butts' assessment[12], very unusual sum of money is a further "surrounding circumstance" that shows commitment by the City to the proposed Project. (*Save Tara, supra,* 45 Cal.4th at 139.)

3. The City Has Committed Substantial City Resources to the Clippers' Project and Its Success.

The City disclaims the importance of "time and effort" spent on the Project. (Opp., p. 24.) However, this time and effort were focused on a single potential project, the Clippers Arena Project. The time and effort were not spent on any alternative project such as housing, a parking

[12] Mayor Butts said regarding the possible Brown Act violation of considering the ENA at the June City Council meeting on less than the required 24-hours public notice: "when this deal came together were we gonna wait for another Tuesday to do it? No we weren't. We're gonna do the deal. *I don't know of any other city that gets paid $1.5 million dollars to negotiate.*" (AR 165, emphasis added.)

lot, or other uses suggested or existing for the proposed Project site parcels. On the contrary, the Mayor rejected considering such alternatives. (AR 960.)

While a public agency need not necessarily complete CEQA review before committing significant time and effort to a project (Opp., p. 25), it must not foreclose alternatives prior to CEQA review. However, in ENA section 2, the City committed not to "negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding … the sale, lease, disposition, and/or development of the City Parcels or Agency Parcels within the Study Area Site." (AR 8). The parcels underlying the Project are extensive and involve multiple parcels of publicly owned property. The City agreed not to "voluntarily transfer their respective interests in any portion of the Study Area Site during the term of this Agreement to any third party." (AR 18).

The City's commitments not to consider proposals or transfer property is a type of expenditure in that the City pays an opportunity cost for not being able to make a better deal or to take a good deal if one is offered for the parcels for a period of three years. An opportunity cost is "'the benefit forgone by employing a resource in a way that' prevents it from being put to another use." (*Meyer v. Sprint Spectrum L.P.* (2009) 45 Cal.4th 634, 640, citing Swygert & Yanes, *A Primer on the Coase Theorem: Making Law in a World of Zero Transaction Costs,* 11 DePaul Bus. L.J. (Fall–Winter 1998) 1, 18, internal quotations omitted.) This opportunity cost expenditure is hidden as the City alleges it incurred no expenses.

The opportunity costs in this instance are far from speculative. There is evidence that by entering the ENA, the City incurred the costs of breaking an existing lease, known as "the Parking Lease," for dozens of parcels of City-owned property which constitute large portions of the Project site, and the ENA would prevent the City from entering the same or similar lease. The City terminated the Parking Lease shortly after commencing negotiations with the Clippers about the Project on January 15, 2017 (AR 963) and shortly before announcing the ENA publicly in June 2017. (AR 447 [April 3, 2017 termination of Parking Lease].)

The private party involved in the Parking Lease, MSG Forum, submitted a claim for damages to the City for breaking this lease. (AR 306-462 [claim for damages].) The lease was, and would have been, significantly lucrative to the City. (AR 419 [Parking Lease provides $200,000 per year].) However, by breaking the Parking Lease and constraining its ability to reenter it, the City has incurred significant opportunity costs including, at a minimum, $600,000 in lost lease payments during the three-year negotiating period of the ENA. This amount exceeds the $475,000 predevelopment portion of a loan found to be significant evidence in *Save*

Tara. (*Save Tara, supra*, 45 Cal.4th at 124.) The Parking Lease termination, in addition to being a significant financial loss to the City, is also analogous to the tenant relocation in *Save Tara*, which the Court perceived as a "significant step in a redevelopment project's progress." (*Save Tara, supra*, 45 Cal.4th at 142.)

Contrary to the City's arguments (Opp., p. 23), Murphy's Bowl's interest in the Project parcels is not some inchoate, unformed interest that has not progressed to a definite commitment from the City. Rather, in Murphy Bowl's own words, it is a "direct and concrete interest in the Parking Lot Property" and grounds for intervention in a lawsuit between MSG Forum and the City related to the Project parcels that MSG had leased before they were designated for the Project. (RJN, Ex. H, p. 6.) When interpreting a contract such as the ENA, the intent of each party to the contract is an important factor in considering the formation and meaning of the contract. (*DeLeon v. Verizon Wireless, LLC* (2012) 207 Cal.App.4th 800, 820.) Murphy's Bowl certainly regards the ENA as a firm commitment from the City giving it a "direct and concrete" interest in the Project parcels. The City's weak efforts to disclaim its commitment to Murphy's Bowl's Project through the ENA are unconvincing.

D. The Publicity Campaign by the City for the Project Demonstrates Its Commitment to the Project as a Practical Matter.

A final surrounding circumstance indicating a commitment to the Project was the public statement by Mayor Butts on a sports radio program that an arena for the Clippers would be, together with The Forum and the new Rams football stadium, part and parcel of "300 acres of development" forming "a sports entertainment district the likes of which Southern California, or California for that matter, has never seen." (AR 570-71.) This interview was part of a press packet released by the City as part of a publicity campaign for the Project. (AR 965; see AR 962-978.) Mayor Butts said of the ENA that it "has to result in a development agreement" (AR 571), reflecting a belief that development is the foregone conclusion of the ENA.

V. THE PROJECT WAS ADEQUATELY DEFINED FOR CEQA ANALYSIS.

The City asserts that when the ENA was approved "the Project Was Still Unformed." (Opp., p. 9.) The City argues that no valid CEQA analysis of the proposed Project could possibly have been done before the June 2017 ENA was signed, or the August 2017 Revised ENA executed, because "necessary information was not available at the time the ENA was executed." (Opp. p. 14-15.) Nonsense. CEQA analysis is regularly completed even for projects that are far less definite than the Clippers arena Project was in June 2017.

The record shows that the Project was sufficiently well defined. Information was

available about the Project's location, size, proposed use, number of employees, proposed intensity of use, ancillary uses, and other information. As the Supreme Court explained about the project in *Citizens for Responsible Government, supra,* 56 Cal.App.4th at 1221, "'[s]ince the development site and the general dimensions of the project were known from the start, there was no problem in providing "meaningful information for environmental assessment."'" (*Save Tara, supra,* 45 Cal.4th 116, 137, quoting *Citizens for Responsible Government, supra,* 56 Cal.App.4th at p. 1221.) Furthermore, even if information was not available, the City should not have foreclosed alternatives by terminating a lease for more than 50[13] parcels owned by the City, refusing to consider alternative proposals, and agreeing not to dispose of the publicly owned property for more than three years.

A. The Project's Location Was Set.

Contrary to the City's argument (Opp., p.14), the Project's "precise location" within the meaning of Guidelines section 15124 has been known since at least June 2017. (AR 305 [June ENA]; AR 4 [August ENA].) In fact, all Project boundaries are identical between the June and August maps except the southern boundary (i.e., West Century Boulevard, Yukon Avenue, and South Prairie Avenue, respectively), which changed only two blocks – from 104th Street to 102nd Street. The publicly owned parcels within the Project are identical between the two agreements and in proposed legislation defining the Project boundaries. (AR 530-531 and 549.) Thus, even if the City were correct that the location was not sufficiently defined by June 2017, it certainly was by August 2017 at the time of the revised ENA.

B. The Project's Size Was Set.

The City claims the "specific capacity was not yet known" (Opp., p. 9). Not so. The Project's size was well-defined as between 18,000 to 20,000 seats (AR 6). What more would be needed? With this number, the size of arena can be calculated, the number of vehicle trips can be assessed, the emissions from these trips can be assessed, and construction impacts can be assessed. As a point of reference, the renovated sports/entertainment facility The Forum is projected to have approximately 17,000 seats (AR385), giving the City an excellent point of reference for the environmental impacts that could be expected from a sports/entertainment facility with 18,000-20,000 seats.

[13] Specifically, there are 55 parcels of property that were subject to the Parking Lease. (AR 428-445 [listing parcels]; RJN, Exh. G [depicting parcels subject to Parking Lease within Project boundaries.])

C. The Project's Use Was Set.

The Project's use is set: a "premier and state of the art National Basketball Association ('NBA') professional basketball arena … and various other ancillary uses…" (AR 284 [June ENA], AR 38 [July ENA], AR 6 [August ENA].) Clippers representative Chris Meany provided further information on the proposed uses at the August 15, 2017 joint City Council meeting, saying "The LA Clippers seek 15 to 20 acres to build a world-class basketball facility. The project would include an NBA arena, training center, and business offices. This would be the year-round home of the Clippers. In addition to 40 to 50 home games each year, this would be the 365 day a year home of the team and its more than 150 employees." (AR 101.)

Contrary to the City's claim that "the number and types of events that [the Project] would host over the course of a year- had not been determined," it is clear that the Clippers anticipate "40 to 50 home games each year" (AR 101), and Mayor Butts stated publicly that he also expected the proposed Project to host entertainment events, as The Forum does now, increasing the amount of use of the arena. (AR 570.) The August ENA specifies that the proposed Project would include "other ancillary uses related to and compatible with the operation and promotion of a state-of-the-art NBA arena…." (AR 6.) The August ENA also discusses tenant selection criteria, meaning other tenants might be there. (AR 15.)

D. The Approximate Number of Employees Was Set.

Clippers representative Meany stated that the Clippers themselves would employ 150 people at the site full-time. (AR 101.) At the August 15, 2017 joint City Council meeting, Mayor Butts estimated that the proposed Project "employ, probably 6,000 more people in construction work, and provide five or six hundred more jobs for the community…," depending on events. (AR 122.)[14] What more could the City possibly have needed to know?

E. The City Was Well-Positioned to Conduct Environmental Review But Just Chose Not To Do So.

The City already had extensive environmental information about the types of impacts that would occur: as Mayor Butts acknowledged publicly, the City had recently done an EIR on the nearby Rams football stadium currently under construction. "[W]e already have studies on file that discuss traffic and other environmental impacts." (AR 571.) This document could give the

[14] Respondents anticipated a development agreement that flushed out details (Opp., p. 10), but the August ENA already specified such details as whether the proposed Project would be subject to prevailing-wage requirements (AR 14), the identification of point-of-sale of contractor and vendor purchases for sales tax purposes (AR 16), and the proposed Project's obligations to attempt to hire local residents (AR15).

City an idea of the scope and seriousness of the potential impacts of another sports venue within the same entertainment district area of the City. Mayor Butts stated that traffic "inbound into the Forum to see the Kings [hockey team] or to see a concert" generates "17,658" people per event. (AR 165.) Since the Forum is of a comparable size (cf. AR 2 [Project] and AR 385 [Forum]) and hosts similar activities (sporting events and concerts) to the Clippers' arena, these numbers would provide the City with an excellent point of reference for CEQA analysis.

The City's claim that the arena's location "within the study area was not yet known" so transportation options and access points could not be analyzed (Opp., p. 9) is false. The parcels involved were well known as their boundaries were narrowed down for the August ENA. (AR 5.) The precise boundaries set forth in the August ENA varied little if at all from the Project boundaries in the February 2018 notice of EIR preparation. (AR 169-170). Alternative locations for components of the Project should have been proposed as part of an EIR's alternatives analysis as the EIR is required to analyze both alternative designs and locations for a project. (Guidelines § 15126.6 subd. (a).)

VI. FORECLOSING ALTERNATIVES PRIOR TO CEQA REVIEW OF THE PROJECT VIOLATES CEQA.

A. The City Gave Up Its Ability to Consider Alternative Proposals For the Project Site or To Dispose of Project Site Parcels For At Least Three Years.

Contrary to the City's arguments (Opp., p. 20-21), the ENA does not preserve the City's unlimited discretion to consider Project alternatives. The ENA states for a period of *at least three years* the City will not consider proposals for alternative uses of the Project site. (AR 8, ENA Section 2(a) [City committed not to "negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding … the sale, lease, disposition, and/or development of the City Parcels or Agency Parcels within the Study Area Site"]; see OB, pp. 5-6.) The City further agreed not to "voluntarily transfer [its] respective interests in any portion of the Study Area Site during the term of this Agreement to any third party." (AR 18).

In *Save Tara*, *supra*, 45 Cal.4th 116 the Court directed that in considering a case where an agency has approved a project-related action prior to performing CEQA compliance, "courts should look not only to the terms of the agreement, but to the surrounding circumstances to determine whether, as a practical matter, the agency has committed itself to the project as a whole *or to any particular features*, so as to *effectively preclude any alternatives or mitigation measures that CEQA would otherwise require to be considered, including the alternative of not going forward with the project.*" (*Id.* at 139, emphasis added.) Subsequent cases also caution

against foreclosing alternatives. (*RiverWatch, supra,* 170 Cal.App.4th 1186, 1215; *City of Santee v. County of San Diego* (2010) 186 Cal.App.4th 55, 65-66.) The Guidelines prohibit foreclosing the consideration of alternatives. (Guidelines §§ 15126.6 and 15004 subd. (b)(2)(B) [forbidding any action "which gives impetus to a planned … project in a manner that forecloses alternatives … that would ordinarily be part of CEQA review of that public project."]) Nonetheless, through the ENA the City has foreclosed its ability to consider alternative proposals for a three-year period or to dispose of the property underlying the Project site. (AR 8, ENA Section 2(a); AR 18.) As the Supreme Court has said, while an EIR is "the heart of CEQA," the "core of an EIR is the mitigation and alternatives sections." (*Citizens of Goleta Valley v. Bd. Of Supervisors* (1990) 52 Cal.3d 553, 564.) The ENA allows the City to conduct CEQA review while simultaneously forbidding it to consider alternative proposals and disposing of the parcels that would be used by the Project for a period of three years.

Contrary to the City's arguments (Opp., p. 24), the ENA has foreclosed the City's consideration of alternatives. In addition to the terms of the ENA itself, the City's conduct before and after executing the ENA shows it regarded the ENA as constraining the alternatives that would be considered for the parcels of City property proposed for the Project.

At the City Council hearing in October 2017 Mayor Butts vigorously rejected calls to consider placing affordable housing or other alternatives on the publicly owned parcels underlying the Project site. (AR 960.) The Mayor stated:

> So, to say now that these parcels that nobody cared about until we got into a [ENA] with the Clippers is now the best only [sic] place to build housing is disingenuous… it's ridiculous, and I, for one, am not going to entertain it for one minute.

(AR 960.) The Mayor's statements show his interpretation of the ENA in his official capacity as Mayor presiding over a City Council hearing. The statements evidence his view that alternatives suggested by the public for the sites should not and will not be considered. Respondents deny that the Mayor "has already refused to consider alternative uses." (Opp., p. 27, fn 16.) The Mayor placed his refusal to consider alternatives in the context of the ENA as he says "now that … we get into a [ENA] with the Clippers…." (AR 960[15].) Therefore, part of the basis for refusing to consider alternatives is the existence of the ENA.

Furthermore, earlier at the same City Council hearing, an Inglewood resident raised the

[15] Petitioner cited Administrative record page 960 in the Opening Brief as Carstens Declaration in Support of Motion to Augment Exhibit B, page 22. After the filing of the Opening Brief, the Court granted in part Petitioner's motion to augment the administrative record. Carstens Declaration Exhibits A through H were added to the administrative record and are now numbered AR 921 to AR 978.

possibility of alternatives for the Project parcels in addition to housing that the City denied previously: "[A] bakery … theater group… [and] a YMCA" were denied by the City Council. (AR 956.) The Mayor broadly swept aside all consideration of any alternatives – whether housing or otherwise – when he said he was "not going to entertain it for one minute." (AR 960.) Therefore, for all the public viewing the hearing could perceive, the City will not be considering any alternatives for the Project site.

The City argues that CEQA does not require discussions be held with other developers. (Opp., p. 21-22.) This misconstrues Petitioner's argument. The point is that the City must have practical discretion to consider other alternatives, including other offers. (Pub. Resources Code §§ 21003.1 and 21081 subd. (a).) Under Community Redevelopment Law ("CRL"), the City is obligated to determine the sale or rental price of redevelopment land at its "highest and best use consistent with the redevelopment plan." (Health & Saf. Code, § 33433.) If the City (in the form of the Successor Agency) may not consider other offers for Successor Agency-owned parcels, it cannot fulfill this obligation of CRL.[16] Moreover, "[i]n the absence of proof to the contrary, the highest and best use of property is presumed to be its current use." (*City of Los Angeles v. Decker* (1977) 18 Cal.3d 860, 867.) Therefore, the no project alternative must be a viable option. Whereas the Mayor argued use of Project site parcels for housing is "a total sham" (AR 960), at least two of the parcels within Project boundaries are already used as residences. (RJN, Exhibits A, B, C, D, and E.) Dozens of other parcels had been leased for parking purposes until April 2017 when the City terminated the lease for them. (AR 428-445; RJN, Exh. G.) These and other parcels could be used for their current or recent use.

B. The Public Agency in *Saltonstall* Did Not Foreclose Alternatives, Conduct Extensive Advocacy, Or Fail to Prepare an EIR.

The City repeatedly cites *Saltonstall v. City of Sacramento* (2015) 234 Cal.App.4th 549 ("*Saltonstall*") (Opp. p. 18-21). It is distinguishable and has no bearing here. In *Saltonstall*, the court decided an agreement was a non-binding, non-approval of a project, and that there was no foreclosure of alternatives. That is not the case here.

In *Saltonstall*, challengers to the Kings basketball arena in Sacramento sued ***after an EIR***

[16] The City claims CEQA does not require the City to pursue development of City-owned property. (Opp., p. 21-22.) However, even if CEQA does not require development or disposition of the parcels, CRL requires the City to dispose of the Successor Agency owned parcels as expeditiously as possible. Following dissolution of redevelopment agencies, successor agencies must "expeditiously" wind down the affairs of the redevelopment agencies. (Health & Saf. Code, § 34177, subd. (h); *City of Emeryville v. Cohen* (2015) 233 Cal.App.4th 293, 298 and 303.)

had already been prepared. Their claims included an assertion that the EIR was "fatally corrupted" by Sacramento having already entered into an agreement with the National Basketball Association to build an arena. (*Id.* at 566.) Thus, although the court evaluated under *Save Tara*, the case did not squarely present a question of whether the timing of environmental review was procedurally correct. Rather, the issue centered around whether the City of Sacramento was fatally pre-committed to the project ***during*** its environmental review of an EIR. The court held it was not. However, in the present case, the question is not one of precommitment infecting an EIR after it has been prepared. Rather, it is whether the City impermissibly foreclosed alternatives or committed as a practical matter to the Project through the ENA and in light of surrounding circumstances prior to review.

In *Saltonstall*, there was no evidence of Sacramento having foreclosed any alternatives or mitigation measures. Sacramento retained "complete discretion to ... mitigate adverse environmental impacts." (*Id.* at 570.) Alternatives are a form of mitigation (*Laurel Heights Improvement Association v. Regents of the Univ. of Ca.* (1998) 47 Cal.3d 376, 403), making an agreement not to consider alternative uses on a site a form of constraining the mitigation measures that may be imposed. In contrast with Sacramento, the City in the present case guaranteed it would not entertain offers for alternative uses of the Project site for at least three years (AR 8), agreed not to dispose of parcels needed for the Project (AR 18), and terminated a parking lease for parcels needed for the Project (AR 447). These actions foreclosed consideration of alternative Project site uses. If an alternative was offered to the City during the three-year ENA period, the City has already guaranteed it would not consider that alternative.

C. *City of Santee* is Distinguishable as There Was No Evidence Suggesting A Commitment Beyond The Four Corners of an Agreement.

The City cites the inapplicable case of *City of Santee v. County of San Diego* (2010) 186 Cal.App.4th 55 ("*Santee*") (Opp. p. 19) to argue a public agency does not violate CEQA in entering into preliminary agreements. *Santee* is factually very different. The City of Santee challenged the county's siting agreement identifying potential locations for a state prison reentry facility as a violation of CEQA.

While the court reasoned that on the face of the agreement there was no commitment to a facility or to a detention facility expansion, (*id.* at 66), it also stated "in addition to looking at the face of the siting agreement we must also examine any circumstances surrounding the agreement which suggest a commitment to proceed with a particular project." (*Id* at 67, citing *Save Tara, supra*, 45 Cal.4th at p. 139.) The court held "there are no such circumstances either alleged in

the complaint or otherwise found in the record." (*Id.* at 67.)

In marked contrast in the present case there are extensive circumstances surrounding the agreement which suggest a commitment to proceed with a particular project. In addition to the ENA terms discussed above being very different by foreclosing alternatives, the surrounding circumstances including lobbying efforts in Sacramento by Mayor Butts (AR 922-923), the publicity campaign surrounding the announcement of a deal with the Clippers (AR 962-978), Mayor Butts' adamant rejection of proposed alternatives (AR 960), and the City's termination of a lease for parcels of the subject property (AR 447) are facts without parallel in the *Santee* case. Further, unlike here, the County of San Diego in *Santee* did not foreclose appropriate review of alternatives. Both the terms of the agreements involved and the surrounding circumstances make the present case very different from the *Santee* case.

D. *Cedar Fair, L.P.* is Distinguishable Because the City of Santa Clara Retained Unconditional Discretion to Consider and Choose Alternatives.

The City repeatedly cites *Cedar Fair, L.P. v. City of Santa Clara* (2011) 194 Cal.App.4th 1150 ("*Cedar Fair*"). (Opp., pp. 18, 21, 24, 26.) However, that case is distinguishable in key aspects. In particular, although it involved a term sheet between a city and a project proponent for a sports arena, it did not involve terms that foreclosed the public agency's ability to consider alternatives. Therefore, the court held that the stadium term sheet did not commit the city to the project, and thus prior environmental review was not required. "[T]he term sheet, even considered together with the alleged circumstances, did not preclude any alternative or mitigation measure that would ordinarily be part of CEQA review." (*Cedar Fair, supra,* 194 Cal.App.4th at 1173.) The City of Santa Clara made sure the term sheet unconditionally allowed it to "select other feasible alternatives to avoid significant environmental impacts." (*Cedar Fair, supra,* 194 Cal.App.4th at 1169.) Additionally, the stadium required a public vote. (*Ibid.*)

In contrast with the term sheet in *Cedar Fair*, although the ENA in the present case contemplates CEQA compliance as touted by Respondents (Opp., p. 29), it does not have any provision expressly reserving the right to select other feasible alternatives *unconditionally* as the term sheet in *Cedar Fair* does. Instead, the City only retains discretion conditionally: "*If the Proposed Project is found to cause significant adverse impacts that cannot be mitigated*, the Public Entities retain absolute discretion to require implementation of mitigation measures, modify the Proposed Project or select feasible alternatives to mitigate or avoid significant adverse environmental impacts." (AR 16 [ENA section 7], emphasis added.) In the event the Project has significant adverse impacts that *can* be mitigated, this conditional provision would ***not***

allow the City to choose an alternative or reject the Project. The ENA does not confirm the City's unfettered discretion to reject the Project; instead, the ENA states the City may "reject the Proposed Project as proposed *if the economic and social benefits of the Proposed Project do not outweigh otherwise unavoidable significant adverse impacts of the Proposed Project.*" (AR 16, emphasis added.) To comply with CEQA, the City must have unfettered discretion to reject the Project even if economic and social benefits might outweigh its unavoidable impacts, but the ENA impermissibly constrains the City's discretion to choose alternatives.

Much like the term sheet in *Cedar Fair, supra,* 194 Cal.App.4th at 1169, the MOU in *Delaware Tetra Technologies, Inc. v. County of San Bernardino* (2016) 247 Cal.App.4th 352, also cited by Respondents (Opp., pp. 19-20), reserved public agency discretion. It involved a salt miner's challenge to a county's resolution authorizing an MOU for a groundwater pumping project. (*Id.* at 361.) Unlike in the present case, the County of San Bernardino unambiguously retained full discretion to consider alternatives and mitigation measures: "the County retains full discretion to consider … require additional mitigation measures or alternatives." (*Id.* at 361.) In contrast, the ENA in the present case uses the words "absolute discretion" but that is conditionally reserved "If" there are significant unavoidable impacts and "if" the benefits of the Project do not outweigh those impacts. (AR 16.)

E. *RiverWatch v. Olivenhain Mun. Water Dist.* is Analogous Because the Agency There Committed to a Definite Course of Action and Did Not Retain Discretion to Consider Alternatives.

The City cites, but does not meaningfully discuss *RiverWatch, supra,* 170 Cal.App.4th 1186, 1212-1213. The appellate court in *Riverwatch* concluded that a water district's (OMWD's) "approval and signing of the Agreement constituted approval of part of the Landfill project within the meaning of CEQA and its guidelines, as interpreted by *Save Tara*" (*id.* at p. 1212) because "OMWD's approval and signing of the Agreement *committed* OMWD to a *definite course of action* and did not condition OMWD's performance of the Agreement on its subsequent exercise of its CEQA discretion to take other actions after considering the final EIR certified by DEH. ([Guidelines], § 15352.)" (*Id.* at p. 1214, fn. omitted.) The court explained "Because the Agreement set forth the specific details regarding OMWD's 60–year obligation to deliver recycled water to GCL, and the construction required to allow that delivery, OMWD's approval and signing of the Agreement satisfied the definiteness requirement (i.e., a *definite* course of action)." (*Id.* at p. 1212.) The court also found significant that, "[a]lthough the Agreement contained a provision regarding CEQA responsibility, that provision *did not, in any*

reasonable construction, provide that OMWD retained its complete discretion under CEQA (as a responsible agency) to consider a final EIR certified by DEH and thereafter approve or disapprove its part of the Landfill project pursuant to the Agreement or to require mitigation measures or alternatives to its part of the project." (*Id.*, pp. 1212-1213, emphasis added.) The definite course of action to which the City committed itself through the ENA was to pursue negotiations to build the Clippers Arena and not to consider any other proposals for the Project site for a three-year period while those negotiations occurred. Inglewood impermissibly limited its complete discretion to consider alternatives to the Project in a later CEQA document.

VII. CONCLUSION.

The City approved an essential step that would culminate in construction of the Clippers arena Project when it approved the ENA. No environmental review was done. This violated CEQA and a writ of mandate should issue directing the City to set aside the ENA. The ENA's express terms forbid the City from even talking to anyone about any alternative development on the 68 parcels making up the Project site or disposing of any of them until well after the Project EIR is expected to be completed. The surrounding circumstances abound with evidence of commitment including: (i) secret cooperation between the Project proponent and the City intentionally to deprive the public of meaningful notice or information, (ii) the official statements that presuppose that the Project will be built and the vigorous advocacy for the Project on paper and in person, (iii) the public statements by the City's mayor and chairperson that assume construction of the Project, and (iv) the City's incursion of opportunity costs including termination of an existing lucrative lease for parcels necessary for the Project. The circumstances combine to demonstrate "substantial momentum" (*Lawson Rock, supra,* 20 Cal.App.5th 77, 101) for the Project. The ENA's restrictive terms in conjunction with the surrounding circumstances together prove a commitment as a practical matter by the City to the Project. The ENA and the City's conduct surrounding it are "detrimental to further fair environmental analysis." (*Id.* at 99.) The ENA precludes the meaningful consideration of alternatives in a way that is impermissible prior to CEQA compliance. (*Save Tara*, *supra*, 45 Cal.4th at 139; Guidelines § 15352.) The ENA must be set aside.

Dated: November 14, 2018

Respectfully submitted,

By 
Douglas P. Carstens
Attorney for Petitioner

PROOF OF SERVICE

I am employed by Chatten-Brown & Carstens LLP in the County of Los Angeles, State of California. I am over the age of 18 and not a party to the within action. My business address is 2200 Pacific Coast Highway, Ste. 318, Hermosa Beach, CA 90254 . November 14, 2018, I served the within documents:

REPLY IN SUPPORT OF PETITION FOR WRIT OF MANDATE

☒ **VIA UNITED STATES MAIL.** I am readily familiar with this business' practice for collection and processing of correspondence for mailing with the United States Postal Service. On the same day that correspondence is placed for collection and mailing, it is deposited in the ordinary course of business with the United States Postal Service in a sealed envelope with postage fully prepaid. I enclosed the above-referenced document(s) in a sealed envelope or package addressed to the person(s) at the address(es) as set forth below, and following ordinary business practices I placed the package for collection and mailing on the date and at the place of business set forth above.

☐ **VIA OVERNIGHT DELIVERY.** I enclosed the above-referenced document(s) in an envelope or package designated by an overnight delivery carrier with delivery fees paid or provided for and addressed to the person(s) at the address(es) listed below. I placed the envelope or package for collection and overnight delivery at an office or a regularly utilized drop box of the overnight delivery carrier.

☐ **VIA MESSENGER SERVICE.** I served the above-referenced document(s) by placing them in an envelope or package addressed to the person(s) at the address(es) listed below and provided them to a professional messenger service for service. (A declaration by the messenger must accompany this Proof of Service or be contained in the Declaration of Messenger below.)

☐ **VIA FACSIMILE TRANSMISSION.** Based on an agreement of the parties to accept service by fax transmission, I faxed the above-referenced document(s) to the persons at the fax number(s) listed below. No error was reported by the fax machine that I used. A copy of the record of the fax transmission is attached.

☒ **VIA ELECTRONIC SERVICE.** I caused the above-referenced document(s) to be sent to the person(s) at the electronic address(es) listed below.

I declare that I am employed in the office of a member of the bar of this court whose direction the service was made. I declare under penalty of perjury under the laws of the State of California that the above is true and correct. Executed on November 14, 2018, at Hermosa Beach, California 90254.

Health & Safety Code

***12 I. Introduction.**

In their single-minded determination to develop a professional basketball arena in Inglewood ("the Project"), the City of Inglewood and various Respondent agencies (collectively, herein "the City") have flouted the laws designed to protect California's environment and the public's right to know the significant environmental effects of a proposed, monumental project like the one here at issue.

In contravention of the California Environmental Quality Act ("CEQA"), Respondents committed to approval of a project on three separate occasions[3] before preparing a single CEQA analysis. This was by design, as Respondents deliberately set out to preclude any meaningful consideration of alternatives to the arena Project or to ensure that they made decisions with environmental considerations in mind as required by California law. (*Laurel Heights Improvement Assn. v. Regents of the University of California (1988) 47 Cal.3d 376, 393 ("Laurel Heights")).*

***13** The Project triggered CEQA review as a matter of law for at least the following reasons, thus warranting reversal of the trial court's order:

- The City's entry into an Exclusive Negotiating Agreement ("ENA") with a developer created by the Clippers for the Project and named "Murphy's Bowl LLC" ("Murphy's Bowl") to hide its affiliation with the Clippers bound the City to exclusive

negotiations with Murphy's Bowl, thus precluding any discussion or consideration of any alternative uses within the Project site for *three years.* It is indisputable that the location and scope of the proposed Project are clear on the face of the ENA: 23 acres of City land provided to the Clippers for an 18,000-20,000 seat arena in a precise location, abutting and including residential areas and numerous existing businesses. Indeed, approximately 84 percent of the proposed Project site is made up of parcels owned by the City. (Administrative Record ("AR") 170.)

- The City and Murphy's Bowl established in the ENA detailed procedures for transferring the project site to Murphy's Bowl, and the City expressly contemplated that it intended to acquire other parcels in the site from third party owners in order to transfer them to ***14** Murphy's Bowl. (AR 38-39 and 41 [ENA Recitals B and C, § 2(b)]; and AR 6, 8-9 [Recitals C and D, § 2(b)].)

- Following its secret dealings to consummate the transaction, the City lent considerable - indeed, unprecedented - momentum, media coverage, and political clout to advance the Project.

- Through the active conduct and advocacy of the City and its officials, the City committed to the Project by creating insurmountable bureaucratic momentum. Underscoring these efforts, the City and its lobbyists sought and finally obtained special legislative treatment for the Project in Sacramento even after its costly efforts in 2017 failed.

Suffice it to say, the City has ignored CEQA's substantive and procedural requirements, and has turned any eventual environmental impact report ("EIR") on this Project from "a document of public accountability" (*Laurel Heights, supra,* 47 Cal.3d at 392), into a document of public irrelevance and impermissible "post hoc rationalization" (*id.* at 394).

Having violated CEQA *as a matter of law by* approving the ENA three times in June, July, and August 2017, foreclosing alternatives in the ENA, and creating insurmountable momentum in favor of the Project - all without conducting any ***15** environmental review - the City's ENA cannot stand. Reversal of the trial court's order is warranted.

Separately, even if the ENA's approval was not a commitment to the Project, the ENA's approval itself was a "project" subject to CEQA and required environmental review. As the City undertook no review of the ENA's potential environmental impacts, the City violated CEQA. The City must be directed to set aside the ENA's approval.

II. Issues Presented

The issues in this case are:

1. Whether the City demonstrated a practical commitment to the proposed basketball arena Project to effectively constitute approval of the Project without the required CEQA review.

2. Whether the City has taken any steps improperly foreclosing alternatives to the Project prior to environmental review.

3. Whether the City otherwise created bureaucratic or financial momentum for the Project sufficient to incentivize ignoring environmental concerns.

4. Whether the ENA itself is a project subject to CEQA.

***16** III. Statement of Facts.

A. Respondents' Actions Prior To Environmental Review: Secret Project Negotiations Prior to June 2017.

***17** The City of Inglewood publicly claims to have begun negotiations with the Clippers in January 2017 (AR 564), though recent media reports confirm that the negotiations secretly began at least six months earlier.[2] City officials negotiated with one or more entities associated with Steve Ballmer, owner of the L.A. Clippers professional basketball team which eventually formed Murphy's Bowl LLC (AR 564, 574, 844, 852).[3] City officials and Ballmer shared a desire for the Clippers to build and occupy a National Basketball Association (NBA) basketball arena in Inglewood, but they had to pursue that desire in secret because of the City's contractual obligations to its leaseholder MSG Forum. (AR 312-313.) Consistent therewith, they gave the

Clippers entity, "Murphy's Bowl LLC," "a generic name so it won't identify the proposed project." (AR 825.) In April 2017, the City terminated a lease of Project parcels for parking without advising the leaseholder (MSG Forum) of the pending negotiations with the Clippers. (AR 306-462; 447 [April 3, 2017 termination].)

The nature of the proposed Project, and the existence of the negotiations over the ENA and a Disposition and Development Agreement (DDA) were not revealed to the public, however, until at least six months later in June 2017, **on less than 24-hour's notice.** (AR 35).

B. June 2017: The City Council Rushed Approval of the June ENA with Well-Established Project Details and then Undertook Extensive Promotional Efforts.

1. The City Held a Public Hearing on the ENA with Minimal Public Notice.

On June 14, 2017, the Inglewood City Council rushed to issue notice of a special joint meeting the very next day, together with the Successor Agency to the Inglewood Redevelopment Agency (Successor Agency) and the Parking Authority, in order to consider the Exclusive Negotiating Agreement (ENA) that is the subject of this case. (AR 150-151). This meeting was called with less than 24-hours' notice required by the Brown Act (Govt. Code § 54956 subd. (a)) for a "special" meeting. (AR 149-151; AR 152; ***18** AR 155; AR 252-253.) City officials deliberately decided against giving the normal 72 hours' notice. (AR 825.)

The City chose to call a special meeting, with its shortened notice, because the Brown Act would require that the proposed ENA be attached to the meeting notice. (AR 825 [having to include ENA with the agenda was "why we elected to just post 24 hours versus the normal 72"].) Following a brief staff presentation at the June 15 special meeting, with no questions, the City Council voted unanimously to formally enter the ENA (AR 161). The ENA is a complex, 22-page agreement that binds the City to a three-year period of exclusive negotiations with Murphy's Bowl, "to facilitate the development of a premier and state-of-the-art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats" on an extensive site that includes numerous tracts of publicly owned land. (AR 160, AR 169-170.) The ENA prohibits the City from considering alternative proposals or transferring parcels included in the Project site. (AR 8; AR 18.)

2. The Project's Location Was Set.

The Project's precise location was known since at least June 2017[4] (AR 305 [June ENA]; AR 4 [August ENA]), as were its boundaries (i.e., West Century Boulevard, Yukon Avenue, and South Prairie Avenue, respectively), with the minor exception of the southern boundary, which changed only two blocks - from 104th Street to 102nd Street- between the June and August versions of the ENA. (Id) The publicly owned parcels within the Project are identical between the two agreements and in proposed legislation defining the Project boundaries. (AR 530-531 and 549.) Thus, the location and boundaries were defined by June 2017 and confirmed in the August 2017 revised ENA (AR 5). The Project boundaries were confirmed in a February 2018 notice of EIR preparation. (AR 169-170.)

***19 3. The Project's Size Was Set.**

Further, the Project's size, in terms of seating capacity, was well-defined as between 18,000 to 20,000 seats (AR 6 [ENA Recital B]). With this number, the size of the arena, the number of vehicle trips and emissions from these trips, and the construction impacts of the Project could be assessed. A nearby renovated sports/entertainment facility, The Forum, with approximately 17,000 seats (AR 385), gave the City an excellent point of reference for the environmental impacts expected from a sports/entertainment facility with 18,000-20,000 seats.

***20** Additionally, prior studies were available from a nearby football stadium. (AR 571 [Mayor stated that prior environmental studies for the Rams' stadium could be used for estimating "traffic and other environmental impacts."])

4. The Project's Use Was Set.

The Project's use was set: a "premier and state of the art National Basketball Association ('NBA') professional basketball arena... and various other ancillary uses..." (AR 284 [June ENA].) A representative of the Clippers provided further information on the proposed uses at the August 15, 2017 joint City Council meeting:

The LA Clippers seek 15 to 20 acres to build a world-class basketball facility. The project would include an NBA arena, training center, and business offices. This would be the year-round home of the Clippers. In addition to 40 to 50 home games each year, this would be the 365 day a year home of the team and its more than 150 employees.

(AR 101) The Mayor estimated that the proposed Project would "employ, probably 6,000 more people in construction work, and provide five or six hundred more jobs for the community...," depending on events. (AR 122.)

In addition, the City Mayor stated publicly that he also expected the proposed Project to host entertainment events, as The Forum does now, increasing use of the arena well beyond those 40 to 50 home games. (AR 569-570.) The Mayor stated ***21** that traffic "inbound into the Forum to see the Kings [hockey team] or to see a concert" generates "17,658" people per event. (AR 165.) The Forum is of a comparable size (cf. AR 6 [Project] and AR 385 [Forum]) and hosts similar activities (sporting events and concerts) as the Clippers' arena would.

5. The City, Led by its Mayor, Undertook a Media Blitz Advocating for the Project.

Inglewood's Mayor made repeated public media statements asserting in strong terms the City's commitment to the proposed Clippers arena, including referring to the ENA during the June 15, 2017 City Council meeting as "a promise ring that we hope will lead to an engagement that will lead to a marriage, and we have a pretty good track records (sic) in consummating those marriages." (AR 164.) A press packet distributed by the City in June 2017 included similar statements from the Mayor in various newspapers anticipating approval of the Project. (AR 966, 971, 976.)

C. July 2017: Public Objections to Project Approval Force City Re-Approval of ENA.

***22** On July 14, 2017, Appellant objected to the inadequacy of the June 15 meeting's 22-hour notice and uninformative project description (AR 252-253).[5] Appellant filed the original petition herein one week later on July 20, 2017. In a hasty response, and again at a "special" meeting on the minimum 24-hours' notice (AR 141-142), the City held a second joint meeting on July 21, 2017, where all three Respondent agencies recommitted the City to the unchanged ENA. (AR 146-147.)

***23 D. August 2017: City Revision of the ENA to Address Extensive Public Opposition and Issues Raised in Litigation.**

1. The City Held a Third Hearing to Approve the Project ENA.

***24** Following shortly after publication of two articles about the arena Project in the Los Angeles Times including one entitled "Possible Clippers arena has many Inglewood residents worried they may lose their homes or businesses" (AR 79)[6], the City Council held a third meeting on August 15, 2017 (AR 73-140). At the August hearing, the City Council approved a "Revised ENA" which tweaked terms of the prior two versions of the ENA to assert that the City had full discretion as to approval of the proposed Project, added new window-dressing language to respond to Petitioner's arguments that CEQA was violated, and attached a revised map of the project area purporting to exclude private homes and churches from the area of potential eminent domain use. (AR 123-125; AR 6-24; AR 4 [site map].) The City's Mayor, however, emphasized that eminent domain to obtain land for the Proposed Arena was still an option. (AR 78; AR 124 ["We will not foreclose the use of any tool that has been provided to cities across this country"].)[7]

2. After Appellant Filed Suit, the City Made Multiple Changes to the Proposed ENA to Enhance the Appearance of City Discretion and CEQA Compliance.

The Revised ENA approved by the City on August 15, 2107 differed significantly from the ENA approved on June 15, 2017,

with copious added language addressing the City's supposed discretion, and expanded descriptions of its duty to comply with CEQA. The most significant changes include the following with deletions from the original ENA indicated by strikeout type, and additions by *underline* type.

Recital E was revised to state: "In accordance with Subject to the requirements of AB 26, the Successor Agency, along with the City and the Authority, has selected and agreed to negotiate with the Developer [Murphy's Bowl] for the potential conveyance ***25** and development of the Agency Parcels (along with the balance of the Study Area Site, ..." (AR 6-7; cf. AR 39.)

Recital F was augmented with a term for CEQA compliance: "*compliance with CEQA as provided in Section 7,* and all applicable City land use and the City Municipal Code *requirements have been satisfied.*" (AR 7; cf. AR 39.)

Section 2(b) was changed from the City using best efforts to acquire third party land to merely *considering* acquiring such land: "....the City and/or the Authority, as applicable, subject to the Developer [Murphy's Bowl] *rights and* obligations_ as set forth in Section 3(g), shall use its best efforts to acquire *consider acquisition of* the parcels of real property comprising the Potential Participating Parcels so identified by the Parties in accordance with applicable law." (AR 8; cf. AR 41.)

Section 3 subdivision (d) was amended to include a term for environmental compliance: "However, no such site plan or architectural renderings shall be deemed final until *the completion of Environmental Review in accordance with CEQA and* approved by the City ..." (AR 10; cf. AR 43.)

Section 7 was added to state the conditional discretion of the public agencies to *"reject the Proposed Project as proposed if the economic and social benefits of the Proposed Project do not outweigh otherwise unavoidable significant adverse impacts of the Proposed Project, or approve the Proposed Project upon a* ***26** *finding that the economic, social, or other benefits of the Proposed Project outweigh unavoidable significant adverse impacts of the Proposed Project."* (AR 16, italics added.)

Section 25(a) was added to assert, among other statements, *"the City reserves all rights to approve, disapprove, or approve with conditions all such Entitlements in its sole and absolute discretion."* (AR 23-24.)

3. The Terms of the Exclusive Negotiating Agreement Foreclosed the Consideration of Alternatives.

The ENA contains an exclusivity provision that commits the City to at least a three year period (with a possible six-month extension (AR 11-12 [ENA § 4]) during which the City will negotiate with Real Party Murphy's Bowl, LLC - and during which the City has affirmatively agreed not to negotiate with anyone else - about a "proposed DDA [Disposition and Development Agreement] for the sale, lease, disposition and/or development" of any parcels within the site for the proposed arena. (AR 8 [ENA § 2(a)].) The ENA also contains a non-transfer provision that forbids the City from voluntarily transferring its interest in any portion of the proposed arena site to anyone except the City or the Parking Authority during the three-year term of the ENA. (AR 18, [ENA § 11].) None of the City entities may discuss or negotiate as to any alternative disposition or use of its public property within the Project site ***27** during that time. (AR 8 [ENA § 2(a)].) In essence, ownership and use of City land within the proposed arena Project site is frozen for three years, possibly more.

The ENA provides that a party may terminate the ENA if another party fails to perform or fails to negotiate in good faith (AR 17 [§ 8(a)]), but the party may not terminate if the failing party cures the failure after being given notice. (Id.) In a lopsided manner, while both parties must give prompt notice of their intent to terminate the ENA, Murphy's Bowl alone "may at any time and for any reason during the ENA period elect not to proceed with the Proposed Project." (AR 17 [§ 8(b)].) Thus, while the City has bound itself to the ENA and may not terminate it except if Murphy's Bowl fails to proceed or to negotiate in good faith, Murphy's Bowl may walk away at any time. Murphy's Bowl has an unconstrained ability to terminate the ENA but the City does not.

Murphy's Bowl is obligated to provide the City both with financial information, including a financial pro forma (AR 9 [§ 3(b)]) and must provide the City with a "Non-Refundable Deposit" of $1.5 million. (AR 12 [§ 5].) Six months after the ENA's effective date, Murphy's Bowl must provide the City with a description of the parcels Murphy's Bowl wants to acquire, a conceptual site plan, and architectural renderings for the proposed project. (AR 10 [§ 3(d)].)

***28** The City's rushed adoption and re-adoption of the ENA was not preceded by any CEQA analysis such as an Initial Study

(Cal. Code of Regs., tit. 14 ("Guidelines") § 15063). On February 20, 2018, six months after approval of the ENA, the City issued a Notice of Preparation of an EIR for the proposed Inglewood Basketball and Entertainment Center. (AR 168 et seq.) To date, 18 months later, not even a draft EIR has been released.

E. September 2017: Further Bureaucratic Momentum From Oversight Board Approval and City Official Lobbying for Special Legislation To Benefit the Private Arena Project.

On September 1, 2017, less than three weeks after the Revised ENA's approval in August, State Senator Steven Bradford, who represents the Inglewood area, introduced SB 789 in the California Legislature. (AR 521 et seq.) The proposed bill would have (1) curtailed public participation in review of the Project, (2) exempted such vital environmental analyses as examination of traffic impacts, parking impacts, and alternative size, height, and locations of the proposed basketball arena and surrounding buildings, (3) allowed the City to use eminent domain before completing CEQA review, and (4) divested the courts of the authority to impose injunctive relief for violations of CEQA as to the proposed Project. (AR 523-526, 529-536.) The legislation also explicitly would have allowed the City to ignore ***29** alternatives that would avoid the Project's significant impacts on a low-income community. (AR 534.)

On September 7, 2017, Inglewood sent a letter to the Legislature stating it "strongly supports SB 789" (AR 182). Also on September 7, 2017, the Oversight Board of the Successor Agency to the Inglewood Redevelopment Agency, chaired by Inglewood's Mayor, voted to approve the Revised ENA. (AR 559-561.)

At a hearing of the Assembly Natural Resources Committee on September 8, 2017, Inglewood's Mayor testified emphatically in support of SB 789. (AR 922-923.) Legislative committee member Assemblymember Muratsuchi expressed concerns "about the civil rights... that CEQA provides" and about the ability of Inglewood residents to participate in project review being curtailed. (AR 933 ["I do see CEQA as a civil right that your community deserves to have to protect your community"].) Inglewood's Mayor rejected these concerns as "preposterous." (AR 934). The committee rejected SB 789. (AR 938.)[8]

***30 F. October 2017: The City's Mayor Vigorously Defends the Project Against Inglewood Residents' Opposition.**

In the month following the defeat of SB 789 in the Legislature, during the October 3, 2017 City Council hearing, members of the public suggested alternative uses of the Project parcels for housing, recreational purposes, or other purposes. (AR 953 ["Surplus Lands Act...requires cities to prioritize the sale or lease of surplus land for affordable housing or parks in open space], AR 954 ["homes before arenas," AR 956 ["that land was wanted by others"].) The Mayor characterized any suggestion from the public that the relevant property could be used for alternative uses as a "total sham" and "ridiculous" and stated that he would not "entertain another use on the property for one minute." (AR 960.)

IV. Procedural History

The Petition for Writ of Mandate in this case was filed July 20, 2017. Trial was held on December 7, 2018. The trial court denied the Writ on January 29, 2019.

***31** The trial court ruled that, despite the defined size and location of the Project arena, anticipated transfers of property to Murphy's Bowl, the substantial unrestricted payment to the City, and the refusal to consider alternative uses of the Project site, that the ENA did not pre-commit the City to the arena Project in violation of CEQA. (Joint Appendix ("JA") 1119-1122[9].) Instead, the trial court considered the ENA a mere "promise ring" that could, but would not necessarily, develop into a Clippers basketball arena. (JA 1125.) Alternatives to the Project were not foreclosed, the trial court found, but merely "delayed" for three years. (JA 1122.) The trial court considered the Mayor's statement that he would not entertain alternatives "for one minute" to be limited to residential alternatives. (JA 1125-1126.) The trial court ruling stated "certain details were unknown," despite the great level of detail about the Project's specific size, capacity, location, and number of employees contained in the record. (JA 1128.)

This appeal was timely filed.

V. Standard of Review

While agency decisions pursuant to CEQA are reviewed for abuse of discretion (Pub. Resources Code § 21168, § 21168.5), questions of law are reviewed de novo, with the court exercising independent judgement as to the legal validity of the action. (*Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116, 131 ("Save Tara").) "The question of what constitutes a 'project' for purposes of CEQA review is a question of law which we review de novo." (***32** *Lincoln Place Tenants Assn. v. City of Los Angeles* (2005) 130 Cal.App.4th 1491, 1503, citing *Association for a Cleaner Environment v. Yosemite Community College Dist.* (2004) 116 Cal.App.4th 629, 637.)

Here, Appellant has challenged the decision by the City to enter into an ENA with Real Party in Interest Murphy's Bowl LLC regarding the Project without first complying with CEQA. Such a claim is thus reviewed de novo. (*Save Tara, supra,* 45 Cal.4th 116, 131 ["A claim... that the lead agency approved a project with potentially significant environmental effects before preparing and considering an EIR 'is predominantly one of improper procedure'... to be decided by the courts independently." Emphasis in original].)

VI. Argument: The City Violated CEQA By Taking Steps To Approve The Project That Foreclosed Alternatives To It And Lent It Significant Momentum Without Performing Any CEQA Analysis Whatsoever.

A. CEQA Requires Public Agencies to Consider the Environmental Consequences of Actions Before Foreclosing Alternatives Or Approving a Project.

In Save Tara, the Supreme Court recognized that actions that trigger CEQA are not confined to the formal approval of a permit or entitlement, but can also occur "[w]hen an agency reaches a binding, detailed agreement with a private developer and publicly commits resources and government prestige to that project[.]" (Save Tara, supra, 45 Cal.4th at 136.) When the City ***33** entered the ENA, it took the kind of significant step and made the kind of public commitment to the Project that is sufficient to require prior CEQA compliance.

The Legislature has declared that CEQA and its procedures form "an integral part of any public agency's decision making process[.]" (Pub. Resources Code § 21006). The CEQA analysis, and any EIR "should be prepared as early in the planning process as possible to enable environmental considerations to influence project, program, or design." (*Bozung v. LAFCo.* (1975) 13 Cal.3d 263, 282 ("*Bozung*").) Where an approval is "an essential step leading to ultimate environmental impact it is therefore... a 'project' within the scope of CEQA." (*Fullerton Joint Union High School Dist. v. State Bd. of Education* (1982) 32 Cal.3d 779, 797, distinguished on other grounds by *Board of Supervisors v. Local Agency Formation Com.* (1992) 3 Cal.4th 903, 909.) The Supreme Court has also held "that the later the environmental review process begins, the more bureaucratic and financial momentum there is behind a proposed project." (*Laurel Heights, supra,* 47 Cal.3d 376, 395.) For those reasons, the CEQA Guidelines at section 15004 subdivision (b)(2)(B), provide that public agencies should not "take any action which gives impetus to a planned or foreseeable project in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project."

***34** CEQA, the Guidelines, and long-standing precedent make clear that CEQA review must precede, and not follow, public agency action to move forward with a planned project. The Guidelines define a project as "the whole of an action, which has a potential for resulting in either a direct physical change to the environment, or a reasonably foreseeable indirect physical change in the environment" (Guidelines § 15378 subd. (a)), and require that "all phases of project planning, implementation, and operation" must be considered in the Initial Study for a project (Guidelines, § 15063 subd. (a)(1), emphasis added). CEQA review and the application of CEQA procedures must be followed at all stages of project consideration, to carry out the legislative intent "to compel government at all levels to make decisions with environmental consequences in mind." (Bozung, supra, 13 Cal.3d 263, 283.)

The Guidelines are clear that a "project" may require multiple government approvals, but that it is the overall activity, and not each individual approval, that is the "project" for CEQA purposes. (Guidelines § 15378 subd. (c).) CEQA's requirements become applicable with the taking of the first significant step towards overall approval of the project, rather than solely at final project approval; the first step in the approval process, not the last step, is when the CEQA process first applies: "Decisions reflecting environmental considerations could most easily be ***35** made when other basic decisions were being made, that is, during the early stage of project conceptualization, design and planning." (Citizens for Responsible Government v. City of Albany (1997) 56 Cal.App.4th 1199, at 1221 (quotations omitted) ("City of Albany").)

In *City of Albany,* Albany prepared a development agreement with a developer to establish and operate card games at a race track, and submitted the development agreement to the city electorate for approval; the development agreement provided for a CEQA review after voter approval. The Court of Appeal struck down the approval, holding that "the appropriate time to introduce environmental considerations into the approval process was during the negotiation of the development agreement... . Any later environmental review might call for a burdensome reconsideration of decisions already made and would risk becoming the sort of 'post hoc rationalization[] to support action already taken' which the Supreme Court disapproved in *Laurel Heights, supra,* 47 Cal. 3d 376, 394." (*Id.* at 1221.) As Save Tara holds:

We apply the general principle that before conducting CEQA review, agencies must not "take any action" that significantly furthers a project "in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project."

(*Save Tara, supra,* 45 Cal.4th at 138.)

***36** Here, the City and the Mayor have significantly delineated and furthered the proposed Project, foreclosed consideration of alternatives (AR 8, [ENA § 2(a)]), advocated for the project in the press and in the Legislature (AR 182, 569-572; 922-923 [legislative testimony]; 966 [approval is a "promise ring"]; 976 [by the end of three years "construction should get underway shortly"]), defended it against public criticism and forcefully declared that a proposed alternative would not be considered (AR 961 ["not... for one minute"]), all without CEQA review.

The trial court noted that the ENA, both the original and the revised version, explicitly stated that the City retained "sole discretion" to approve or disapprove the Project. (JA 1119-1120.) *That may be true in theory. However, Save Tara* explains why such a theoretical reservation of discretion can be insufficient to prevent a violation of CEQA. The Supreme Court held:

> A public entity that, *in theory,* retains legal discretion to reject a proposed project may, by executing a detailed and definite agreement with the private developer and by lending its political and financial assistance to the project, have as a *practical matter* committed itself to the project.

(*Save Tara, supra,* 45 Cal.4th at 135, emphasis added.) Here, the Revised ENA presents a façade of preserving the City's discretion to approve or disapprove the Project, but the totality of what the City was willing to give up, as reflected in the original June ENA, shows that the City was already profoundly committed to the ***37** Project prior to any CEQA analysis.

By failing to provide any CEQA analysis whatsoever prior to the ENA approval, the City has completely failed to comply with CEQA's information disclosure requirements, and has abused its discretion.

B. A Comparison of the Original ENA With the Revised ENA That Was Approved Shows the Strength of the City's Commitment to the ENA and the Project.

In Save Tara, the City of West Hollywood approved an original agreement in May 2004 and then a redrafted agreement with a developer in August 2004 after the Save Tara citizen's group filed suit in July 2004. *(Save Tara, supra,* 45 Cal.4th 124,

125-126). The Supreme Court explicitly looked back at the original agreement in that case, including its terms as part of the mosaic of circumstances indicating the City of West Hollywood's commitment to approving a development project as it evidenced the City's "willingness to give up further ... authority over CEQA compliance...." (Save Tara, supra, 45 Cal.4th at 141.) It also noted that West Hollywood's "apprehensive citizenry" might justly be skeptical of West Hollywood's newfound zealotry in adhering to CEQA, in light of the original agreement's terms. (Id.)

Here, the City approved the original ENA in June of 2017 (AR 161), and reaffirmed it in July of 2017 (AR 146-147). The ***38** City then approved a hastily redrafted ENA in August of 2017, after Appellant filed the suit below in July 2017. (AR 123-125.) That redraft made a multitude of changes to the previously-approved ENA, changes that - on paper, at least - significantly increased both the City's discretion to approve the Project and its ability to comply with CEQA's requirements, over what the City was willing to agree to originally. The same type of examination of the original document as was conducted in Save Tara reveals the strength and depth of the City's commitment to the proposed Project in the terms to which the City originally agreed.

Perhaps the clearest statement of the City's commitment to the Project is found in the June ENA, Recital E, which states forthrightly that:

> [T]he Successor Agency, along with the City and the Authority, *has selected the Developer [Murphy's Bowl] for the conveyance and development of the Agency Parcels (along with the balance of the Site)* as a result of the Developer's affiliation with an NBA franchise that can be moved to the City[.]

(AR 39, emphasis added.)

The Revised ENA approved on August 15, 2017 backpedaled from this statement of developer selection, stating that the "selection" of Murphy's Bowl was only for purposes of "negotiating]" a possible DDA for the Project. (AR 6-7.) However, the City had made its intentions clear: the City had ***39** chosen Real Party in Interest Murphy's Bowl as the recipient and developer of public lands because Murphy's Bowl had the ability to transfer an NBA franchise to Inglewood and develop an NBA arena, and would do so. The June ENA originally approved by the City flatly stated that the City had "select[ed]" the Murphy's Bowl for conveyance of City property and development of a major sports arena before any CEQA analysis had been undertaken.

The City's commitment to the Project is also shown by Section 2(b) of the June ENA. The original ENA set up a procedure whereby the City and Murphy's Bowl could reach an agreement prior to negotiating and executing a DDA that certain parcels were "necessary" for the Project, and that the City would use "its best efforts to acquire the parcels" designated as necessary for the Project. (AR 41.) Further, the original June ENA obligated Murphy's Bowl to advance the City money for such land purchases. Thus, the June ENA contemplated the City's use of eminent domain to acquire these "necessary" parcels "prior to entering into an approved DDA," i.e., while the parties were still negotiating. (AR 43, [June ENA § 3(g)].) There is no reference to any CEQA compliance or analysis in connection with these "best efforts" or the parcel acquisition. The City agreed in this section of the ENA that it might go so far as to begin the eminent domain process, by "scheduling] a public hearing to consider adoption of a resolution of necessity" that would allow it ***40** to acquire Murphy's Bowl's chosen parcels. (Id.)

The Revised ENA approved in August of 2017 sanitized this provision, excising all reference to reaching a pre-DDA agreement, and emphasizing that the City was under no "obligation or commitment" to adopt a resolution of necessity and that any City action would be "in its [the City's] sole discretion." (AR 8-9.) This change in direct response to Appellant's lawsuit should be given no weight as it was a transparent attempt by the City to provide the veneer of future process.[10] Indeed, the record demonstrates that the City was willing to set up a procedure whereby it could enter a legally binding agreement to go up to the edge of formal condemnation proceedings for these parcels, and to "use [the City's] best efforts to acquire" them prior to environmental review.

Finally, after Appellant filed suit, the City and Project proponent nearly doubled the length of section 7 of the ENA (AR 16), dealing with CEQA compliance, in the August Revised ENA over what appeared in the June ENA. New references to complying with CEQA or environmental review were added to the August ENA that were not there when the City approved the ***41** June ENA. (AR 39 [June ENA Recital F], AR 7 [August ENA Recital F].)

Save Tara holds that where an agency's conduct shows that it is committed to a course of conduct as to a potential project, "the simple insertion of a CEQA compliance condition will not save the agreement from being considered an approval requiring prior environmental review." (Save Tara, supra, 45 Cal. 4th at 132.) The City committed itself to the Project by approval of the June ENA, with its weak CEQA language and its permission for acquisition of Project parcels prior to approval of a DDA, and only added new CEQA requirements and discretionary provisions to the August Revised ENA after the suit herein had been filed. The City's commitment was made in June, reaffirmed in August, and made without CEQA compliance. The City's conduct was tantamount to Project approval.

C. The City Created Bureaucratic and Financial Momentum for the Project Sufficient to Incentivize Ignoring Environmental Concerns.

1. The Supreme Court Defines The Legal Framework For Evaluating an Agency's Precommitment to a Project to Include Evaluating Surrounding Circumstances.

A public agency's conduct towards a proposed project can show a commitment, as a practical matter, to the project that is so clear and pronounced that the conduct, taken together with ***42** surrounding circumstances such as public officials' statements, may be sufficient to require prior CEQA review. In Save Tara, supra, 45 Cal.4th 116, the Supreme Court recognized that it does not require the issuance of a formal permit or entitlement by a public agency to trigger CEQA:

> When an agency has not only expressed its inclination to favor a project, but has increased the political stakes by publicly defending it over objections, putting its official weight behind it, devoting substantial public resources to it, and announcing a detailed agreement to go forward with the project, the agency will not be easily deterred from taking whatever steps remain toward the project's final approval.

(*Save Tara, supra,* 45 Cal.4th at 135.) The Court in Save Tara, 45 Cal.4th at 132, also held that it is not merely the literal words of an agreement that matter. *Save Tara* examined the question of whether "the agreement, viewed in *light of all the surrounding circumstances, commits* the public agency as a practical matter to the project..." *(Ibid.,* emphasis added.)

Creating overwhelming bureaucratic momentum for a project is a critical factor in evaluating if an agency has impermissibly approved a project prior to environmental review. (Save Tara, supra, 45 Cal.4th at 135.) The Court concluded that "the City of West Hollywood's conditional agreement to sell land for private development, *coupled with financial support, public statements, and other actions by its officials committing the city to* ***43** *the development,* was, for CEQA purposes, an approval of the project...." (Id. at pp. 121-122, emphasis added.)

Courts evaluating a claim of improper precommitment view the "core issue" as "whether the agency has taken any steps foreclosing alternatives, including that of not going forward, or has otherwise created bureaucratic or financial momentum sufficient to incentivize ignoring environmental concerns." (*John R. Lawson Rock & Oil, Inc. v. State Air Resources Bd.* (2018) 20 Cal.App.5th 77, 100 ("Lawson Rock").) In Lawson Rock, the court held that approvals under CEQA, such as State Air Resources Board's issuance of a public regulatory advisory stating that fleet operators could take advantage of proposed regulatory modifications, are not dependent only on final action by the lead agency, but also by conduct that prejudices further fair environmental analysis. The court stated "[t]his 'opening the way' can trigger CEQA where it constitutes an approval." (*Id.* at 98.) "Approvals under CEQA, therefore, are not dependent on 'final' action by the lead agency, but by conduct detrimental to further fair environmental analysis." (Id. at 99.) Guaranteeing not to consider alternative proposals for the Project site and other actions the City took in the present case are fundamentally "detrimental to further fair environmental analysis."

Here, even considering only the August Revised ENA, the range, number, and specificity of City commitments in the ENA ***44** as to the design of the DDA and the Project itself, the vociferous advocacy of the Project by Inglewood officials in public

meetings, in the press, and in the state Legislature, and the commitment by the City of what the Revised ENA describes as "substantial time and effort" of City staff, the hiring of consultants and attorneys by the City, and providing "aid and assistance to the Developer [Murphy's Bowl] in connection with the Proposed Project" (AR 7 [Recital I]) shows that the City has "as a practical matter committed itself to the project." (*Save Tara, supra* 45 Cal.4th at 133.) Add to this that the repeatedly stated goal of the ENA is a DDA that will require the City to transfer significant amounts of public land to Murphy's Bowl for the Project, and potentially use eminent domain to obtain other property for the Project (AR 8-11 [22(a), 2(b), 3(g)], AR 13-14 [§ 6(c), 6(1)], and AR 5-6 [Recitals A, C, D, E, and F]), and it is clear that the City took a significant step towards approval of the overall Project in approving the ENA three times in June, July, and August 2017. Here, the circumstances surrounding Inglewood's approval of the ENA indicate the strongest level of bureaucratic and political momentum contributing to a commitment as a practical matter. The City's professed non-commitment to the Project is belied by its actions evident in the surrounding circumstances.

***45 2. The Circumstances Under Which the ENA Was Consummated Show the City's Commitment to the Project Without Regard For The Public.**

Before a project is fully approved, the public agency and project proponent should stand at arm's length and negotiate in a way that does not convey favoritism or an impression that the project has already been decided upon. (*Citizens for Ceres v. Superior Court* (2013) 217 Cal.App.4th 889, 918 ("Citizens for Ceres")) The Citizens for Ceres court explained how Save Tara "applied a concept that is common in CEQA cases. This is the concept that a primary purpose and effect of CEQA is to require agencies to confront environmental impacts before deciding in favor of applicants' projects." (*Citizens for Ceres, supra,* 217 Cal.App.4th 889, 918.) The court viewed a public agency's duty to impartially review an applicant's proposal and "the applicant's primary interest in... having the agency produce a favorable EIR that will pass legal muster" as interests that "are fundamentally at odds." (Ibid.) Similarly, Real Party in Interest Murphy's Bowl's clear interest in preventing the City from considering alternative proposals for the Project site is "fundamentally at odds" with the City's duty to consider alternatives to both the location and design of the proposed Project.

***46** The City and Murphy's Bowl's mutual actions to preserve secrecy about the ENA and the Project, and exclude any consideration of alternatives to the Project, is evidence of their mutual commitment to the Project. Instead of negotiating the ENA at arm's length, the City negotiated the ENA in secret for months before making it public. Negotiations over the ENA lasted for a length of time that neither the City nor Murphy's Bowl has yet disclosed, but reportedly began January 15, 2017 (AR 963), and likely began earlier.[11] The City maintained secrecy about the existence, let alone the terms, of the ENA from the public until less than 24 hours before the June 15, 2017 hearing to consider the ENA. (AR 150-51.)

Murphy's Bowl tried to mask the identity of the project proponent until the latest possible moment, with the City's assistance. Legal counsel for the Project proponent (Hunter) told the City's outside counsel (Jones) that the entity being formed would have a "generic name so it won't identify the proposed project" and asked whether the ENA had to be part of the agenda, "or can it be down loaded shortly before the hearing" (AR 825). In a reply e-mail, the City's outside counsel advised that "[t] document has to be posted with the agenda. *That is why we elected to just post* 24 hours versus the normal 72 hours." (Ibid, emphasis added.)

The City then sprang the ENA on the public at the eleventh ***47** hour by attaching it to the notice of the meeting (ibid.), a notice posted so late and with such little informational value that the City violated the Brown Act and had to reaffirm the ENA a month later at a July meeting. (AR 27-29.)

At the June meeting, despite the magnitude of the proposed Project, and despite the brevity of the notice of the consideration of the ENA, there was a brief (little more than three minute) oral staff report on the ENA that comprises only twenty lines of the transcript (AR 161). The City followed this brief report with an immediate and unanimous vote jointly approving the ENA without any discussion or questions. (AR 161.) Public participation was hindered, as little notice or information was provided to inform that participation. These circumstances demonstrate a public entity committed as a practical matter to approval of the Project, thus seeking to minimize public awareness of it and possible opposition to it.

3. The City's Conduct After the June ENA Approval Demonstrates Its Commitment to the Project as a Practical Matter.

The City's belated planning for an EIR for the Project also demonstrates its commitment to the Project. During the three-year period in which the City would be conducting CEQA review including preparing and reviewing the EIR, it would not be able to consider alternative proposals. The ENA has a term of 36 months. (AR 8, ENA, § 1.) The revised ENA was approved on ***48** August 15, 2017, starting the 36-month period. (AR 115.) Thus, while the ENA is in effect, the City bound itself to "not negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer [Murphy's Bowl], regarding a proposed [Disposition and Development Agreement] for the sale, lease, disposition, and/or development of" the proposed Project site (AR 8, ENA § 2(a)) or to dispose of the parcels needed for the Project (AR 18). Thus, until the ENA's expiration, no alternative uses for the Project site would be considered or allowed.

***49** After approving the ENA, on February 20, 2018, the City issued a Notice of Preparation (NOP) of an EIR for the proposed Project. (AR 168-179.) *The City anticipated review of the Project and certification of the EIR would be conducted while the ENA was still in effect.*[12] This improperly constrains the City's discretion to fully consider alternatives. The timing of the EIR review and the ENA expiration shows that, as a practical matter, the City has prevented itself from even considering any alternative use of the publicly owned property proposed as the Project site until it has decided about the Clippers' arena. This self-imposed constraint is evidence of the City's practical commitment to the arena Project.

4. The Mayor's Fervent Project Advocacy in His Official Capacity Is Evidence of the City's Strong Commitment to the Project.

The City has invested extensive political capital and staff time in the Project. Save Tara holds that statements by City officials, and their public advocacy for a proposed project can be weighed "as one circumstance shedding light on the degree of City's commitment." (Save Tara, supra, 45 Cal.4th at 142, fn. 13.) The Court in Save Tara noted the City of West Hollywood's mayor's role in supporting a project there, and defending it in public against criticism, was part of the totality of circumstances providing evidence that West Hollywood had impermissibly committed as a practical matter to approval of a project prior to conducting environmental review. (Save Tara, supra, 45 Cal.3d at 141-142 ["City's Mayor announced 'it [a federal grant] will be used"' for project, and City newsletter stated "City and Laurel Place redevelop the property."'] Emphasis added.) The Court in Save Tara emphasized that "one of the statements on which we rely was a communication from City's mayor, another appeared in an official City newsletter." (Save Tara, supra, 45 Cal.3d at 142, fn. 13.) This newsletter promulgated by West Hollywood in Save Tara is analogous to the City's press packet ***50** promoting the Project in the present case. (AR 962-978.) The Mayor's active and aggressive advocacy to the exclusion of all other possible alternatives is far beyond an expression of mere interest in a proposed project. Here, the Mayor likened the ENA process to entering into a process that would lead to marriage between the City and Murphy's Bowl. (AR 164.) The City's behavior paralleled the Mayor's words: the City entered a long-term, exclusive relationship with Murphy's Bowl, and foreclosed itself from even talking with anyone else about the Project site for three years. (AR 8 [§ 2a].)

The statements of the City Mayor's, who also chairs other Respondent agencies (AR 59), are powerful evidence of commitment as a practical matter to the Project, as in *Save Tara.* The City's commitment to the Project is shown by its officials' fervent advocacy of legislative special treatment under CEQA for the Project. (AR 182-83.) In its letter "strongly support[ing]" proposed SB 789, the City refers to "a new basketball arena *to be built* in Inglewood for the LA Clippers.... (AR 182, emphasis added.) The City's letter speaks of the arena as "to be built," not "proposed to be built," showing that as far as the City was concerned, approval of the arena was a foregone conclusion. Construction was planned "shortly" after the three year agreement term (AR 976). The City was going to "do the deal." (AR 165.)

***51** The Mayor emphatically supported legislation - SB 789 -that would have approved special treatment of the arena Project by reducing and limiting public review of it in various ways. Contrary to the Mayor's statement that the "bill does not relieve [the City] from any obligations under CEQA" (AR 934), this legislation would have *eliminated* several of CEQA's key requirements including the requirement to study alternatives to the proposed Project. (AR 534 [subsection (h), exempting the EIR for the Project from considering alternative locations, alternative densities, aesthetic impacts, and parking impacts].)[13]

5. The City's Acceptance of Murphy's Bowl's $1.5 Million for Merely Entering the ENA Contributed to Considerable Bureaucratic Momentum.

***52** In Save Tara, the Supreme Court found that the commitment of a loan of under $500,000 was evidence of West Hollywood's commitment to the project. (*Save Tara, supra,* 45 Cal.4th at 140.) Here, the City negotiated the payment by Murphy's Bowl of $1.5 million as a "non-refundable deposit" that the City has the absolute right to retain regardless of the outcome of the ENA negotiating period, and has "the right, but not the obligation" to use for any types of costs related to the proposed Project and the ENA. (AR 12, ENA § 5, emphasis added.) For a city of Inglewood's size to accept $1.5 million dollars from the Project proponent with no contractual limits on what it can be spent on must inevitably create intense goodwill, a feeling of obligation, and intense "bureaucratic momentum" in favor of the Project proponent and its proposed Project. (Laurel Heights, supra, 47 Cal.3d at 395.) The negotiation and acceptance of this very substantial, non-refundable, and, according to the City Mayor's assessment, very unusual[14] sum of money is a further "surrounding circumstance" that shows commitment by the City to the proposed Project. (*Save Tara, supra,* 45 Cal.4th at 139.)

6. The City Has Committed Substantial City Resources to the Clippers' Project and Its Success.

The Supreme Court in *Save* Tara regarded the expenditure of public agency resources on a proposed project to be part of the "surrounding circumstances" by which the agency's ***53** commitment to the project could be determined. (*Save Tara,* 45 Cal.4th at 139.) Here, City focused time and effort on a single potential use of public parcels of land for the Clippers Arena Project. These taxpayer-funded time and effort expenditures included the negotiation of the ENA, the City's publicity campaign for the Project, and the time spent in lobbying for the passage of AB 789. The Mayor rejected considering alternatives such as housing and recreational space for even "one minute." (AR 960.)

The City also incurred substantial opportunity costs in its determined pursuit of the Clippers arena in Inglewood. In ENA section 2, the City committed not to "negotiate with, or consider any offers or solicitations from, any person or entity, other than the Developer, regarding... the sale, lease, disposition, and/or development of the City Parcels or Agency Parcels within the Study Area Site." (AR 8).

The City's commitments not to consider proposals or transfer property is a type of expenditure in that the City pays an opportunity cost in not being able to make a better deal if one is offered for the parcels for a period of three years. An opportunity cost is "the benefit forgone by employing a resource in a way that' prevents it from being put to another use." (Meyer v. Sprint Spectrum L.P. (2009) 45 Cal.4th 634, 640, fn. 1.) The opportunity costs in this instance are far from speculative. There is evidence ***54** that by entering the ENA, the City incurred the costs of breaking an existing lease, known as "the Parking Lease," for dozens of parcels of City-owned property which constitute large portions of the Project site. The ENA would prevent the City from entering the same or similar lease. (AR 8 and 18.) The City terminated the Parking Lease shortly after commencing negotiations with the Clippers about the Project, purportedly on January 15, 2017 (AR 963; AR 447 [April 3, 2017 termination of Parking Lease].)

The private party involved in the Parking Lease, MSG Forum, submitted a claim for damages to the City for breaking this lease. (AR 306-462 [claim for damages].) The lease was, and would have been, significantly lucrative to the City. (AR 419 [Parking Lease provides $200,000 per year].) However, by breaking the Parking Lease and constraining its ability to reenter it, the City has incurred significant opportunity costs including, at a minimum, $600,000 in lost lease payments during the three-year negotiating period of the ENA. This amount exceeds the $475,000 predevelopment portion of a loan found to be significant evidence in Save Tara. (Save Tara, supra, 45 Cal.4th at 124.) The Parking Lease termination, in addition to being a significant financial loss to the City, is also analogous to the tenant relocation in Save Tara, since the income from that lease, and the ENA's prohibition on any other transfer of property rights, will be irretrievable during the pendency of the ***55** ENA.

7. The Publicity Campaign by the City for the Project Demonstrates Its Commitment to the Project.

An additional surrounding circumstance indicating a commitment to the Project as a practical matter was the cumulative weight of public statements by the City's Mayor promoting the Project. On a sports radio program, the Mayor stated that an arena for the Clippers would be, together with The Forum and the new Rams football stadium, part and parcel of "300 acres of development" forming "a sports entertainment district the likes of which Southern California, or California for that matter, has never seen." (AR 570-71.) This interview was part of a press packet released by the City as part of a publicity campaign for the Project. (AR 965; see AR 962-978.) The City's Mayor said of the ENA that it "has to result in a development agreement" (AR 571), reflecting a belief that development is the foregone conclusion of the ENA.

8. DDA Negotiations Will Be Outside the Public Process and Uninformed by the Environmental Review That CEQA Requires.

An additional circumstance demonstrating the momentum built for the Project by the ENA is the small amount of public participation that was allowed, or will be allowed, in crafting the ***56** Project's essential parameters. "Public participation is an essential part of the CEQA process." (Guidelines § 15201; Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agricultural Assn. (1986) 42 Cal.3d 929, 935.) "The EIR is intended to furnish both the road map and the environmental price tag for a project, so that the decision maker and the public both know, before the journey begins, just where the journey will lead, and how much they - and the environment - will have to give up in order to take that journey." (Natural Resources Defense Council, Inc. v. City of Los Angeles (2002) 103 Cal.App.4th 268, 271 [quoting amicus brief of Attorney General], emphasis added.)

Despite the wealth of information available to the City about the proposed Project before the ENA was executed, including its size, use, and precise location, the first notice of preparation of a CEQA document for the proposed arena was not issued until February 20, 2018 (AR 168-179), a full six months after the Revised ENA was approved. (AR 123-125.) Given that the EIR for such a major project would likely take at least one to two years to complete (AR 571), the EIR cannot be expected to be completed until the DDA negotiation period is one-half to two-thirds over, a time at which the information in the EIR is unlikely to shape the parameters of the project being negotiated in the DDA process.

The ENA does not incorporate CEQA review as part of the ***57** parties' negotiating process. While the Revised ENA requires that the City and Murphy's Bowl enter into an agreement within 30 days of signing the ENA that specifies funding for "environmental review" (AR 9 [§ 3(a)]), the ENA only requires that CEQA be complied with prior to "execution" of the DDA and that it applies only to "the consideration and potential approval of any DDA by the Public Entities relating to the Proposed Project." (AR 16 [§ 7].) In other words, the ENA contemplates compliance with CEQA after the terms of the DDA are agreed upon through the ENA process, and not prior to, or even contemporaneous with, development and negotiation of the DDA.

The CEQA process is intended, in part, to "demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action." (No Oil, Inc. v. City of Los Angeles (1974) 13 Cal.3d 68, 86.) The ENA process is not so designed. The only provision in the ENA that mentions the giving of any information to the public during the three-year negotiations period is the requirement that Murphy's Bowl make two "presentations of the proposed Project at community meetings" noticed by the City. (AR 13-14 [§ 6(d) and (e)].) These two "presentations," one six months after the signing of the ENA, and the other six months later, with "the express purpose of allowing community residents to review the plans and drawings" for the Project (AR 13 [§ 6(d)]), cannot substitute for ***58** the open, public process CEQA mandates.

Momentum will unquestionably build up over three long years of detailed negotiations and additional City official advocacy for the Project. It is clear that any DDA reached under the ENA would come to the City for formal consideration with a powerful head of steam and overwhelming bureaucratic momentum. It is more than reasonably foreseeable that when any such DDA comes before the City, virtually every aspect of project location, design, and operation that would affect the environment will already have been negotiated and established, and that City officials will already hold firmly entrenched positions on these various aspects, views improperly reached entirely outside the CEQA review process.

D. The City Violated CEQA By Foreclosing Alternatives Prior To CEQA Review of The Project.

1. The City's Approval of the ENA Triggered CEQA Because That Decision Foreclosed Alternatives.

A project approval under CEQA is not the final step that allows the project to proceed. Rather, it is an agency's earliest commitment to a definite course of action in carrying out a project. The CEQA Guidelines define a project "approval" in part as occurring "upon the earliest commitment to issue ...a discretionary contract ... for use of the project." (Guidelines ***59** § 15352, subd. (b).) The Supreme Court reiterated the breadth of this definition of project "approval" in Save Tara, stating:
City [of West Hollywood] and Laurel Place apparently would limit the "commit [ment]" that constitutes approval of a private project for CEQA purposes (Cal. Code Regs., tit. 14, § 15352, subd. (a)) to unconditional agreements irrevocably vesting development rights. In their view, "[t]he agency commits to a definite course of action ...by agreeing to be legally bound to take that course of action." ([Citation].) On this theory, any development agreement, no matter how definite and detailed, even if accompanied by substantial financial assistance from the agency and other strong indications of agency commitment to the project, falls short of approval so long as it leaves final CEQA decisions to the agency's future discretion. Such a rule would be inconsistent with the CEQA Guidelines' definition of approval as the agency's "earliest commitment" to the project. (Cal. Code Regs., tit. 14, § 15352, subd. (b), italics added.) Just as CEQA itself requires environmental review before a project's approval, not necessarily its final approval (Pub. Resources Code, § 21100, 21151), so the guideline defines "approval" as occurring when the agency first exercises its discretion to execute a contract or grant financial assistance, not when the last such discretionary decision is made.

(*Save Tara, supra,* 45 Cal.4th at 134, emphasis in original.) The ENA here foreclosed alternatives and was accompanied by other strong indications of the City's commitment to the Project so as to constitute Project approval despite the City's belated addition of ***60** boilerplate that purportedly left future potential CEQA decisions to the City's discretion. Under Save Tara, the ENA's conditioning of final approval of the Project on CEQA compliance does not exempt it from CEQA review. (*Save Tara, supra,* 45 Cal.4th at 139.)

The Supreme Court does not limit the need for prior environmental review to where a public agency "commits" to a project. Rather an agency may not "take any action" that "significantly furthers a project" in a way that forecloses alternatives before environmental review:
[W]e apply the general principle that before conducting CEQA review, agencies must not "take any action" that significantly furthers a project "in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project." (Cal.Code Regs., tit. 14, § 15004, subd. (b)(2)(B);... *Citizens for Responsible Government, supra,* 56 Cal.App.4th at p. 1221, 66 Cal.Rptr.2d 102 [development agreement was project approval because it limited city's power "to consider the full range of alternatives and mitigation measures required by CEQA"].)

(*Save Tara, supra,* 45 Cal.4th at 138.)

The Supreme Court established that when an agency takes an "essential step" toward project approval, that step must be preceded by environmental review. (*Fullerton Joint Union High School District v. State Board of Education* (1982) 32 Cal.3d 779, 795 and 797-798 ("Fullerton"); *Bozung v. Local Agency* ***61** *Formation Com.* (1975) 13 Cal.3d 263, 279 ("*Bozung*") [approval of annexation required an environmental impact report as it was a necessary step in a chain of events which would culminate in physical impact on the environment even though it was not an *irreversible commitment to a particular project*].)

Fullerton, supra, 32 Cal.3d 779 involved a plan to eventually create a new school in the same way the present case involves a plan to construct a Clippers basketball arena. Even though the plan in Fullerton had not progressed to the point of creating direct environmental impacts, the Court held the public agency should have initiated environmental review before approving an "essential step" in the process that would culminate in such impacts. (Id. at 798.) The Supreme Court in Union of Medical Marijuana Patients, Inc. v. City of San Diego (Cal., Aug. 19, 2019, No. S238563, 2019 WL 3884465) recently applied this "essential step" analysis with approval. (Id. at *13.)

The Court in *Bozung, supra,* 13 Cal.3d 263 eloquently rejected the narrow view espoused by the City in the trial court of requiring a project approval to cause direct physical harm to the environment before necessitating review:

The notion that the project itself must directly have such an effect was effectively scotched in Friends of Mammoth [*v. Board of Supervisors* (1972) 8 Cal.3d 247].... Friends of Mammoth, of course, said that the word "project' appears to emphasize activities culminating in physical changes to the environment, ***62** ..." Id. at p. 265. Italics added.) In response to that concept, the Guidelines refer to "physical impact on the environment, directly or *ultimately.*" (Cal. Code of Regs., tit. 14, § 15037. Italics added.)

(*Bozung, supra,* 13 Cal.3d 263, 279, original emphasis.) *Favorably citing Bozung, supra,* 13 Cal.3d 263 and *Fullerton, supra,* 32 Cal.3d 779 the Supreme Court in Save Tara stated "we have held an agency approved a project even though further discretionary governmental decisions would be needed before any environmental change could occur." (Save Tara, supra, 45 Cal.4th at 134-135.)

The record shows that the Project was sufficiently well defined at the time of the ENA's approval to support CEQA analysis. Information was available about the Project's location, size, proposed use, number of employees, proposed intensity of use, ancillary uses, and other information. As the Supreme Court explained "s]ince the development site and the general dimensions of the project were known from the start, there was no problem in providing 'meaningful information for environmental assessment."' (*Save Tara, supra,* 45 Cal.4th 116, 137-138 quoting Citizens for Responsible Government, supra, 56 Cal.App.4th at p. 1221.)

***63 2. In the ENA, The City Gave Up Its Ability to Consider Alternative Proposals For the Project Site or to Dispose of Project Site Parcels For at Least Three Years.**

CEQA itself mandates that public agencies not approve projects with the potential to harm the environment if feasible alternatives that are less environmentally damaging are available. (Pub. Resources Code § 21002; see also *Citizens of Goleta Valley v. Bd. Of Supervisors* (1990) 52 Cal.3d 553, 564, [emphasizing the crucial importance of considering alternatives and stating "The core of an EIR is the mitigation and alternatives sections."])

Contrary to these commands, the ENA does not preserve the City's unlimited discretion to consider Project alternatives. The ENA states that for a period of at least three years the City will not consider proposals for alternative uses of the Project site. (AR 8, ENA § 2(a) [City committed not to "negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding ... the sale, lease, disposition, and/or development of the City Parcels or Agency Parcels within the Study Area Site"].) The City further agreed not to "voluntarily transfer [its] respective interests in any portion of the Study Area Site during the term of this Agreement to any third party." (AR 18).

In Save Tara, supra, 45 Cal.4th 116 the Court directed that ***64** in considering a case where an agency has approved a project-related action prior to performing CEQA compliance,

> [C]ourts should look not only to the terms of the agreement, but to the surrounding circumstances to determine whether, as a practical matter, the agency has committed itself to the project as a whole or to *any particular features, so as to effectively preclude any alternatives or mitigation measures that CEQA would otherwise require to be considered, including the alternative of not going forward with the project."*

(*Id.* at 139, emphasis added.)

Subsequent cases also caution against foreclosing alternatives. (RiverWatch v. Olivenhain Municipal Water Dist. (2009) 170 Cal.App.4th 1186, 1215; City of Santee v. County of San Diego (2010) 186 Cal.App.4th 55, 65-66.) The Guidelines prohibit foreclosing the consideration of alternatives. (Guidelines § 15126.6 and 15004 subd. (b)(2)(B) [forbidding any action "which gives impetus to a planned ... project in a manner that forecloses alternatives ... that would ordinarily be part of CEQA review of that public project."]) Nonetheless, through the ENA the City has foreclosed its ability to consider alternative proposals for a three-year period and to dispose of the property underlying the Project site. (AR 8, ENA Section 2(a); AR 18.) The ENA paradoxically and impermissibly allows the City to conduct CEQA review while simultaneously forbidding it to consider alternative proposals and to dispose of the parcels that would be ***65** used by the Project for a period of three years.

In addition to the terms of the ENA itself, the City's Mayor's conduct immediately after executing the ENA shows he regarded the ENA as constraining the alternatives that would be considered for the parcels of City property proposed for the Project. At the City Council hearing in October 2017, the Mayor vigorously rejected calls to consider placing affordable housing or other alternatives on the publicly owned parcels underlying the Project site. (AR 960.) The Mayor stated:

> So, to say now that these parcels that nobody cared about until we got into a [ENA] with the Clippers is now the best only [sic] place to build housing is disingenuous.... it's ridiculous, and I, for one, am not going to entertain it for one minute.

(AR 960.) The Mayor's statements show his interpretation of the ENA in his official capacity as Mayor presiding over a City Council hearing. The statements evidence his view that alternatives suggested by the public for the sites should not and will not be considered. The Mayor placed his refusal to consider alternatives in the context of the ENA as he says "now that... we get into a [ENA] with the Clippers...." (AR 960.) Therefore, part of the basis for refusing to consider alternatives is the existence of the ENA.

Furthermore, earlier at the same City Council hearing, an Inglewood resident raised the possibility of alternatives for the ***66** Project parcels in addition to housing that the City denied previously: "[A] bakery... theater group... [and] a YMCA" were denied by the City Council. (AR 956.) The Mayor broadly swept aside all consideration of any alternatives - whether housing or otherwise - when he said he was "not going to entertain it for one minute." (AR 960.) Therefore, for all that the public viewing the hearing could tell, the City will not be considering any alternatives for the Project site, in clear derogation of CEQA. (Pub. Resources Code § 21002, Guidelines § 15126.6.) In order to carry out its duties under CEQA, the City must have practical discretion to consider other alternatives, including other locations, or even other developers. (Pub. Resources Code § § 21003.1 and 21081 subd. (a).)

3. The ENA Would Prevent the City From Choosing a Project Alternative Complying with Community Redevelopment Law.

The Community Redevelopment Law ("CRL") obligates the City to determine the sale or rental price of redevelopment land at its "highest and best use consistent with the redevelopment plan." (Health & Saf. Code, § 33433, subd. (a)(2)(B)(ii).) *If the City (specifically, the Successor Agency)* may not consider other offers for Successor Agency-owned parcels, it cannot fulfill this obligation of CRL "expeditiously," as CRL requires (Health & Saf. Code, § 34177, subd. (h).) Moreover, "[i]n the absence of proof to ***67** the contrary, the highest and best use of property is presumed to be its current use." (City of Los Angeles v. Decker (1977) 18 Cal.3d 860, 867.) Whereas the Mayor argued use of Project site parcels for housing is "a total sham" (AR 960), at least two of the parcels within Project boundaries are already used as residences. (JA 937-940.) Dozens of other parcels had been leased for parking purposes until April 2017 when the City terminated the lease for them. (AR 428-445.) These and other parcels could be used for their current or recent use. However, the ENA prohibits consideration of offers (AR 8) or their disposition (AR 18).

4. The ENA Would Prevent the City From Pursuing a Project Alternative Complying with the Surplus Lands Act.

***68** The Surplus Lands Act requires the City to be able to explore alternative land uses to the Project as it requires surplus public land to be offered for affordable housing, schools, or open space before being offered for a private commercial proposal such as the Project. (Gov. Code § 54222.)[15] One public commenter raised the Surplus Lands Act (AR 953) and another suggested recreational use of the parcels, among other suggestions (AR 956). Because the City cannot offer the City, Successor Agency, or Parking Authority-owned Project parcels[16] to other entities prior to negotiating with the Project proponent (AR 8 and 18), it would be unable to comply with the Surplus Lands Act while the ENA remains in effect.

***69 5. Case Law Subsequent to Save Tara Shows How Agreements May be Reached That Preserve the Public Agency's Unconditional Discretion to Consider and Choose Alternatives.**

***70** *In Cedar Fair, L.P. v. City of Santa Clara* (2011) 194 Cal.App.4th 1150 ("Cedar Fair"), the Court of Appeal considered a public agency approval of a term sheet for a sports arena, a stadium for the San Francisco 49ers football franchise. However, even though a term sheet between the developer and the City of Santa Clara was lengthy and detailed, the court properly upheld it because it did not involve terms that foreclosed the public agency's unconditional ability to consider alternatives.[17] The court held that the stadium term sheet did not commit the city to the project, and thus prior environmental review was not required. "[T]he term sheet, even considered together with the alleged circumstances, did not preclude any alternative or mitigation measure that would ordinarily be part of CEQA review." (*Cedar Fair, supra,* 194 Cal.App.4th at 1173.) Instead, the City of Santa Clara made sure the term sheet unconditionally allowed it to "select other feasible alternatives to avoid significant environmental impacts." (*Cedar Fair, supra,* 194 Cal.App.4th at 1169.)

In contrast with the term sheet in *Cedar Fair,* the ENA in the present case does not have any provision expressly reserving the right to select other feasible alternatives unconditionally as the term sheet in Cedar Fair does. Instead, the City only retains discretion conditionally: "*If the Proposed Project is found to cause significant adverse impacts that cannot be mitigated,* the Public Entities retain absolute discretion to require implementation of mitigation measures, modify the Proposed Project or select feasible alternatives to mitigate or avoid significant adverse environmental impacts." (AR 16 [ENA section 7], emphasis added.) In the event the Project has significant adverse impacts that can be mitigated, this conditional provision would not allow the City to choose an alternative or reject the Project, and therefore violates CEQA.

By entering into the ENA, the City foreclosed its ability to make a good faith offer to dispose of parcels of property for affordable housing, recreational use, educational or other purposes. (AR 8 and 18.)

E. The Approval of the ENA Itself Is A "Project" Subject to CEQA Because It Could Have Environmental Impacts.

The City approved the ENA's prohibition on considering proposals or dispositions of any Project parcels without any prior ***71** CEQA review. Approval of a prohibition on development in one area of a jurisdiction can have potential environmental impacts so that such an approval is a project that requires prior CEQA review. Thus, even if the Court finds that the ENA's approval was not an essential step in the City's consideration of the Clippers' arena, the ENA itself and standing alone was a "project" requiring environmental review. The City's failure to conduct environmental review prior to approving the ENA violated CEQA.

In Muzzy Ranch Co. v. Solano County Airport Land Use Com. (2007) 41 Cal.4th 372, the Supreme Court determined that a plan that prohibited residential development in one area was a project within the meaning of CEQA. (Id. at 382 ["a government agency may reasonably anticipate that its placing a ban on development in one area of a jurisdiction may have the consequence, notwithstanding existing zoning or land use planning, of displacing development to other areas of the jurisdiction."])

The Supreme Court recently expanded upon the applicable concept: "limitation of development in the relevant area to existing

approved levels could cause intensified development in other parts of the county [is] a phenomenon referred to as 'displaced development.'" (Union of Medical Marijuana Patients, Inc. v. City of San Diego (---P.3d---, Cal., Aug. 19, 2019, *72 No. S238563, 2019 WL 3884465, at *11 ("UMMP"), *citing* *Muzzy Ranch, supra,* 41 Cal.4th at p. 382.) The Supreme Court explained:

> *Muzzy Ranch* clearly requires a public agency to consider the substance of a proposed activity in determining its status as a project.

(*UMMP, supra,* 2019 WL 3884465, at *13. Applying the foregoing test, Supreme Court concluded the City of San Diego erred in determining that the adoption of an ordinance authorizing the establishment of medical marijuana dispensaries and regulating their location and operation was not a project. (Ibid.)

CEQA also requires analysis of the potential creation of blight. (*American Canyon Community United for Responsible Growth v. City of American Canyon* (2006) 145 Cal.App.4th 1062.) Physical deterioration of an area caused as an indirect impact of approval of development is subject to CEQA review. (Id. at 1081.)

Here, the ENA prohibits development or disposition on numerous parcels of public property located throughout a broad swath of Inglewood for a period of at least three years. (AR 8 and 18.) Preventing the development of this public property, or its use for productive activities such as event parking pursuant to the Parking Lease that had been broken (AR 452 et seq.) or development of a public recreational center as had been proposed *73 (AR 954 [proposing "community investments..." such as youth centers"]; AR 956 [YMCA]; AR 84; AR 90-91), could result in blighting the Project parcels and displaced development elsewhere. In both Muzzy Ranch and UMMP, the indirect effect of displaced development was recognized as qualifying an activity as a project. City officials in the present case claimed the parcels involved "have been in the possession of the city as long as 25 or 30 years with no use (AR 115), but there is no evidence the City offered the parcels to any entity or requested proposals prior to entering the ENA with Murphy's Bowl. Because the ENA prevents the productive usage of publicly owned parcels for at least the three-year term of the ENA, it could displace development from those parcels and its approval is a project approval that required prior environmental review pursuant to CEQA. As underscored in UMMP and Muzzy Ranch, an activity that affects future development projects in a jurisdiction as the ENA affects development distribution within the City, is a project within the meaning of CEQA.

VII. Conclusion

The City approved an essential step for the Clippers arena Project when it approved the ENA for it in June, July, and August of 2017. The ENA's terms prove the City has foreclosed feasible alternatives, and conduct by City officials at first to hide negotiations and then to publicly advocate for and defend the *74 Project against criticism has confirmed the overwhelming political and bureaucratic momentum created for the Project exemplified by approval of the ENA. The hurried and ill-publicized process of initially adopting the ENA, the content of the ENA, the public statements, and the conduct of City officials show decisively that the City took steps to move the Project forward that were essential for the Project, and required a CEQA analysis after, not before, these steps were taken. Environmental review pursuant to CEQA should have been conducted prior to the ENA approval. To prevent the heavy thumb on the scale of precommitment to the Project as proposed during further Project environmental evaluation, the ENA approval, including its provisions restricting consideration of alternatives, must be set aside.

Footnotes

[1] The original ENA was approved by the City Council on June 15, 2017 (AR 33-57), and is herein referenced as "June

ENA." As explained infra, the City re-approved the ENA in July 2017. A significantly revised ENA was approved on August 15, 2017 (AR 5-26).

2 Newspaper accounts in February 2019 reported the Mayor of Inglewood met with several Clippers representatives to discuss the arena Project proposal on June 24, 2016, and that a series of email exchanges ensued after that meeting focused on Inglewood properties. (Request for Judicial Notice in Support of Appellants' Opening Brief Exhibit A.)

3 Although Petitioner undertook extensive efforts in the trial court to obtain relevant communications about the Clippers arena Project (JA 153-173), the administrative record certified by the City leaves many of the facts about the Project's development shrouded in secrecy. The earliest draft of the ENA is attached to an email dated May 9, 2017 (AR 574-599), nearly five months after negotiations purportedly began in January 2017 (AR 564).

4 Subsequent reports reveal the precise Project location was known as early as June 28, 2016, when it was referred to as "super confidential" with the code name "eagle" and included "three blocks highlighted in a map attached to the email [between Clippers representatives]." (Request for Judicial Notice, Exhibit A, p. 6.)

5 The Los Angeles County District Attorney investigated the City's June 15, 2017 meeting for violation of the Brown Act and determined that the "City Council did violate the Act by failing to provide a sufficient agenda description of Item 1, which involved an Exclusive Negotiating Agreement (ENA) between the City of Inglewood and Murphy's Bowl LLC." (Request for Judicial Notice Exh. B.) The District Attorney further stated:
It should be noted that the deficiency of the agenda description appears to have been part of concerted efforts between representatives of the city and the Murphy's Bowl LLC to limit the notice given to the public. Evidence reveals that the matter was set for a special meeting rather than a regular meeting to reduce the time required to give public notice from 72 hours to 24 hours before the meeting, Furthermore, the generic name of Murphy's Bowl LLC was used intentionally to obfuscate the identity of the proposed project and those associated with it.
(Request for Judicial Notice in Support of Appellant's Opening Brief, Exh. B, p. 2.)

6 Petitioner requested notice of these two contemporaneous Los Angeles Times articles published in August 2017. (JA 757-767.) This request was denied. (JA 831.) Petitioner requests judicial notice of these articles as part of the factual circumstances surrounding Project approval that explain some changes in the August ENA.

7 At least two residential parcels remain within the proposed Project area, as shown on the proposed Project area map included with the ENA (AR 4; see JA 932-940.) The Public Resources Code identifies the two parcels of residentially-used property (Los Angeles County Assessor parcel numbers ("APN") 4032-008-002 and 4032-008-006) for inclusion in the Project. (Pub. Resources Code § 21168.6.8 subd. (a)(5)(A); see JA 938, 940 [matching APN numbers to street addresses and locations].)

8 While this lawsuit was pending, a second piece of special legislation for the Project, AB 987, was introduced. This legislation, significantly different from SB 789 in that it preserved consideration of alternatives and various impacts among other differences, passed and was codified in Public Resources Code section 21168.6.8.

9 The applicable page numbers of the Joint Appendix are in the middle of each Joint Appendix page.

10 The court in *Culligan Water Conditioning v. State Bd. of Equalization* (1976) 17 Cal.3d 86 noted that little weight would be attached to an argument that was merely a litigating position in a particular matter. (Id., p. 93.)

11 Inglewood's Mayor met with Clippers representatives about the arena Project in June 2016. (Request for Judicial Notice, Exh. A.)

12 The City anticipated in a scoping meeting presentation that the draft EIR would be complete by the winter of 2019 with the final EIR complete in the summer of 2019. (JA 953.) Petitioner requested judicial notice of this document (JA 912 et seq.), which was denied by the trial court as irrelevant (JA 1157). Petitioner requests judicial notice of this document as probative of the City's intention to review and approve the Project EIR while bound by the ENA terms.

[13] SB 789 was rejected in legislative committee (AR 938), which may be interpreted as a reaffirmation that alternatives to the Project design and location must be vetted in a properly conducted CEQA review process. (*Sterling v. City of Oakland* (1962) 208 Cal.App.2d 1, 6.)

[14] During a City Council hearing, the Mayor stated: "*I don't know of any other city that gets paid $1.5 million dollars to negotiate*." (AR 165, emphasis added). This enthusiasm for the payment demonstrates the weighty influence Murphy's Bowl's contribution had on City official decision making.

[15] The Surplus Lands Act defines "surplus land" as "land owned by any local agency, that is determined to be no longer necessary for the agency's use ...." (Gov. Code § 54221 subd. (b).)

Government Code Section 54222 provides the procedures to be followed when a local agency disposes of surplus land. In relevant part, this section provides:

Any local agency disposing of surplus land shall send, prior to disposing of that property, a written offer to sell or lease the property as follows:

(a) A written offer to sell or lease for the purpose of developing low- and moderate-income housing shall be sent to any local public entity... within whose jurisdiction the surplus land is located. Housing sponsors... shall be sent... a written offer to sell or lease surplus land for the purpose of developing low- and moderate-income housing...

(b) A written offer to sell or lease for park and recreational purposes or open-space purposes shall be sent:... [to park, recreation, and related entities]

(c)-(e) [Written offers to sell or lease land suitable for school facilities or purposes, enterprise zone purposes, or infill development]

[16] A map depicting the various City entity ownerships of parcels was attached to the June ENA. (AR 57).

[17] The court in *Cedar Fair* gave little weight to the circumstances surrounding the term sheet including alleged Santa Clara officials' statements indicating their view the term sheet was binding. (*Cedar Fair, supra,* 194 Cal.App.4th at 1172.)

***10 I. Introduction.**

Respondents provide multiple excuses for why they may unduly procrastinate in preparing environmental review prior to construction of the Clippers Basketball Arena Project ("Arena Project"). None of their rationalizations for procrastination are valid. Their arguments are based in clear misinterpretations of the law. Respondents' principal argument may be summarized as follows: although the Arena Project may be a "project" within the meaning of the California Environmental Quality Act ("CEQA") for which environmental review would eventually be required, the exclusive negotiation agreement ("ENA") with the Clippers' entity Murphy's Bowl LLC, which Respondents' indisputably approved, did not constitute a "project approval" within the meaning of the CEQA. Respondents' theory is that approval of the ENA did not commit them to a definite course of action with regard to the Arena Project. They further argue that the approval of the ENA itself, while clearly an "approval" within the meaning of CEQA, was not a CEQA-triggering project approval because the ENA is not a "project." Respondents are wrong on all counts.

In arguing that the ENA does not constitute a project approval, Respondents rely on an incomplete and inaccurate view of the law. They state that because the ENA "explicitly conditioned" future approval of the Arena Project on CEQA compliance and Respondents ostensibly retained discretion with regards to CEQA compliance, there was no commitment to the Arena Project. (Opposition Brief ("Opp."), p. 25.) Respondents overlook the fact that specific terms of the ENA, in conjunction with the surrounding circumstances, show otherwise. As the California Supreme Court held in *Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116 ("*Save Tara*"), these surrounding circumstances are critical to evaluating whether an agency ***11** has committed itself to a project. (*Id.* at 132.) Recent case law focuses on "conduct detrimental to further fair environmental analysis." (*John R. Lawson Rock & Oil v. State Air Resources Board* (2018) 20 Cal.App.5th 77, 99 ("*Lawson Rock*").)

By agreeing to exclusivity of negotiations (Administrative Record ("AR"), 8 [ENA section 2(a)]) and non-transfer (AR 18 [ENA section 11]) of project parcels owned by the Respondents for a period of at least three years, and restricting their absolute discretion to deny the project for any reason (AR 16 [ENA section 7]), the Respondents made definite, enforceable commitments that foreclosed alternatives in a way that should have followed, not preceded, environmental review.

In addition to the commitments manifested within the four corners of the ENA, numerous surrounding circumstances demonstrate Respondents' strong commitment to the Arena Project. Respondents revised and approved the ENA several times to reach an agreement that (1) places Respondents at a significant negotiating disadvantage with exclusivity, non-transfer, and unilateral termination provisions favoring Murphy's Bowl; (2) strikes against their own monetary interest by preventing reentry into a parking lease; and (3) provides Murphy's Bowl with exclusive, uninhibited access to contiguous swaths of public land. Respondents' engaged in secret negotiations, undertook concerted efforts to reduce public notice, violated the Brown Act, and promoted and defended the Arena Project in order to push it forward. These surrounding circumstances demonstrate

Respondents' commitment to the Arena Project and flagrant disregard for public participation in further fair consideration of environmental analysis. Therefore, their formal approval of the ENA, the first set of discretionary approvals related to the Arena Project, was an approval of the Arena Project as a practical matter.

***12** Further, the ENA itself was a "project" within the meaning of CEQA because its approval is the type of activity that could lead to environmental changes. As such, Respondents' approval of the ENA constitutes a project "approval" within the meaning of CEQA, meaning that Respondents were obligated to perform an environmental analysis - at the very least, an initial study - prior to approving the ENA. The ENA approval must be set aside.

II. Summary of Facts.

Respondents present a melange of factual assertions and argument as part of their Summary of Facts. (Opp., pp. 11-18.) Appellant addresses these assertions in the argument section of this Reply brief.

III. Standard of Review and Trial Court Opinion.

Respondents quote, but do not recognize the significance of the line drawn in *Save Tara* in stating a public agency must not *"take any action"* that significantly furthers a project "in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project." (Opp., p. 20, citing *Save Tara, supra,* 45 Cal.4th at 138, emphasis added.) Notably, the Court did not merely caution against public agencies committing to a definite course of action. Rather, it forbids any action that significantly furthers a project in a manner that forecloses alternatives: an agency should not *"effectively preclude any alternatives or mitigation measures that CEQA would otherwise require to be considered, including the alternative of not going forward with the project."* (*Save Tara, supra,* 45 Cal.4th at 139.) This holding gives almost equal weight to the question of whether alternatives have been precluded as it does to the question of whether the agency has committed itself to the project as a whole.

***13** Respondents also quote a portion of the trial court opinion stating "[T]he ENA does not commit the City to a definite course of action." (Opp., p. 19.) While examining for a commitment to a definite course of action is relevant, it is not the only inquiry. In *Save Tara,* the Supreme Court rejected the view that a legally binding commitment was required to find a project approval. Additionally, the Supreme Court directed courts to examine the "surrounding circumstances" of the agency's action, to see if it made a commitment as a practical matter. (*Save Tara, supra,* 45 Cal.4th at 132.)

A portion of the trial court opinion stated it had considered "All surrounding circumstances" but did not find they "demonstrated a commitment by the City to a definite course of action." (Opp., p. 19.) Of course, in a CEQA case involving issues of law, "the appellate court reviews the agency's action, not the trial court's decision." (*Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 427.) "[T]he timing question...is one of law." (*Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116, 131.) Surrounding circumstances are a factor in determining if an agency has approved a project "as a practical matter," which is a different question from a determination of whether an agency has committed to a definite course of action. The extent of agency advocacy and defense of the project is also critical to the analysis. (*Save Tara, supra,* 45 Cal.4th at 141.)

Respondents rely heavily on *Concerned McCloud Citizens v. McCloud Community Services Dist.* (2007) 147 Cal.App.4th 181 ("McCloud") throughout their brief (Opp., pp. 10, 31, 36-37, 40-41) as the trial court did in its ruling (Joint Appendix ("JA") 1118, 1120, 1122, 1123, 1126, 1129). Respondents fault Appellant for not citing *McCloud* "at all" in its opening brief. (Opp., p. 10, fn. 2.) The *McCloud* decision is not controlling because the ***14** Supreme Court limited it to its "unique circumstances" in *Save Tara.* Of *McCloud* and another decision, the Supreme Court stated:

Without questioning the correctness of *Stand Tall* and *McCloud* on their facts, we note that each case involved particular circumstances limiting the range of its logic; neither convinces us a broad rule exists permitting EIR preparation to be postponed in all circumstances by the use of a CEQA compliance condition... *McCloud* [] speaks as much to *definiteness* as to commitment and does not establish that a conditional agreement for development never constitutes approval of the development.

(*Save Tara, supra,* 45 Cal.4th at 133, emphasis in original.) This limitation was recognized by the Court of Appeal in *RiverWatch v. Olivenhain Municipal Water Dist.* (2009) 170 Cal.App.4th 1186, which stated "Save Tara likewise limited [McCloud] to its particular circumstances." (Id. at 1209.) Decided as it was before *Save Tara, McCloud* did not address the "surrounding circumstances" inquiry mandated by *Save Tara,* an inquiry that completes the picture of the "definiteness" of a project. Therefore, focus on the Supreme Court ruling in *Save Tara,* rather than a single 2007 appellate court case that Save Tara essentially limited to its facts, is appropriate.

Lawson Rock, supra, 20 Cal.App.5th 77, discussed by Appellant (Appellant's Opening Brief ("AOB), p. 43) but never distinguished by Respondents, provides more recent, precise, and controlling guidance as to the proper application of *Save Tara.* As stated in *Lawson Rock,* the Supreme Court in Save Tara noted that "limiting [a finding of agency] approval to unconditional agreements would ignore situations where bureaucratic and financial momentum had built irresistibly behind a proposed project, creating a strong incentive to ignore environmental concerns." (*Lawson Rock, supra,* 20 Cal.App.5th at 100 citing *Save Tara, supra,* at 136.) In *Lawson Rock,* the court held that conduct that prejudices further fair environmental analysis is ***15** "'opening the way' [that] can trigger CEQA where it constitutes an approval." (*Id.* at 98.) *"Approvals under CEQA, therefore, are not dependent on 'final' action by the lead agency, but by conduct detrimental to further fair environmental analysis."* (*Id.* at 99, emphasis added.)

IV. ARGUMENT: Respondents Violated CEQA By Failing to Conduct Environmental Review Prior to Approval of a Project.

A. Sufficient Project Detail Existed to Conduct Meaningful Environmental Review Prior to ENA Approval; Such Review Would Not Have Been Premature Or Illegal.

1. Respondents' Position That Every Project Detail Necessary For Environmental Review Must Be Available at the Start of Review is Unreasonable and Contrary to Law.

In reviewing the issue of the proper timing of environmental review, the quality of available information is a factor to consider. (*Save Tara, supra,* 45 Cal.4th at 130-31.). In *Fullerton Joint Union High School Dist. v. State Board of Education* (1982) 32 Cal.3d 779, the Supreme Court rejected the argument that environmental analysis would be premature before specifications for a new high school were developed, because delaying environmental analysis would "as a practical matter" preclude the alternative of continuing the status quo. (*Id.* at 797.) Thus, the Board of Education was required to conduct an initial study prior to approval of the plan. (*Id.* at 794, 798.) In the present case, Respondents reject the need for ***16** an initial study, conceding only that an EIR would be required before the Arena Project could be built. (AR 172, citing Cal.Code Regs., tit. 14 ("Guidelines") § 15063 subd. (a).)

Respondents argue environmental review would have been premature without detailed project specifications. (Opp., p. 13). However, CEQA does not demand such a high level of project design merely to begin environmental review. (*Save Tara, supra,* 45 Cal.4th at 139.) Respondents assert that "[before environmental review can begin, there must be enough information on which to base an adequately detailed project description." (Opp., p. 22.) The case Respondents rely upon involves an inadequate description within a draft EIR itself, not information available at the start of the EIR review process. (*San Joaquin Raptor Rescue Ctr. v. Cty. of Merced* (2007) 149 Cal.App.4th 645, 654-65.) Meaningful review can be done even if not all the hypothetical details of a proposed project are available. (*City of Antioch v. City Council* (1986) 187 Cal.App.3d 1325, 1336-1337.) CEQA is not designed to "freeze the ultimate proposal in the precise mold of the initial project"; instead, it provides sufficient flexibility for a project to evolve during the public review process. (*Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal.App.4th 1036, 1062.) If every detail about a project had to be known before review was begun, an agency could argue at each step of cascading approvals until final approval that more must be known, so commencement of environmental review has to be further delayed. This procrastination rationale must be rejected as contrary to Save Tara (Save Tara, supra, 45 Cal.4th at 134) and would impermissibly allow public agencies to precommit to projects long before conducting review.

CEQA requires an EIR to disclose the location and boundaries of the proposed project and "a general description" of its characteristics. *17 (Guidelines § 15124.) Respondents emphasize that the Arena Project facility's "specific capacity was not yet known" as it varied from 18,000 to 20,000 seats (Opp., p. 13, citing AR 6.) The relatively minor difference in seating capacity would not prevent disclosing meaningful information to the public. Respondents contrast *Fullerton, supra,* 32 Cal.3d 779, by saying that it involved an "approved project" with scope and detail already determined. (Opp., p. 28.) But in *Fullerton,* the high school specifications were not yet determined. (*Fullerton, supra,* 32 Cal.3d at 797.)

Respondents claim "No actual project proposal" had addressed additional commercial or other development or construction details such as soils condition. (Opp., p. 13.) Respondents advocate determining details to a high level of finality but the types of issues such as transportation, access, and parking mentioned by Respondents (Opp., p. 14) are exactly what should be analyzed as design options within an EIR.

Respondents claim the actual size of the Project site in the Notice of Preparation ("NOP") "was significantly smaller than the Study Area." (Opp., p. 18.) This is an ex post facto excuse for procrastination; enough was known about the Project size at the time of the August ENA to conduct review. The main difference between the Study Area in the ENA (AR 4) and the Project site in the NOP (AR 174) was the omission of some parcels labelled "Potentially Participating Parcels" from the NOP map project boundaries. The Supreme Court has of course cautioned against delaying environmental review merely because every single detail is not available. The Supreme Court in *Save Tara, supra,* 45 Cal.4th at 134 emphasized that approval is an agency's "earliest commitment" to a project and when it "first exercises" its discretion to execute a contract. (*Id.* at 134, quoting Guidelines section 15352 subd. (b), emphasis in original.) Here, Respondents unjustifiably delay *18 environmental review for the Arena Project despite the existence of sufficient information about its location and parameters. With the facts of this case, such procrastination violates CEQA.

2. Extensive Project Related Information Was Available Outside the ENA.

Respondents claim the "ENA contains virtually none of the information necessary for environmental review." (Opp., p. 23.) However, in addition to the ENA, the record reveals the availability of extensive information about potential environmental impacts. (AOB, pp. 18-20.)

Respondents deny comparison to the nearby Forum would provide any useful information. (Opp., p. 23, fn. 10.) Yet, the Forum's operational impacts, with a similar capacity of approximately 17,000 people (AR 385), would provide analogous information about traffic, air quality, and other impacts for a 18,000-20,000 seat arena.[1] According to the Mayor, there are 17,658 trips (a very specific number) inbound to the Forum on event days. (AR 165.)

***19 3. Respondents Were Not "Legally Incapable" of Conducting Environmental Review Prior to Approving an ENA.**

Respondents further assert the trial court correctly found the City[2] was "legally *incapable* of conducting appropriate environmental review." (Opp., p. 19, emphasis in original.) In reality, the trial court opined that insufficient information existed to conduct meaningful review, not that the City was legally incapable of review. (JA 1156-57.) Even this conclusion was incorrect.

Sufficient information existed to conduct meaningful review. The precise location of the overall proposed project was well known at the time of the August ENA even if building locations were not specified. (AOB, pp. 18-19.) The August ENA had narrowed down project boundaries to four city blocks. (AR 4; see also Appellant's Request for Judicial Notice in Support of Opening Brief ("RJN") Exh. A [project site code named "eagle" in secret June 2016 meeting].) The Site described in the NOP (AR 169-170) is nearly identical to the Site described in the August ENA (AR 5). Further, the Project's main activity (basketball games) and capacity (18,000 to 20,000 seats) and "ancillary uses" were well known, and did not change between the ENA (AR 5-6 and AR 6, respectively) and the NOP (AR 170-171).[3]

***20** Respondents claim that when the Arena Project comes before the City Council, it will come with a final environmental impact report ("EIR"). (Opp., p. 11.) That is irrelevant where Respondents impermissibly precommited to the Arena Project prior to any form of compliance with CEQA. (*Save Tara, supra,* 45 Cal.4th at 126 [EIR prepared during pendency of lawsuit did not moot case or salvage improper precommitment].) Respondents' intention for future environmental review is not dispositive. (*Save Tara, supra,* 45 Cal.4th at 139.)

B. The ENA Improperly Foreclosed Analysis of Alternatives and Limited Respondents' Discretion That Would Normally Be Part of the Environmental Review Process.

Respondents summarize Appellant's case as asserting "environmental review of the Project should have been completed before the City executed the ENA." (Opp., p. 22.) CEQA cannot be an afterthought to project approval. (*Laurel Heights Improvement Association of San Francisco, Inc v. Regents of the University of California* (1988) 47 Cal.3d 376, 394 and 425 *("Laurel Heights I")* [condemning using EIRs as "*post hoc* rationalizations" for decisions already made], citing *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 79.) The Supreme Court stated: "A fundamental purpose of an EIR is to provide decision makers with information they can use in deciding *whether* to approve a proposed project, not to inform them of the environmental effects of projects that they have already approved." (*Laurel Heights I, supra,* 47 Cal.3d at 394.) Here, the timing of Respondents delaying an EIR raises the distinct possibility that the future EIR on the Arena Project will only be a post-hoc rationalization for a commitment that has already been made to its approval.

***21** Respondents could have easily negotiated and approved an ENA without foreclosing consideration of alternatives as required during the environmental review process, just as they could have refrained from taking actions evincing a strong commitment to the Arena Project as a practical matter prior to environmental review. Such an ENA would have been permissible. However, through the terms of the ENA and the overwhelming political and bureaucratic momentum given to the Arena Project, Respondents prevented themselves from genuinely considering alternative uses of the site or alternative locations for the Project. This violates CEQA.

Respondents also mischaracterize Appellant's argument as requiring that environmental review be completed before sufficient information was available. (Opp., p. 24.) Appellant cites *Citizens for Responsible Government v. City of Albany* (1997) 56 Cal.App.4th 1199, 1219 *("Albany")* because it is instructive in the requirement to avoid foreclosing alternatives. While facts of that case were different - a development agreement was approved before environmental review - the principles that the *Albany* case established are sound. They were carried forward with approval and adopted by the Supreme Court in *Save Tara, supra,* 45 Cal.4th at 137-138. In *Save Tara,* the respondent City of West Hollywood planned later environmental review and further approval. (*Id.* at 132.) However, the Court was not persuaded that such an intention to conduct future review was sufficient to salvage the City of West Hollywood's impermissible approval of a project without first conducting environmental review.

***22 C. Exclusive Negotiating Agreements Are Not Typical Arrangements in Public Agency Contracting, Especially for Disposition of Publicly Owned Land.**

Respondents' willingness to agree to exclusivity in negotiating the potential transfer of extensive tracts of public property to a private entity is a surrounding circumstance indicating commitment as a practical matter to the Arena Project. Respondents claim it is "typical" for a public agency to agree "not to consider other potential development" for a study area during an exclusive negotiating period. (Opp., p. 15.) Respondents cite no evidence or cases to support this bold but incorrect claim. For a public agency to agree not to consider other potential options for disposal of public land is far from typical, especially for a three-year period of time. The alternatives analysis in an EIR has been described as the "heart" of the EIR. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.) Alternatives are required to be potentially feasible. (Guidelines § 15126.6 subd. (a); *Save Round Valley Alliance v. County of Inyo* (2007) 157 Cal.App.4th 1437, 1457.) Therefore, alternatives cannot be effectively foreclosed by an agreement not to discuss alternatives with, or transfer property to,

third parties.

***23** Respondents aver "DDAs are commonly executed in connection with large or complex developments." (Opp., p. 15, fn. 7.) While this statement about DDAs may be true[4], it is not true that Exclusive Negotiating Agreements, or ENAs, are commonly executed by public agencies disposing of public property. ENAs are unusual in the lexicon of common law. In extensive California caselaw, there is apparently mention of the phrase "Exclusive Negotiating Agreement" in only nine published cases.[5] Only two of these cases involve CEQA review (*Save Tara, supra,* 45 Cal.4th 116 and *City of Santee v. County of San Diego* (2010) 186 Cal.App.4th 55) and neither of these two cases actually involved ENAs. *No courts have upheld an ENA against a challenge that it unlawfully foreclosed consideration of alternatives to a project under CEQA.*

***24** Respondents claim, without citation to facts or law, "it is appropriate for a city and developer to execute an exclusive negotiating agreement" as part of an early engagement. (Opp., p. 26.) When dealing with the possible transfer of public property to a private commercial entity, it is not "appropriate" to create significant disadvantages for the public agency seller by limiting the available market of buyers. But that is the effect of the exclusivity and non-transfer provisions in the ENA. ("Understanding Exclusive Negotiation Periods In Business Negotiations," Pon Staff, Harvard Law School Program on Negotiation, May 20, 2019.)[6] By entering into the ENA, which prohibits negotiations with any other parties or transfer of its land to any third parties other than Murphy's Bowl, the public agency Respondents have improperly constrained themselves.

Both the self-imposed constraints precluding consideration of alternative uses for the Project site and Respondents' other actions lending overwhelming bureaucratic and political momentum to Arena Project approval are fundamentally "detrimental to further fair environmental analysis." (*Lawson Rock, supra,* 20 Cal.App.5th at 99.) They are a crucial part of the "surrounding circumstances" that evidence improper precommitment.

D. Respondents Committed to a Definite Course of Action as a Practical Matter Even While Claiming to Reserve Discretion to Deny the Project.

Appellant argued the ENA constituted an approval of the Arena Project because the ENA, along with surrounding circumstances, committed Respondents to the Arena Project as a practical matter. (AOB, pp. 43-44, and 49-50.) Respondents argue the ENA was "explicitly conditioned on compliance with CEQA." (Opp., p. 25.) Respondents' efforts to retain theoretical discretion is nothing more than a fig leaf and cannot salvage their approval from being a practical commitment to the Arena Project and therefore a Project approval. (*Save Tara, supra,* 45 Cal.4th at 139 [future environmental compliance relevant but not determinative].)

Respondents argue evidence of commitment in *Save Tara* included the commitment by the City of West Hollywood to loan a developer half a million dollars, resulting in a direct financial investment. (Opp., p. 25.) In *Save Tara,* a direct financial investment was not the only circumstance that evidenced improper precommitment. There was also evidence of improper ***25** precommitment because the City of West Hollywood gave substantial political and bureaucratic momentum to a project. (*Save Tara, supra,* 45 Cal.4th at 141-142.)

Respondents misinterpret the Supreme Court's recognition that public agencies routinely "cooperate with developers to shape a project" before an environmental impact report is drafted. (Opp., p. 26.) While that may be true, agencies do not generally prevent themselves from negotiating about or transferring public property they own as Respondents have done here through the exclusivity (AR 8 [ENA section 2(a)]) and non-transfer (AR 18 [ENA section 11]) provisions of the ENA. The Supreme Court recognized privately conducted projects often need some form of government "consent or assistance to get off the ground." (*Save Tara, supra,* 45 Cal.4th at 136.) However, no such consent or assistance was necessary in this case where the Clippers organization had substantial wherewithal to move the Project along without any early assistance (AR 971 ["The entire project would be 100 percent privately funded and financed"]) and indeed the Clippers gave the City $1.5 million to give momentum to the Project (AOB, p. 51).

***26** Respondents falsely claim that the Supreme Court "has expressly rejected" the argument that execution of an ENA can be a project approval, claiming unreservedly that an ENA is "*not* a project approval that must be preceded by environmental

review." (Opp., p. 27.) This misstates the law. The Supreme Court merely recognized that an amicus brief argued ENAs and other types of agreements are often reached. However, the Court declined to adopt a bright-line test for when a public agency approves a project, holding: *"[W]e express no opinion on whether any particular form of agreement, other than those involved in this case, constitutes project approval"* (*Save Tara,* 45 Cal.4th at 137, emphasis added.) Thus, far from establishing a bright-line rule that exempts ENAs from CEQA (Opp., p. 27), the Court made clear that the facts of a case, not any particular form of agreement, determine whether CEQA applies.[7] *Save Tara's* statement that "*Not all such efforts* require prior CEQA review" (Opp., at p. 26, quoting *Save Tara, supra,* 45 Cal.4th at 136, emphasis added) undercuts Respondents' arguments as the Court's use of the phrase "Not all such efforts" clearly implies many "such efforts" *do* require prior CEQA review.

Respondents seek to counter the principle stated in *Fullerton, supra,* 32 Cal.3d 779, that before an agency takes an essential step for project approval, it must conduct environmental review. (Opp., p. 27.) Respondents claim the approval in Fullerton would "necessitate construction of a new school." (Opp., p. 27.) Whether an approval would necessitate changes with environmental impacts was not the test. Rather, the question was whether the action taken was an essential step in the process of project construction. (Id. at 797.)

Respondents argue the August ENA contemplates "full environmental review before any actual development can be approved." (Opp., p. 28.) However, this contemplation of future environmental review does not justify failing to conduct environmental review prior to project approval. (*Save Tara, supra,* 45 Cal.4th at 136.) Respondents claim *Fullerton,* supra, 32 Cal.3d 779 involved a project "with their scope and detail already determined." (Opp., p. 28.) This is clearly untrue. In Fullerton, the Board of Education argued that environmental analysis would be premature as ***27** *specifications for the new high school had not yet been developed.* (Id. at 797.) The Supreme Court rejected the argument that review would be premature.

E. Cases Following *Save Tara* Have Not Unequivocably Affirmed Public Agencies Can "Go Much Further" Than Execution of an ENA Without Environmental Review.

Respondents argue cases subsequent to *Save Tara* have affirmed public agencies can go further than execution of an ENA without risking premature approval. (Opp., p. 29.) Respondents' overbroad assertion misstates the law and relies on an interpretation of the case law that omits consideration of the unique facts of the older cases they cite, as explained below.

1. Binding Commitments Are Not a Prerequisite to Project Approval.

Respondents extensively rely on *Cedar Fair, L.P. v. City of Santa Clara* (2011) 194 Cal.App.4th 1150. (Opp., pp. 29, 35, 48.) In Cedar Fair, the Court of Appeal held that a city and redevelopment agency's approval of a stadium term sheet did not constitute an "approval" for the purposes of CEQA, and thus did not mandate that the agencies prepare an EIR. (*Cedar Fair, supra,* 194 Cal.App.4th 1150, 1175.)

Even while the court in *Cedar Fair* recognized the principle that alternatives should not be foreclosed (id. at 1165), the court relied on the theory that a binding contractual commitment is necessary to find a project had been approved. (*Id.* at p. 1171 ["...City of West Hollywood *contractually bound* itself to sell land for private development conditioned upon CEQA compliance, or *Riverwatch,* where the water district *contractually* bound itself to deliver water for 60 years", emphasis added.]) However, in *Save Tara,* the ***28** Supreme Court rejected the idea that "committing to a definite course of action" means that the agency needs to have "contractually bound" itself:

> City and [Real Party in Interest] Laurel Place apparently would limit the "commit[ment]" that constitutes approval of a private project for CEQA purposes (Cal.Code Regs., tit. 14, § 15352, subd. (a)) to unconditional agreements irrevocably vesting development rights. *In their view, "[t]he agency commits to*

> *a definite course of action...by agreeing to be legally bound to take that course of action."* ([Citation].) *On this theory, any development agreement, no matter how definite and detailed, even if accompanied by substantial financial assistance from the agency and other strong indications of agency commitment to the project, falls short of approval so long as it leaves final CEQA decisions to the agency's future discretion. Such a rule would be inconsistent with the CEQA Guidelines' definition of approval as the agency's "earliest commitment" to the project.* (Cal.Code Regs., tit. 14, § 15352, subd. (b), italics added.) Just as CEQA itself requires environmental review before a project's approval, not necessarily its final approval (Pub. Resources Code, § § 21100, 21151), so the guideline defines "approval" as occurring when the agency *first exercises its discretion to execute a contract or grant financial assistance, not when the last such discretionary decision is made.*

(*Save Tara, supra,* p. 134, emphasis added.) If project approval can occur when an agency "first exercises its discretion to execute a contract" as stated by the Supreme Court, the ENA would certainly be the first exercise of discretion to execute a contract. Of course, examination of surrounding circumstances is also necessary, as they complete the picture of agency commitment.

The court in *Saltonstall v. City of Sacramento* (2015) 234 Cal.App.4th 549. (Opp., p. 29) similarly relied on the theory that a binding commitment is needed to find project approval by the public agency, pointing out no breach of contract claim was possible. (*Saltonstall, supra,* 234 Cal.App.4th at 570.) This idea of a binding commitment being a precommitment litmus test was ***29** rejected in Save Tara, which required examination of surrounding circumstances as well as contract terms. (Save Tara, supra, 45 Cal.4th at 134.)

2. Unlike the ENA, the Term Sheets in Cedar Fair and Saltonstall are Not Enforceable Contracts.

The term sheets involved in *Cedar Fair* and *Saltonstall* contain an obvious difference from the ENA in the present case: neither of them was an enforceable contract whereas the ENA in the present case is an enforceable agreement. For example, if Respondents chose to negotiate with, or convey the Project site land to, a third party they would be in breach of the contract. ENAs can be enforced, as any other contract can. (AR 17 [setting governing law]; *Copeland v. Baskin Robbins U.S.A.* (2002) 96 Cal. App. 4th 1251, 1262.)

Furthermore, the language in the term sheet in Cedar Fair reserved discretion unconditionally. (*Cedar Fair, supra,* 194 Cal.App.4th 1150 at p.1169.) In contrast, the ENA in the present case reserves discretion *conditionally.* The ENA includes two conditional "if" clauses that were not present in the *Cedar Fair* term sheet. (AR 16 [ENA Section 7].) Furthermore, the exclusivity provision (AR 8 [ENA Section 2(a)]) and non-transfer provision (AR 18 [ENA Section 11]) of the ENA are not conditioned on anything; they are immediately binding on Respondents. No binding exclusivity or non-transfer provisions are mentioned in Cedar Fair.

Saltonstall v. City of Sacramento, supra, 234 Cal.App.4th 549, is inapposite as well. In *Saltonstall,* the Court of Appeal held that the city of Sacramento did not prematurely commit itself to building a sports arena by signing a term sheet with a sports investor group and acquiring property for the arena. (Id. at 566.) The facts of the present case are very different from ***30** those of Saltonstall: the city in Saltonstall retained "sole and independent discretion" whether to proceed with the project (id. at 568) but Section 7 of the ENA (AR 16) contains qualifications and conditions to the Respondents' discretion. Furthermore, in Saltonstall, there were no exclusivity (AR 8 [ENA section 2(a)]) or non-transfer (AR 18 [ENA section 11]) provisions which would foreclose alternatives that would have otherwise been considered.

3. Surrounding Circumstances Are Critical to Analyzing the Whether a Project Has Been Approved.

The effect of surrounding circumstances is a type of inquiry viewed as critically important by the Supreme Court in Save Tara in evaluating whether an agency approved a project. (*Save Tara, supra,* 45 Cal.4th at 132, 139.) The court in *Cedar Fair,* as it upheld the grant of a demurrer without leave to amend, downplayed such an analysis. The appellate court in Cedar Fair viewed city officials' statements as ineffective to change or color the meaning of a term sheet for stadium construction, no matter what those statements were. (*Cedar Fair, supra,* 194 Cal.App.4th at 1172.) Surrounding circumstances in the present case make it significantly different from *Cedar Fair* as discussed below.

Unlike in *Save* Tara and the present case, *Cedar Fair* did not involve an earlier form of the agreement analogous to the June ENA, which was then extensively changed after litigation was filed to water down the terms, resulting in the August ENA.

Cedar Fair did not involve any irregular activities undertaken by City officials as the present case does. Here, there were concerted efforts to minimize public notice, violations of the Brown Act in the approval of the ***31** June ENA (Appellant's Request for Judicial Notice ("RJN"), Exh. B), a project proponent (Murphy's Bowl) named specifically to elude public attention (AR 825); and a clandestine June 2016 project strategy meeting involving the Mayor/Chairman of Respondents (RJN, Exh. A) a year before Respondents publicly announced the ENA.

Unlike in Save Tara and the present case, *Cedar Fair, supra,* 194 Cal.App.4th 1150 did not involve the public agency inducing an existing tenant to relocate. Here, the City induced termination of an existing parking lease to make way for the Arena Project envisioned in the ENA. (AR 312.)

Unlike in *Save* Tara and the present case, *Cedar* Fair did not involve public official lobbying for legislation that would eliminate CEQA requirements to benefit the speedy approval of a proposed project (AR 182-183) or defending a project against criticism (AR 960; AR 934).

4. Public Participation Is Critical Part of CEQA Review But Respondents Have Hindered that Participation.

Public participation is a critical part of the CEQA review process. (AOB, p. 56.) In *Cedar Fair, supra* 194 Cal.App.4th 1150, early public participation was ensured because an EIR had been released for public review in 2009 contemporaneously with term sheet consideration, and the EIR was certified before litigation was filed. (*Id.* at 1158.) In the present case, a Notice of Preparation was issued on February 20, 2018 (AR 168) after the ENA was executed but a draft EIR has still not been released now, 21 months later. Additionally, in *Cedar Fair,* an election was required prior to project construction (*Cedar Fair, supra,* 194 Cal.App.4th at 1173) but in the present case there is no similar guarantee of public participation other than two "presentations" at community meetings. (see AR 10 [ENA Section 3(e)].)

***32** In *Saltonstall, supra,* 234 Cal.App.4th 549 a final EIR had been certified and approved before the lawsuit was filed (id. at 561) but in the present case, no EIR has been released, even in draft. The public participation that was ensured in *Cedar Fair* and *Saltonstall* is missing from the present case.

5. The ENA's Site Definition and Developer Selection Distinguishes This Case From City of Santee v. County of San Diego and Saltonstall.

Respondents seek to rely on *City of Santee v. County of San Diego* (2010) 186 Cal.App.4th 55. *City of Santee* is very different. The Court of Appeal found that a siting agreement between the County of San Diego and the state Department of Corrections ("DOC"), in which the county agreed to identify potential sites for a reentry facility, was not a project requiring CEQA review. (*Id.* at 59-60.) The agreement in *City of Santee* did not have a defined location for the proposed facility; it proposed two possible sites, one of which was not even owned by the defendant county. (*Id.* at 66.) The County's obligation

to convey a site was conditional on whether DOC picked a County-owned site. *(Ibid.)* In contrast, in the present case, the site has been specifically defined. The Arena Project intended for the site is a defined part of the ENA. (See AR 5-6.) The June ENA stated the Respondents had "selected" the developer for the Project. (AR 39.)

In *Saltonstall, supra,* 234 Cal.App.4th 549, the term sheet left undefined the arena location, allowed for additional alternatives other than the proposed site, and did not specify ownership structure. (*Id.* at 570.) In contrast, the August ENA includes a specific map of the location of the ***33** Project. (AR 4.) Because of the exclusivity and non-transfer provisions, the only eligible party to develop the Project site is Murphy's Bowl.

Finally, the City of Sacramento's acquisition of a site for an arena fell into a CEQA exception (Guidelines § 15004, subd. (b)(2)(A)) which allows for land *acquisition* agreements without environmental review when the agency conditions future use of the site on CEQA compliance (*Saltonstall, supra,* 234 Cal.App.4th at 570). However, the potential *disposal* of land as contemplated by the ENA is beyond such an exception.

F. Respondents' Definite Commitments in the ENA Are Significant.

1. Irreversible Action is Not Necessary to Demonstrate Commitment to a Project as a Practical Matter and Even if it Were, Irreversible Actions to the Detriment of Public Participation Were Taken.

Respondents claim that in *Save Tara,* West Hollywood took a series of concrete steps that committed itself to a project as a practical matter and "disabled itself from reversing course." (Opp., p. 31.) From this, Respondents argue that a petitioner must prove "an actual and irreversible commitment to the project" with the effect of foreclosing "any meaningful options to going forward with the project." (Opp., p. 31, *Save Tara, supra,* 45 Cal.4th at 139.) This assertion goes far beyond what the Supreme Court and subsequent cases have required. Instead, the Supreme Court emphasizes public agencies must avoid taking "any action" that would foreclose alternatives. (*Save Tara, supra,* 45 Cal.4th at 138; Guidelines, § 15004.). It does not require foreclosing all meaningful options or taking irreversible actions. Instead, as *Lawson Rock* correctly explained, a public agency must not take action that ***34** prevents a fair consideration of the project. (*Lawson Rock, supra,* 20 Cal.App.5th at 99-100.)

Respondents anticipate project details will be worked out as a disposition development agreement ("DDA") is negotiated within the detailed parameters of the ENA (Opp., p. 41-43) and state the public has not "been shut out." (Opp., p. 41). The evidence to this point proves otherwise - that Respondents have intentionally hindered public participation at numerous points. Respondents and Murphy's Bowl took multiple concerted actions to conceal the Arena Project from the public: disguising the name of the project proponent (AR 825); using a special meeting rather than a normal meeting to reduce notice (AR 149-51; AR 152; AR 155; AR 252-53; AR 825); providing less than 24 hours notice for the June ENA approval (AR 825); and providing a vague project description that the District Attorney determined violated the Brown Act. (Appellant's RJN, Exh. B).

The public perception that the Clippers Arena Project is a "done deal" after the June, July, and August ENA approvals affects public participation in the EIR review process. Public participation and comments are intended to have a significant role in the CEQA process. (AOB, p. 56; Guidelines § § 15087, 15088.) Furthermore, the public agency and project applicant are supposed to approach environmental review of a proposed project as an arms-length transaction. (*Citizens for Ceres v. City of Ceres* (2013) 217 Cal.App.4th 889, 917 [before approval "agency is neutral and objective"].) With the ENA in place, including its exclusivity and non-transfer provisions, the public is forced to begin with the assumption that the Arena Project is the only viable alternative that will be examined in the EIR since any other purportedly feasible alternatives would be prohibited by the ENA. The review process thus becomes a question of how the Arena Project will be built not whether it ***35** will be built. This type of post-hoc rationalization examination was expressly condemned in *Laurel Heights I, supra,* 47 Cal.3d 376, 394. That condemnation was repeated in *Save Tara.* (*Save Tara, supra,* 45 Cal.4th at 130.)

2. The City Entities Do Not Unambiguously Have "Absolute" Discretion To Consider Alternatives as Respondents Assert.

Respondents incorrectly argue nothing in the ENA "limits or circumscribes" their ability to consider alternatives or mitigation measures. (Opp., p. 33.) Respondents provide a block quotation of section 7 of the ENA. (Opp., p. 16.) ENA Section 7 (AR 16), the exclusivity provision (AR 11-12 [August ENA Section 4]) and the non-transference provision (AR 18 [August ENA Section 11]) flatly contradict Respondents' argument on this point.

Section 7 of the ENA imposes conditions on Respondents' exercise of discretion, thus rendering it limited, not absolute, because Section 7 twice includes the word "if." "The word 'if,' in legal as in ordinary phraseology, imports a condition...." (*In re Alexander's Estate* (1906) 149 Cal. 146, 149; accord *Batcheller v. Whittier* (1909) 12 Cal.App. 262, 266 ["conditional clause introduced by the word 'if' " means that an "offer was not absolute."])

Respondents emphasize the ability of Respondents to reject the Project, but they do not explain the two conditional phrases starting with the critical word "if." (AR 16.) "If the Proposed Project is found to cause significant adverse impact" that cannot be mitigated, only then would the Respondents "retain absolute discretion" to require various changes or to reject the Project. (AR 16.) The second use of the word *"if"* in section 7 sets conditions to the rejection of the Project as proposed to occur only "if the economic and social ***36** benefits... do not outweigh otherwise unavoidable significant adverse impacts." (AR 16, emphasis added.) If the Respondents truly retained absolute discretion, there would be no need for these conditional limitations. In contract interpretation, no word (including "if") should be rendered surplusage. (*ACL Technologies, Inc. v. Northbrook Property & Casualty Ins. Co.* (1993) 17 Cal.App.4th 1773, 1785.)

Respondents also quote Section 13 of the August ENA, which purports to retain "sole and absolute discretion" for the Respondents. (Opp., p. 17 and Opp., p. 34.) However, this reservation of discretion is limited by the conditional phrases in Section 7 of the agreement. Even if Section 7 does not contradict Section 13, at the very least, it renders the agreement ambiguous, thus justifying resort to extrinsic sources. (*Kerr Land & Timber Co. v. Emmerson* (1965) 233 Cal.App.2d 200, 219-220.) Even absent ambiguity, Save Tara directed an examination of surrounding circumstances using extrinsic sources because of the need for "transparency in environmental decisionmaking." (*Save Tara, supra,* 45 Cal.4th at 136.)

Extrinsic sources shedding light on the meaning of the ENA include the prior version of the ENA, as the Court in *Save Tara* examined prior versions of the agreement in that case. They also include the course of conduct of the parties and their contemporaneous actions. (*Kerr Land, supra,* 233 Cal.App.2d at 219-220.) Similarly, in *Save Tara,* the Supreme Court examined the surrounding circumstances including the conduct of the parties and the statements of public officials to shed light on the extent of West Hollywood's practical commitment to a project approval. (*Save Tara, supra,* 45 Cal.4th at 141-142.)

***37 3. While The Amended August ENA is the Operative Agreement, The June ENA Sheds Light on the Respondents' Level of Impermissible Precommitment to Project Approval.**

Respondents dramatically claim Appellant asserts a "nefarious reason" for its approval of the Amended August ENA. (Opp., p. 53 and p. 58.) Appellant nowhere uses the adjective "nefarious." Instead, the approval of the August ENA, understood in light of the surrounding circumstances, was part of Respondents' premature commitment to Arena Project approval, as a practical matter, prior to environmental review.

As a matter of contract law, an amended contract might supersede an earlier contract as posited by Respondents. (Opp., p. 54.) However, the Supreme Court did not examine the agreements in *Save Tara* as a matter of contract law. Instead, it examined their legal effects as a matter of CEQA compliance. In *Save Tara,* the court found the terms of the original draft agreement to be relevant, even though the agreement was later revised supposedly to cure the deficiencies. (*Save Tara, supra,* 45 Cal.4th, at 141 [comparing August and May forms of an agreement].) The Court stated the City Council "had already approved the May 3 draft agreement, by which it had *shown a willingness to give up further authority over CEQA compliance* in favor of dependence on the city manager's determination" thus providing a reason to forgive skepticism by the public. (*Ibid.,* emphasis

added.)

In this case, Respondents were willing to give up, or to ignore, their authority over CEQA compliance in the ENA as originally approved in June of 2017. This is demonstrated by the many sections of the June ENA that Respondents changed in the August ENA, after Appellant filed suit, to suddenly add multiple new requirements for CEQA compliance (AOB pp. 24- ***38** 26 [redline of Recital F, Section 3(d), and Section 7]; Section 6 of the August ENA (compare AR 13 with AR 291); Section 10 of the August ENA (compare AR 17-18 with AR 296); and Section 13 of the August ENA (compare AR 19 with AR 298).) Respondents here approved the June version of the ENA twice, in June (AR 161) and in July (see AR 150-151) of 2017, when the ENA lacked these multiple recognitions of the need for CEQA compliance.

Respondents assert courts "give great weight" to provisions making clear that project approvals "will be contingent on completion of the CEQA process." (Opp., p. 31.) Instead of giving "great weight" to a provision of an agreement anticipating future environmental review, the Supreme Court in Save Tara stated "conditioning of final approval on CEQA compliance is relevant but not determinative." (*Save Tara, supra,* 45 Cal.4th at 139.)

Respondents argue against ENA terms being a "sham," incorrectly attributing that term to Appellant. (Opp., p. 32.) Appellant nowhere claimed that the conditions were a "sham" or that public officials have "improper motives." (Opp., p. 33.)[9] Instead, Appellant referred to the Supreme Court's succinct observation: "the City's 'apprehensive citizenry'... could be forgiven if they were skeptical" as to whether the city council would give "full consideration" to impacts disclosed in a later EIR. (AOB, p. 37; *Save Tara, supra,* 45 Cal.4th at 141.)

Respondents falsely claim that the August ENA did not materially change the June ENA. (Opp., p. 54 [claiming the Amended August ENA "did ***39** not materially alter the Original ENA" except for the reduction in project site size and "more limited scope" of private property acquisition.]) Contrary to the claim, material provisions did change. (AOB, pp. 24-26.) For example, the revised August ENA changes terms regarding conveyance of Site parcels to developer from the definite "will be separately conveyed" in the June ENA (quoted by Respondents Opp., p. 38) to the more non-committal "may be separately conveyed" in the August ENA. (Compare AR 6 to AR 285, first sentence of Recital C, emphases added.) The June ENA language is evidence of precommitment in the same way the May 2004 agreement in Save Tara provided evidence of improper precommitment in that case.

Respondents characterize the ENA as having been approved after public notice and comment. (Opp., p. 56, fn. 20.) Respondents initially approved the ENA after less than 24 hours' public notice. (AR 150-151; 155 [stating posting time]; 161.) Respondents attempt to distinguish *Culligan Water Conditioning v. State Board of Education* (1976) 17 Cal.3d 86, 93 regarding positions taken for purposes of litigation (Opp., p. 56, fn. 21), but fail. The August ENA was adopted after Appellant first filed suit on July 20, 2017 (JA 6), making it fair to characterize the entire August ENA as something of a "litigating position" because provisions were specifically changed to address the contentions set forth in Appellant's petition for writ of mandate.

***40 4. The ENA's Uneven Right to Terminate Significantly Constrains the Respondents' Discretion Not to Complete CEQA Review.**

Respondents cite *McCloud, supra,* 147 Cal.App.4th 181, for the proposition that an uneven right to terminate an agreement is not evidence of precommitment. (Opp. p. 40.) In *McCloud,* the court found that the uneven right to terminate was an unpersuasive argument in light of the agreement's language stating that "neither party shall be bound hereby unless and until District's compliance with CEQA is completed and there is no possibility of a challenge pursuant to CEQA." (*Id.* at 188.) This provision failed to bind either party until CEQA compliance was complete.

By contrast, the revised ENA, in Section 7, states Respondents "retain" so-called "absolute discretion" to reject the project *if* it "is found to cause significant adverse impacts that cannot be mitigated" and "*if* the... benefits of the Proposed Project do not outweigh otherwise unavoidable significant adverse impacts." (AR 16, emphasis added.) Respondents should be able to reject the project for any reason if they wanted to (Pub. Resources Code § 21080, subd. (b)(5) [no CEQA necessary for a project a

public agency rejects]), whether related to adverse environmental impacts or not. However, the ENA forecloses this opportunity by setting conditions on that discretion to reject, cabining it only to a situation where adverse impacts cannot be mitigated and are not outweighed by benefits. Agencies may generally agree to uneven termination provisions, but in the present case Respondents have impermissibly set conditions to exercising their discretion to reject the Arena Project based upon its impacts and benefits. CEQA requires that a public agency maintain complete discretion to consider all alternatives to a project, including the alternative of rejecting the project altogether.

***41 5. The ENA's Exclusivity Term, in Conjunction with the ENA's Non-Transfer Provision, Was a Significant Circumstance Contributing to Respondents' Commitment as a Practical Matter to Project Approval.**

Respondents deny the ENA's exclusivity provision is evidence of their commitment as a practical matter to Project approval. (Opp., p. 36.) The ENA states that for a period of *at least three years* Respondents will not consider offers from third parties for uses of the Project site. (AR 8, ENA § 2(a).) While the exclusivity provision alone may not be conclusive proof of such a commitment, it is evidence that corroborates the overall conclusion of such a commitment.

Respondents claim the ENA's exclusivity provision does not constrain its discretion to modify the Project "or to put the site to some other use." (Opp., p. 37.) The ENA's non-transfer provision certainly prohibits putting the project site to any other use requiring a sale or lease. Respondents agreed not to "voluntarily transfer [their] respective interests in any portion of the Study Area Site during the term of this Agreement to any third party." (AR 18 [ENA section 11]).

Respondents assert they need not entertain "at all times and without limitation, all offers to purchase their property." (Opp., p. 37.) That mischaracterizes Appellant's position. Instead, Respondents must be unconstrained, when considering the disposition of their property, in evaluating all alternatives and mitigation measures that are normally part of a review process. Where a major collection of public property is proposed for a particular use, it must be available for alternative offers. (AOB, p. 67-68.)

***42** Other public entities, faced with the challenge of reusing public property, have first issued a request for proposals before entering exclusive negotiations with a single party. (*Citizens for a Megaplex-Free Alameda v. City of Alameda* (2007) 149 Cal.App.4th 91, 96 ["City... issued a request for proposals for revitalizing the building and reopening it as a movie theater."]) *Placerville Historic Preservation League v. Judicial Council of California* (2017) 16 Cal.App.5th 187, 192 [request for proposals issued.]) The fact that no request for proposals was issued in the present case before Respondents decided to enter the ENA with Murphy's Bowl immediately following secret backroom negotiations is indicative of a practical commitment to approval of the Arena Project. Respondents did not explore their options prior to the ENA, and are prohibited from exploring them afterward for three years or more because of the ENA.

6. The June ENA Committed Respondents to Use Best Efforts to Acquire Land for the Arena Project, Including Through Use of Eminent Domain.

Respondents deny that they would use eminent domain powers to acquire parcels in the Project Site from third party owners. (Opp., p. 37, citing AOB, p. 13.) These third party owned properties are called "Potentially Participating Parcels" in both the June ENA (AR 57) and the August ENA (AR 4). The August ENA states Respondents are not obligated to use eminent domain, but would consider doing so. (Opp., p. 39, citing AR 6, 8-9.) The August ENA is considerably different from the June ENA because the August ENA does not mention Respondents using "best efforts" to acquire third party parcels. The original June ENA provided Respondents and Murphy's Bowl could agree prior to a DDA that certain parcels were "necessary" for the Project, and that the City would use "its best efforts to ***43** acquire the parcels". (AR 41 [ENA section 2(b)].) Thus, the June ENA contemplated Respondents' use of eminent domain to acquire these "necessary" parcels "prior to entering into an approved DDA," i.e., while the parties were still negotiating. (AR 43, [June ENA § 3(g)].) California courts have enforced "best efforts" contracts. (*Gilmore v. Hoffman* (1954) 123 Cal.App.2d 313, 319-320.) Respondents' use of "best efforts" would therefore include using eminent domain powers if necessary.

The City of Inglewood's Mayor, who is also the Chairman of Respondent Successor Agency and Parking Authority (AR 24-25), adamantly emphasized at a joint public hearing of three of the Respondents about the ENA that eminent domain to

obtain land for the Arena Project was an option they would not give up. (AR 78; AR 124 ["We will not foreclose the use of any tool...."]) The City of Inglewood strongly supported SB 789 in the California Legislature. (AR 182.) Among other provisions, the proposed bill would have allowed Respondents to use eminent domain *before* completing CEQA review. (AR 531; AR 549.)

Respondents steadfastly deny residentially occupied parcels are part of the Project Site and claim residential use is irrelevant to the issues in this case. (Respondents' Opposition to RJN, pp. 13-14.) However, Respondents' willingness to use eminent domain for the sake of the Arena Project is a surrounding circumstance indicating a practical commitment to the Project before it has been fully reviewed. State legislation defining the "Project area" for the Project includes two parcels of residentially zoned property. (Pub. Resources Code § 21168.6.8 subd. (a)(5)(A) and AOB p. 24, fn. 7.)

***44 7. Murphy's Bowl's Unilateral Right to Terminate the ENA Gives It Substantial Negotiating Advantage, Constituting Further Evidence of the Respondents' Commitment to the Project as a Practical Matter.**

Respondents wrongly argue the unilateral termination provision allowing Murphy's Bowl, but not the Respondents, to terminate the ENA is not evidence of a practical commitment to Project approval. (Opp., p. 40.)

The ENA forbids Respondents from leaving or cancelling the ENA except if Murphy's Bowl "materially fail[s] to perform" or to negotiate in good faith (AR 16-17, ENA § 8(a)), although Murphy's Bowl may leave the ENA "at any time and for any reason." (AR 17, ENA § 8(b).) Therefore, until Murphy's Bowl decides to violate or leave the ENA, Respondents have disabled themselves from having any discussion whatever with any other developer, considering any other project, or transferring any parcel within the Project Site for at least three full years. (AR 8; AR 18 [Exclusivity and Non-transfer provisions].) As a practical matter, this restriction makes it impossible for Respondents to produce an EIR with an adequate alternatives section, since they cannot talk with third parties to evaluate alternative potential uses for the Project site. The imbalanced termination provisions mean if a third party were to offer Murphy's Bowl a superior alternative site or terms, Murphy's Bowl could immediately terminate the ENA and pursue that offer. Respondents have no similar ability. The unilateral termination provision, coupled with the exclusivity and non-transfer terms, means the Respondents have agreed to give Murphy's Bowl significant negotiating advantages.

The exclusivity of negotiations is highly valuable to Murphy's Bowl, as it states it paid the City of Inglewood $1.5 million "for that opportunity." ***45** (Opp., p. 40.) Respondents' willingness to give up their ability *for three years* to seek a better deal for transfer of interests in publicly owned land is an extraordinary period of time. Typical exclusive negotiating periods last between one month and one year, not three years or more. ("Understanding Exclusive Negotiation Periods in Business Negotiations," *supra,* ["one-year lockout, common in the world of mergers and acquisitions (M&As)... 30-day lockout typical of many commercial settings."])

V. Respondents Have Taken Actions That Impermissibly Lend Significant Momentum to Project Approval and Foreclose Alternatives Necessary to Ensure CEQA Compliance.

A. The City's Investment in the Project is Substantial Both Financially, Albeit Indirectly, and in Political and Bureaucratic Momentum.

Respondents argue they made no commitments "resembling those at issue in Save Tara." (Opp., p. 44.) The factual circumstances in Save Tara have parallels to the present case even though not every circumstance is mirrored exactly. Financial investments take a different form here than those in Save Tara, and political momentum imparted to the Arena Project here is much stronger than such political investment was in Save Tara.

In *Save Tara,* statements and actions by City officials, which are a form of political investment in a project, were found to be significant. The *Save Tara* Court referred to a statement by the City of West Hollywood's mayor, by the city manager, and by city officials. (*Save Tara, supra,* 45 Cal.4th at 141-42.) In contrast, in the present case, the statements and actions creating ***46** substantial political and bureaucratic momentum are more extensive. (AOB, pp. 47-55.) Respondents argue that the

Mayor's statements are just talk and do not bind the City. (Opp., pp. 46-51.) While Respondents contend that news articles are not evidence that various statements were "actually made" by the Mayor (Opp., p. 47, fn. 14), they do not account for the material having been posted on the Mayor's official City account that announced a deal had been made. (AR 963-969; 562-564.) The evidence of the Mayor's various statements are thus similar to the "newsletter" the Supreme Court found probative of official statements about a project in Save Tara. (Save Tara, supra, 45 Cal.4th at 123, 141, and fn. 13.)

Respondents argue if a developer is unable to conclude there is hope of developing a project, there is no point in undertaking environmental review. (Opp., p. 46.) However, the Clippers in this case apparently focused in on the Project site in an early meeting with the City of Inglewood's Mayor. (Appellant's RJN, Exh. A, p. 23). There was no question, and none is apparent in the ENA, of whether the Project is feasible since it will be completely privately financed. (AR 971.) Instead, the whole orientation of the ENA is toward how land would be assembled and transferred and how the Project would be designed and executed, not *if* it would.

B. Statements and Actions By the Mayor/Successor Agency Chairman Are Evidence of Premature Commitment.

Respondents mischaracterize Appellant's arguments as contending that statements from the Mayor "are the equivalent of formal approval" of the Project. (Opp., p. 46.) That is inaccurate. Instead, Appellant argued the statements by the Mayor are evidence, in the same way such statements ***47** were evidence in *Save Tara,* of a commitment as a practical matter to a project approval.

1. Mayor/Chairman Butts Statements Exceed a Showing of Mere Interest in the Arena Project.

While the ENA purports to make it clear Respondents have not approved the Project (Opp., p. 47), the surrounding circumstances including the Mayor/Chairman's actions and statements, shed light on whether or not they approved the Project as a practical matter. Public officials can express preliminary judgements and desires about proposed projects. (Opp., p. 47.) The Supreme Court recognized as much. (*Save Tara, supra,* 45 Cal.4th at 136-137 ["mere interest in" a project is not approval].) However, the Supreme Court made its statement about "mere interest" after a lengthy discussion beginning with the following paragraph identifying actions that contribute to an impermissible precommitment to a project prior to environmental review:

> A public entity... may, by executing a detailed and definite agreement with the private developer and by lending its political and financial assistance to the project, have as a practical matter committed itself to the project. *When an agency has not only expressed its inclination to favor a project, but has increased the political stakes by publicly defending it over objections, putting its official weight behind it, devoting substantial public resources to it, and announcing a detailed agreement to go forward with the project,* the agency will not be easily deterred from taking whatever steps remain toward the project's final approval.

***48** (*Save Tara, supra,* 45 Cal.4th at 135, emphasis added.) In the present case, as contemplated in *Save Tara, supra,* 45 Cal. 4th at 135, the City's Mayor "increased the political stakes by publicly defending [the project] over objections" (AR 960 [Mayor calls public concerns "a sham"])[9] ; AR 934 [Mayor called legislator's expressed concerns "preposterous"]); put "its official weight behind it" (AR 182-183 [City letter to Legislature]); and it announced a "detailed agreement to go forward with the project" (AR 5-26 [August ENA]; AR 38-56 [June ENA]). All the factors the Supreme Court identified in *Save Tara* as contrasting with, and going beyond, "mere interest" in or "high esteem" for a project are present in this case.

Respondents argue "Courts look to actual commitments... not mere statements by city officials or staff." (Opp., p. 48.) Contrary to this assertion, the Supreme Court has instructed that city official or staff statements are important pieces of factual evidence.

(*Save Tara*,45 Cal.4th at 141-142, and fn. 13.) While some appellate courts in cases involving unique circumstances might give little weight to statements by city officials or staff, other more recent authority holds public statements have probative value. (*POET, LLC v. State Air Resources Bd.* (2013) 218 Cal.App.4th 681, 724.)

Respondents focus on the "promise ring" statement by Mayor Butts. (Opp., p. 48-49.) Calling the ENA a mere "promise ring," does not make it so and this statement is only one of many similar ones. Statements in isolation may not constitute determinative evidence of commitment as a practical matter, but their cumulative effect must be considered. As the Supreme Court observed, "Here, of course, we weigh statements by City officials not in ***49** isolation but as one circumstance shedding light on the degree of City's commitment..." (*Save Tara, supra,* 45 Cal.4th at 142, fn. 13.)

Respondents parse Mayor Butts' statements that the ENA "has to result in a development agreement" as referring only to timing. (Opp., p. 49, fn. 15.) However, Mayor Butts contemplated that the ENA will result in a development agreement and Arena Project. (AR 971 [Mayor stating ENA is a promise ring, which will lead to a DDA which is an engagement ring which "will lead to the building of an arena"].) This projection of certain events is similar to the way that CARB contemplated a future action in *POET, LLC v. State Air Resources Board, supra,* 218 Cal.App.4th 681. The court in POET, LLC analyzed a public agency press release that used the phrase "will implement" to conclude it "increased the political stakes' (*Save Tara, supra,* 45 Cal.4th at p. 135,...) and left little doubt that ARB was committed to implementing the LCFS [Low Carbon Fuel Standards] regulations...." (*POET, LLC, supra,* 218 Cal.App.4th at 724.) Similarly, in the present case, the Mayor's multiple statements celebrate that the City has reached a deal with the Clippers and that the Arena Project *will,* not might, be built after further negotiation. These statements significantly increase "the political stakes" within the meaning of *Save Tara, supra,* 45 Cal.4th at p. 135 and are similar to predictive statements cited as evidence in *POET, LLC, supra,* 218 Cal.App.4th 681.

2. Official City Support for Legislation Modifying CEQA to Benefit the Arena Project Proponents is Weighty Evidence of Commitment to the Arena Project.

Respondents deny the City's support for state legislation to modify CEQA review for the Arena Project demonstrates premature commitment to ***50** the Project. (Opp., p. 50.) Respondents say that the "propriety" of the Sacramento Kings streamlining legislation was affirmed in *Saltonstall, supra,* 234 Cal.App.4th 549 (Opp., p. 50, fn. 16), but the propriety of legislation itself is irrelevant. Instead, the evidentiary value of Respondents' Mayor/Chairman intense lobbying for legislation for a project for which they had not yet done environmental review goes to show precommitment as a practical matter. The support in this case was presented on official City letterhead (AR 182) and the legislation was proposed to modify substantive (AOB, p. 51, citing AR 534), not just procedural, requirements of CEQA to benefit the Arena Project.

Respondents contend the support for legislation in early September "has no bearing" because it came nearly a month after ENA approval in August 2017. (Opp., p. 50.) However, the Supreme Court in *Save* Tara took an expansive view of what factors have bearing on interpreting when commitment as a practical matter occurred. The Supreme Court examined an August 2004 agreement, though a petition challenging the City of West Hollywood's action had been filed in July 2004. (*Save Tara, supra,* 45 Cal.4th at 125.) In *POET,* the court found that documents created after a hearing (notices of decision, CARB press release, update on regulations) showed that there was "significant bureaucratic momentum" and demonstrated that CARB was committed to implementing the LCFS regulations. (*POET, LLC v. CARB, supra,* 218 Cal.App.4th 681 at 723-724.)

Respondents argue the City's support for legislation benefiting the Arena Project does not bind it to approval of the Project. (Opp., p. 50.) While this may be true, the extraordinary lengths to which the City would go to make sure the Project would not be slowed by routine public review pursuant ***51** to CEQA demonstrates the City's view the Arena Project deserved special treatment and is evidence of a commitment as a practical matter.

Respondents seek to downplay the City's letter that asks for CEQA special treatment for "a new NBA basketball arena *to be built* in Inglewood...." (AR 182, emphasis added.) Overall, the letter speaks of projects it lists, including the Arena Project as certain to occur and already slated "to be built." No special treatment would be needed if Arena Project approval was not

already a foregone conclusion.

3. Inducing the Termination of the Parking Lease, and the Inability of Respondents to Reenter it, Had Significant Financial Consequences for the City.

Respondents characterize their termination of a parking lease ("the Parking Lease") with MSG Forum LLC (MSG)[10] as an "acceptance of MSG's termination of its parking lease." (Opp., p 52.) Sworn evidence in the record states that Mayor/Chairman Butts induced the Parking Lease termination under false pretenses[11] in order to smooth the way for the Clippers Arena proposal, telling MSG he and the City needed the land back (and the Parking Lease terminated) in order to construct a "technology park." (AR 312.)

***52** Respondents claim MSG's termination of the Parking Lease enhanced the City's ability to consider alternatives for the Project site. (Opp., p. 52.) In Save Tara, the eviction of tenants was regarded as additional factual evidence of premature commitment as a practical matter to the proposed redevelopment project, not as a way to enhance the range of possible alternatives: "Relocation of tenants is a significant step in a redevelopment project's progress, and one that is likely to be irreversible." (*Save Tara, supra,* 45 Cal.4th at 142.)[12] With the ENA's non-transfer provision (AR 18 [ENA section 11]), it would not be possible to re-enter the Parking Lease or any similar lease with a third party other than Murphy's Bowl. A lease represents a transfer of a leasehold interest and such a transfer may be prohibited by contract. (*Kendall v. Ernest Pestana, Inc.* (1985) 40 Cal.3d 488, 494.) The non-transfer provision of the ENA would prevent the transfer of a leasehold interest. Any vehicles that would have been parked at the leased premises would have to park elsewhere.

***53** Respondents assert that "the Arena Site consists, almost entirely, of unimproved land," and contests Appellant's demonstration that at least two parcels are currently zoned and used as residential property. (Opp., p. 61 and fn. 27, citing AOB, p. 67.) In Respondents' view, there are no tenants on the Project Site to be evicted. However, the inclusion of residential property designated in state legislation (Pub. Resources Code § 21168.6.8 subd. (a)(5)(A) and AOB p. 24, fn. 7) as part of the defined "Project Area," the City's support for that legislation, and current resident opposition to that legislation (JA 942-943), shows the City is not easily dissuaded from approving the Arena Project even if it means displacing current residents.

***54** Respondents argue that since Appellant did not raise an argument about the Parking Lease termination in the trial court opening brief, it has waived it here, citing *May v. City of Milpitas* (2013) 217 Cal.App.4th 1307. (Opp., p. 52, fn. 19.)[13] *May* held that an argument was barred because it was not raised until the reply brief *in the Court of Appeal, not* the trial court. (*May, supra,* 217 Cal.App.4th at 1333, fn. 11.) In the present case the argument was raised below (JA 897), and properly raised in Appellant's Opening Brief. (AOB, p. 54.)

C. Additional Evidence Abounds of Respondents' Impermissible Precommitment as a Practical Matter to Arena Project Approval.

In addition to the ENA's extended 3-year long exclusivity and non-transfer period that benefits the Clippers/Murphy's Bowl, the momentum imparted to the project after the City accepted a $1.5 million payment, and the conditions set on Respondents' discretion in Section 7 of the ENA, additional surrounding circumstances outside the four corners of the ENA demonstrate a high level of commitment as a practical matter to the Arena Project.

1. Repetitive Approvals Were Granted By Respondents, All of Which Were Chaired by Mayor Butts.

Respondents claim the fact that three separate public entities approved the ENA *three* separate times in the space of three months proves nothing (Opp., p. 58), with the second approval correcting an alleged Brown Act violation, and the third approval amending the ENA after litigation was filed. The repetitive approvals, including that of the Oversight Board on September 7, 2017 pursuant to Health and Safety Code section 34181 subdivision (a) (see Opp., p. 18, fn. 9), underscore the doggedness of Respondents' determination to approve the Arena Project, contributing to the overwhelming momentum of the

Arena Project before it underwent any environmental review.

***55 2. Respondents' Willingness to Engage in Secret Negotiations, Their "Concerted Efforts" to Reduce Public Notice, and Their Violation of the Letter and Spirit of the Brown Act is Evidence of Improper Precommitment to Project Approval.**

Contrary to Respondents' claim of irrelevance (Opp., p. 58), the Brown Act violations and "concerted efforts" to reduce public notice identified by the District Attorney (AOB, pp. 45-47; Appellant's RJN, Exh. B), the shortened notice (AR 150-151; 155 [stating shortened time]; 165), and the other irregularities are highly relevant because Respondents' inappropriate actions have had the effect of hindering public notice and involvement in review of the Arena Project. Inappropriate or illegal activity that reduces public notice and benefits a project proponent is a "surrounding circumstance" relevant to determining the level of a public agency's impermissible precommitment to a project approval. Such activity is a form of raising the political stakes for a project and defending a project from objections, two categories of actions identified in Save Tara as evidence of commitment and approval as a practical matter. (*See* *Save Tara, supra,* 45 Cal.4th at 135.) "Departures from the normal procedural sequence also might afford evidence that improper purposes are playing a role." (*Village of Arlington Heights v. Metro. Hous. Dev. Corp.,* 429 U.S. 252, 267.) In the same way that departures from normal procedures provide evidence of improper purposes in the context of Equal Protection Clause cases, Brown Act violations and procedural irregularities are evidence of improper precommitment in the present case.

Respondents argue that the timing of negotiation commencement (whether June 2016 or January 2017) is irrelevant. (Opp., p. 11, fn. 4.) However, the length of project negotiation prior to commencement of ***56** environmental review (in the words of a Clippers representative "how long deals have brewed in back rooms" (RJN, Exh. A, p. 29)), is evidence of Respondents' commitment to the Project as a practical matter. *Save Tara* emphasized West Hollywood's conduct before and after it entered a formal agreement (*Save Tara, supra,* 45 Cal.4th at 123-124); here too such conduct is part of the "surrounding circumstances."

V. The ENA is Itself a Project Within the Meaning of CEQA.

Respondents argue the ENA is not a "project" that required an environmental impact report. (Opp., p. 56.) The ENA is a "project" within the meaning of that term as defined in CEQA and as clarified in Union of *Medical Marijuana Patients, Inc. v. City of San Diego* (2019) 7 Cal.5th 1171 (UMMP).[14] The ENA, because of its limitation on the transfer of extensive parcels of public property, represents a disposition of those parcels that should have been preceded by environmental review.

***57** Respondents assert that an ENA can have no environmental effects, so therefore cannot itself be a "project," and assert that *Save Tara* "identified exclusive negotiating agreements as one of the paradigmatic types of agreements that a city can execute before commencing environmental review." (Opp., p. 57.) This assertion is a bald misstatement of the law as the Supreme Court expressed no opinion about ENAs, let alone that they are a paradigmatic type of any sort. (*Save Tara, supra,* 45 Cal.4th at 137.) Further, *UMMP* made clear how expansive CEQA's definition of "project" is.

Respondents barely address the significant Supreme Court case of UMMP. (Opp., p. 27, fn. 12, and p. 57.) However, UMMP addressed what types of actions are considered to be "projects" within the meaning of CEQA, a critical question in the present case because, as the Supreme Court in Save Tara stated: "the timing question may also be framed by asking whether a particular agency action is in fact a "project" for CEQA purposes, and that question, we have held, is one of law." (Save Tara, supra, 45 Cal.4th at 131, citing *Muzzy Ranch Co. v. Solano County Airport Land Use Corp.* (2007) 41 Cal.4th 372, 382 and Fullerton, supra, 32 Cal.3d at p. 795; *see also* *Save Tara, supra,* 45 Cal.4th at 129, fn. 8 [approval timing and project definition are related issues].)

The Court in UMMP held that amending a city's zoning ordinance, including provisions on siting and operation of marijuana dispensaries, was a project under CEQA and required an initial environmental review. (*UMMP, supra,* 7 Cal.5th at 1199.) The

Court clarified the nature of the appropriate inquiry about what is a "project": if an activity has the potential to "cause an environmental change" in either a direct or reasonably foreseeable indirect manner, the agency must regard the activity as a "project" under CEQA. (*UMMP, supra,* 7 Cal.5th at 1197, 1200.) The Court stated that ***58** "theoretical effects" were enough to show that the ordinance had the potential to cause environmental change, and thus obligated the city to consider it a project under CEQA and perform, at the very least, an initial study. (*Id.* at 1199.)

Therefore, *UMMP* sheds light both on the fact that the ENA is a "project" within the meaning of CEQA in its own right, and that the ENA must be considered as a discretionary action with the potential to cause environmental changes so should have been treated as a project approval. Respondents unquestionably approved the ENA despite failing to conduct even an initial study. (AR 123-124; AR 161.)

Respondents seek to distinguish *Muzzy Ranch, supra,* 41 Cal.4th 372 and *UMMP* as dealing with development regulation, while the present case deals with an ENA presaging a development. (Opp., p. 57.) Such a distinction makes no difference. The ENA in the present case is an action affecting the environment directly (restricting property disposition) and indirectly (presaging development of the Arena Project).

VI. Conclusion.

Respondents have taken various actions that demonstrate an impermissible commitment as a practical matter to approval of the Arena Project. The ENA locks out exploration of alternatives with third parties, prohibits transfers of public land to them, and constrains Respondents' discretion by conditioning its exercise on adverse effects.

The extensive surrounding circumstances showing commitment to the Arena Project as a practical matter include Respondents':
(1) lengthy secret negotiations prior to public announcement of the ENA,

***59** (2) induced termination of an existing parking lease,

(3) concerted efforts to violate the Brown Act letter and spirit, shortening notice, and concealment of the real identity of the developer until shortly before the June ENA approval,

(4) approval of the June ENA with no CEQA compliance terms;

(5) approval of provisions in the June ENA that the City would use "best efforts," including eminent domain powers, to acquire land for the Arena Project Site even before a DDA was negotiated, that Respondents had already "selected" Murphy's Bowl as the developer and that they "will convey" public land to it;

(6) omission of CEQA compliance except as a pro forma item on a list prior to final Project approval,

(7) strong advocacy for special legislative treatment of the Project before the Project was reviewed under CEQA,

(8) officials publicly defending the Arena Project against criticism, and

(9) repetitive approvals.

All of these facts have the effect of prejudicing further fair environmental review in the future consideration of the Arena Project.

The approval of the ENA itself is a project approval which required prior CEQA review, but that review was not done.

***60** For all of these reasons, and to ensure a future fair environmental review process for the Arena Project, the approval of the ENA must be set aside.

Footnotes

1 Respondents wrongly argue that the point about the Forum providing analogous information regarding traffic was not raised. (Opp., p. 23.) Appellant argued below that residents were familiar with traffic impacts from the Forum. (JA 787, fn.7). Even if the argument had not been raised before, arguments may be presented on appeal related to legal questions, especially those of public interest. (*Bayside Timber Co. v. Board of Supervisors* (1971) 20 Cal.App.3d 1, 5.)

2 The trial court opinion refers to all Respondents collectively as "the City" and that convention is adopted in Appellant's Opening Brief. However, since individual Respondents such as the Oversight Board took varying actions, this brief refers to "Respondents" collectively except where it refers to the City of Inglewood separately.

3 The Clippers, on the verge of investing over $100 million in private funds (AR 971) in the Arena Project, likely had much more information about it. The City merely needed to request it.

4 Respondents rely on *Santa Margarita Residents Together v. San Luis Obispo County Bd. Of Supervisors* (2000) 84 Cal.App.4th 221 to describe the common use of a Development Agreements ("DA"). (Opp., p. 15, fn. 7.) However, *Santa Margarita Residents* involved a DA, not an ENA, and environmental review was to go hand-in-hand with project planning (id. at 229), not to follow it, as here.

5 These nine cases are named in Appellant's reply brief below. (JA 884.) A memorandum of understanding ("MOU"), which normally does not involve exclusivity or non-transfer provisions, is a far more typical form of negotiation document involving public entities. (Ibid.)

6 Available at https://www.pon.harvard.edu/daily/dealmaking-daily/understanding-exclusive-negotiation-periods/.

7 Subsequent cases recognized the Court's refusal to adopt the bright-line rule Respondents imagine. (*Cedar Fair, L.P. v. City of Santa Clara* (2011) 194 Cal.App.4th 1150, 1161; *RiverWatch v. Olivenhain* (2009) 170 Cal.App.4th 1186, 1210.)

8 The only use of the word "sham" in these proceedings thus far was by Mayor Butts when he called public comments seeking use of Project site parcels for affordable housing "a total sham" (AR 960), despite the fact that at least two of the parcels within Project boundaries are already used as residences. (JA 937-942.)

9 Respondents claim that in response to public comments, the Mayor identified constraints on placing housing on Project Site parcels related to a Federal Aviation Administration ("FAA") agreement (Opp., p. 49, fn. 15), but there is no evidence in the record of the FAA agreement that was mentioned.

10 Respondents contend that Appellant should have listed MSG Forum, LLC. as an "interested party" in its Certificate of Interested Entities or Persons because MSG would allegedly "face competition" from the future Clippers Arena. (Opp., p. 51, fn. 18.) Respondents allude to rule 8.208's rationale to allow Justices to evaluate the potential need for recusal. Respondents' claims are speculative. Rule of Court Rule 8.208 subdivision (e) states "An interest in the outcome of the proceeding does not arise solely because the entity or person is in the same industry, field of business, or regulatory category as a party and the case might establish a precedent that would affect that industry, field of business, or regulatory category." (Rule 8.208 subdivision (e)(2)(B).) Thus, Murphy's Bowl, MSG, Steve Ballmer, and the Clippers being in the same field of sports entertainment business does not create a reportable interest. Appellant does not seek any monetary recovery through this proceeding but instead seeks a fair public review process prior to Respondent actions without precommitment to a foreordained result. Appellant can receive funding from multiple sources including members of the community. (E.g., AR 81 [Diane Zambrano, a resident of Inglewood, stating she would "be giving some money to each one of those" entities including Appellant].) Thus, the "interest in the outcome of the proceeding" within the meaning of Rule 8.208 is general and public, not financial and specific.

[11] The City denies MSG's contentions and is currently engaged in litigation about this issue in *MSG Forum LLC v. City of Inglewood et al.*, Los Angeles Superior Court (LASC) case number YC072715. By trial court order of September 10, 2018, the present case was related to *Inglewood Residents Against Takings and Eviction v. Successor Agency to the Redevelopment Agency of the City of Inglewood*, LASC case number BS174709, but the trial court denied relating it to *MSG Forum LLC v. Oversight Board to the Successor Agency etc.*, LASC case number BS174710. It is not related to any other litigation brought by MSG.

[12] Although Respondents focus on monetary payments (Opp., pp. 25, 30, 44, 52, 53) and irreversibility of eviction (Opp., pp. 25, 44, 48), *Save Tara* did not limit "surrounding circumstances" showing pre-CEQA commitment to a project to monetary interests or tenant eviction.

[13] At various points, Respondents also cite *Baxter Healthcare Corp. v. Denton* (2004) 120 Cal.App.4th 333, which declined to consider an argument that was raised in the reply brief *at the appellate level* (*id.* at 371, fn. 8). In *Premier Med. Mgmt. Sys. v. California Insurance Guarantee Assn.* (2008) 163 Cal.App.4th 550, the Court of Appeal declined to hear an issue not raised in the trial court. (*Id.* at 564.) In short, none of the cases cited by the City support its claims of waiver of various arguments.

[14] Respondents assert that because Appellant did not raise the argument that the ENA is itself a project until the reply brief in the trial court, it has waived the argument. (Opp., p. 57.) Appellant properly raised this argument in its Opening Brief. (AOB, pp. 70-73.) There are "many situations where appellate courts will consider" newly raised issues including questions of law and in matters of public interest. (*Bayside Timber Co., supra*, 20 Cal.App.3d 1, 5.) The proper timing of CEQA review is both a question of law and a matter of broad public interest. Additionally, the *UMMP* case, with its clarification of what constitutes a "project" under CEQA, was not decided until August 19, 2019, the day before Appellant's Opening Brief was filed.

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF LOS ANGELES

MSG FORUM, LLC, a Delaware Limited Liability Company,

Petitioner and Plaintiff,

v.

CITY OF INGLEWOOD AS SUCCESSOR AGENCY TO THE FORMER INGLEWOOD REDEVELOPMENT AGENCY; OVERSIGHT BOARD TO THE SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; LOS ANGELES COUNTY SECOND DISTRICT CONSOLIDATED OVERSIGHT BOARD and DOES 1-10;

Defendants and Respondents,

MURPHY'S BOWL LLC and ROES 1-10;

Real Parties In Interest.

CASE NO. BS174710

Hon. James C. Chalfant, Dept. 85

FIRST AMENDED VERIFIED PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR INJUNCTIVE AND DECLARATORY RELIEF

[Gov. Code §§ 54950 *et seq.*; Code Civ. Proc. §§ 1085, 1094.5]

Petitioner and Plaintiff MSG Forum, LLC ("MSG Forum") alleges as follows.

INTRODUCTION

1. In a series of meetings, the agencies tasked with overseeing the disposition of properties formerly owned by the former Inglewood Redevelopment Agency—all chaired by Mayor James T. Butts Jr. of Inglewood—violated California's open meeting law by secretly taking actions to further the development of an arena for the Los Angeles Clippers without proper notice under the Ralph M. Brown Act. The actions by these entities—the City of Inglewood as Successor Agency to the Former Inglewood Redevelopment Agency ("Successor Agency") and the recently replaced Oversight Board to the Successor Agency ("Former Oversight Board")—were illegal and must be set aside.

2. On June 19, 2018, the Successor Agency, and on June 27, 2018, the Former Oversight Board—*at a special meeting held just four days before it ceased to exist*—rushed to approve actions to facilitate the transfer of 13 publicly owned properties (the "Redevelopment Agency Properties") needed for the controversial proposed Los Angeles Clippers' arena that Mayor Butts is championing in Inglewood. The Former Oversight Board's responsibilities have now been assumed by a new Los Angeles County Second District Consolidated Oversight Board ("Consolidated Oversight Board"), also currently chaired by Mayor Butts.

3. The proposed Clippers arena is the subject of great dispute and public concern in the City of Inglewood. Meetings addressing the proposed project are regularly attended by concerned citizens and businesses, and thousands of residents have voiced opposition. Yet, those residents did not appear at the Successor Agency meeting on June 19, 2018 and the three parties that testified at the Former Oversight Board's June 27, 2018 meeting stressed that it was not possible for the public to understand the action being taken from the information disclosed.

4. Why? The meetings' agendas failed not only to mention the Clippers, the National Basketball Association, a basketball arena, or Murphy's Bowl LLC, the Clippers' affiliated entity, but the agendas failed even to identify that the properties under consideration for action by the Successor Agency and Former Oversight Board were those connected to the proposed arena. Instead, the agendas disguised them under the term "LAX Noise Mitigation Properties" without any reference to the Clippers, the National Basketball Association, a basketball arena, or Murphy's Bowl. Moreover, the agendas failed entirely to describe, in any comprehensible terms, what exactly was being done with the properties. MSG Forum believes that the Successor Agency and the Former Oversight Board did *something* to facilitate the transfer of these properties to the Clippers, but it ***still cannot determine what exactly was done***. The agendas are completely incomprehensible and the staff reports are equally unintelligible as to what actions were taken.

5. This is not how government is supposed to work. The Brown Act exists to "aid in the conduct of the people's business." (Gov. Code §§ 54950 *et seq.*) "It is the intent of the law that [legislative bodies'] actions be taken openly and that their deliberations be conducted openly." (*Id.*) Consistent with these goals, the Brown Act requires that a meeting's agenda state the meeting time and place and contain a brief general description of each item of business to be transacted or discussed at the meeting. Members of the public are supposed to know what is being considered in advance of a meeting, so that they can choose whether or not to exercise their right to attend and meaningfully comment on the government's plans.

6. That did not happen here. Neither the Successor Agency nor the Former Oversight's Board agendas provided the public with any hint that the entities were apparently acting to facilitate the transfer of the Redevelopment Agency Properties needed for the Clippers arena. Neither agenda mentioned the Clippers, the National Basketball Association, a basketball arena, or Murphy's Bowl; neither agenda mentioned

prior approvals by the City, the Successor Agency or the Former Oversight Board for the proposed Clippers' arena; neither agenda mentioned that the approvals were in furtherance of the proposed Clippers' arena; and neither agenda clearly identified the Redevelopment Agency Properties' location. The agendas could not have been more opaque and misleading. As a result MSG Forum and the public were deprived of an opportunity to attend and comment on the item. There was limited public comment by MSG Forum and others at the Former Oversight Board meeting on June 27, and those who did speak noted that insufficient notice and information was provided to understand the actions being taken. It appears that even the Former Oversight Board members did not have the information necessary to take the actions they took. There was no reference in the staff report that gave even the remotest hint that these properties were the very properties that are part of the site for the proposed Clippers arena. There was no discussion of the action by the Former Oversight Board members. Zero. Just a move to approve and a vote. The entire meeting of the Former Oversight Board lasted less than 15 minutes, further frustrating the public discourse goals championed by the Brown Act. For all of these reasons, the Successor Agency's and Former Oversight Board's actions must be voided and set aside.

PARTIES TO THIS PROCEEDING

7. Plaintiff and Petitioner MSG Forum is, and at all times mentioned herein was, a Delaware limited liability company. Petitioner operates an Inglewood venue commonly known as the Forum, a 17,800-seat, multi-purpose indoor arena.

8. Respondent and Defendant Successor Agency is the legal entity responsible for overseeing the winding down of the affairs of the former Inglewood Redevelopment Agency. The former Inglewood Redevelopment Agency was dissolved in 2012, in accordance with ABx1 26, commonly referred to as the "Dissolution Act."

9. Respondent and Defendant Former Oversight Board was an "oversight board" within the meaning of the Dissolution Act. Pursuant to the Dissolution Act, the

Former Oversight Board had certain duties, including overseeing the winding down of the Successor Agency. Pursuant to the Dissolution Act, as of July 1, 2018, the Former Oversight Board was dissolved and its duties, responsibilities, and liabilities were assumed by the Consolidated Oversight Board.

10. On information and belief, Respondent and Defendant Consolidated Oversight Board is the successor in interest to the Former Oversight Board. The Consolidated Oversight Board has certain duties, including overseeing the winding down of the Successor Agency.

11. Real Party in Interest Murphy's Bowl is a Delaware limited liability company with its principal place of business in Bellevue, Washington.

12. MSG Forum does not know the true names or capacities, whether individual, corporate, associate or otherwise, of Respondent Does 1–10, or of Real Parties in Interest Roes 10–20, inclusive, and therefore sues said Respondents and Real Parties in Interest under fictitious names. MSG Forum will amend this Petition and Complaint to show their true names and capacities when and if the same has been ascertained.

JURISDICTION AND VENUE

13. This Court has jurisdiction over the causes of action asserted in this Petition and Complaint pursuant to the California Constitution Article VI, section 10, Code of Civil Procedure section 410.10, Code of Civil Procedure sections 1085 and/or 1094.5, and Government Code sections 54960 and 54960.1.

14. Venue in this Court is proper. The obligations, liabilities, and violations of law alleged in this pleading occurred in the City of Inglewood. (Code Civ. Proc. § 401(1).) In addition, Respondents are located within the County of Los Angeles. (*Id.* § 394.)

15. MSG Forum has performed all conditions precedent to filing this action, including exhausting all available administrative remedies, and has no other remedy than to bring this action.

GENERAL ALLEGATIONS

A. *Overview of the Dissolution Act*

16. The Successor Agency controls the Redevelopment Agency Properties. Pursuant to the Dissolution Act, the Successor Agency is tasked with, among other things, winding down the affairs of the former Inglewood Redevelopment Agency. The Inglewood City Council is the designated "Governing Board" of the Successor Agency, and Mayor Butts of the City of Inglewood serves as the Chair of the Successor Agency Governing Board.

17. Certain actions taken by the Successor Agency when winding down the affairs of the former Inglewood Redevelopment Agency, such as the disposition of real property assets, are subject to "oversight board" direction and approval under the Dissolution Act. Oversight boards are seven member boards established by the Dissolution Act to oversee successor agency wind down efforts. Oversight board members have a fiduciary responsibility to the taxing entities that benefit from the distribution of property tax and other revenues.

18. Prior to July 1, 2018, the Successor Agency was overseen by the Former Oversight Board. In addition to being Mayor of the City of Inglewood, sitting on the City Council and serving as chair of the Successor Agency Governing Board, Mayor Butts also chaired the Former Oversight Board. Since the dissolution of the Former Oversight Board on July 1, 2018, the Successor Agency is now overseen by the Consolidated Oversight Board. Mayor Butts currently chairs the Consolidated Oversight Board as well.

19. Pursuant to the Dissolution Act, the Successor Agency was required to adopt a "Long Range Property Management Plan" (the "LRPMP") that addresses the disposition and use of real properties owned by the former Inglewood Redevelopment Agency. The Redevelopment Agency Properties are included in the LRPMP.

20. It is in this context that, on information and belief, the Successor Agency and Former Oversight Board were acting on Mayor Butts' proposal for the Clippers arena.

B. ***Mayor Butts' Plan for a Clippers' Arena in Inglewood***

21. On June 15, 2017, Mayor Butts and the City of Inglewood publicly announced a plan to enter into an Exclusive Negotiating Agreement ("ENA") with the Clippers, by way of a company called Murphy's Bowl LLC, to facilitate the development of the Clippers arena. The Redevelopment Agency Properties were included in the ENA area and are subject to the requirements set forth in the ENA. The same day, the City, the Successor Agency, and the City of Inglewood Parking Authority, all of which are chaired by Mayor Butts, each held a "special meeting" to approve the ENA. Both the Successor Agency and Parking Authority violated the Brown Act by failing to provide sufficient notice to the public for their respective special meetings. MSG Forum sent a cure and correct demand pursuant to the Brown Act to both the Successor Agency and Parking Authority on July 14, 2017. (A true and correct copy of the July 14, 2017 cure and correct demand to the Successor Agency is attached as **Exhibit A**.)

22. Emails between representatives of Murphy's Bowl and the City of Inglewood revealed the efforts to keep the public in the dark about the ENA. In an email exchange discussing the agenda for the June 15, 2017 meeting, the City's attorney, responding to a Murphy's Bowl representative's question about whether the ENA had to be posted with the agenda, answered that the "document has to be posted with the agenda. That is why we elected to just post 24 hours versus the normal 72 hours." (A true and correct copy of this email exchange is attached as **Exhibit B**.) The same email from the Murphy's Bowl representative stated that its entity would "have a generic name so it won't identify the proposed project." (*Id.*)

23. Following receipt of MSG Forum's demand letters, the Successor Agency and Parking Authority each held another special meeting on July 21, 2017 to "redo" their unlawful approval of the ENA.

24. The City, Successor Agency, Parking Authority, and Murphy's Bowl subsequently entered into an amended and restated ENA, dated August 15, 2017 (the "Amended ENA"). The Redevelopment Agency Properties are subject to the Amended ENA. On information and belief, the Redevelopment Agency Properties are shown in yellow and described as the "Successor Agency Parcels" on the Amended ENA "Exhibit "A" - Study Area Site Map." (A true and correct copy of the Amended ENA is attached hereto as **Exhibit C**.)

25. In the Amended ENA, the Successor Agency committed to convey the Redevelopment Agency Properties directly to Murphy's Bowl if the Clippers arena was "approved." (*See* **Exhibit C**, at Recital D.)

26. On September 7, 2017, the Former Oversight Board adopted a resolution that, among other things, "ratified and approved" the "actions of the Successor Agency to date in connection with the ENA." (*See* Former Oversight Board Resolution No. 17-OB-004 at 3, a true and correct copy of which is attached as **Exhibit D**.)

C. *The Successor Agency and Former Oversight Board Rush to Take Additional Actions in Furtherance of the Proposed Clippers Arena and Violate the Brown Act*

27. On June 14, 2018, the Former Oversight Board posted a "NOTICE TO PUBLIC OF PROPOSED ACTION." The notice stated, among other things, the following:

> Successor Agency staff is requesting the Oversight Board to direct the Successor Agency to dispose of all parcels of real property identified as LAX Noise Mitigation Properties in the approved Long-Range Property Management Plan, as amended, subject to the disposition requirements set forth in those certain Federal Aviation Grant Agreements and Los Angeles World Airport Letter Agreements applicable to the LAX Noise

> Mitigation Properties (collectively, the "FAA Grant Agreements").

(A true and correct copy of the June 14, 2018 notice is attached hereto as **Exhibit E**.)

28. While the notice posted on June 14, 2018 states that the Successor Agency was requesting the Former Oversight Board to direct it to dispose of the "LAX Noise Mitigation Properties," ***the Successor Agency did not actually vote to make this request until June 19, 2018, five days after the Former Oversight Board posted the notice about the request***.

29. On June 19, 2018, the Successor Agency held a regular meeting. The agenda for that meeting contained the following vague and ambiguous description for agenda item CSA-3:

> CSA-3. OFFICE OF THE EXECUTIVE DIRECTOR
> Staff report recommending approval to request that the Oversight Board for the Successor Agency of the Former Inglewood Redevelopment Agency adopt a Resolution, directing the Successor Agency to implement the State of California Department of Finance approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable disposition requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements.

(A true and correct copy of the June 19, 2018 Agenda and Staff Report of the Inglewood Successor Agency is attached hereto as **Exhibit F**.)

30. This Successor Agency agenda description is vague, ambiguous, misleading, and insufficient to put the public on notice of the action the Successor Agency proposed to take at the June 19, 2018 regular meeting. While the referenced "LAX Noise Mitigation Properties" are—as has now become clear—the Redevelopment Agency Properties subject to the Amended ENA, there was no mention in the agenda description (or its accompanying staff report) of the Amended ENA, Murphy's Bowl, or the Clippers arena. No addresses were listed. No map of the properties was included.

There is also no information in the agenda description (or accompanying staff report) regarding the referenced "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements," i.e., what they require, who is a party to the agreements, the dates of the agreements, agreement numbers, where the agreements might be available to review, etc. (*See* **Exhibit F.**) Without discussion, the Successor Agency approved an action at its June 19, 2018 regular meeting to:

> request that the Oversight Board for the Successor Agency of the Former Inglewood Redevelopment Agency adopt a Resolution, directing the Successor Agency to implement the State of California Department of Finance approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable disposition requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements.

31. On information and belief, given the nature of the vague, ambiguous, and potentially misleading agenda language, no member of the public testified on agenda item CSA-3 at the Successor Agency's June 19, 2018 regular meeting.

32. On July 13, 2018, MSG Forum submitted a letter to the Successor Agency demanding that it cure and correct the action taken on item CSA-3 at the June 19, 2018 regular meeting in violation of the Brown Act. (A true and correct copy of MSG Forum's July 13, 2018 demand is attached hereto as **Exhibit G.**) The Successor Agency did not respond to MSG Forum's demand.

33. On June 27, 2018, the Former Oversight Board held a special meeting. Agenda item 3 was described as follows:

> Adoption of Resolution by the Oversight Board to the Successor Agency of the former Inglewood Redevelopment Agency Directing the City of Inglewood as the Successor Agency to former Inglewood Redevelopment Agency to Implement the approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable Disposition

Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements.

(A true and correct copy of the June 27, 2018 special meeting agenda is attached hereto as **Exhibit H**.)

34. Again, while the referenced "LAX Noise Mitigation Properties" are actually the Redevelopment Agency Properties subject to the Amended ENA between the Successor Agency, the City, the Parking Authority and Murphy's Bowl, there is no reference to the Amended ENA, to Murphy's Bowl, to the Clippers, or to the proposed Clippers arena in the agenda description. The agenda description again also includes vague and uninformative references to "applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." However, there is no information in the agenda about those agreements – again, what they require, who is a party to the agreements, the dates of the agreements, agreement numbers, where the agreements might be available to review, etc. Further, the staff report for special meeting agenda item 3 again did not contain any reference to the Amended ENA, Murphy's Bowl, the Clippers, or the proposed Clippers arena, or any details regarding the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." (A true and correct copy of the staff report for the June 27, 2018 special meeting, agenda item 3, is attached as **Exhibit I**.)

35. On information and belief, the referenced "Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements" were not made available to the public in the June 27, 2018 special meeting materials or at the meeting itself. Failing to make these documents available frustrated the Brown Act's purpose to "facilitate public participation in local government decisions and to curb misuse of democratic process by secret legislation by public bodies." (*Boyle v. City of Redondo Beach* (1999) 70 Cal.App.4th 1109, 1116.)

36. Further, on information and belief, the Former Oversight Board did not possess or review the Federal Aviation Administration grant agreements or the Los Angeles World Airports letter agreements at or prior to the June 27, 2018 special meeting.

37. At the June 27, 2018 special meeting, the Former Oversight Board took an action to adopt Resolution 18-OB-003. (A true and correct copy of the June 27, 2018 resolution is attached as **Exhibit J**.) In pertinent part, Resolution 18-OB-003 provides:

> WHEREAS, the Mitigation Properties are subject to the Federal Aviation Administration grant agreements and associated Los Angeles World Airports letter agreements (collectively, the "FAA Grant Agreements") …
>
> Section 3. The Successor Agency is hereby directed to dispose of the Mitigation Properties in accordance with the Amended LRPMP.
>
> Section 4. The Mitigation Properties are subject to the disposition requirements of the FAA Grant Agreements and any compensation agreement requirements of the Dissolution Law with respect to any net proceeds from a third party (non-City) transferee, after all obligations of the FAA Grant Agreements are satisfied. …

The adopted Resolution contains no reference to the Revised ENA, Murphy's Bowl, the Clippers, or the proposed Clippers arena, and no information about the referenced "FAA Grant Agreements." The lack of information surrounding the action to adopt Resolution 18-OB-003 places the public in the position of not knowing what the Former Oversight Board directed the Successor Agency to do. This is precisely the misuse of the democratic process the Brown Act seeks to protect against.

38. MSG Forum participated in the June 27, 2018 special meeting of the Former Oversight Board and provided written and oral testimony; however, MSG Forum and, on information and belief, other members of the public, were unable to adequately understand the items discussed or acted on by the Former Oversight Board at the June 27,

2018 special meeting, and were therefore denied the opportunity to prepare and provide meaningful comments to the Former Oversight Board.

39. On June 29, 2018, MSG Forum submitted a letter to the Former Oversight Board demanding that it cure and correct its action, taken in violation of the Brown Act, to adopt Resolution 18-OB-003 at its June 27, 2018 special meeting. (A true and correct copy of the demand is attached hereto as **Exhibit K**.) The Former Oversight Board did not respond to the demand.

40. On July 1, 2018, by operation of law, the Former Oversight Board dissolved and was replaced by the Consolidated Oversight Board which assumed, by operation of law, all of the duties and responsibilities of the Former Oversight Board.

FIRST CAUSE OF ACTION

(Brown Act Violations (Gov. Code § 54950 *et seq.*) – Against Successor Agency)

41. MSG Forum incorporates and alleges the allegations in paragraphs 1 through 40, inclusive, as though fully set forth herein.

42. Pursuant to Government Code section 54960, an interested person such as MSG Forum may "commence an action by mandamus, injunction, or declaratory relief for purpose of stopping or preventing violations or threatened violations" of the Brown Act, or to "determine the applicability of this chapter to ongoing actions or threatened future actions of the legislative body, or to determine the applicability of this chapter to past actions of the legislative body, subject to Section 54960.2 …"

43. Pursuant to Government Code section 54960.1, an interested person such as MSG Forum may "commence an action by mandamus or injunction for the purpose of obtaining a judicial determination that an action taken by a legislative body of a local agency in violation of Section … 54954.2 … is null and void under this section."

44. Pursuant to Government Code section 54954.2, "[a]t least 72 hours before a regular meeting, the legislative body of the local agency, or its designee shall post on an agenda containing a ***brief general description of each item of business to be transacted***

or discussed at the meeting, including items to be discussed in closed session. A brief general description of an item generally need not exceed 20 words. The agenda shall specify the time and location of the regular meeting and shall be posted in a location that is freely accessible to members of the public and on the local agency's Internet Web site, if the local agency has one." (emphasis added.)

45. The Successor Agency had a mandatory, non-discretionary, ministerial duty to comply with the requirements of the Brown Act, including Government Code section 54954.2.

46. The Successor Agency violated the Brown Act by inadequately describing the business to be transacted at its June 19, 2018 meeting in violation of Government Code section 54954.2 with its vague, ambiguous, and misleading agenda language. The agenda language for item CSA-3 provided no indication that the properties for which the Successor Agency sought direction from the Former Oversight Board were subject to the Amended ENA and within the "Site" proposed for the Clippers arena. The agenda also failed to provide any information regarding the referenced "Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." Neither the agenda itself, nor the accompanying staff report gave any indication as to what those agreements required, who was a party to the agreements, the dates of the agreements, the agreement numbers, where the agreements may be available to review, etc.

47. In taking the action that it took on agenda item CSA-3 at its June 19, 2018 regular meeting, the Successor Agency violated the Brown Act.

48. On July 13, 2018, MSG Forum submitted a letter to the Successor Agency demanding that it cure and correct the action taken at its June 19, 2018 regular meeting in violation of the Brown Act. While Government Code section 54960.1(c)(2) directs that, within 30 days of the demand, a legislative body shall either cure an action taken in violation of the Brown Act or inform the demanding party of its decision not to cure and

correct the challenged action, the Successor Agency failed to respond to MSG Forum's demand.

49. The Successor Agency has a history of violating the Brown Act in connection with the ENA and the Amended ENA. (*See* **Exhibit A.**) Consequently, MSG Forum has reason to believe that the Successor Agency will continue to violate the Brown Act in the future.

50. MSG Forum and the public were prejudiced and harmed as a result of the foregoing violation of the Brown Act because neither it nor the public were able to adequately understand the items to be discussed or acted on by the Successor Agency at the June 19, 2018 regular meeting, and were therefore denied the opportunity to prepare and provide meaningful comments to the Successor Agency.

51. MSG Forum requests that this Court hold and declare that the Successor Agency violated the Brown Act on June 19, 2018, by providing a vague, ambiguous and misleading agenda with respect to an action in furtherance of the proposed Clippers arena agenda and voting to request that the Former Oversight Board direct it to take certain actions with respect to the Redevelopment Agency Properties. MSG Forum further requests that this Court issue a writ of mandate enjoining the Successor Agency from undertaking any action or discussion on any item not properly described on an agenda under Government Code section 54954.2(a) (regular meeting) and/or section 54956 (special meetings).

52. MSG Forum further requests that this Court hold and declare that, based on the violations of the Brown Act at the June 19, 2018 regular meeting, any action taken by the Successor Agency at that meeting to request that the Former Oversight Board direct it to take certain actions with respect to the Redevelopment Agency Properties is null and void. MSG Forum also requests that this Court issue a writ of mandate compelling the Successor Agency to nullify its action to request that the Former Oversight Board direct it to take certain actions with respect to the Redevelopment Agency Properties.

SECOND CAUSE OF ACTION

(Brown Act Violations (Gov. Code § 54950 *et seq.*) – Against Former Oversight Board and Consolidated Oversight Board as Successor in Interest)

53. MSG Forum incorporates and alleges the allegations in paragraphs 1 through 52, inclusive, as if fully set forth herein.

54. Pursuant to Government Code section 54960, an interested person such as MSG Forum may "commence an action by mandamus, injunction, or declaratory relief for purpose of stopping or preventing violations or threatened violations" of the Brown Act, or to "determine the applicability of this chapter to ongoing actions or threatened future actions of the legislative body, or to determine the applicability of this chapter to past actions of the legislative body, subject to Section 54960.2 …"

55. Pursuant to Government Code section 54960.1, an interested person such as MSG Forum may "commence an action by mandamus or injunction for the purpose of obtaining a judicial determination that an action taken by a legislative body of a local agency in violation of Section … 54956… is null and void under this section."

56. Pursuant to Government Code section 54956, a "special meeting may be called at any time by the presiding officer of the legislative body of a local agency, or by a majority of the members of the legislative body, by delivering written notice to each member of the legislative body and to each local newspaper of general circulation and radio or television station requesting notice in writing and posting a notice on the local agency's Internet Web site, if the local agency has one. The notice shall be delivered personally or by any other means and shall be received at least 24 hours before the time of the meeting as specified in the notice. The call and notice shall specify the time and place of the special meeting and the business to be transacted or discussed. No other business shall be considered at these meetings by the legislative body." (Gov. Code § 54956(a).)

57. The Former Oversight Board had a mandatory, non-discretionary, ministerial duty to comply with the requirements of the Brown Act, including Government Code section 54956.

58. The Former Oversight Board violated the Brown Act by inadequately describing the business to be transacted at its June 27, 2018 special meeting in violation of Government Code section 54956 with its vague, ambiguous, and misleading language on the written notice of the special meeting. The agenda language for item 3 provided no indication that the properties for which it was proposing to provide direction were subject to the Amended ENA and within the location proposed for the Clippers arena. The agenda also failed to provide any information regarding the referenced "Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." Neither the agenda itself, the accompanying staff report, nor the adopted Resolution 18-OB-003 gave any indication as to what those agreements required, who was a party to the agreements, the dates of the agreements, the agreement numbers, where the agreements may be available to review, etc.

59. In adopting Resolution 18-OB-003 on June 27, 2018, the Former Oversight Board violated the Brown Act.

60. MSG Forum and the community at large were prejudiced and harmed as a result of the foregoing violation of the Brown Act because both it and other members of the public were unable to adequately understand the items to be discussed or acted on by the Former Oversight Board at the June 27, 2018 special meeting, and were therefore denied the opportunity to prepare and provide meaningful comments to the Former Oversight Board.

61. On June 29, 2018, MSG Forum submitted a letter to the Former Oversight Board demanding that it cure and correct the action taken at its June 27, 2018 regular meeting in violation of the Brown Act. While Government Code section 54960.1(c)(2) directs that, within 30 days of the demand, a legislative body shall either cure an action

taken in violation of the Brown Act or inform the demanding party of its decision not to cure and correct the challenged action, the Former Oversight Board failed to respond to MSG Forum's demand. On July 27, 2018, MSG Forum informed the Consolidated Oversight Board of the Former Oversight Board's improper actions taken on June 27, 2018 and MSG Forum's June 29, 2018 cure and correct demand. (A true and correct copy of the letter to the Consolidated Oversight Board is attached as **Exhibit L.**)

62. MSG Forum requests that this Court hold and declare that the Former Oversight Board violated the Brown Act on June 27, 2018 by adopting Resolution 18-OB-003.

63. MSG Forum further requests that this Court hold and declare that, based on the violations of the Brown Act at the June 27, 2018 meeting, the Former Oversight Board's action adopting Resolution 18-OB-003 is null and void. MSG Forum also requests that this Court issue a writ of mandate compelling the Consolidated Oversight Board, as successor in interest to the Former Oversight Board, to nullify the Former Oversight Board's action adopting Resolution 18-OB-003 and directing the Successor Agency to take no action in furtherance of the disposition of the Redevelopment Agency Properties until so directed by the Consolidated Oversight Board following a properly noticed public meeting that complies with the Brown Act.

THIRD CAUSE OF ACTION

(Writ of Mandate (Cal. Code Civ. Proc. §§ 1085, 1094.5) – Against Former Oversight Board and Consolidated Oversight Board as Successor in Interest)

64. MSG Forum incorporates and alleges the allegations in paragraphs 1 through 63, inclusive, as if fully set forth herein.

65. The Former Oversight Board had a clear duty to oversee the Successor Agency's wind down activities, including the disposition of the Successor Agency's assets and property.

66. The Former Oversight Board was required to hold a public meeting before directing the Successor Agency to dispose of its property. The Former Oversight Board held the meeting. The Former Oversight Board was vested with discretion in determining how to direct the Successor Agency with regard to the Redevelopment Agency Properties.

67. On information and belief, the Former Oversight Board members did not possess or consider the "Federal Aviation Administration grant agreements and Los Angeles World Airport letter agreements" when the Former Oversight Board directed the Successor Agency to dispose of the Redevelopment Agency Properties, even though the Former Oversight Board's Resolution 18-OB-003 determined that the Redevelopment Agency Properties were subject to the Federal Aviation Administration grant agreements and Los Angeles World Airport letter agreements.

68. The Former Oversight Board's finding that the Redevelopment Agency Properties were subject to the Federal Aviation Administration grant agreements and Los Angeles World Airport letter agreements, and its direction to the Successor Agency to dispose of the Redevelopment Agency Properties subject to the disposition requirements in those agreements, without, on information and belief, having reviewed or possessed such agreements, violates the Former Oversight Board's mandatory duty to oversee the Successor Agency under the Dissolution Act, is arbitrary and capricious, is wholly lacking in evidentiary support, and constitutes a prejudicial abuse of discretion.

69. MSG Forum is beneficially interested. MSG Forum owns the Forum, which is less than two miles away from the Redevelopment Agency Properties. Moreover, MSG Forum has a lease interest[1] in vacant lots that abut the Redevelopment Agency Properties. As such, any changes to or development on the Redevelopment

[1] The continued validity of MSG Forum's lease interest is subject to another pending action between MSG Forum and the City, *MSG Forum, LLC v. City of Inglewood et al.*, YC072715, Los Angeles County Superior Court, Torrance (2017).

Agency Properties may have a material impact on the operation or value of MSG Forum's properties and interests.

70. MSG Forum is also a taxpayer with an interest in preventing the illegal and improper disposition of the Successor Agency's property. MSG Forum also has a beneficial interest in ensuring that the Former Oversight Board properly carries out its duty to oversee the Successor Agency's wind down activities.

71. MSG Forum has exhausted all potential administrative remedies, including providing written and oral testimony at the Former Oversight Board's June 27, 2018 special meeting where it adopted Resolution 18-OB-003.

72. MSG Forum has no plain, speedy, or adequate legal remedy outside the grant of a writ of mandate. No money or other legal remedies can adequately compensate MSG Forum for the hardship caused by the Former Oversight Board's abuse of its discretion in the performance of its legal duties.

PRAYER FOR RELIEF

WHEREFORE, MSG Forum respectfully prays for the following relief:

On the First Cause of Action (Brown Act Violations Against Successor Agency)

1. That this Court enter a declaratory judgement that the Successor Agency violated the Brown Act at its June 19, 2018 regular meeting;

2. That this Court issue a writ of mandate enjoining the Successor Agency from undertaking any action or discussion on any item not properly described on an agenda under Government Code section 54954.2(a) (regular meeting) and/or section 54956 (special meetings);

3. That this Court issue a writ of mandate enjoining the Successor Agency from taking any action in furtherance of the disposition of the Redevelopment Agency Properties until so directed by the Consolidated Oversight Board following a properly noticed public meeting that complies with Government Code sections 54950 *et seq.*;

4. That this Court enter a declaratory judgement that the action taken by the Successor Agency on June 19, 2018 on agenda item CSA-3 is null and void;

5. That this Court issue a writ of mandate compelling the Successor Agency to nullify the action taken at its June 19, 2018 regular meeting on agenda item CSA-3;

On the Second Cause of Action (Brown Act Violations Against Former Oversight Board):

6. That this Court enter a declaratory judgement that the Former Oversight Board violated the Brown Act at its June 27, 2018 meeting;

7. That this Court enter a declaratory judgement that the action taken by the Former Oversight Board on June 27, 2018 to adopt Resolution 18-OB-003 is null and void;

8. That this Court issue a writ of mandate compelling the Consolidated Oversight Board as successor in interest to the Former Oversight Board to nullify the action taken by the Former Oversight Board on June 27, 2018 to adopt Resolution 18-OB-003 and directing the Successor Agency to take no further action in furtherance of the disposition of the Redevelopment Agency Properties until such time the Consolidated Oversight Board directs it do so following a properly noticed public meeting that complies with Government Code sections 54950 *et seq.*;

On the Third Cause of Action (Writ of Mandate):

9. That this Court issue a writ of mandate directing the Consolidated Oversight Board as successor in interest to the Former Oversight Board to vacate and nullify the Former Oversight Board's June 27, 2018 adoption of Resolution 18-OB-003.

As to All Causes of Action:

10. That this Court issue an order awarding MSG Forum its attorneys' fees incurred in this action pursuant to Government Code section 54960.5 and/or Code of Civil Procedure section 1021.5;

11. That this Court issue an order awarding MSG Forum its costs incurred in this action; and

12. For such other relief as the Court deems just and proper.

Dated: August 21, 2018

Respectfully submitted,

Successor Agency to the Inglewood Redevelopment Agency
1 Manchester Boulevard, 4th Floor
Inglewood, CA 90301

Re: Demand to Cure Violation of the Ralph M. Brown Act

Dear Chairperson Butts and Board Members:

On behalf of MSG Forum LLC, and pursuant to Government Code sections 54960 and 54960.1, we demand that the Successor Agency to the Inglewood Redevelopment Agency (the "Successor Agency") cure the violation of the Ralph M. Brown Act (Government Code section 54950 *et seq.*) (the "Brown Act") that the Successor Agency committed at the improperly noticed and agendized special meeting held on June 15, 2017 (the "Special Meeting"), with respect to Special Meeting Consent Item No. 1.

On June 15, 2017, the Successor Agency, together with the Inglewood City Council (the "City") and the Inglewood Parking Authority (the "Authority"), held an improperly noticed special meeting. Pursuant to Health & Safety Code section 34173, subdivision (g), "[a] successor agency is a separate public entity from the public agency that provides for its governance and the two entities shall not merge. . . . Each successor agency shall be deemed to be a local entity for purposes of the Ralph M. Brown Act[.]" As a separate public entity subject to the Brown Act, the Successor Agency was required to give the public notice of any special meeting by posting a notice on its website. *See* Gov. Code § 54956(a) ("[a] special meeting may be called at any time . . . by delivering written notice . . . and posting a notice on the local agency's Internet Web site, if the local agency has one").

8107/71/60

The Successor Agency has its own website.[1] The Successor Agency did not post public notice of the Special Meeting on its website. Neither the "Home Page"[2] nor the "Agenda Center"[3] contains any reference to, or notice of, the June 15, 2017 Special Meeting. Attached as Exhibit 1 are screenshots of the Home Page and Agenda Center, respectively, dated June 16, 2017. These exhibits demonstrate that the Successor Agency failed to post the requisite notice.

This failure to post notice of the Successor Agency's June 15, 2017 Special Meeting violated the Brown Act. The Successor Agency's actions at the June 15, 2017 Special Meeting are therefore void.

Further, there is no explicit indication that the *Successor Agency* – which is a separate entity (*see* Health & Safety Code § 34173(g)) – would take any action with respect to the ENA at the meeting. Consent Item No. 1 is listed on the agenda under the heading "ECONOMIC AND COMMUNITY DEVELOPMENT DEPARTMENT." This is a department of the City. Moreover, the following language appears immediately above this heading: "These items will be acted upon as a whole unless called upon by a Council Member." The Successor Agency does not have Council Members; it has Board Members. The Agenda does not include any explicit reference to Board Members acting on these items, or taking any action at all.

In sum, the agenda – which was posted exclusively on the *City's* website, and identified Consent Item No. 1 as an action item for a *City* department, to be acted on by *City* Council Members – failed to provide reasonable notice that the *Successor Agency* could or would take any action regarding the ENA at the meeting.

We demand that the Successor Agency immediately cure its Brown Act violations as described above. In particular, the "action" taken by the Successor Agency is void and the Successor Agency must rescind the improper action taken at the improperly noticed Special Meeting, including entering into the ENA. In any event, the ENA is currently void because of the Successor Agency's failure to lawfully enter into it.

Government Code section 54960.1 requires the Successor Agency either to cure or correct its actions, or to inform us of its intent not to do so, within 30 days from the receipt of this demand. If the Successor Agency fails to cure or correct its violations as demanded and required by law, our client intends to seek judicial invalidation of the action (along with its costs and reasonable attorneys' fees) pursuant to Government Code section 54960.1.

Sincerely,

Marvin S. Putnam
of LATHAM & WATKINS LLP

The City Council of the City of Inglewood is the designated Governing Board of the Successor Agency. The officers of the Successor Agency are:

- James T. Butts, Jr., Chairperson
- George Dotson, Board Member
- Ralph L. Franklin, Board Member
- Eloy Morales, Board Member
- Alex Padilla, Board Member

Overview

The City of Inglewood ("City") created the Agency in 1969 to exercise the powers granted by the Redevelopment Law. Six redevelopment project areas were adopted that were merged into one, the Merged and Amended Redevelopment Project Area (Merged Project Area). The Merged Project Area covered approximately 1,594 acres of land in the City and included major commercial and industrial arteries along La Cienega Boulevard, La Brea Avenue, Prairie Avenue, Florence Avenue, Century Boulevard and Imperial Highway.

Important Dates / Conclusions

On December 29, 2011, the California Supreme Court upheld Assembly Bill XI 26 (AB xI 26), which provides for the termination of all California Redevelopment Agencies (RDAs).

On January 10, 2012, The City elected to become the Successor Agency of the former Inglewood Redevelopment Agency taking effect on February 1, 2012. As the Successor Agency the City assumes the obligations of the former Inglewood Redevelopment Agency and elects to carry out activities necessary to wind down its affairs. This includes completing the Inglewood Senior Center, reconstructing Century Boulevard and the Hollywood Park redevelopment project. The Forum, a Successor Agency project, has already been completed.

Since the initial adoption of AB X1 26, additional legislation has passed affecting the dissolution process of Redevelopment Agencies and creating additional reporting requirements.

Subject: Re: Question

Hello Chris,

The document has to be posted with the agenda. That is why we elected to just post 24 hours versus the normal 72 hours.

Attachment No. 1

AGREEMENT NO. 17-456 (AMENDMENT NO. 1)
APPROVED: AUGUST 15, 2017

AMENDED AND RESTATED EXCLUSIVE NEGOTIATING AGREEMENT

This Amended and Restated Exclusive Negotiating Agreement, dated as of August 15, 2017,[1] (the "Agreement"), is made by and among the City of Inglewood, a municipal corporation (the "City"), the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, a public body, corporate and politic (the "Successor Agency"), the Inglewood Parking Authority, a public body, corporate and politic (the "Authority"), and Murphy's Bowl LLC, a Delaware limited liability company (the "Developer").

The City, Successor Agency and the Authority are sometimes collectively referred to herein as the "Public Entities"). The Public Entities and Developer are sometimes herein referred to as the "Parties").

For and in consideration of the mutual covenants and promises herein, the parties agree as follows:

RECITALS

This Agreement amends and restates in its entirety that certain Exclusive Negotiating Agreement previously entered into by the Parties and approved on June 15, 2017 (the "Prior ENA") with reference to the following facts:

A. The subject matter of this Agreement involves certain negotiation parameters established by the Parties with respect to a proposed development of an NBA professional basketball facility as more specifically described in Recital B and generally located on certain real property to be subsequently determined by the Parties within the following area of the City: Century Boulevard on the north, Prairie Avenue on the west along with two parcels located to the west of Prairie Avenue depicted as the approximately 2.03 acre parcel and the approximately 3.12 acre parcel as shown on Exhibit A, the Study Area Site Map, then midblock on West 102nd Street toward West 103rd Street on the south to Doty Avenue, and then West 102nd Street on the south to Yukon Avenue, and then Yukon Avenue on the east (the "Study Area Site"). The Study Area Site is generally depicted on the "Study Area Site Map" attached hereto, labeled Exhibit A, and incorporated herein by this reference. Once established by the Parties pursuant to negotiations established by this Agreement, the desired parcels of real properties within the Study Area Site will be specifically identified and consist of all or some of the following parcels (the "Potential Arena Site"): (1) those certain parcels of real property currently owned by the City referred to and identified as the "City Parcels" and designated as such on the Study Area Site Map, (2) those certain parcels of real property owned by the Successor Agency referred to and identified as the "Agency Parcels" and designated as such on the Study Area Site Map, and (3) those certain parcels of commercial non-residential real property currently owned by third parties referred to and identified as the "Potential Participating Parcels" and designated as such on the Study Area Site Map. Under no circumstances shall the Potential Arena Site include any parcel of real property

[1] The "Effective Date" of this Agreement, and the commencement of the Exclusive Negotiating Period, shall be the first calendar day of the month following the approval of this Agreement by the Public Entities.

on which a church or occupied residential use exists. Moreover, in no event shall the City or the Authority undertake any action to acquire any Potential Participating Parcel except in accordance with Section 2 and all applicable law. Neither the City nor the Authority shall be under any obligation pursuant to the terms of this Agreement to adopt a resolution of necessity authorizing the acquisition of any of the Potential Participating Parcels by eminent domain, and neither the City nor the Authority has committed to do so.

B. The Developer has proposed development of a premier and state of the art National Basketball Association ("NBA") professional basketball arena consisting of approximately 18,000 to 20,000 seats as well as related landscaping, parking and various other ancillary uses related to and compatible with the operation and promotion of a state-of-the-art NBA arena within the Study Area Site (the "Proposed Project").

C. It is anticipated by the Parties that, subject to the satisfaction of all the provisions of this Agreement, including without limitation the determination of the Potential Arena Site, the parcels of real property comprising the Potential Arena Site may be separately conveyed to the Developer by each of the City, Successor Agency and/or the Authority in accordance with their respective interests in the Potential Arena Site; provided however, and at the discretion of the Public Entities, the City Parcels, Agency Parcels and the Authority's interest, if any, may be singularly conveyed by the City or the Authority to the extent feasible and legally permissible. Moreover, it is contemplated by the Parties that conveyance of the City Parcels, Agency Parcels and the Authority's interest, if any, by the Public Entities will take place concurrently with back to back escrow closings to the extent a joint conveyance by the City or the Authority is not legally feasible and permissible.

D. In furtherance of the objectives of the California Redevelopment Dissolution Law, as amended ("AB 26"), if the Proposed Project is approved by the Public Entities, the Successor Agency shall convey its interests in the Agency Parcels within the Study Area Site (as defined in this Agreement) directly to the Developer under applicable provisions contained in AB 26. AB 26 has required the dissolution of the former Inglewood Redevelopment Agency (the "RDA"). The conveyance of the Agency Parcels within the Study Area Site shall be conveyed (if approved) consistent with the Successor Agency's approved Long Range Property Management Plan (the "LRPMP"), which has been approved by the Successor Agency, the Oversight Board to the Successor Agency, and the California Department of Finance (the "DOF"). The Developer acknowledges that the Public Entities have not approved the Proposed Project as of the Effective Date of this Agreement, notwithstanding the Agreement's contemplation of the process by which the approvals may be obtained and will not do so except as provided in this Agreement in the exercise of their respective absolute discretion.

E. Subject to the requirements of AB 26, the Successor Agency, along with the City and the Authority, has selected and agreed to negotiate with the Developer for the potential conveyance and development of the Agency Parcels (along with the balance of the Study Area Site, or applicable portion thereof subsequently determined) as a result of the Developer's affiliation with an NBA franchise that can be moved to the City (subject to NBA approval), and the Developer's experience and expressed commitment to expeditiously develop the Proposed Project on the Study Area Site so as to bolster the economic revitalization of Inglewood and a unique opportunity not otherwise available to provide an NBA franchise within the City of

09/11/2018

Inglewood. The Public Entities have also agreed to negotiate with the Developer for the Proposed Project because of: (a) the unique economic development and employment opportunities the Proposed Project would provide to the financial base and overall fiscal stability of the City that might otherwise not be available; and (b) the anticipated expansion of the City's presence as a major sports and entertainment center.

F. No entitlements required or requested by the Developer for the development of the Proposed Project will be considered for approval or approved by the Public Entities until the requirements of this Agreement have been satisfied, including without limitation, the approval of a Disposition and Development Agreement ("DDA") by the Public Entities as described in Section 6, compliance with CEQA as provided in Section 7, and all applicable City land use and Municipal Code requirements have been satisfied.

G. It is being proposed by the Developer that the Proposed Project be developed in multiple phases and that it be developed in a manner consistent with the descriptions, undertakings, procedures and other provisions set forth in this Agreement and as specifically set forth in a proposed DDA subject to changes or revisions if and as agreed to by the Public Entities and Developer (subject to the provisions of Section 25 below), or as may arise from the City's independent regulatory review of the Proposed Project.

H. As a result of the qualifications, experience and identity of Developer, which are of particular concern to the Public Entities, both individually and collectively, the Public Entities desire to enter into this Agreement with the Developer with the objective of negotiating a proposed mutually acceptable DDA for consideration by the Public Entities, providing for the development of the Proposed Project consistent with the terms and conditions of this Agreement.

I. The Public Entities anticipate that following execution of this Agreement and through the period of negotiation and the preparation of any DDA for the development of the Proposed Project, staff of the City on the behalf of the Public Entities, as well as certain consultants and attorneys hired by the Public Entities will devote substantial time and effort in reviewing plans, contacting and meeting with the Developer and various other necessary third parties, and providing other aid and assistance to the Developer in connection with the Proposed Project, as well as negotiating and preparing the proposed DDA described above.

Section 1. Definitions. The following terms shall have the meaning ascribed thereto, unless the context requires otherwise:

"Agreement" means this Amended and Restated Exclusive Negotiating Agreement, by and among the City, Successor Agency, the Authority and the Developer.

"Authority" means the Inglewood Parking Authority, a public body organized and existing pursuant to the California Parking Law of 1949.

"CEQA" has the meaning given in Section 7.

"City" means the City of Inglewood, a municipal corporation, organized and existing pursuant to the constitution and laws of the State of California.

"DDA" has the meaning given in Recital F.

"Developer" means Murphy's Bowl LLC, a Delaware limited liability company.

"Entitlements" has the meaning given in Section 25.

"Exclusive Negotiating Period" means a period of time consisting of thirty-six (36) months commencing on the Effective Date specified in this Agreement above, subject to extension as provided in this Agreement for Force Majeure and Challenges and/or for additional negotiations as established by the Public Entities pursuant to Section 4 below.

"Party" means any party to this Agreement.

"Potential Arena Site" has the meaning given in Recital A.

"Study Area Site" has the meaning given in Recital A.

"Successor Agency" means the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, a public entity, corporate and politic, established pursuant to AB 26.

Section 2. Obligations of the Public Entities.

(a) During the Exclusive Negotiating Period and the sixty (60) day period referred to in Section 22 below, the Public Entities shall perform the following: (i) review and consider all financial documents required of Developer for the financing of the Proposed Project; and (ii) shall not negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding a proposed DDA for the sale, lease, disposition, and/or development of the City Parcels or Agency Parcels within the Study Area Site; provided however, and notwithstanding anything contained in this Agreement, the City shall not be precluded from engaging in negotiations and discussions with current property owners and/or authorized tenants of the Potential Participating Parcels for the rehabilitation or development of their respective properties in accordance with existing City land use regulations and City Municipal Code requirements, and any such negotiations and discussions by the City shall not be a violation of this Agreement. City staff shall be available to meet with the Developer to discuss the proposed development of the Proposed Project, the site plan and architectural renderings, and any other issues pertinent to the preparation of a DDA for the proposed development of the Proposed Project within the Study Area Site.

(b) If the City and/or the Authority determines in their sole discretion that all or certain of those parcels of real property comprising the Potential Participating Parcels specifically identified by the Parties are desirable for the development of the Proposed Project, the City and/or the Authority, as applicable, subject to the Developer rights and obligations as set forth in Section 3(g), shall consider acquisition of the parcels of real property comprising the Potential Participating Parcels so identified by the Parties in accordance with applicable law. In the event the City and/or the Authority, as applicable, determined, in its sole discretion, that it(they) is(are) unable to acquire all such identified and desirable parcels of the Potential Participating Parcels by negotiated voluntary sale, then the City or the Authority, as applicable, may elect, in its sole discretion and without any obligation or commitment to do so, to give legal notice and schedule a

public hearing to consider the adoption of a resolution of necessity authorizing the acquisition of the Potential Participating Parcels by eminent domain. The adoption of the resolution of necessity shall be subject to the sole discretion of the City and/or the Authority and nothing in this Agreement shall obligate or commit the City and/or the Authority to adopt a resolution of necessity with respect to any of the Potential Participating Parcels.

(c) For purposes of Developer's initial due diligence for the Proposed Project during the Exclusive Negotiating Period, the City shall grant Developer access to the City Parcels and Agency Parcels pursuant to a right of entry agreement as described in Section 18(b), which right of entry shall continue as long as this Agreement is in effect; and the City shall respond to requests for information from the Developer in a timely fashion. The Public Entities acknowledge and agree that Developer's due diligence may encompass such matters as, without limitation, title and survey, environmental conditions, soil conditions, physical conditions, siting, access, traffic patterns, financing, economic feasibility, platting, and zoning.

Section 3. Obligations of Developer. During the Exclusive Negotiating Period the obligations of Developer shall include the following:

(a) Within thirty (30) days of the Effective Date of this Agreement, the Developer and City shall enter into a funding agreement pursuant to which the Developer shall reimburse the City for all third party costs incurred in obtaining the necessary documentation required for the review and consideration of the Proposed Project within the Study Area Site (the "Environmental Review"), as may be required by CEQA (as such term is defined in Section 7). The City shall consult with Developer and keep Developer reasonably informed regarding the proposed timeline for the Environmental Review and the selection of the vendors to perform the Environmental Review. The funding agreement shall provide a process where the City shall establish a budget for the Environmental Review which shall be approved or disapproved in Developer's reasonable discretion and shall contain a dispute resolution procedure in the event the parties cannot agree on the budget.

(b) Within one hundred fifty (150) days of the Effective Date of this Agreement, the Developer shall provide to the City a reasonable confidential draft of cost pro forma, and a reasonable confidential draft table describing the sources and uses of funds and cash flow projections and distributions, concerning the Proposed Project to be developed within the Study Area Site, and a narrative describing the fundamental economics of the Proposed Project (the "Proposed Project Pro Forma"), in a form reasonably acceptable to the City. If the Proposed Project Pro Forma submitted by the Developer to the City is not reasonably acceptable to the City, the City shall within thirty days after receipt of the Proposed Project Pro Forma provide detailed comments about the Proposed Project Pro Forma and set forth those items that are unacceptable to the City; pursuant to which, the City and the Developer shall meet and negotiate in good faith to modify the Proposed Project Pro Forma at a level acceptable to the City. The Parties acknowledge the information to be provided under this Section 3(b) and Section 3(c) may contain proprietary confidential material, and if so requested, the Public Entities and Developer will seek to enter into a mutually satisfactory confidentiality agreement, within the maximum limits permitted by law.

(c) Within sixty (60) days after the City finds the Proposed Project Pro Forma acceptable, the Developer shall also provide a confidential conditional commitment letter from an

09/11/2018
09/12/2018

equity investor providing the necessary equity financing consistent with the acceptable Proposed Project Pro Forma. This condition may be satisfied by the Developer submitting to the City evidence reasonably acceptable to the City demonstrating sufficient liquidity required for the development of the Proposed Project within the Study Area Site. If such submission is not reasonably acceptable to the City, the City shall within thirty days after receipt of the Proposed Project Pro Forma provide detailed comments setting forth those items that are unacceptable to the City, and the City and the Developer shall meet and negotiate in good faith to modify the submission(s) in order that such evidence may be acceptable to the City.

(d) Within one hundred eighty (180) days of the Effective Date of this Agreement, the Developer shall deliver to the City a sketch and legal description of the portions of the property which the Developer would like to acquire for development of the Proposed Project (which property shall constitute the "Proposed Arena Site") and a conceptual site plan and basic architectural renderings for the development of the Proposed Project and any additional information reasonably requested by the City concerning any conceptual site plan and basic architectural renderings for the development of the Proposed Project within the Study Area Site submitted by the Developer in a form sufficient to commence the Environmental Review. The Parties acknowledge that the detailed site plan and architectural drawings shall not be required to be prepared by Developer until Developer is processing the Entitlements (as such term is defined in Section 25, below), at which time final site plan and architectural renderings shall be prepared and shall include a well-defined architectural concept for the Proposed Project showing vehicular circulation and access points, amounts and location of parking, location and size of all buildings (including height and perimeter dimensions) pedestrian circulation, landscaping and architectural character of the Proposed Project. However, no such site plan or architectural renderings shall be deemed final until the completion of Environmental Review in accordance with CEQA and approved by the City pursuant to an approved and executed DDA and the submittal of complete applications by the Developer for the Entitlements required for development of the Proposed Project within the Study Area Site.

(e) Conduct and make at least two presentations of the Proposed Project at community meetings noticed per City instructions. The first such community meeting shall be conducted not later than ninety (90) days after the date of the expiration of the one hundred fifty (150) day period referenced in Section 3(b), above, and the second such community meeting shall be conducted not later than one hundred and eighty (180) days after the date of the first community meeting.

(f) The Public Entities acknowledge that in consideration for the Public Entities entering into this Agreement, the Developer has delivered and City has accepted the Non-Refundable Deposit required by Section 5.

(g) If the City and/or the Authority determine in their sole discretion that all or certain of those parcels of real property comprising the Potential Participating Parcels specifically identified by the Parties are desirable for the development of the Proposed Project, and the City and/or the Authority determine to acquire, in accordance with all applicable law, all or certain of these desirable parcels, the Developer shall fully advance to the City and/or Authority, as applicable, all costs associated with the acquisition of these parcels including, but not limited to, the payment of the negotiated purchase price for these parcels and all legally required relocation costs associated with the acquisitions (the "Developer Contribution") within a reasonable time

09/11/2018

following the written notice from the City and/or Authority requesting the Developer Contribution; provided, however, that as to any such Potential Participating Parcel for which the Developer Contribution is sought, before the City and/or Authority: (i) take any action that would create any obligations whatsoever on the part of the Developer, in each case with respect to acquiring such parcel, it shall first obtain the Developer's consent (which shall not be unreasonably withheld, conditioned or delayed) to such actions; or (ii) enter into any acquisition agreement with any owner of any such parcel, it shall first obtain the Developer's consent (which shall not be unreasonably withheld, conditioned or delayed) for the proposed purchase price for any such parcel(s). In the event that the City and/or Authority, as applicable, legally determines to use its/their eminent domain authority subject to applicable California eminent domain law requirements and limitations, after having adopted a resolution of necessity authorizing the acquisition, to acquire all or certain parcels of the real property comprising the Potential Participating Parcels desirable for the development of the Proposed Project, the Developer shall advance to the City and/or Authority, as applicable, all costs associated with the exercise of such eminent domain authority (including all court costs and reasonable legal fees), as well as all acquisition costs including, but not limited to, the payment of fair market value for each of the condemned parcels as determined by the Court, or pursuant to a negotiated acquisition or settlement agreement, as approved by the Developer (the "Expanded Developer Contribution") within a reasonable amount of time following written notice from the City and/or Authority requesting the Expanded Developer Contribution; provided, however, that before the City and/or the Authority take any actions with respect to exercising such eminent domain authority as to any such Parcel for which the City and/or the Authority requests the Expanded Developer Contribution, it or they, as applicable, shall first obtain the Developer's consent (which shall not be unreasonably withheld, conditioned or delayed) to such actions. In addition, subject to the aforesaid prior consent, the Developer shall also pay all legally required relocation costs associated with such acquisition. With the exception of the court costs and reasonable attorney fees advanced and paid by the Developer for the eminent domain action undertaken by the City and/or the Authority, as applicable, all such advanced acquisition costs shall be credited against the "Payment Consideration Amount" as defined and described in Section 6(c) below, payable by the Developer to the City and/or the Authority, as applicable, for the conveyance of the applicable portions of the Study Area Site. The Parties agree that, upon the acquisition by the City and/or the Authority, as applicable, of any Potential Participating Parcel pursuant to this Section 3(g), such Potential Participating Parcel shall, for all purposes of this Agreement, be deemed to be a City Parcel or Agency Parcel, as the case may be.

Section 4. Exclusive Negotiation Period.

THE EXCLUSIVE NEGOTIATING PERIOD SHALL, IF NOT SOONER TERMINATED AS PROVIDED IN SECTION 8, TERMINATE ON THE DATE THAT IS THIRTY-SIX (36) MONTHS AFTER THE EFFECTIVE DATE HEREOF, SUBJECT TO EXTENSION AS PROVIDED IN THIS AGREEMENT FOR FORCE MAJEURE AND CHALLENGES. HOWEVER, THE EXCLUSIVE NEGOTIATING PERIOD MAY ALSO BE EXTENDED BY THE MUTUAL WRITTEN CONSENT OF THE PARTIES FOR ONE ADDITIONAL PERIOD OF SIX (6) MONTHS. THE CITY MANAGER MAY: (1) GRANT SUCH EXTENSION FOR AND ON BEHALF OF THE CITY; AND (2) GRANT SUCH EXTENSION IN HIS CAPACITY AS EXECUTIVE DIRECTOR OF THE SUCCESSOR AGENCY, FOR AND ON BEHALF OF THE SUCCESSOR AGENCY, AND (3) GRANT SUCH EXTENSION IN HIS CAPACITY AS EXECUTIVE DIRECTOR OF THE AUTHORITY FOR

AND ON BEHALF OF THE AUTHORITY, ALL OF WHICH IN HIS REASONABLE DISCRETION. HOWEVER, NOTWITHSTANDING THE FOREGOING, THE CITY MANAGER AND IN HIS CAPACITY AS EXECUTIVE DIRECTOR SHALL NOT DENY ANY REQUESTED EXTENSION IF AT THE TIME OF THE REQUEST BY DEVELOPER, THE PUBLIC ENTITIES ARE UNABLE TO SIGN A DDA DUE TO ITS FAILURE TO: (I) COMPLETE ANY APPLICABLE ENVIRONMENTAL REVIEW NECESSARY FOR THE PUBLIC ENTITIES TO SIGN A DDA; OR (II) SATISFY ANY CONDITION OR REQUIREMENT OF AB 26.

Initials: *See Next Page* Developer _____ City

_____ Successor Agency _____ Authority

If the City Manager and in his capacity as Executive Director, has granted a written extension of the term of this Agreement as provided hereinabove, then the Parties shall within such extended term, and subject to Developer's right to terminate this Agreement under Section 8(b), continue to negotiate in good faith a DDA in accordance with the terms of this Agreement for the proposed development of the Proposed Project on the Study Area Site, and the Exclusive Negotiating Period under this Agreement shall be deemed extended for the period of the extension.

However, notwithstanding the foregoing, the City Manager and in his capacity as Executive Director may, in his sole discretion, submit any extension request to the City Council, the Successor Agency and the Authority for their consideration consistent with this Section 4.

Section 5. Non-Refundable Deposit. Developer, within twenty-four (24) hours after City's approval of the Prior ENA, deposited with the City the sum of One Million Five Hundred Thousand Dollars ($1,500,000) which amount constituted and is referred to herein as the "Non-Refundable Deposit." The Non-Refundable Deposit was paid as consideration to the Public Entities for entering into the Prior ENA and shall be used as consideration for the Public Entities entering into this Agreement, and the City shall have the right, but not the obligation to use or spend the proceeds of the Non-Refundable Deposit towards the payment of certain administrative costs and any other related expenses incurred by the Public Entities (the "City Expenses") relative to the negotiation and preparation of a DDA and/or the implementation of the various obligations of the Public Entities as set forth in this Agreement. All proceeds of the Non-Refundable Deposit shall be the sole property of the City upon submittal by Developer, and shall in no event be refundable, in whole or in part, to the Developer for any reason including, but not limited, to the Parties' inability to enter into a DDA.

Section 6. Disposition and Development Agreement. Subject to the Parties' rights to terminate this Agreement under Section 8, the Parties hereby acknowledge and agree that during the Exclusive Negotiation Period, the Parties shall use their respective good faith efforts to negotiate and enter into a DDA which shall include, but not be limited to, the following terms. The Parties hereby acknowledge that the following terms set forth a general outline for the Parties going forward and that the DDA will contain substantial additional terms which, through mutual negotiation and agreement, may differ from the following specific provisions and that nothing

AND ON BEHALF OF THE AUTHORITY, ALL OF WHICH IN HIS REASONABLE DISCRETION. If the City Manager and in his capacity as Executive Director, has granted a written extension of the term of this Agreement as provided hereinabove, then the Parties shall within such extended term, and subject to Developer's right to terminate this Agreement under Section 8(b), continue to negotiate in good faith a DDA in accordance with the terms of this Agreement for the proposed development of the Proposed Project on the Study Area Site, and the Exclusive Negotiating Period under this Agreement shall be deemed extended for the period of the extension.

However, notwithstanding the foregoing, the City Manager and in his capacity as Executive Director may, in his sole discretion, submit any extension request to the City Council, the Successor Agency and the Authority for their consideration consistent with this Section 4.

Section 5. Non-Refundable Deposit. Developer, within twenty-four (24) hours after City's approval of the Prior ENA, deposited with the City the sum of One Million Five Hundred Thousand Dollars ($1,500,000) which amount constituted and is referred to herein as the "Non-Refundable Deposit." The Non-Refundable Deposit was paid as consideration to the Public Entities for entering into the Prior ENA and shall be used as consideration for the Public Entities entering into this Agreement, and the City shall have the right, but not the obligation to use or spend the proceeds of the Non-Refundable Deposit towards the payment of certain administrative costs and any other related expenses incurred by the Public Entities (the "City Expenses") relative to the negotiation and preparation of a DDA and/or the implementation of the various obligations of the Public Entities as set forth in this Agreement. All proceeds of the Non-Refundable Deposit shall be the sole property of the City upon submittal by Developer, and shall in no event be refundable, in whole or in part, to the Developer for any reason including, but not limited, to the Parties' inability to enter into a DDA.

Section 6. Disposition and Development Agreement. Subject to the Parties' rights to terminate this Agreement under Section 8, the Parties hereby acknowledge and agree that during the Exclusive Negotiation Period, the Parties shall use their respective good faith efforts to negotiate and enter into a DDA which shall include, but not be limited to, the following terms. The Parties hereby acknowledge that the following terms set forth a general outline for the Parties going forward and that the DDA will contain substantial additional terms which, through mutual negotiation and agreement, may differ from the following specific provisions and that nothing

09/11/2018 08:11:22 AM

herein binds the Public Entities to undertake any action except in compliance with CEQA as provided in Section 7:

(a) A Scope of Development setting forth the specific development components of the Proposed Project including the total square feet of the Proposed Project, the number of required parking spaces and the design parameters for the Study Area Site including, but not be limited to, demolition and clearance activity on the Study Area Site, building height, acceptable architectural and landscape quality, access and circulation, determination of parcel boundaries, on-site and off-site improvements, site-perimeter treatment, landscaped buffers, parking, signage, lighting, and easements, if applicable. The design of the Proposed Project to be developed within the Study Area Site by the Developer shall be reasonably consistent with any concept, plans, schematics and drawings approved by the City.

(b) Developer's submittal to the City of various concepts, plans, schematics and drawings depicting the development of the Proposed Project within the Study Area Site on a phase-by-phase basis, the final construction plans and all other items and materials required by the City for its approval consideration of the Entitlements needed for the Proposed Project within the Study Area Site. Prior to conveyance of the Potential Arena Site to the Developer or as soon thereafter as they are completed, the Developer shall provide concept and schematic plans for the entire Proposed Project as well as final construction plans and any other related items or materials required for the development of the Proposed Project on the Potential Arena Site.

(c) Any DDA that may be negotiated and entered into pursuant to this Agreement by the Parties shall provide that the Developer shall pay a purchase price of not less than fair market value for the conveyance of the City Parcels and Agency Parcels (which fair market value shall be determined by an appraisal of the City Parcels and Agency Parcels using a valuation date as of the Effective Date), and if applicable, by the Authority (collectively, the "Payment Consideration Amount"). Notwithstanding the foregoing, the Payment Consideration Amount shall be subject to reduction as a consequence of any payment obligation of the Developer attributable to all reasonable costs associated with any environmental remediation reasonably approved by the Public Entities required for the development of the Proposed Project on the Potential Arena Site in accordance with remediation procedures established by any applicable governing or public entity having jurisdiction over the remediation of the Study Area Site and for the payment by the Developer of any advance pursuant to Section 3(g) above.

(d) Establishment of a detailed Schedule of Performance in which an acquisition and construction schedule for the development of the Proposed Project on the Potential Arena Site will be provided and the time frame for the submittal of final plans and specifications by the Developer for approval consideration by the Public Entities, consistent with the approved Scope of Development. The Schedule shall also include Developer participation in community presentations for the expressed purpose of allowing community residents to review the plans and drawings.

(e) The operation and management of the Proposed Project by the Developer in a good and professional manner.

(f) The maintenance of landscaping, buildings and improvements in good condition and satisfactory state of repair so as to be attractive to the community residents.

(g) The operation of the proposed development of the Proposed Project on the Potential Arena Site by the Developer in compliance with all applicable equal opportunity standards established by Federal, California State and local law.

(h) If the City determines in its reasonable discretion that the financial status of Developer and the Guarantor is not sufficient to satisfy the obligations of the Developer under any DDA, then the City may mandate a provision requiring the Developer's contractor to provide a payment and performance bond ensuring the obligations of said contractor, where necessary.

(i) The payment by Developer on or before the execution of the DDA by City of a Good Faith Deposit in a form provided for in the DDA, in the amount provided in the DDA, which, at the option of the Developer, may be applied towards the Payment Consideration Amount.

(j) A provision providing that the Developer shall be solely responsible for all development costs of the Proposed Project. Neither the Public Entities, nor any of their officers, employees, consultants or agents have provided any direct or indirect information or taken any position which in any way would indicate that the proposed development of the Proposed Project on the Potential Arena Site is or is not subject to the State of California's prevailing wage requirements.

(k) A sources and uses budget, which shall be based upon a financial pro forma that has been reasonably approved by the City, and a feasible method of financing, reasonably demonstrating to the City the availability of all funds needed to complete the development of the Proposed Project on the Potential Arena Site. The DDA shall require the submittal of documentation of all proposed construction loans and owner equity needed to carry out the proposed method of financing. Developer agrees to make continuing full disclosure to the City of its proposed methods of financing, including the financing of any off-site improvements that are required to obtain the necessary entitlements for the Proposed Project on the Potential Arena Site.

(l) It is the intention of the Public Entities and Developer that the disposition and development of the Potential Arena Site be completed in a timely and an expeditious manner. Accordingly, a Schedule of Performance shall be included encompassing appropriate and necessary legal, administrative, transfer of property ownership and interests, financial and construction benchmarks to be met by the appropriate Party, together with required conditions precedent for the conveyance of the Potential Arena Site or applicable portions thereof, including without limitation adequate evidence of financing and entitlements for the proposed development of the Potential Arena Site. The Schedule of Performance shall be subject to extension for: (a) "Force Majeure" (a period of time equal to any period of delay experienced by Developer due to strikes, civil riots, war, invasion, fire or other casualty, acts of God, unavailability of labor or materials, adverse weather conditions, act or failure to act of governmental or quasi-governmental authorities or utilities, including failure or delay in issuing necessary approvals, permits and licenses, and zoning changes and any act or failure to act of third-party utility service providers, or other causes beyond the reasonable control of Developer; and (b) in the event of an administrative appeal, judicial challenge, or filing an application for referendum for such approval

to any of the Entitlements (collectively a "Challenge") until the Challenge is finally resolved on terms satisfactory to Developer or waived in its sole discretion.

(m) Appropriate controls to regulate the use of the Potential Arena Site, including but not limited to an Agreement Affecting Real Property, setting forth the ongoing uses, tenant selection criteria and maintenance obligations with respect to the Potential Arena Site in the form of covenants binding on all successors and assigns.

(n) Subject to the adjustment to the Payment Consideration Amount as contemplated in Section 6(c) hereof, the Developer's responsibility for all costs and fees associated with the removal or remediation of any potentially Hazardous Materials from the Potential Arena Site, and demolition and clearance of all improvements on the Potential Arena Site;

(o) The DDA shall be subject to the City's standard insurance requirements for the development of the Potential Arena Site and all other applicable and customary City policies;

(p) The Developer shall use its best efforts to utilize (subject to Developer's right to impose customary screening and qualification standards on all hires) local residents and community businesses in all aspects of the development of the Proposed Project.

(q) In order to attempt to provide additional employment opportunities for Inglewood residents and businesses, the Developer shall engage in the following process with the goal of hiring qualified Inglewood residents for no less than 30% of the construction workforce for the Proposed Project from a list of targeted zip codes mutually agreed upon by the City and Developer and 35% of the employment positions needed in connection with Developer's operation of the Potential Arena Site after completion of the Proposed Project: (i) upon commencement of a job search, publication of employment opportunities in a newspaper of general circulation in Inglewood, social media and the City's website, and (ii) utilization of the resources and networks of the WOCP to create a community resource list that includes Southbay Workforce Investment Board as the primary resource agency and other similar organizations whose capabilities are matched with the particular needs of the Proposed Project. Developer and its contractors, subcontractors and vendors' obligations with respect to this goal shall be satisfied by engaging in the following activities: (w) utilization of the WOCP to identify and solicit qualified Inglewood residents; (x) coordination with organizations such as the Inglewood Airport Chamber of Commerce and Inglewood Partners for Progress to identify and solicit qualified Inglewood residents; (y) funding by Developer and participation in job fairs as may be reasonably requested by City and (z) coordination of local jobs training programs including pre-apprentice programs with the Southbay Workforce Investment Board as the primary resource agency and other local job resource agencies.

(r) To the extent legally permissible, Developer shall designate, and shall cause its contractors, subcontractors, vendors and other third parties under its control or with whom it enjoys privity of contract to designate the City of Inglewood as the point of sale for California sales and use tax purposes (to the extent the payment of sales and use tax is required by applicable law), for all purchases of materials, fixtures, furniture, machinery, equipment and supplies for the development of the Potential Arena Site during construction thereof.

(s) The delivery to the City on or before the City's execution of the DDA of a Performance and Completion Guaranty of an individual or entity (the "Guarantor") having a net worth at least equal to that of the Guarantor approved by the City in its sole and absolute discretion, assuring the timely performance of the Developer's obligations under the DDA.

(t) The installation and placement of appropriate signage on the Potential Arena Site identifying the use of the Potential Arena Site as a premier and state of the art NBA arena and certain ancillary uses related to and compatible with the operation of the arena.

(u) Additional environmental, feasibility, Entitlements, NBA approval and/or other contingencies on the obligations of the Parties.

Section 7. California Environmental Quality Act. Execution of a DDA shall be subject to compliance with the California Environmental Quality Act ("CEQA"), California Public Resources Code §§ 21000 et seq. (as amended, and including any successor statutes and regulations promulgated pursuant thereto). In this regard, the City may conduct an Initial Study of the Proposed Project pursuant to Title 14, Division 6, Chapter 3, Section 15063 of the California Code of Regulations or other appropriate documentation in order to determine the appropriate environmental documents and procedures that may be necessary to comply with CEQA as to the consideration and potential approval of any DDA by the Public Entities relating to the Proposed Project. The Developer hereby agrees to provide all assistance to the City necessary for the Public Entities to carry out their obligations under CEQA. In the event the City determines after consultation with the Developer, but in its independent judgment or any time determines that additional Environmental Review is required pursuant to CEQA, all such costs of the additional environmental work shall be the responsibility of the Developer as required by CEQA. If the Proposed Project is found to cause significant adverse impacts that cannot be mitigated, the Public Entities retain absolute discretion to require implementation of mitigation measures, modify the Proposed Project or select feasible alternatives to mitigate or avoid significant adverse environmental impacts, reject the Proposed Project as proposed if the economic and social benefits of the Proposed Project do not outweigh otherwise unavoidable significant adverse impacts of the Proposed Project, or approve the Proposed Project upon a finding that the economic, social, or other benefits of the Proposed Project outweigh unavoidable significant adverse impacts of the Proposed Project.

Section 8. Termination.

(a) Any Party may terminate this Agreement if another Party should materially fail to comply with and perform in a timely manner all provisions hereof to be performed by the Party, or if no progress is being made in the DDA negotiations as a result of its failure to negotiate a DDA in good faith as required hereby. The Party claiming a failure shall give thirty (30) days written notice to the other Parties specifying any failure under the terms of this Agreement. The Party claiming failure shall not terminate this Agreement if the other Party(ies) cures the deficiency(ies) specified in the notice within said thirty (30) day period, or commences to cure to completion the deficiency(ies) in the event such deficiency(ies) cannot be cured within the requisite thirty (30) day period.

(b) Developer may at any time and for any reason during the Exclusive Negotiating Period elect not to proceed with the Proposed Project. Upon such an election Developer shall promptly provide written notice of termination of this Agreement to the other Parties.

(c) Upon a termination of this Agreement pursuant to the foregoing Section 8(a) or Section 8(b), (i) no portion of the Non-Refundable Deposit shall be returned to the Developer and the entire amount shall be retained by the City as its property, (ii) but any funds advanced by the Developer to the City and/or Authority pursuant to Section 3(g) shall be returned to the Developer (less reasonable attorneys' fees and costs incurred by the Public Entities in connection with the eminent domain proceedings, including, but not limited to, any damages payable to the owners and/or tenants of the Potential Participating Parcels and/or their respective legal counsel associated with the abandonment of the eminent domain proceedings as required to be paid under California law; provided however, if the City and/or Authority elect to continue to proceed with any eminent domain action commenced prior to the termination of this Agreement following the termination of this Agreement, the City and/or the Authority shall be solely responsible for the payment of any awards, settlements or judgments in any such action and any costs associated with such action incurred after the termination of this Agreement), and (iii) the Parties shall have no further obligations to each other except for those obligations, if any, which by the terms of this Agreement expressly survive its termination.

Section 9. Governing Law. This Agreement and the legal relations between the parties hereto shall be governed by and construed and enforced in accordance with the laws of the State of California. Moreover, the parties hereby agree that in the event of litigation between the parties, venue for litigation brought in any state court shall lie exclusively in the County of Los Angeles, Superior Court, Southwest District located at 825 Maple Avenue, Torrance, California 90503-5058, and venue for any litigation brought in any federal court shall lie exclusively in the Central District of California, Los Angeles.

Section 10. No Other Agreement. This Agreement constitutes the entire agreement of the parties hereto with respect to the subject matter hereof. There are no agreements or understandings between the parties and no representations by either party to the other as an inducement to enter into this Agreement, except as expressly set forth herein. All prior negotiations between the parties are superseded by this Agreement. This Agreement may not be altered, amended or modified except by a written agreement executed by the Parties. Notwithstanding anything provided herein to the contrary, whether expressed or implied, neither the Public Entities nor the Developer shall have any obligation to enter into a DDA with the other party and neither Public Entities nor the Developer, nor any of their respective officers, members, staff or agents have made any promises to the other party other than to exclusively negotiate in good faith with the other party during the Exclusive Negotiating Period, and no statements of either the Public Entities or their respective officers, members, staff or agents as to future obligations shall be binding upon the Public Entities until Environmental Review has been completed and a DDA has been approved by the Public Entities, and duly executed by the Mayor of the City and Chairman of the Successor Agency and Authority, respectively.

Section 11. Prohibition Against Assignment of Agreement and Transfer of Study Area Site. This Agreement shall not be assigned or transferred by the Developer without the prior written consent of the Public Entities which may not be unreasonably withheld by the Public

Entities. The Public Entities shall not voluntarily transfer their respective interests in any portion of the Study Area Site during the term of this Agreement to any third party but shall be allowed to transfer to either the City or the Authority their respective interests in the parcels comprising the Study Area Site.

Section 12. Notices. Any notice which is required or which may be given hereunder may be delivered or mailed to the party to be notified, as follows:

Section 13. No Commitment to Approve DDA. Notwithstanding any provision of this Agreement, the Developer acknowledges and agrees that nothing in this Agreement shall obligate the Public Entities to approve a DDA nor any proposed development within the Study Area Site or shall otherwise expressly or impliedly obligate the Public Entities to sell and/or lease any property or interests therein. The Developer further acknowledges and agrees that the approval of this Agreement and a DDA and any participation in any portion of the Proposed Project by the Public Entities shall be in the sole and absolute discretion of the Public Entities. The Developer further acknowledges and agrees that this Agreement does not confer upon the Developer the right to have a DDA or develop the Proposed Project within the Study Area Site or any portion thereof absent an approved and executed DDA by the Public Entities. The Public Entities acknowledge and agree that nothing in this Agreement shall obligate the Developer to enter into a DDA, provided, however, that the Developer shall promptly notify the Public Entities if it elects not to proceed with the Proposed Project. The Parties in no way intend for this Agreement to waive or restrict the Public Entities' exercise of their independent, discretionary judgment with regard to CEQA or a DDA for the development of the Proposed Project within the Study Area Site or any portion thereof, or any City discretionary decisions or determinations relative to Entitlements required for the Proposed Project.

Section 14. Progress Reports. From time-to-time, as requested by City, by prior written notice to the Developer, the Developer shall make oral and written progress reports advising the City on all matters related to the proposed development, including financial feasibility analyses, construction cost estimates, marketing studies, and similar due diligence matters. All third party non-legally privileged work product documents and due diligence material (not including

09/11/2018

confidential materials and proprietary economic data, but including engineering studies, soils studies, environmental studies and similar work product relating to the Study Area Site which is required to be submitted to the City in connection with the Plot Plan Review for the Proposed Project) (the "Work Product"), shall be made available to the City, without any representation, warranty or liability to the Developer. In the event of the termination of this Agreement without the execution of a DDA by the Public Entities and the Developer (other than in the event of a default by the City), the City shall have the right, in its sole discretion, to take possession of any and all Work Product owned by Developer (subject to any retained rights of the party preparing said Work Product) and use such documents and information contained therein in connection with development within the Study Area Site; provided however, Developer makes no representation or warranty with respect to such documents and information; pursuant to which, Developer shall have no liability to the Public Entities, or any other person or entity in connection with providing such documents, the contents thereof and the Public Entities' (or any other person's or entity's) reliance on such documents or information.

Section 15. Disclosure. At the written request of the City, the Developer agrees to disclose to City its partners, principals, officers, stockholders, associates, and of all other material, non-privileged non-proprietary pertinent information concerning the proposed development and the Developer, including the Developer's consultants and the design, financing, and development teams proposed by the Developer and the respective roles and responsibilities of all such parties.

Section 16. Cooperation. Each Party shall cooperate with the other Party and provide such additional information and data relating to the proposed development of the Proposed Project with the Study Area Site, including financing of the Proposed Project, or any necessary information about the development experience of the Developer and any other participants as the City may request from time to time.

Section 17. Brokers. The Public Entities shall not be liable in any manner for any real estate commission or brokerage fees which may arise from the transactions contemplated by this Agreement other than any broker engaged in writing by the Public Entities. The Public Entities and the Developer each represent that it has engaged no broker, agent, or finder in connection with this transaction, and the Developer agrees to indemnify and hold the Public Entities harmless from any claim by any broker, agent, or finder retained by the Developer.

Section 18. Hazardous Materials and Study Area Site Conditions.

(a) The Developer shall be solely responsible for all necessary testing of the Study Area Site for hazardous materials pursuant to all applicable laws, statutes, rules and regulations. Upon fee and/or leasehold acquisition of each parcel of the Study Area Site, as applicable, the Developer shall also be responsible for making each such parcel of the Study Area Site usable for the proposed development of the proposed Project on such parcel as a result of any Study Area Site conditions including, without limitation, flood zones, Alquist-Priolo Earthquake Fault Zoning Act, and similar matters. For purposes of this Agreement, "hazardous materials" shall mean any substance, material or waste which is or becomes regulated by any local governmental authority, the State of California and/or the United States Government, including, but not limited to asbestos; polychlorinated biphenyls (whether or not highly chlorinated); radon gas; radioactive materials; explosives; chemicals known to cause cancer or reproductive toxicity; hazardous waste, toxic

substances or related materials; petroleum and petroleum product, including, but not limited to, gasoline and diesel fuel; those substances defined as a "Hazardous Substance", as defined by Section 9601 of the Comprehensive Environmental Response, Compensation and Liability Act of 1980, 42 U.S.C. 9601, et seq., or as "Hazardous Waste" as defined by Section 6903 of the Resource Conservation and Recovery Act, 42 U.S.C. 6901, et seq.; an "Extremely Hazardous Waste," a "Hazardous Waste" or a "Restricted Hazardous Waste," as defined by The Hazardous Waste Control Law under Section 25115, 25117 or 25122.7 of the California Health and Safety Code, or is listed or identified pursuant to Section 25140 of the California Health and Safety Code; a "Hazardous Material", "Hazardous Substance," "Hazardous Waste" or "Toxic Air Contaminant" as defined by the California Hazardous Substance Account Act, laws pertaining to the underground storage of hazardous substances, hazardous materials release response plans, or the California Clean Air Act under Sections 25316, 25281, 25501, 25501.1 or 39655 of the California Health and Safety Code; "Oil" or a "Hazardous Substance" listed or identified pursuant to 311 of the Federal Water Pollution Control Act, 33 U.S.C. 1321; a "Hazardous Waste," "Extremely Hazardous Waste" or an "Acutely Hazardous Waste" listed or defined pursuant to Chapter 11 of Title 22 of the California Code of Regulations Sections 66261.1 through 66261.126; chemicals listed by the State of California under Proposition 65 Safe Drinking Water and Toxic Enforcement Act of 1986 as a chemical known by the State to cause cancer or reproductive toxicity pursuant to Section 25249.8 of the California Health and Safety Code; a material which due to its characteristics or interaction with one or more other substances, chemical compounds, or mixtures, materially damages or threatens to materially damage, health, safety, or the environment, or is required by any law or public agency to be remediated, including remediation which such law or government agency requires in order for the Potential Arena Site to be put to the purpose proposed by this Agreement; any material whose presence would require remediation pursuant to the guidelines set forth in the State of California Leaking Underground Fuel Tank Field Manual, whether or not the presence of such material resulted from a leaking underground fuel tank; pesticides regulated under the Federal Insecticide, Fungicide and Rodenticide Act, 7 U.S.C. 136 et seq.; asbestos, PCBs, and other substances regulated under the Toxic Substances Control Act, 15 U.S.C. 2601 et seq.; any radioactive material including, without limitation, any "source material," "special nuclear material," "by-product material," "low-level wastes," "high-level radioactive waste," "spent nuclear fuel" or "transuranic waste" and any other radioactive materials or radioactive wastes, however produced, regulated under the Atomic Energy Act, 42 U.S.C. 2011 et seq., the Nuclear Waste Policy Act, 42 U.S.C. 10101 et seq., or pursuant to the California Radiation Control Law, California Health and Safety Code, Sections 25800 et seq.; hazardous substances regulated under the Occupational Safety and Health Act, 29 U.S.C. 651 et seq., or the California Occupational Safety and Health Act, California Labor Code, Sections 6300 et seq.; and/or regulated under the Clean Air Act, 42 U.S.C. 7401 et seq. or pursuant to The California Clean Air Act, Sections 3900 et seq. of the California Health and Safety Code. Any studies and reports generated by the Developer's testing for hazardous materials shall be made available to the City upon the City's request. The City will deliver to the Developer all actually known reports within its possession or under its control regarding Hazardous Materials relating to the Study Area Site.

(b) Upon the execution by Developer of a right of entry agreement acceptable in form and substance to the Public Entities, and upon Developer's satisfaction of conditions precedent therein, which agreement and conditions precedent shall include indemnification of the Public Entities, insurance of the Public Entities and the provision of adequate security for the restoration of the area accessed to substantially its condition prior to any such permitted entry, the Public

09/14/2018

Entities shall, subject to the rights of any tenant, permit Developer and/or Developer's representatives to enter the Study Area Site at reasonable times for the purpose of soils testing, survey work and other predevelopment activities.

(c) Notwithstanding anything in this Agreement to the contrary, by entering this Agreement, neither the Public Entities nor the Developer release, waive, discharge or otherwise alter any and all rights to pursue compensation, damages, contribution, indemnification and/or other remedies against any third party, including without limitation, related to Hazardous Materials or the clean-up, remediation or disposal thereof.

Section 19. Indemnity. Developer shall indemnify, defend, and hold the Public Entities, and their respective directors, officers, employees, agents, and successors and assigns (the "Indemnitee" in this Section) harmless against all suits and causes of action, claims, costs, and liability, including, but not limited to, reasonable attorney's fees and costs of any litigation, or arbitration or mediation, if any, brought by third parties (1) challenging the validity, legality or enforceability of this Agreement or (2) seeking damages which may arise directly or indirectly from the negotiation, formation, execution, enforcement or termination of this Agreement, or which are incident to the performance of the activities contemplated in this Agreement. Nothing in this Section shall be construed to mean that Developer shall hold the Indemnitee harmless and/or defend the Indemnitee to the extent of any claims arising from, or alleged to arise from the negligence, or willful misconduct or illegal acts of any of the Indemnitees, or the breach by the Public Entities of any agreement relating to the Study Area Site, including but not limited to this Agreement and any DDA, if approved. The Public Entities agree to fully cooperate with Developer in the defense of any matter in which Developer is defending and/or holding the Indemnitee harmless. The Public Entities may make all reasonable decisions with respect to its representation in any legal proceeding, including, but not limited to, the selection of attorney(s). This indemnity obligation shall survive the termination of this Agreement.

Section 20. No Third Party Beneficiaries. The Public Entities and the Developer expressly acknowledge and agree they do not intend, by their execution of this Agreement, to benefit any persons or entities not signatory to this Agreement, including, without limitation, any brokers representing the parties to this transaction. No person or entity not a signatory to this Agreement shall have any rights or causes of action against either the Public Entities or the Developer arising out of or due to the Public Entities' or the Developer's entry into this Agreement.

Section 21. Offer to Enter Negotiations. This Agreement, when executed by the Developer and delivered to the City, shall be deemed to be an offer by the Developer to enter into negotiations pursuant to the terms of this Agreement and will then be scheduled jointly for approval consideration by the Public Entities. This Agreement must be authorized, executed and delivered by the Public Entities within sixty (60) days after the date of signature by the Developer or the Developer shall have the right to withdraw its offer to enter into this Agreement upon written notice to the Public Entities. The Exclusive Negotiating Period shall commence and this Agreement shall not be effective until the Effective Date, which is the first calendar day of the month following the date this Agreement has been executed by both of the Parties, which date shall be entered on the first paragraph of this Agreement by the Public Entities after approval of this Agreement.

Section 22. Public Entities Rights. The Developer understands and agrees that in the event of the termination or expiration of this Agreement without the execution of a DDA, the Public Entities shall have the right, in their respective discretion, to commence exclusive negotiations with any other third party developer selected for the development of the parcels comprising the Study Area Site, without the need for any consultation or approval by the Developer. The Developer acknowledges and agrees that it will not receive any property interest in the Study Area Site of any kind as a result of entering into this Agreement.

In the event the Developer executes a DDA consistent with the provisions of this Agreement prior to the termination or expiration of the Exclusive Negotiating Period, then within sixty (60) days of the delivery to City of such DDA, the Public Entities shall consider whether to approve or disapprove such DDA. If the Public Entities' approval does not occur within such 60 day period, the Developer shall have the right to withdraw its offer to enter into such DDA upon written notice to the Public Entities.

Section 23. Counterparts. This Agreement may be executed in counterparts, each of which when so executed shall be deemed an original, and all of which, together, shall constitute one and the same instrument.

Section 24. Attorney's Fees. In the event that either party hereto brings an action or proceeding against the other party to enforce or interpret any of the conditions or provisions of this Agreement, the prevailing party shall be entitled to recover all reasonable attorney's fees and expenses and court costs associated with such action or proceeding.

Section 25. Effect of Agreement. Notwithstanding any other provision of this Agreement, the Parties expressly acknowledge and agree as follows:

(a) None of the matters described in this Agreement as a purported commitment or obligation of the Parties to be contained in a proposed DDA shall have any effect unless and only to the extent such matters are expressly set forth in a DDA or other written agreement duly authorized, approved and executed by the Parties. Notwithstanding any provision of this Agreement to the contrary, Developer acknowledges and expressly agrees as follows: (i) that this Agreement does not obligate the Public Entities in any way to approve, in whole or in part, any of the matters described in this Agreement, including, without limitation, matters pertaining to land use entitlements or approvals, permits, waivers or reduction of fees, development or any other matters (the "Entitlements") to be acted on independently by the City; (ii) that all such required Entitlements shall be considered and processed by the City in accordance with all applicable City requirements and procedures; and (iii) that the City reserves all rights to approve, disapprove or approve with conditions all such Entitlements in its sole and absolute discretion. Upon the execution of a DDA by the Parties, this Agreement shall be null and void and of no effect and shall be superseded by the terms and conditions of the DDA.

(b) The Parties shall promptly commence the good faith negotiation of a DDA following the execution of this Agreement by the Parties. Each Party acknowledges and agrees that, for the purposes of this Agreement, a Party shall be deemed to be acting in good faith so long as it makes reasonable efforts to attend scheduled meetings, directs its consultants to cooperate with the other Parties, provides information necessary for the negotiations to the other Parties,

participates in negotiations, and uses commercially reasonable efforts to promptly review and return with comments all correspondence, reports, documents, or agreements received from another Party that require such comments. Upon termination of this Agreement for any reason, without limiting the provisions of Section 8(c), the obligation of the Parties to negotiate in good faith shall terminate.

IN WITNESS WHEREOF, the City, Successor Agency, Authority and Developer have executed this Agreement in the City of Inglewood, Los Angeles County, California, on the date hereinabove first set out.

RESOLUTION NO. 17-OB-004

A RESOLUTION OF THE OVERSIGHT BOARD TO CITY OF INGLEWOOD AS SUCCESSOR AGENCY TO THE FORMER INGLEWOOD REDEVELOPMENT AGENCY FINDING AND DETERMINING THAT THE SUCCESSOR AGENCY'S APPROVAL OF THAT CERTAIN AMENDED AND RESTATED EXCLUSIVE NEGOTIATING AGREEMENT ON AUGUST 15, 2017 (ENA), IS CONSISTENT WITH AND IMPLEMENTS ITS APPROVED LONG-RANGE PROPERTY MANAGEMENT PLAN AND THE REDEVELOPMENT DISSOLUTION LAW

WHEREAS, Assembly Bill x1 26 ("AB 26") and ABx 27 ("AB 27") were passed by the State Legislature on June 15, 2011 and signed by the Governor on June 28, 2011, making certain changes to Redevelopment Law, including adding Part 1.8 (commencing with Section 34161) and Part 1.85 (commencing with Section 34170) ("Part 1.85") to Division 24 of the California Health and Safety Code ("Health and Safety Code") (collectively, "Dissolution Law"), and

WHEREAS, the California Supreme Court in California Redevelopment Association v. Matosantos, Case No. S194861 upheld the constitutionality of AB 26; and

WHEREAS, Health and Safety Code section 34173(a) designates successor agencies as successor entities to former redevelopment agencies; and

WHEREAS, upon dissolution of the Inglewood Redevelopment Agency as of February 1, 2012, the Inglewood Redevelopment Agency was deemed the Former Inglewood Redevelopment Agency ("Former Redevelopment Agency" under Health and Safety Code Section 34173(a); and

WHEREAS, pursuant to Health and Safety Code section 34173(d), the City of Inglewood presently serves in the capacity of the successor agency to the Former Redevelopment Agency ("Successor Agency"), as confirmed by City Council Resolution No. 12-02 adopted on January 1, 2012;

WHEREAS, AB 26 requires that there shall be an oversight board ("Oversight Board") established for each of the former California redevelopment agency's successor agencies to supervise

the activities of the Successor Agency and the wind down of the dissolved Redevelopment Agency's affairs pursuant to AB 26; and

WHEREAS, the City of Inglewood, in its capacity as Successor Agency, is engaged in activities necessary to wind down the affairs of the Former Redevelopment Agency; and

WHEREAS, in accordance with Dissolution Law, the Successor Agency prepared and the Oversight Board and the State Department of Finance did approve a Long-Range Property Management Plan pursuant to AB 26 specifically in conformance with Health & Safety Code section 34191.5(b) (the "LRPMP").; and

WHEREAS, in furtherance of the LRPMP, the Successor Agency has undertaken various actions, including the action of the Successor Agency on August 15, 2017 approving that certain 17077.001 3826684v5 2 Amended and Restated Exclusive Negotiating Agreement (ENA) by and among the City of Inglewood, Successor Agency and Murphy's Bowl LLP, for the purpose of studying the feasibility of disposing of and utilizing certain Successor Agency parcels (in combination with certain City of Inglewood parcels as provided in the ENA), and facilitating the proposed development of a state-of-the-art National Basketball Association (NBA) professional basketball arena in the City of Inglewood); and

WHEREAS, this Oversight Board has reviewed and considered the ENA staff report and comments received by it at this hearing and submitted in writing; and

WHEREAS, the ENA is subject to reasonable limitations, conditions and milestones for the achievement of a major development within the City of Inglewood that would involve and result in the potential and timely assemblage of certain parcels of real property owned by the Successor Agency that, upon disposition by the Successor Agency, would produce and make available to the tax entities significant tax revenues that might not otherwise be realized by the taxing entities; and

WHEREAS, nothing in the ENA obligates the Successor Agency or this Oversight Board to approve the sale, disposition of any of the Successor Agency-owned parcels or interests therein, nor to approve any proposed development thereon.

WHEREAS, nothing in the ENA or this Board's actions herein waives or otherwise restricts the Successor Agency's or this Oversight Board's ability to exercise its own independent,

discretionary judgment with regard to the California Environmental Quality Act as to the development of the Successor Agency-owned parcels or any portion thereof, or interest therein; and

WHEREAS, this Oversight Board finds the ENA consistent with implementation of the LRPMP.

NOW, THEREFORE, the Oversight Board to the City of Inglewood, as the Successor Agency to the former Inglewood Redevelopment Agency, does hereby find, determine and resolve and order as follows:

Section 1. The foregoing recitals are true and correct.

Section 2. All legal prerequisites to the adoption of this Resolution have occurred.

Section 3. The Successor Agency staff is authorized to make such nonmaterial adjustments to the ENA as may be appropriate in the judgment of the Executive Director of the Successor Agency or to accommodate other requests not inconsistent with this Resolution.

Section 4. The actions of the Successor Agency to date in connection with the ENA are hereby ratified and approved.

Section 5. This Resolution shall take effect immediately upon its adoption.

17077.001 3826684v5 3

Section 6. The Oversight Board Secretary shall certify as to the adoption of this Resolution.

PASSED, APPROVED and ADOPTED by the Oversight Board to the City of Inglewood as the Successor Agency to the former Inglewood Redevelopment Agency, at a specially scheduled meeting held this 7th day of September, 2017 by the following vote. Board Members Margarita Cruz, Jo Ann Higdon, Carolyn Hull and Chair James T. Butts; Noes: None; Abstain: None; Absent: Board Member Eugenio Villa and Vice Chair Banner

James T. Butts, Chairman

Olga J. Castañeda, Deputy Clerk
Secretary to the City of Inglewood Former Redevelopment Agency Oversight Board

09/11/2018

AGREEMENT NO. 17-456 (AMENDMENT NO. 1)
APPROVED: AUGUST 15, 2017

AMENDED AND RESTATED EXCLUSIVE NEGOTIATING AGREEMENT

This Amended and Restated Exclusive Negotiating Agreement, dated as of August 15, 2017,[1] (the "Agreement"), is made by and among the City of Inglewood, a municipal corporation (the "City"), the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, a public body, corporate and politic (the "Successor Agency"), the Inglewood Parking Authority, a public body, corporate and politic (the "Authority"), and Murphy's Bowl LLC, a Delaware limited liability company (the "Developer").

The City, Successor Agency and the Authority are sometimes collectively referred to herein as the "Public Entities"). The Public Entities and Developer are sometimes herein referred to as the "Parties").

For and in consideration of the mutual covenants and promises herein, the parties agree as follows:

RECITALS

This Agreement amends and restates in its entirety that certain Exclusive Negotiating Agreement previously entered into by the Parties and approved on June 15, 2017 (the "Prior ENA") with reference to the following facts:

A. The subject matter of this Agreement involves certain negotiation parameters established by the Parties with respect to a proposed development of an NBA professional basketball facility as more specifically described in Recital B and generally located on certain real property to be subsequently determined by the Parties within the following area of the City: Century Boulevard on the north, Prairie Avenue on the west along with two parcels located to the west of Prairie Avenue depicted as the approximately 2.03 acre parcel and the approximately 3.12 acre parcel as shown on Exhibit A, the Study Area Site Map, then midblock on West 102nd Street toward West 103rd Street on the south to Doty Avenue, and then West 102nd Street on the south to Yukon Avenue, and then Yukon Avenue on the east (the "Study Area Site"). The Study Area Site is generally depicted on the "Study Area Site Map" attached hereto, labeled Exhibit A, and incorporated herein by this reference. Once established by the Parties pursuant to negotiations established by this Agreement, the desired parcels of real properties within the Study Area Site will be specifically identified and consist of all or some of the following parcels (the "Potential Arena Site"): (1) those certain parcels of real property currently owned by the City referred to and identified as the "City Parcels" and designated as such on the Study Area Site Map, (2) those certain parcels of real property owned by the Successor Agency referred to and identified as the "Agency Parcels" and designated as such on the Study Area Site Map, and (3) those certain parcels of commercial non-residential real property currently owned by third parties referred to and identified as the "Potential Participating Parcels" and designated as such on the Study Area Site Map. Under no circumstances shall the Potential Arena Site include any parcel of real property

[1] The "Effective Date" of this Agreement, and the commencement of the Exclusive Negotiating Period, shall be the first calendar day of the month following the approval of this Agreement by the Public Entities.

on which a church or occupied residential use exists. Moreover, in no event shall the City or the Authority undertake any action to acquire any Potential Participating Parcel except in accordance with Section 2 and all applicable law. Neither the City nor the Authority shall be under any obligation pursuant to the terms of this Agreement to adopt a resolution of necessity authorizing the acquisition of any of the Potential Participating Parcels by eminent domain, and neither the City nor the Authority has committed to do so.

B. The Developer has proposed development of a premier and state of the art National Basketball Association ("NBA") professional basketball arena consisting of approximately 18,000 to 20,000 seats as well as related landscaping, parking and various other ancillary uses related to and compatible with the operation and promotion of a state-of-the-art NBA arena within the Study Area Site (the "Proposed Project").

C. It is anticipated by the Parties that, subject to the satisfaction of all the provisions of this Agreement, including without limitation the determination of the Potential Arena Site, the parcels of real property comprising the Potential Arena Site may be separately conveyed to the Developer by each of the City, Successor Agency and/or the Authority in accordance with their respective interests in the Potential Arena Site; provided however, and at the discretion of the Public Entities, the City Parcels, Agency Parcels and the Authority's interest, if any, may be singularly conveyed by the City or the Authority to the extent feasible and legally permissible. Moreover, it is contemplated by the Parties that conveyance of the City Parcels, Agency Parcels and the Authority's interest, if any, by the Public Entities will take place concurrently with back to back escrow closings to the extent a joint conveyance by the City or the Authority is not legally feasible and permissible.

D. In furtherance of the objectives of the California Redevelopment Dissolution Law, as amended ("AB 26"), if the Proposed Project is approved by the Public Entities, the Successor Agency shall convey its interests in the Agency Parcels within the Study Area Site (as defined in this Agreement) directly to the Developer under applicable provisions contained in AB 26. AB 26 has required the dissolution of the former Inglewood Redevelopment Agency (the "RDA"). The conveyance of the Agency Parcels within the Study Area Site shall be conveyed (if approved) consistent with the Successor Agency's approved Long Range Property Management Plan (the "LRPMP"), which has been approved by the Successor Agency, the Oversight Board to the Successor Agency, and the California Department of Finance (the "DOF"). The Developer acknowledges that the Public Entities have not approved the Proposed Project as of the Effective Date of this Agreement, notwithstanding the Agreement's contemplation of the process by which the approvals may be obtained and will not do so except as provided in this Agreement in the exercise of their respective absolute discretion.

E. Subject to the requirements of AB 26, the Successor Agency, along with the City and the Authority, has selected and agreed to negotiate with the Developer for the potential conveyance and development of the Agency Parcels (along with the balance of the Study Area Site, or applicable portion thereof subsequently determined) as a result of the Developer's affiliation with an NBA franchise that can be moved to the City (subject to NBA approval), and the Developer's experience and expressed commitment to expeditiously develop the Proposed Project on the Study Area Site so as to bolster the economic revitalization of Inglewood and a unique opportunity not otherwise available to provide an NBA franchise within the City of

Inglewood. The Public Entities have also agreed to negotiate with the Developer for the Proposed Project because of: (a) the unique economic development and employment opportunities the Proposed Project would provide to the financial base and overall fiscal stability of the City that might otherwise not be available; and (b) the anticipated expansion of the City's presence as a major sports and entertainment center.

F. No entitlements required or requested by the Developer for the development of the Proposed Project will be considered for approval or approved by the Public Entities until the requirements of this Agreement have been satisfied, including without limitation, the approval of a Disposition and Development Agreement ("DDA") by the Public Entities as described in Section 6, compliance with CEQA as provided in Section 7, and all applicable City land use and Municipal Code requirements have been satisfied.

G. It is being proposed by the Developer that the Proposed Project be developed in multiple phases and that it be developed in a manner consistent with the descriptions, undertakings, procedures and other provisions set forth in this Agreement and as specifically set forth in a proposed DDA subject to changes or revisions if and as agreed to by the Public Entities and Developer (subject to the provisions of Section 25 below), or as may arise from the City's independent regulatory review of the Proposed Project.

H. As a result of the qualifications, experience and identity of Developer, which are of particular concern to the Public Entities, both individually and collectively, the Public Entities desire to enter into this Agreement with the Developer with the objective of negotiating a proposed mutually acceptable DDA for consideration by the Public Entities, providing for the development of the Proposed Project consistent with the terms and conditions of this Agreement.

I. The Public Entities anticipate that following execution of this Agreement and through the period of negotiation and the preparation of any DDA for the development of the Proposed Project, staff of the City on the behalf of the Public Entities, as well as certain consultants and attorneys hired by the Public Entities will devote substantial time and effort in reviewing plans, contacting and meeting with the Developer and various other necessary third parties, and providing other aid and assistance to the Developer in connection with the Proposed Project, as well as negotiating and preparing the proposed DDA described above.

Section 1. Definitions. The following terms shall have the meaning ascribed thereto, unless the context requires otherwise:

"Agreement" means this Amended and Restated Exclusive Negotiating Agreement, by and among the City, Successor Agency, the Authority and the Developer.

"Authority" means the Inglewood Parking Authority, a public body organized and existing pursuant to the California Parking Law of 1949.

"CEQA" has the meaning given in Section 7.

"City" means the City of Inglewood, a municipal corporation, organized and existing pursuant to the constitution and laws of the State of California.

"DDA" has the meaning given in Recital F.

"Developer" means Murphy's Bowl LLC, a Delaware limited liability company.

"Entitlements" has the meaning given in Section 25.

"Exclusive Negotiating Period" means a period of time consisting of thirty-six (36) months commencing on the Effective Date specified in this Agreement above, subject to extension as provided in this Agreement for Force Majeure and Challenges and/or for additional negotiations as established by the Public Entities pursuant to Section 4 below.

"Party" means any party to this Agreement.

"Potential Arena Site" has the meaning given in Recital A.

"Study Area Site" has the meaning given in Recital A.

"Successor Agency" means the City of Inglewood as Successor Agency to the Inglewood Redevelopment Agency, a public entity, corporate and politic, established pursuant to AB 26.

Section 2. Obligations of the Public Entities.

(a) During the Exclusive Negotiating Period and the sixty (60) day period referred to in Section 22 below, the Public Entities shall perform the following: (i) review and consider all financial documents required of Developer for the financing of the Proposed Project; and (ii) shall not negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding a proposed DDA for the sale, lease, disposition, and/or development of the City Parcels or Agency Parcels within the Study Area Site; provided however, and notwithstanding anything contained in this Agreement, the City shall not be precluded from engaging in negotiations and discussions with current property owners and/or authorized tenants of the Potential Participating Parcels for the rehabilitation or development of their respective properties in accordance with existing City land use regulations and City Municipal Code requirements, and any such negotiations and discussions by the City shall not be a violation of this Agreement. City staff shall be available to meet with the Developer to discuss the proposed development of the Proposed Project, the site plan and architectural renderings, and any other issues pertinent to the preparation of a DDA for the proposed development of the Proposed Project within the Study Area Site.

(b) If the City and/or the Authority determines in their sole discretion that all or certain of those parcels of real property comprising the Potential Participating Parcels specifically identified by the Parties are desirable for the development of the Proposed Project, the City and/or the Authority, as applicable, subject to the Developer rights and obligations as set forth in Section 3(g), shall consider acquisition of the parcels of real property comprising the Potential Participating Parcels so identified by the Parties in accordance with applicable law. In the event the City and/or the Authority, as applicable, determined, in its sole discretion, that it(they) is(are) unable to acquire all such identified and desirable parcels of the Potential Participating Parcels by negotiated voluntary sale, then the City or the Authority, as applicable, may elect, in its sole discretion and without any obligation or commitment to do so, to give legal notice and schedule a

public hearing to consider the adoption of a resolution of necessity authorizing the acquisition of the Potential Participating Parcels by eminent domain. The adoption of the resolution of necessity shall be subject to the sole discretion of the City and/or the Authority and nothing in this Agreement shall obligate or commit the City and/or the Authority to adopt a resolution of necessity with respect to any of the Potential Participating Parcels.

(c) For purposes of Developer's initial due diligence for the Proposed Project during the Exclusive Negotiating Period, the City shall grant Developer access to the City Parcels and Agency Parcels pursuant to a right of entry agreement as described in Section 18(b), which right of entry shall continue as long as this Agreement is in effect; and the City shall respond to requests for information from the Developer in a timely fashion. The Public Entities acknowledge and agree that Developer's due diligence may encompass such matters as, without limitation, title and survey, environmental conditions, soil conditions, physical conditions, siting, access, traffic patterns, financing, economic feasibility, platting, and zoning.

Section 3. Obligations of Developer. During the Exclusive Negotiating Period the obligations of Developer shall include the following:

(a) Within thirty (30) days of the Effective Date of this Agreement, the Developer and City shall enter into a funding agreement pursuant to which the Developer shall reimburse the City for all third party costs incurred in obtaining the necessary documentation required for the review and consideration of the Proposed Project within the Study Area Site (the "Environmental Review"), as may be required by CEQA (as such term is defined in Section 7). The City shall consult with Developer and keep Developer reasonably informed regarding the proposed timeline for the Environmental Review and the selection of the vendors to perform the Environmental Review. The funding agreement shall provide a process where the City shall establish a budget for the Environmental Review which shall be approved or disapproved in Developer's reasonable discretion and shall contain a dispute resolution procedure in the event the parties cannot agree on the budget.

(b) Within one hundred fifty (150) days of the Effective Date of this Agreement, the Developer shall provide to the City a reasonable confidential draft of cost pro forma, and a reasonable confidential draft table describing the sources and uses of funds and cash flow projections and distributions, concerning the Proposed Project to be developed within the Study Area Site, and a narrative describing the fundamental economics of the Proposed Project (the "Proposed Project Pro Forma"), in a form reasonably acceptable to the City. If the Proposed Project Pro Forma submitted by the Developer to the City is not reasonably acceptable to the City, the City shall within thirty days after receipt of the Proposed Project Pro Forma provide detailed comments about the Proposed Project Pro Forma and set forth those items that are unacceptable to the City; pursuant to which, the City and the Developer shall meet and negotiate in good faith to modify the Proposed Project Pro Forma at a level acceptable to the City. The Parties acknowledge the information to be provided under this Section 3(b) and Section 3(c) may contain proprietary confidential material, and if so requested, the Public Entities and Developer will seek to enter into a mutually satisfactory confidentiality agreement, within the maximum limits permitted by law.

(c) Within sixty (60) days after the City finds the Proposed Project Pro Forma acceptable, the Developer shall also provide a confidential conditional commitment letter from an

equity investor providing the necessary equity financing consistent with the acceptable Proposed Project Pro Forma. This condition may be satisfied by the Developer submitting to the City evidence reasonably acceptable to the City demonstrating sufficient liquidity required for the development of the Proposed Project within the Study Area Site. If such submission is not reasonably acceptable to the City, the City shall within thirty days after receipt of the Proposed Project Pro Forma provide detailed comments setting forth those items that are unacceptable to the City, and the City and the Developer shall meet and negotiate in good faith to modify the submission(s) in order that such evidence may be acceptable to the City.

(d) Within one hundred eighty (180) days of the Effective Date of this Agreement, the Developer shall deliver to the City a sketch and legal description of the portions of the property which the Developer would like to acquire for development of the Proposed Project (which property shall constitute the "Proposed Arena Site") and a conceptual site plan and basic architectural renderings for the development of the Proposed Project and any additional information reasonably requested by the City concerning any conceptual site plan and basic architectural renderings for the development of the Proposed Project within the Study Area Site submitted by the Developer in a form sufficient to commence the Environmental Review. The Parties acknowledge that the detailed site plan and architectural drawings shall not be required to be prepared by Developer until Developer is processing the Entitlements (as such term is defined in Section 25, below), at which time final site plan and architectural renderings shall be prepared and shall include a well-defined architectural concept for the Proposed Project showing vehicular circulation and access points, amounts and location of parking, location and size of all buildings (including height and perimeter dimensions) pedestrian circulation, landscaping and architectural character of the Proposed Project. However, no such site plan or architectural renderings shall be deemed final until the completion of Environmental Review in accordance with CEQA and approved by the City pursuant to an approved and executed DDA and the submittal of complete applications by the Developer for the Entitlements required for development of the Proposed Project within the Study Area Site.

(e) Conduct and make at least two presentations of the Proposed Project at community meetings noticed per City instructions. The first such community meeting shall be conducted not later than ninety (90) days after the date of the expiration of the one hundred fifty (150) day period referenced in Section 3(b), above, and the second such community meeting shall be conducted not later than one hundred and eighty (180) days after the date of the first community meeting.

(f) The Public Entities acknowledge that in consideration for the Public Entities entering into this Agreement, the Developer has delivered and City has accepted the Non-Refundable Deposit required by Section 5.

(g) If the City and/or the Authority determine in their sole discretion that all or certain of those parcels of real property comprising the Potential Participating Parcels specifically identified by the Parties are desirable for the development of the Proposed Project, and the City and/or the Authority determine to acquire, in accordance with all applicable law, all or certain of these desirable parcels, the Developer shall fully advance to the City and/or Authority, as applicable, all costs associated with the acquisition of these parcels including, but not limited to, the payment of the negotiated purchase price for these parcels and all legally required relocation costs associated with the acquisitions (the "Developer Contribution") within a reasonable time

09/12/2018

following the written notice from the City and/or Authority requesting the Developer Contribution; provided, however, that as to any such Potential Participating Parcel for which the Developer Contribution is sought, before the City and/or Authority: (i) take any action that would create any obligations whatsoever on the part of the Developer, in each case with respect to acquiring such parcel, it shall first obtain the Developer's consent (which shall not be unreasonably withheld, conditioned or delayed) to such actions; or (ii) enter into any acquisition agreement with any owner of any such parcel, it shall first obtain the Developer's consent (which shall not be unreasonably withheld, conditioned or delayed) for the proposed purchase price for any such parcel(s). In the event that the City and/or Authority, as applicable, legally determines to use its/their eminent domain authority subject to applicable California eminent domain law requirements and limitations, after having adopted a resolution of necessity authorizing the acquisition, to acquire all or certain parcels of the real property comprising the Potential Participating Parcels desirable for the development of the Proposed Project, the Developer shall advance to the City and/or Authority, as applicable, all costs associated with the exercise of such eminent domain authority (including all court costs and reasonable legal fees), as well as all acquisition costs including, but not limited to, the payment of fair market value for each of the condemned parcels as determined by the Court, or pursuant to a negotiated acquisition or settlement agreement, as approved by the Developer (the "Expanded Developer Contribution") within a reasonable amount of time following written notice from the City and/or Authority requesting the Expanded Developer Contribution; provided, however, that before the City and/or the Authority take any actions with respect to exercising such eminent domain authority as to any such Parcel for which the City and/or the Authority requests the Expanded Developer Contribution, it or they, as applicable, shall first obtain the Developer's consent (which shall not be unreasonably withheld, conditioned or delayed) to such actions. In addition, subject to the aforesaid prior consent, the Developer shall also pay all legally required relocation costs associated with such acquisition. With the exception of the court costs and reasonable attorney fees advanced and paid by the Developer for the eminent domain action undertaken by the City and/or the Authority, as applicable, all such advanced acquisition costs shall be credited against the "Payment Consideration Amount" as defined and described in Section 6(c) below, payable by the Developer to the City and/or the Authority, as applicable, for the conveyance of the applicable portions of the Study Area Site. The Parties agree that, upon the acquisition by the City and/or the Authority, as applicable, of any Potential Participating Parcel pursuant to this Section 3(g), such Potential Participating Parcel shall, for all purposes of this Agreement, be deemed to be a City Parcel or Agency Parcel, as the case may be.

Section 4. Exclusive Negotiation Period.

THE EXCLUSIVE NEGOTIATING PERIOD SHALL, IF NOT SOONER TERMINATED AS PROVIDED IN SECTION 8, TERMINATE ON THE DATE THAT IS THIRTY-SIX (36) MONTHS AFTER THE EFFECTIVE DATE HEREOF, SUBJECT TO EXTENSION AS PROVIDED IN THIS AGREEMENT FOR FORCE MAJEURE AND CHALLENGES. HOWEVER, THE EXCLUSIVE NEGOTIATING PERIOD MAY ALSO BE EXTENDED BY THE MUTUAL WRITTEN CONSENT OF THE PARTIES FOR ONE ADDITIONAL PERIOD OF SIX (6) MONTHS. THE CITY MANAGER MAY: (1) GRANT SUCH EXTENSION FOR AND ON BEHALF OF THE CITY; AND (2) GRANT SUCH EXTENSION IN HIS CAPACITY AS EXECUTIVE DIRECTOR OF THE SUCCESSOR AGENCY, FOR AND ON BEHALF OF THE SUCCESSOR AGENCY, AND (3) GRANT SUCH EXTENSION IN HIS CAPACITY AS EXECUTIVE DIRECTOR OF THE AUTHORITY FOR

AND ON BEHALF OF THE AUTHORITY, ALL OF WHICH IN HIS REASONABLE DISCRETION. HOWEVER, NOTWITHSTANDING THE FOREGOING, THE CITY MANAGER AND IN HIS CAPACITY AS EXECUTIVE DIRECTOR SHALL NOT DENY ANY REQUESTED EXTENSION IF AT THE TIME OF THE REQUEST BY DEVELOPER, THE PUBLIC ENTITIES ARE UNABLE TO SIGN A DDA DUE TO ITS FAILURE TO: (I) COMPLETE ANY APPLICABLE ENVIRONMENTAL REVIEW NECESSARY FOR THE PUBLIC ENTITIES TO SIGN A DDA; OR (II) SATISFY ANY CONDITION OR REQUIREMENT OF AB 26.

Successor Agency Authority

If the City Manager and in his capacity as Executive Director, has granted a written extension of the term of this Agreement as provided hereinabove, then the Parties shall within such extended term, and subject to Developer's right to terminate this Agreement under Section 8(b), continue to negotiate in good faith a DDA in accordance with the terms of this Agreement for the proposed development of the Proposed Project on the Study Area Site, and the Exclusive Negotiating Period under this Agreement shall be deemed extended for the period of the extension.

However, notwithstanding the foregoing, the City Manager and in his capacity as Executive Director may, in his sole discretion, submit any extension request to the City Council, the Successor Agency and the Authority for their consideration consistent with this Section 4.

Section 5. Non-Refundable Deposit. Developer, within twenty-four (24) hours after City's approval of the Prior ENA, deposited with the City the sum of One Million Five Hundred Thousand Dollars ($1,500,000) which amount constituted and is referred to herein as the "Non-Refundable Deposit." The Non-Refundable Deposit was paid as consideration to the Public Entities for entering into the Prior ENA and shall be used as consideration for the Public Entities entering into this Agreement, and the City shall have the right, but not the obligation to use or spend the proceeds of the Non-Refundable Deposit towards the payment of certain administrative costs and any other related expenses incurred by the Public Entities (the "City Expenses") relative to the negotiation and preparation of a DDA and/or the implementation of the various obligations of the Public Entities as set forth in this Agreement. All proceeds of the Non-Refundable Deposit shall be the sole property of the City upon submittal by Developer, and shall in no event be refundable, in whole or in part, to the Developer for any reason including, but not limited, to the Parties' inability to enter into a DDA.

Section 6. Disposition and Development Agreement. Subject to the Parties' rights to terminate this Agreement under Section 8, the Parties hereby acknowledge and agree that during the Exclusive Negotiation Period, the Parties shall use their respective good faith efforts to negotiate and enter into a DDA which shall include, but not be limited to, the following terms. The Parties hereby acknowledge that the following terms set forth a general outline for the Parties going forward and that the DDA will contain substantial additional terms which, through mutual negotiation and agreement, may differ from the following specific provisions and that nothing

Successor Agency Authority

If the City Manager and in his capacity as Executive Director, has granted a written extension of the term of this Agreement as provided hereinabove, then the Parties shall within such extended term, and subject to Developer's right to terminate this Agreement under Section 8(b), continue to negotiate in good faith a DDA in accordance with the terms of this Agreement for the proposed development of the Proposed Project on the Study Area Site, and the Exclusive Negotiating Period under this Agreement shall be deemed extended for the period of the extension.

However, notwithstanding the foregoing, the City Manager and in his capacity as Executive Director may, in his sole discretion, submit any extension request to the City Council, the Successor Agency and the Authority for their consideration consistent with this Section 4.

Section 5. Non-Refundable Deposit. Developer, within twenty-four (24) hours after City's approval of the Prior ENA, deposited with the City the sum of One Million Five Hundred Thousand Dollars ($1,500,000) which amount constituted and is referred to herein as the "Non-Refundable Deposit." The Non-Refundable Deposit was paid as consideration to the Public Entities for entering into the Prior ENA and shall be used as consideration for the Public Entities entering into this Agreement, and the City shall have the right, but not the obligation to use or spend the proceeds of the Non-Refundable Deposit towards the payment of certain administrative costs and any other related expenses incurred by the Public Entities (the "City Expenses") relative to the negotiation and preparation of a DDA and/or the implementation of the various obligations of the Public Entities as set forth in this Agreement. All proceeds of the Non-Refundable Deposit shall be the sole property of the City upon submittal by Developer, and shall in no event be refundable, in whole or in part, to the Developer for any reason including, but not limited, to the Parties' inability to enter into a DDA.

Section 6. Disposition and Development Agreement. Subject to the Parties' rights to terminate this Agreement under Section 8, the Parties hereby acknowledge and agree that during the Exclusive Negotiation Period, the Parties shall use their respective good faith efforts to negotiate and enter into a DDA which shall include, but not be limited to, the following terms. The Parties hereby acknowledge that the following terms set forth a general outline for the Parties going forward and that the DDA will contain substantial additional terms which, through mutual negotiation and agreement, may differ from the following specific provisions and that nothing

09/11/2018

herein binds the Public Entities to undertake any action except in compliance with CEQA as provided in Section 7:

(a) A Scope of Development setting forth the specific development components of the Proposed Project including the total square feet of the Proposed Project, the number of required parking spaces and the design parameters for the Study Area Site including, but not be limited to, demolition and clearance activity on the Study Area Site, building height, acceptable architectural and landscape quality, access and circulation, determination of parcel boundaries, on-site and off-site improvements, site-perimeter treatment, landscaped buffers, parking, signage, lighting, and easements, if applicable. The design of the Proposed Project to be developed within the Study Area Site by the Developer shall be reasonably consistent with any concept, plans, schematics and drawings approved by the City.

(b) Developer's submittal to the City of various concepts, plans, schematics and drawings depicting the development of the Proposed Project within the Study Area Site on a phase-by-phase basis, the final construction plans and all other items and materials required by the City for its approval consideration of the Entitlements needed for the Proposed Project within the Study Area Site. Prior to conveyance of the Potential Arena Site to the Developer or as soon thereafter as they are completed, the Developer shall provide concept and schematic plans for the entire Proposed Project as well as final construction plans and any other related items or materials required for the development of the Proposed Project on the Potential Arena Site.

(c) Any DDA that may be negotiated and entered into pursuant to this Agreement by the Parties shall provide that the Developer shall pay a purchase price of not less than fair market value for the conveyance of the City Parcels and Agency Parcels (which fair market value shall be determined by an appraisal of the City Parcels and Agency Parcels using a valuation date as of the Effective Date), and if applicable, by the Authority (collectively, the "Payment Consideration Amount"). Notwithstanding the foregoing, the Payment Consideration Amount shall be subject to reduction as a consequence of any payment obligation of the Developer attributable to all reasonable costs associated with any environmental remediation reasonably approved by the Public Entities required for the development of the Proposed Project on the Potential Arena Site in accordance with remediation procedures established by any applicable governing or public entity having jurisdiction over the remediation of the Study Area Site and for the payment by the Developer of any advance pursuant to Section 3(g) above.

(d) Establishment of a detailed Schedule of Performance in which an acquisition and construction schedule for the development of the Proposed Project on the Potential Arena Site will be provided and the time frame for the submittal of final plans and specifications by the Developer for approval consideration by the Public Entities, consistent with the approved Scope of Development. The Schedule shall also include Developer participation in community presentations for the expressed purpose of allowing community residents to review the plans and drawings.

(e) The operation and management of the Proposed Project by the Developer in a good and professional manner.

09/11/2018 09/12/2018

(f) The maintenance of landscaping, buildings and improvements in good condition and satisfactory state of repair so as to be attractive to the community residents.

(g) The operation of the proposed development of the Proposed Project on the Potential Arena Site by the Developer in compliance with all applicable equal opportunity standards established by Federal, California State and local law.

(h) If the City determines in its reasonable discretion that the financial status of Developer and the Guarantor is not sufficient to satisfy the obligations of the Developer under any DDA, then the City may mandate a provision requiring the Developer's contractor to provide a payment and performance bond ensuring the obligations of said contractor, where necessary.

(i) The payment by Developer on or before the execution of the DDA by City of a Good Faith Deposit in a form provided for in the DDA, in the amount provided in the DDA, which, at the option of the Developer, may be applied towards the Payment Consideration Amount.

(j) A provision providing that the Developer shall be solely responsible for all development costs of the Proposed Project. Neither the Public Entities, nor any of their officers, employees, consultants or agents have provided any direct or indirect information or taken any position which in any way would indicate that the proposed development of the Proposed Project on the Potential Arena Site is or is not subject to the State of California's prevailing wage requirements.

(k) A sources and uses budget, which shall be based upon a financial pro forma that has been reasonably approved by the City, and a feasible method of financing, reasonably demonstrating to the City the availability of all funds needed to complete the development of the Proposed Project on the Potential Arena Site. The DDA shall require the submittal of documentation of all proposed construction loans and owner equity needed to carry out the proposed method of financing. Developer agrees to make continuing full disclosure to the City of its proposed methods of financing, including the financing of any off-site improvements that are required to obtain the necessary entitlements for the Proposed Project on the Potential Arena Site.

(l) It is the intention of the Public Entities and Developer that the disposition and development of the Potential Arena Site be completed in a timely and an expeditious manner. Accordingly, a Schedule of Performance shall be included encompassing appropriate and necessary legal, administrative, transfer of property ownership and interests, financial and construction benchmarks to be met by the appropriate Party, together with required conditions precedent for the conveyance of the Potential Arena Site or applicable portions thereof, including without limitation adequate evidence of financing and entitlements for the proposed development of the Potential Arena Site. The Schedule of Performance shall be subject to extension for: (a) "Force Majeure" (a period of time equal to any period of delay experienced by Developer due to strikes, civil riots, war, invasion, fire or other casualty, acts of God, unavailability of labor or materials, adverse weather conditions, act or failure to act of governmental or quasi-governmental authorities or utilities, including failure or delay in issuing necessary approvals, permits and licenses, and zoning changes and any act or failure to act of third-party utility service providers, or other causes beyond the reasonable control of Developer; and (b) in the event of an administrative appeal, judicial challenge, or filing an application for referendum for such approval

09/12/2018 09/11/2018

to any of the Entitlements (collectively a "Challenge") until the Challenge is finally resolved on terms satisfactory to Developer or waived in its sole discretion.

(m) Appropriate controls to regulate the use of the Potential Arena Site, including but not limited to an Agreement Affecting Real Property, setting forth the ongoing uses, tenant selection criteria and maintenance obligations with respect to the Potential Arena Site in the form of covenants binding on all successors and assigns.

(n) Subject to the adjustment to the Payment Consideration Amount as contemplated in Section 6(c) hereof, the Developer's responsibility for all costs and fees associated with the removal or remediation of any potentially Hazardous Materials from the Potential Arena Site, and demolition and clearance of all improvements on the Potential Arena Site;

(o) The DDA shall be subject to the City's standard insurance requirements for the development of the Potential Arena Site and all other applicable and customary City policies;

(p) The Developer shall use its best efforts to utilize (subject to Developer's right to impose customary screening and qualification standards on all hires) local residents and community businesses in all aspects of the development of the Proposed Project.

(q) In order to attempt to provide additional employment opportunities for Inglewood residents and businesses, the Developer shall engage in the following process with the goal of hiring qualified Inglewood residents for no less than 30% of the construction workforce for the Proposed Project from a list of targeted zip codes mutually agreed upon by the City and Developer and 35% of the employment positions needed in connection with Developer's operation of the Potential Arena Site after completion of the Proposed Project: (i) upon commencement of a job search, publication of employment opportunities in a newspaper of general circulation in Inglewood, social media and the City's website, and (ii) utilization of the resources and networks of the WOCP to create a community resource list that includes Southbay Workforce Investment Board as the primary resource agency and other similar organizations whose capabilities are matched with the particular needs of the Proposed Project. Developer and its contractors, subcontractors and vendors' obligations with respect to this goal shall be satisfied by engaging in the following activities: (w) utilization of the WOCP to identify and solicit qualified Inglewood residents; (x) coordination with organizations such as the Inglewood Airport Chamber of Commerce and Inglewood Partners for Progress to identify and solicit qualified Inglewood residents; (y) funding by Developer and participation in job fairs as may be reasonably requested by City and (z) coordination of local jobs training programs including pre-apprentice programs with the Southbay Workforce Investment Board as the primary resource agency and other local job resource agencies.

(r) To the extent legally permissible, Developer shall designate, and shall cause its contractors, subcontractors, vendors and other third parties under its control or with whom it enjoys privity of contract to designate the City of Inglewood as the point of sale for California sales and use tax purposes (to the extent the payment of sales and use tax is required by applicable law), for all purchases of materials, fixtures, furniture, machinery, equipment and supplies for the development of the Potential Arena Site during construction thereof.

(s) The delivery to the City on or before the City's execution of the DDA of a Performance and Completion Guaranty of an individual or entity (the "Guarantor") having a net worth at least equal to that of the Guarantor approved by the City in its sole and absolute discretion, assuring the timely performance of the Developer's obligations under the DDA.

(t) The installation and placement of appropriate signage on the Potential Arena Site identifying the use of the Potential Arena Site as a premier and state of the art NBA arena and certain ancillary uses related to and compatible with the operation of the arena.

(u) Additional environmental, feasibility, Entitlements, NBA approval and/or other contingencies on the obligations of the Parties.

Section 7. California Environmental Quality Act. Execution of a DDA shall be subject to compliance with the California Environmental Quality Act ("CEQA"), California Public Resources Code §§ 21000 et seq. (as amended, and including any successor statutes and regulations promulgated pursuant thereto). In this regard, the City may conduct an Initial Study of the Proposed Project pursuant to Title 14, Division 6, Chapter 3, Section 15063 of the California Code of Regulations or other appropriate documentation in order to determine the appropriate environmental documents and procedures that may be necessary to comply with CEQA as to the consideration and potential approval of any DDA by the Public Entities relating to the Proposed Project. The Developer hereby agrees to provide all assistance to the City necessary for the Public Entities to carry out their obligations under CEQA. In the event the City determines after consultation with the Developer, but in its independent judgment or any time determines that additional Environmental Review is required pursuant to CEQA, all such costs of the additional environmental work shall be the responsibility of the Developer as required by CEQA. If the Proposed Project is found to cause significant adverse impacts that cannot be mitigated, the Public Entities retain absolute discretion to require implementation of mitigation measures, modify the Proposed Project or select feasible alternatives to mitigate or avoid significant adverse environmental impacts, reject the Proposed Project as proposed if the economic and social benefits of the Proposed Project do not outweigh otherwise unavoidable significant adverse impacts of the Proposed Project, or approve the Proposed Project upon a finding that the economic, social, or other benefits of the Proposed Project outweigh unavoidable significant adverse impacts of the Proposed Project.

Section 8. Termination.

(a) Any Party may terminate this Agreement if another Party should materially fail to comply with and perform in a timely manner all provisions hereof to be performed by the Party, or if no progress is being made in the DDA negotiations as a result of its failure to negotiate a DDA in good faith as required hereby. The Party claiming a failure shall give thirty (30) days written notice to the other Parties specifying any failure under the terms of this Agreement. The Party claiming failure shall not terminate this Agreement if the other Party(ies) cures the deficiency(ies) specified in the notice within said thirty (30) day period, or commences to cure to completion the deficiency(ies) in the event such deficiency(ies) cannot be cured within the requisite thirty (30) day period.

09/11/2018

(b) Developer may at any time and for any reason during the Exclusive Negotiating Period elect not to proceed with the Proposed Project. Upon such an election Developer shall promptly provide written notice of termination of this Agreement to the other Parties.

(c) Upon a termination of this Agreement pursuant to the foregoing Section 8(a) or Section 8(b), (i) no portion of the Non-Refundable Deposit shall be returned to the Developer and the entire amount shall be retained by the City as its property, (ii) but any funds advanced by the Developer to the City and/or Authority pursuant to Section 3(g) shall be returned to the Developer (less reasonable attorneys' fees and costs incurred by the Public Entities in connection with the eminent domain proceedings, including, but not limited to, any damages payable to the owners and/or tenants of the Potential Participating Parcels and/or their respective legal counsel associated with the abandonment of the eminent domain proceedings as required to be paid under California law; provided however, if the City and/or Authority elect to continue to proceed with any eminent domain action commenced prior to the termination of this Agreement following the termination of this Agreement, the City and/or the Authority shall be solely responsible for the payment of any awards, settlements or judgments in any such action and any costs associated with such action incurred after the termination of this Agreement), and (iii) the Parties shall have no further obligations to each other except for those obligations, if any, which by the terms of this Agreement expressly survive its termination.

Section 9. <u>Governing Law</u>. This Agreement and the legal relations between the parties hereto shall be governed by and construed and enforced in accordance with the laws of the State of California. Moreover, the parties hereby agree that in the event of litigation between the parties, venue for litigation brought in any state court shall lie exclusively in the County of Los Angeles, Superior Court, Southwest District located at 825 Maple Avenue, Torrance, California 90503-5058, and venue for any litigation brought in any federal court shall lie exclusively in the Central District of California, Los Angeles.

Section 10. <u>No Other Agreement</u>. This Agreement constitutes the entire agreement of the parties hereto with respect to the subject matter hereof. There are no agreements or understandings between the parties and no representations by either party to the other as an inducement to enter into this Agreement, except as expressly set forth herein. All prior negotiations between the parties are superseded by this Agreement. This Agreement may not be altered, amended or modified except by a written agreement executed by the Parties. Notwithstanding anything provided herein to the contrary, whether expressed or implied, neither the Public Entities nor the Developer shall have any obligation to enter into a DDA with the other party and neither Public Entities nor the Developer, nor any of their respective officers, members, staff or agents have made any promises to the other party other than to exclusively negotiate in good faith with the other party during the Exclusive Negotiating Period, and no statements of either the Public Entities or their respective officers, members, staff or agents as to future obligations shall be binding upon the Public Entities until Environmental Review has been completed and a DDA has been approved by the Public Entities, and duly executed by the Mayor of the City and Chairman of the Successor Agency and Authority, respectively.

Section 11. <u>Prohibition Against Assignment of Agreement and Transfer of Study Area Site</u>. This Agreement shall not be assigned or transferred by the Developer without the prior written consent of the Public Entities which may not be unreasonably withheld by the Public

Entities. The Public Entities shall not voluntarily transfer their respective interests in any portion of the Study Area Site during the term of this Agreement to any third party but shall be allowed to transfer to either the City or the Authority their respective interests in the parcels comprising the Study Area Site.

Section 12. Notices. Any notice which is required or which may be given hereunder may be delivered or mailed to the party to be notified, as follows:

Section 13. No Commitment to Approve DDA. Notwithstanding any provision of this Agreement, the Developer acknowledges and agrees that nothing in this Agreement shall obligate the Public Entities to approve a DDA nor any proposed development within the Study Area Site or shall otherwise expressly or impliedly obligate the Public Entities to sell and/or lease any property or interests therein. The Developer further acknowledges and agrees that the approval of this Agreement and a DDA and any participation in any portion of the Proposed Project by the Public Entities shall be in the sole and absolute discretion of the Public Entities. The Developer further acknowledges and agrees that this Agreement does not confer upon the Developer the right to have a DDA or develop the Proposed Project within the Study Area Site or any portion thereof absent an approved and executed DDA by the Public Entities. The Public Entities acknowledge and agree that nothing in this Agreement shall obligate the Developer to enter into a DDA, provided, however, that the Developer shall promptly notify the Public Entities if it elects not to proceed with the Proposed Project. The Parties in no way intend for this Agreement to waive or restrict the Public Entities' exercise of their independent, discretionary judgment with regard to CEQA or a DDA for the development of the Proposed Project within the Study Area Site or any portion thereof, or any City discretionary decisions or determinations relative to Entitlements required for the Proposed Project.

Section 14. Progress Reports. From time-to-time, as requested by City, by prior written notice to the Developer, the Developer shall make oral and written progress reports advising the City on all matters related to the proposed development, including financial feasibility analyses, construction cost estimates, marketing studies, and similar due diligence matters. All third party non-legally privileged work product documents and due diligence material (not including

confidential materials and proprietary economic data, but including engineering studies, soils studies, environmental studies and similar work product relating to the Study Area Site which is required to be submitted to the City in connection with the Plot Plan Review for the Proposed Project) (the "Work Product"), shall be made available to the City, without any representation, warranty or liability to the Developer. In the event of the termination of this Agreement without the execution of a DDA by the Public Entities and the Developer (other than in the event of a default by the City), the City shall have the right, in its sole discretion, to take possession of any and all Work Product owned by Developer (subject to any retained rights of the party preparing said Work Product) and use such documents and information contained therein in connection with development within the Study Area Site; provided however, Developer makes no representation or warranty with respect to such documents and information; pursuant to which, Developer shall have no liability to the Public Entities, or any other person or entity in connection with providing such documents, the contents thereof and the Public Entities' (or any other person's or entity's) reliance on such documents or information.

Section 15. Disclosure. At the written request of the City, the Developer agrees to disclose to City its partners, principals, officers, stockholders, associates, and of all other material, non-privileged non-proprietary pertinent information concerning the proposed development and the Developer, including the Developer's consultants and the design, financing, and development teams proposed by the Developer and the respective roles and responsibilities of all such parties.

Section 16. Cooperation. Each Party shall cooperate with the other Party and provide such additional information and data relating to the proposed development of the Proposed Project with the Study Area Site, including financing of the Proposed Project, or any necessary information about the development experience of the Developer and any other participants as the City may request from time to time.

Section 17. Brokers. The Public Entities shall not be liable in any manner for any real estate commission or brokerage fees which may arise from the transactions contemplated by this Agreement other than any broker engaged in writing by the Public Entities. The Public Entities and the Developer each represent that it has engaged no broker, agent, or finder in connection with this transaction, and the Developer agrees to indemnify and hold the Public Entities harmless from any claim by any broker, agent, or finder retained by the Developer.

Section 18. Hazardous Materials and Study Area Site Conditions.

(a) The Developer shall be solely responsible for all necessary testing of the Study Area Site for hazardous materials pursuant to all applicable laws, statutes, rules and regulations. Upon fee and/or leasehold acquisition of each parcel of the Study Area Site, as applicable, the Developer shall also be responsible for making each such parcel of the Study Area Site usable for the proposed development of the proposed Project on such parcel as a result of any Study Area Site conditions including, without limitation, flood zones, Alquist-Priolo Earthquake Fault Zoning Act, and similar matters. For purposes of this Agreement, "hazardous materials" shall mean any substance, material or waste which is or becomes regulated by any local governmental authority, the State of California and/or the United States Government, including, but not limited to asbestos; polychlorinated biphenyls (whether or not highly chlorinated); radon gas; radioactive materials; explosives; chemicals known to cause cancer or reproductive toxicity; hazardous waste, toxic

substances or related materials; petroleum and petroleum product, including, but not limited to, gasoline and diesel fuel; those substances defined as a "Hazardous Substance", as defined by Section 9601 of the Comprehensive Environmental Response, Compensation and Liability Act of 1980, 42 U.S.C. 9601, et seq., or as "Hazardous Waste" as defined by Section 6903 of the Resource Conservation and Recovery Act, 42 U.S.C. 6901, et seq.; an "Extremely Hazardous Waste," a "Hazardous Waste" or a "Restricted Hazardous Waste," as defined by The Hazardous Waste Control Law under Section 25115, 25117 or 25122.7 of the California Health and Safety Code, or is listed or identified pursuant to Section 25140 of the California Health and Safety Code; a "Hazardous Material", "Hazardous Substance," "Hazardous Waste" or "Toxic Air Contaminant" as defined by the California Hazardous Substance Account Act, laws pertaining to the underground storage of hazardous substances, hazardous materials release response plans, or the California Clean Air Act under Sections 25316, 25281, 25501, 25501.1 or 39655 of the California Health and Safety Code; "Oil" or a "Hazardous Substance" listed or identified pursuant to 311 of the Federal Water Pollution Control Act, 33 U.S.C. 1321; a "Hazardous Waste," "Extremely Hazardous Waste" or an "Acutely Hazardous Waste" listed or defined pursuant to Chapter 11 of Title 22 of the California Code of Regulations Sections 66261.1 through 66261.126; chemicals listed by the State of California under Proposition 65 Safe Drinking Water and Toxic Enforcement Act of 1986 as a chemical known by the State to cause cancer or reproductive toxicity pursuant to Section 25249.8 of the California Health and Safety Code; a material which due to its characteristics or interaction with one or more other substances, chemical compounds, or mixtures, materially damages or threatens to materially damage, health, safety, or the environment, or is required by any law or public agency to be remediated, including remediation which such law or government agency requires in order for the Potential Arena Site to be put to the purpose proposed by this Agreement; any material whose presence would require remediation pursuant to the guidelines set forth in the State of California Leaking Underground Fuel Tank Field Manual, whether or not the presence of such material resulted from a leaking underground fuel tank; pesticides regulated under the Federal Insecticide, Fungicide and Rodenticide Act, 7 U.S.C. 136 et seq.; asbestos, PCBs, and other substances regulated under the Toxic Substances Control Act, 15 U.S.C. 2601 et seq.; any radioactive material including, without limitation, any "source material," "special nuclear material," "by-product material," "low-level wastes," "high-level radioactive waste," "spent nuclear fuel" or "transuranic waste" and any other radioactive materials or radioactive wastes, however produced, regulated under the Atomic Energy Act, 42 U.S.C. 2011 et seq., the Nuclear Waste Policy Act, 42 U.S.C. 10101 et seq., or pursuant to the California Radiation Control Law, California Health and Safety Code, Sections 25800 et seq.; hazardous substances regulated under the Occupational Safety and Health Act, 29 U.S.C. 651 et seq., or the California Occupational Safety and Health Act, California Labor Code, Sections 6300 et seq.; and/or regulated under the Clean Air Act, 42 U.S.C. 7401 et seq. or pursuant to The California Clean Air Act, Sections 3900 et seq. of the California Health and Safety Code. Any studies and reports generated by the Developer's testing for hazardous materials shall be made available to the City upon the City's request. The City will deliver to the Developer all actually known reports within its possession or under its control regarding Hazardous Materials relating to the Study Area Site.

(b) Upon the execution by Developer of a right of entry agreement acceptable in form and substance to the Public Entities, and upon Developer's satisfaction of conditions precedent therein, which agreement and conditions precedent shall include indemnification of the Public Entities, insurance of the Public Entities and the provision of adequate security for the restoration of the area accessed to substantially its condition prior to any such permitted entry, the Public

09/12/2018

Entities shall, subject to the rights of any tenant, permit Developer and/or Developer's representatives to enter the Study Area Site at reasonable times for the purpose of soils testing, survey work and other predevelopment activities.

(c) Notwithstanding anything in this Agreement to the contrary, by entering this Agreement, neither the Public Entities nor the Developer release, waive, discharge or otherwise alter any and all rights to pursue compensation, damages, contribution, indemnification and/or other remedies against any third party, including without limitation, related to Hazardous Materials or the clean-up, remediation or disposal thereof.

Section 19. Indemnity. Developer shall indemnify, defend, and hold the Public Entities, and their respective directors, officers, employees, agents, and successors and assigns (the "Indemnitee" in this Section) harmless against all suits and causes of action, claims, costs, and liability, including, but not limited to, reasonable attorney's fees and costs of any litigation, or arbitration or mediation, if any, brought by third parties (1) challenging the validity, legality or enforceability of this Agreement or (2) seeking damages which may arise directly or indirectly from the negotiation, formation, execution, enforcement or termination of this Agreement, or which are incident to the performance of the activities contemplated in this Agreement. Nothing in this Section shall be construed to mean that Developer shall hold the Indemnitee harmless and/or defend the Indemnitee to the extent of any claims arising from, or alleged to arise from the negligence, or willful misconduct or illegal acts of any of the Indemnitees, or the breach by the Public Entities of any agreement relating to the Study Area Site, including but not limited to this Agreement and any DDA, if approved. The Public Entities agree to fully cooperate with Developer in the defense of any matter in which Developer is defending and/or holding the Indemnitee harmless. The Public Entities may make all reasonable decisions with respect to its representation in any legal proceeding, including, but not limited to, the selection of attorney(s). This indemnity obligation shall survive the termination of this Agreement.

Section 20. No Third Party Beneficiaries. The Public Entities and the Developer expressly acknowledge and agree they do not intend, by their execution of this Agreement, to benefit any persons or entities not signatory to this Agreement, including, without limitation, any brokers representing the parties to this transaction. No person or entity not a signatory to this Agreement shall have any rights or causes of action against either the Public Entities or the Developer arising out of or due to the Public Entities' or the Developer's entry into this Agreement.

Section 21. Offer to Enter Negotiations. This Agreement, when executed by the Developer and delivered to the City, shall be deemed to be an offer by the Developer to enter into negotiations pursuant to the terms of this Agreement and will then be scheduled jointly for approval consideration by the Public Entities. This Agreement must be authorized, executed and delivered by the Public Entities within sixty (60) days after the date of signature by the Developer or the Developer shall have the right to withdraw its offer to enter into this Agreement upon written notice to the Public Entities. The Exclusive Negotiating Period shall commence and this Agreement shall not be effective until the Effective Date, which is the first calendar day of the month following the date this Agreement has been executed by both of the Parties, which date shall be entered on the first paragraph of this Agreement by the Public Entities after approval of this Agreement.

Section 22. Public Entities Rights. The Developer understands and agrees that in the event of the termination or expiration of this Agreement without the execution of a DDA, the Public Entities shall have the right, in their respective discretion, to commence exclusive negotiations with any other third party developer selected for the development of the parcels comprising the Study Area Site, without the need for any consultation or approval by the Developer. The Developer acknowledges and agrees that it will not receive any property interest in the Study Area Site of any kind as a result of entering into this Agreement.

In the event the Developer executes a DDA consistent with the provisions of this Agreement prior to the termination or expiration of the Exclusive Negotiating Period, then within sixty (60) days of the delivery to City of such DDA, the Public Entities shall consider whether to approve or disapprove such DDA. If the Public Entities' approval does not occur within such 60 day period, the Developer shall have the right to withdraw its offer to enter into such DDA upon written notice to the Public Entities.

Section 23. Counterparts. This Agreement may be executed in counterparts, each of which when so executed shall be deemed an original, and all of which, together, shall constitute one and the same instrument.

Section 24. Attorney's Fees. In the event that either party hereto brings an action or proceeding against the other party to enforce or interpret any of the conditions or provisions of this Agreement, the prevailing party shall be entitled to recover all reasonable attorney's fees and expenses and court costs associated with such action or proceeding.

Section 25. Effect of Agreement. Notwithstanding any other provision of this Agreement, the Parties expressly acknowledge and agree as follows:

(a) None of the matters described in this Agreement as a purported commitment or obligation of the Parties to be contained in a proposed DDA shall have any effect unless and only to the extent such matters are expressly set forth in a DDA or other written agreement duly authorized, approved and executed by the Parties. Notwithstanding any provision of this Agreement to the contrary, Developer acknowledges and expressly agrees as follows: (i) that this Agreement does not obligate the Public Entities in any way to approve, in whole or in part, any of the matters described in this Agreement, including, without limitation, matters pertaining to land use entitlements or approvals, permits, waivers or reduction of fees, development or any other matters (the "Entitlements") to be acted on independently by the City; (ii) that all such required Entitlements shall be considered and processed by the City in accordance with all applicable City requirements and procedures; and (iii) that the City reserves all rights to approve, disapprove or approve with conditions all such Entitlements in its sole and absolute discretion. Upon the execution of a DDA by the Parties, this Agreement shall be null and void and of no effect and shall be superseded by the terms and conditions of the DDA.

(b) The Parties shall promptly commence the good faith negotiation of a DDA following the execution of this Agreement by the Parties. Each Party acknowledges and agrees that, for the purposes of this Agreement, a Party shall be deemed to be acting in good faith so long as it makes reasonable efforts to attend scheduled meetings, directs its consultants to cooperate with the other Parties, provides information necessary for the negotiations to the other Parties,

09/12/18

participates in negotiations, and uses commercially reasonable efforts to promptly review and return with comments all correspondence, reports, documents, or agreements received from another Party that require such comments. Upon termination of this Agreement for any reason, without limiting the provisions of Section 8(c), the obligation of the Parties to negotiate in good faith shall terminate.

IN WITNESS WHEREOF, the City, Successor Agency, Authority and Developer have executed this Agreement in the City of Inglewood, Los Angeles County, California, on the date hereinabove first set out.

THE CITY OF INGLEWOOD FORMER REDEVELOPMENT AGENCY OVERSIGHT BOARD

NOTICE TO PUBLIC OF PROPOSED ACTION

CONCERNING THE PROPOSED ADOPTION OF A RESOLUTION OF THE OVERSIGHT BOARD TO CITY OF INGLEWOOD AS SUCCESSOR AGENCY TO THE FORMER INGLEWOOD REDEVELOPMENT AGENCY DIRECTING THE CITY OF INGLEWOOD AS SUCCESSOR AGENCY TO THE FORMER INGLEWOOD REDEVELOPMENT AGENCY WITH RESPECT TO THE DISPOSITION PROCESS FOR ALL PARCELS OF REAL PROPERTY IDENTIFIED AS LAX NOISE MITIGATION PROPERTIES AS PART OF ITS IMPLEMENTATION OF THE APPROVED LONG RANGE PROPERTY MANAGEMENT PLAN, AS AMENDED

NOTICE IS HEREBY GIVEN that all citizens are invited to attend a Public Meeting of the City of Inglewood Former Redevelopment Agency Oversight Board to be held on Wednesday, June 27, 2018 commencing at 6:00 P.M., in the City of Inglewood City Council Chambers, One Manchester Boulevard, Ninth Floor, Inglewood, California, 90301. The public is invited to comment on the disposition process and requirements applicable to all parcels of real property identified as LAX Noise Mitigation Properties as part of its implementation of the approved Long-Range Property Management Plan, as amended.

Proposed Action

PROPOSED DISPOSITION OF LAX NOISE MITGATION PROPERTIES PURSUANT TO LONG-RANGE PROPERTY MANAGEMENT PLAN, AS AMENDED — Successor Agency staff is requesting the Oversight Board to direct the Successor Agency to dispose of all parcels of real property identified as LAX Noise Mitigation Properties in the approved Long-Range Property Management Plan, as amended, subject to the disposition requirements set forth in those certain Federal Aviation Grant Agreements and Los Angeles World Airport Letter Agreements applicable to the LAX Noise Mitigation Properties (collectively, the "FAA Grant Agreements"). These subject properties are more particularly identified and described in the approved Long-Range Property Management Plan, as amended, as the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13.

The Oversight Board will hold a public meeting to consider the adoption of a resolution directing the Successor Agency to dispose of the LAX Noise Mitigation Properties identified in and pursuant to the Long-Range Property Management Plan, as amended, subject to the disposition requirements of the FAA Grant Agreements, on Wednesday, June 27, 2018 commencing at 6:00 P.M., in the City of Inglewood City Council Chambers, One Manchester Boulevard, Ninth Floor, Inglewood, California, 90301. Members of the public are invited to attend the public meeting and provide testimony on the proposed disposition process and requirements for all parcels of real property identified as LAX Noise Mitigation Properties in the approved Long-Range Property Management Plan (the "Plan"), as amended, as part of its implementation of the Plan.

09/27/2018

Questions and comments may be directed to Olga Castaneda, Secretary, City of Inglewood Former Redevelopment Agency Oversight Board, Los Angeles County Board of Supervisors, 500 West Temple Street, Room B-50, Los Angeles, California, 90012, (213) 974-1431.

ADJOURNMENT INGLEWOOD SUCCESSOR AGENCY

9102/11/60

Exhibit F
81

CITY OF INGLEWOOD

Office of the Executive Director

Inglewood All-America City 2009

DATE: June 19, 2018

TO: Chairman and Successor Agency Board Members

FROM: Office of the Successor Agency Executive Director

SUBJECT: Request to the Oversight Board to Adopt a Resolution Directing the Successor Agency to Implement the Approved Long-Range Property Management Plan, as Amended, with Respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties

RECOMMENDATION:

It is recommended that the Chairman and Successor Agency Board Members ("Successor Agency") request that the Oversight Board for the Successor Agency of the Former Inglewood Redevelopment Agency ("Oversight Board") adopt a Resolution, directing the Successor Agency to implement the State of California Department of Finance approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13 ("Mitigation Properties"), subject to the applicable disposition requirements of the Federal Aviation Administration grant agreements ("FAA Agreements") and Los Angeles World Airports letter agreements ("LAWA Agreements").

BACKGROUND:

On October 1, 2015, the State of California Department of Finance ("DOF") approved the disposition and use of all the Successor Agency properties listed in the Long-Range Property Management Plan ("LRPMP"). On June 15, 2016, at the request of the Successor Agency, the Oversight Board approved an amendment to the LRPMP by Resolution No. 16-OB-003. Thereafter, on July 1, 2016, DOF approved the amended LRPMP ("Amended LRPMP").

DISCUSSION:

As required under Health & Safety Code section 34191.5, the Amended LRPMP addressed the disposition and use of all properties held by the Successor Agency pursuant to the Dissolution Law (Assembly Bill x1 26). More specifically, the Amended LRPMP contained a detailed description of the 'Long-Term Planned Use and Disposition' of the Mitigation Properties. The acquisition of each of these Mitigation Properties was funded in part by certain funds provided by the Federal Aviation Administration pursuant to the FAA Agreements, the Los Angeles World Airports pursuant to the LAWA Agreements, and/or tax increment of the former Inglewood Redevelopment Agency.

At this time, none of the Mitigation Properties have been sold and the Successor Agency now seeks specific direction from the Oversight Board with respect to the disposition of the Mitigation Properties in accordance with the Amended LRPMP subject to the applicable disposition requirements of the FAA Agreements and LAWA Agreements.

FINANCIAL/FUNDING ISSUES AND SOURCES:

There is no financial or funding requirement of the Successor Agency for this action.

Re: Demand to Cure Violation of the Ralph M. Brown Act

Dear Members of the Successor Agency:

On behalf of MSG Forum, LLC, and pursuant to Government Code Sections 54960 and 54960.1, we demand that the Successor Agency to the Former Inglewood Redevelopment Agency (the "Successor Agency") cure the violation of the Ralph M. Brown Act (Government Code Section 54950 *et seq.*) (the "Brown Act") that the Successor Agency committed at the improperly agendized meeting held on June 19, 2018 (the "Meeting").

The description on the Successor Agency agenda for Item CSA-3 read as follows:

> A. CSA-3. OFFICE OF THE EXECUTIVE DIRECTOR
>
> Staff report recommending approval to request that the Oversight Board for the Successor Agency of the Former Inglewood Redevelopment Agency adopt a Resolution, directing the Successor Agency to implement the State of California Department of Finance approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable disposition requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements.

This description is vague, ambiguous, misleading and insufficient to put the public on notice of the action the Successor Agency might take at the Meeting.

The public could not understand that the properties referenced in the agenda are in fact the very properties proposed for a Clippers basketball arena and are subject to an "Exclusive Negotiating Agreement" between the Successor Agency, the City of Inglewood, and Murphy's Bowl LLC ("Murphy's Bowl"). There is no reference to the Exclusive Negotiating Agreement, to Murphy's Bowl, to the Clippers, or to the proposed basketball arena in the agenda description.

The agenda description also includes vague and uninformative references to "applicable disposition requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." However, there is no information about those agreements -- what they require, who is a party to the agreements, the date of the agreements, agreement numbers, where the agreements might be available to review, etc. In short, given the description of CSA-3 on the Meeting agenda, the public could not reasonably determine how the "LAX Noise Mitigation Properties" might be disposed of, to whom they might be disposed to, for what purpose they would be disposed, or the requirements or obligations that might be imposed on any disposal.

This violation by the Successor Agency is part of a pattern of violations of the Brown Act by the City and the Successor Agency. The "hide the ball" approach of the agenda's description is inconsistent with the Brown Act, and we demand that the Successor Agency immediately cure the violation by rescinding the action taken on Meeting Item CSA-3 and complying with the Brown Act prior to taking action with respect to the "LAX Noise Mitigation Properties."

Government Code Section 54960.1 requires the Successor Agency either to cure or correct its actions, or to inform us of its intent not to do so, within 30 days from the receipt of this demand. If the Successor Agency fails to cure or correct its violations as demanded and required by law, our client intends to seek judicial invalidation of the action (along with its costs and reasonable attorneys' fees) pursuant to Government Code Section 54960.1.

Sincerely,

John C. Heintz

CITY OF INGLEWOOD

Office of the Successor Agency Executive Director

Inglewood All-America City 2009

DATE: June 27, 2018

TO: Chair and Oversight Board Members

FROM: Office of the Successor Agency Executive Director

SUBJECT: **Adoption of Resolution by the Oversight Board to the Successor Agency of the former Inglewood Redevelopment Agency ("Oversight Board") Directing the City of Inglewood as the Successor Agency to former Inglewood Redevelopment Agency ("Successor Agency") to Implement the approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements**

RECOMMENDATION:

It is recommended that the Chair and Oversight Board Members adopt the attached Resolution directing the Successor Agency to implement the Long-Term Use and Disposition provisions of the approved Long-Range Property Management Plan, as amended for the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13 ("Mitigation Properties"), subject to the Federal Aviation Administration grant agreements ("FAA Agreements") and Los Angeles World Airports letter agreements ("LAWA Agreements").

BACKGROUND:

On October 1, 2015, the State of California Department of Finance ("DOF") approved the disposition and use of all the Successor Agency properties listed in the Long-Range Property Management Plan ("LRPMP"). On June 15, 2016, at the request of the Successor Agency, the Oversight Board approved an amendment to the LRPMP by Resolution No. 16-OB-003. Thereafter, on July 1, 2016, DOF approved the amended LRPMP ("Amended LRPMP").

DISCUSSION:

As required under Health & Safety Code section 34191.5, the Amended LRPMP addressed the disposition and use of all properties held by the Successor Agency pursuant to the Dissolution Law (Assembly Bill x1 26). More specifically, the Amended LRPMP contained a detailed description of the 'Long-Term Planned Use and Disposition' of the Mitigation Properties. The acquisition of each of these Mitigation Properties was funded in part by certain funds provided by the Federal Aviation Administration pursuant to the FAA Agreements, the Los Angeles World Airports pursuant to the LAWA Agreements, and/or tax increment of the former Inglewood Redevelopment Agency.

At this time, none of the Mitigation Properties have been sold and the Successor Agency now seeks specific direction from the Oversight Board with respect to the disposition of the Mitigation Properties in accordance with the Amended LRPMP subject to the applicable disposition requirements of the FAA Agreements and LAWA Agreements.

FINANCIAL/FUNDING ISSUES AND SOURCES:
There is no financial or funding requirement of the Oversight Board for this action.

RESOLUTION NO. 18-OB-003

A RESOLUTION OF THE OVERSIGHT BOARD TO CITY OF INGLEWOOD AS SUCCESSOR AGENCY TO THE FORMER INGLEWOOD REDEVELOPMENT AGENCY DIRECTING THE SUCCESSOR AGENCY TO DISPOSE OF ALL PARCELS OF REAL PROPERTY IDENTIFIED AS LAX NOISE MITIGATION PROPERTIES IN THE APPROVED LONG RANGE PROPERTY MANAGEMENT PLAN, AS AMENDED

WHEREAS, Assembly Bill xl 26 ("AB 26") and ABx 27 ("AB 27") were passed by the State Legislature on June 15, 2011 and signed by the Governor on June 28, 2011, making certain changes to Redevelopment Law, including adding Part 1.8 (commencing with Section 34161) and Part 1.85 (commencing with Section 34170) ("Part 1.85") to Division 24 of the California Health and Safety Code ("Health and Safety Code") (collectively, "Dissolution Law"), and

WHEREAS, the California Supreme Court in *California Redevelopment Association v. Matosantos*, Case No. S194861 upheld the constitutionality of AB 26; and

WHEREAS, Health and Safety Code section 34173(a) designates successor agencies as successor entities to former redevelopment agencies; and

WHEREAS, upon dissolution of the Inglewood Redevelopment Agency as of February 1, 2012, the City of Inglewood elected to serve in the capacity of successor agency to the Former Inglewood Redevelopment Agency ("Former Redevelopment Agency") under Health and Safety Code Section 34173(d), as confirmed by City Council Resolution No. 12-02 adopted on January 1, 2012; and

WHEREAS, AB 26 requires that there shall be an oversight board ("Oversight Board") established for each of the former California redevelopment agency's successor agencies to supervise the activities of the successor agency and the wind down of the dissolved redevelopment agency's affairs pursuant to AB 26; and

WHEREAS, the City of Inglewood, in its capacity as the "Successor Agency" is presently engaged in activities necessary to wind down the affairs of the Former Redevelopment Agency; and

WHEREAS, in accordance with Dissolution Law, the Successor Agency prepared and both the Oversight Board and the State Department of Finance ("Finance") approved a Long-Range Property Management Plan pursuant to AB 26 in conformance with Health & Safety Code section 34191.5(b) (the "LRPMP") providing for the disposition and use of the real properties of the Former Redevelopment Agency; and

WHEREAS, at the request of the Successor Agency and in furtherance of the Dissolution Law, the Oversight Board and Finance approved an amendment to the LRPMP ("Amended LRPMP") on June 15, 2016 and July 1, 2016, respectively; and

WHEREAS, the Successor Agency now proposes to implement the Amended LRPMP specifically with regard to disposition of those certain parcels of real property identified and described in the Amended LRPMP as the "LAX Noise Mitigation Properties" (the " Mitigation Properties"); and

WHEREAS, the Mitigation Properties are subject to the Federal Aviation Administration grant agreements and associated Los Angeles World Airports letter agreements (collectively, the "FAA Grant Agreements"); and

NOW, THEREFORE, the Oversight Board to the City of Inglewood, as the Successor Agency to the Former Redevelopment Agency, does hereby find, determine and resolve and order as follows:

Section 1. The foregoing recitals are true and correct.

Section 2. All legal prerequisites to the adoption of this Resolution have occurred.

Section 3. The Successor Agency is hereby directed to dispose of the Mitigation Properties in accordance with the Amended LRPMP.

Section 4. The Mitigation Properties are subject to the disposition requirements of the FAA Grant Agreements and any compensation agreement requirements of the Dissolution Law with respect to any net proceeds from a third party (non-City) transferee, after all obligations of the FAA Grant Agreements are satisfied.

Section 5. This Resolution shall take effect immediately upon its adoption.

Section 6. The Oversight Board Secretary shall certify as to the adoption of this Resolution.

PASSED, APPROVED and ADOPTED by the Oversight Board to the City of Inglewood as the Successor Agency to the former Inglewood Redevelopment Agency at a specially scheduled public

Re: Demand to Cure Violation of the Ralph M. Brown Act

Dear Members of the Oversight Board:

On behalf of MSG Forum, LLC, and pursuant to Government Code Sections 54960 and 54960.1, we demand that the Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency (the "Oversight Board") cure the violation of the Ralph M. Brown Act (Government Code Section 54950 *et seq.*) (the "Brown Act") that the Oversight Board committed at the improperly agendized special meeting held on June 27, 2018 (the "Special Meeting").

The description on the Oversight Board agenda for Special Meeting Item 3 read as follows:

> Adoption of Resolution by the Oversight Board to the Successor Agency of the former Inglewood Redevelopment Agency Directing the City of Inglewood as the Successor Agency to former Inglewood Redevelopment Agency to Implement the approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements.

This description is vague, ambiguous, misleading and wholly insufficient to put the public on notice of the action the Oversight Board might take at the Special Meeting. It is clear this has been done intentionally to cloud from the public's view what is really going on with this proposed action.

07/11/2018

Not a single person reading this agenda would have a clue that the properties referenced in the agenda are in fact the very properties proposed for a Clippers basketball arena and are subject to an "Exclusive Negotiating Agreement" between the Successor Agency, the City of Inglewood, and Murphy's Bowl LLC ("Murphy's Bowl"). There is no reference to the Exclusive Negotiating Agreement, to Murphy's Bowl, to the Clippers, or to the proposed basketball arena in the agenda description.

The agenda description also includes vague and uninformative references to "applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." However, there is no information about those agreements -- what they require, who is a party to the agreements, the date of the agreements, agreement numbers, where the agreements might be available to review, etc. In short, given the description of Item 3 on the Special Meeting agenda, the public could not reasonably determine how the "LAX Noise Mitigation Properties" might be disposed of, to whom they might be disposed to, for what purpose they would be disposed, or the requirements or obligations that might be imposed on any disposal.

It is clear that this violation by the Oversight Board is part of a pattern of violation of the Brown Act by the City, the Successor Agency and now the Oversight Board. What is even more shocking was the complete disregard for the testimony of Public Counsel, Doug Cartsens of Chatten-Brown and Carstens, and Latham & Watkins to very serious issues raised at the Oversight Board. There was not a single question or comment from any Board Member in response to the public testimony. There was no discussion before the roll call vote and approval, and the meeting was over in a matter of minutes. This is simply not appropriate.

The "hide the ball" approach of the agenda's description is inconsistent with the Brown Act. We demand that the Oversight Board immediately cure the violation by rescinding the action taken on Special Meeting Item 3 and complying with the Brown Act prior to directing the Successor Agency to take action with respect to the "LAX Noise Mitigation Properties."

Government Code Section 54960.1 requires the Oversight Board either to cure or correct its actions, or to inform us of its intent not to do so, within 30 days from the receipt of this demand. If the Oversight Board fails to cure or correct its violations as demanded and required by law, our client intends to seek judicial invalidation of the action (along with its costs and reasonable attorneys' fees) pursuant to Government Code Section 54960.1.

Sincerely,

John C. Heintz

Re: Action Taken by the Former Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency at its June 27, 2018 Special Meeting

Dear Members of the Los Angeles County Second District Consolidated Oversight Board:

As counsel to MSG Forum LLC, we write regarding an eleventh-hour action taken by the former Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency (the "Former Board") at an improperly noticed special meeting held on June 27, 2018 (the "Special Meeting"), just four days prior to the Former Board being replaced by this Consolidated Oversight Board. The action involved unclear and ambiguous "direction" to the Successor Agency to the Former Inglewood Redevelopment Agency ("Successor Agency") related to the disposition of 13 parcels of land previously owned by the former Inglewood Redevelopment Agency (the "Action").

The Action suffered from a number of infirmities, all of which were clearly communicated by MSG Forum and others to the Former Board in both written and oral testimony prior to and during the Special Meeting. The Action is null and void given the Former Board's failure to comply with the Ralph M. Brown Act, it is inconsistent with the Former Board's fiduciary duties to the taxing entities and it violated the California Environmental Quality Act ("CEQA").

07/31/2018

On June 29, 2018, we sent a letter to the Former Board demanding that it immediately cure the violation by rescinding the Action and comply with the Brown Act prior to directing the Successor Agency to take action with respect to the 13 parcels of land that were the subject of the Action. A copy of our demand letter to the Former Board is attached. Also attached is a copy of a letter we submitted to the Former Board prior to its meeting on June 27th.

We respectfully request that the Consolidated Oversight Board immediately correct and cure the Former Board's Brown Act violation and ensure that any future action taken by the Successor Agency with respect to the 13 parcels moving forward complies with Dissolution Act, CEQA and all applicable laws.

Sincerely,

George J. Mihlsten

Re: June 27, 2018 Special Meeting of the Oversight Board: Agenda Item 3 -

Dear Members of the Oversight Board:

As counsel to MSG Forum, LLC, we write regarding today's Special Meeting of the Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency (the "Oversight Board").

First, we note that the notice for Special Meeting Item No. 3 violates the Ralph M. Brown Act (Government Code Section 54950 *et seq.*) (the "Brown Act"). The description for Item No. 3 reads as follows:

> Adoption of Resolution by the Oversight Board to the Successor Agency of the former Inglewood Redevelopment Agency Directing the City of Inglewood as the Successor Agency to former Inglewood Redevelopment Agency to Implement the approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements.

This description is wholly insufficient to put the public on notice of the action the Oversight Board might take. The lack of clarity related to the direction to "implement" the approved Long Range Property Management Plan ("LRPMP") subject to certain referenced "agreements" that are

undated and unavailable in the materials posted for the meeting is apparent. The public cannot reasonably determine what action is being taken by the Oversight Board because they cannot reasonably determine what specific agreements are being referenced or what those agreements might provide. There is also insufficient information about the Parcels themselves, and there is no information regarding a particular disposition of the Parcels. We therefore demand that the Oversight Board decline to take any action on Item 3 at the Special Meeting tonight, and note that any action taken on Item 3 would be void.

Should the Oversight Board decide to move forward with consideration of the improperly noticed Item 3, consideration of Resolution No. 18-OB-003, we respectfully request that the Oversight Board decline to approve the Successor Agency's request.

The referenced "Mitigation Properties" (referred to herein as the "Parcels") are currently subject to an "Exclusive Negotiating Agreement" (the "ENA") between the Successor Agency, the City of Inglewood, and Murphy's Bowl LLC ("Murphy's Bowl"). While it is widely known that Murphy's Bowl is seeking to develop a basketball arena for the Los Angeles Clippers on the Parcels, there is no reference to the ENA, to Murphy's Bowl, or to the proposed basketball arena in the proposed Resolution (or its accompanying Staff Report) before this Oversight Board. Not only are the notices regarding the Resolution 18-OB-003 deficient, but approval of the Resolution would violate the California Environmental Quality Act ("CEQA"). Approval of the disposition would be an action in furtherance of the arena project in a manner that forecloses alternatives or mitigation measures in violation of CEQA. (*Save Tara v. City of West Hollywood* (2008) 45 Cal.4th 116, 138 and CEQA Guidelines section 15004 (b)(2)(B).)

Notwithstanding its actual purpose, on its face the Resolution appears to simply direct the Successor Agency to comply with the LRPMP that it is already required to comply with under the law. *See* Health & Safety Code § 34191.3. However, the Successor Agency is not currently complying with the LRPMP. By tying up the Parcels for three years (and potentially longer) without compensation to the taxing entities, the ENA directly conflicts with the LRPMP's primary directive to sell the Parcels within three years of the LRPMP's approval and virtually assures that it will be several years before the taxing entities receive any of their entitled compensation. To address this non-compliance with the LRPMP, the Oversight Board should decline to approve proposed Resolution before it today and take steps to ensure the Successor Agency complies with the LRPMP moving forward.

Further, given the vagueness of the proposed Resolution itself, the lack of information available in the Staff Report, and the lack of discussion during the Successor Agency's June 19, 2018 consideration of the request now before the Oversight Board, it appears that the Successor Agency may be attempting to obtain the Oversight Board's pre-approval of the transfer of the sale of the Parcels in the future or any transfer of the Parcels to the City to facilitate the arena project. We are concerned that the Successor Agency may be taking this action now, four days before this Oversight Board ceases to exist, to circumvent the need for approval from the Countywide

Oversight Board[1] for the sale or transfer of the Parcels in the future. Such an action would be inconsistent with the Dissolution Act. A future transaction for the sale of the Parcels would have to return to the Countywide Oversight Board for approval.

In addition to being void under the Brown Act, an 11th hour provision of any pre-approval to the Successor Agency for the transfer of the Parcels without publically available details as to the purchaser and its obligations, the price and basis for the same, the proposed future use, etc. would be inconsistent with the Dissolution Act and would violate Oversight Board's fiduciary duties. Prior to transfer, the Oversight Board must have enough information to determine whether or not such transfer maximizes value for the taxing entities and is consistent with the LRPMP and Dissolution Act. The Successor Agency itself has recognized these obligations when it has sold former redevelopment agency parcels listed on the LRPMP to private developers in the past. For example, on November 18, 2015, the Successor Agency disposed of real property at the corner of Olive Street and Glasgow Avenue by private sale by seeking and receiving specific approval from the Oversight Board. In that case, the Successor Agency put before the Oversight Board a complete Disposition and Development Agreement along with the sale price that relied on an independent appraisal based upon the parcel's highest and best use. *See* Oversight Board Resolution No. 15-OB-012 at 2. This level of information allowed the Oversight Board to "duly consider[] all of the terms and conditions of the proposed sale of the [Successor] Agency Parcels and the development of the Site pursuant to the terms of the [Development and Disposition Agreement.]" *Id.*

Similarly, on November 4, 2015, the Successor Agency transferred real property designated in the LRPMP as "Properties to be Retained for Future Development" from itself to the City by seeking and receiving specific approval for such transfer from the Oversight Board. *See* Oversight Board Resolution 15-OB-015.

The Successor Agency is not providing similar information or specificity to the Oversight Board today. It is well known that the Successor Agency and City of Inglewood propose to sell the Parcels to Murphy's Bowl for a new basketball arena. Yet the proposed Resolution before the Oversight Board only provides a vague reference to disposing of the Mitigation Properties "in accordance with the [] LRPMP." Regardless of the Successor Agency's reasoning for its request, the Oversight Board cannot adopt the proposed Resolution that is impermissibly vague and that could be read as offering a "blank check" to the Successor Agency to quietly dispose of the Parcels at some unknown point in the future without giving the Oversight Board the ability to analyze the disposal for consistency with the LRPMP and the Dissolution Act. The Oversight Board should decline to approve the Successor Agency's request and take steps to ensure the Successor Agency obtains the Oversight Board's approval prior to the sale of any of the Parcels to a private party or transfer of any of the Parcels to the City once the details of such a transaction are disclosed.

---

[1] *See* Health & Safety Code § 34179(j); *see also* California Department of Finance, *Countywide Oversight Board Frequently Asked Questions*; available at http://www.dof.ca.gov/Programs/Redevelopment/Countywide_OB/documents/Countywide_OB_FAQs.pdf (noting that "Countywide Oversight Boards shall be in operation as of July 1, 2018" and that "[t]he current [Oversight Board] of each Agency will dissolve and will no longer have bearing on Agency actions").

The Oversight Board has a fiduciary duty to the taxing entities, and it is time that the Oversight Board fulfilled that duty. The Oversight Board should decline to take action on tonight's improperly noticed Item No. 3 and take steps to ensure the Successor Agency complies with the LRPMP and obtains the Oversight Board's approval prior to the sale of any of the Parcels to a private party or transfer of any of the Parcels to the City once the details of such a transaction are disclosed.

Sincerely,

John C. Heintz

Re: Demand to Cure Violation of the Ralph M. Brown Act

Dear Members of the Oversight Board:

On behalf of MSG Forum, LLC, and pursuant to Government Code Sections 54960 and 54960.1, we demand that the Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency (the "Oversight Board") cure the violation of the Ralph M. Brown Act (Government Code Section 54950 *et seq.*) (the "Brown Act") that the Oversight Board committed at the improperly agendized special meeting held on June 27, 2018 (the "Special Meeting").

The description on the Oversight Board agenda for Special Meeting Item 3 read as follows:

> Adoption of Resolution by the Oversight Board to the Successor Agency of the former Inglewood Redevelopment Agency Directing the City of Inglewood as the Successor Agency to former Inglewood Redevelopment Agency to Implement the approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements.

This description is vague, ambiguous, misleading and wholly insufficient to put the public on notice of the action the Oversight Board might take at the Special Meeting. It is clear this has been done intentionally to cloud from the public's view what is really going on with this proposed action.

8107/11/68 8107/11/68

LATHAM&WATKINS LLP

Not a single person reading this agenda would have a clue that the properties referenced in the agenda are in fact the very properties proposed for a Clippers basketball arena and are subject to an "Exclusive Negotiating Agreement" between the Successor Agency, the City of Inglewood, and Murphy's Bowl LLC ("Murphy's Bowl"). There is no reference to the Exclusive Negotiating Agreement, to Murphy's Bowl, to the Clippers, or to the proposed basketball arena in the agenda description.

The agenda description also includes vague and uninformative references to "applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." However, there is no information about those agreements -- what they require, who is a party to the agreements, the date of the agreements, agreement numbers, where the agreements might be available to review, etc. In short, given the description of Item 3 on the Special Meeting agenda, the public could not reasonably determine how the "LAX Noise Mitigation Properties" might be disposed of, to whom they might be disposed to, for what purpose they would be disposed, or the requirements or obligations that might be imposed on any disposal.

It is clear that this violation by the Oversight Board is part of a pattern of violation of the Brown Act by the City, the Successor Agency and now the Oversight Board. What is even more shocking was the complete disregard for the testimony of Public Counsel, Doug Cartsens of Chatten-Brown and Carstens, and Latham & Watkins to very serious issues raised at the Oversight Board. There was not a single question or comment from any Board Member in response to the public testimony. There was no discussion before the roll call vote and approval, and the meeting was over in a matter of minutes. This is simply not appropriate.

The "hide the ball" approach of the agenda's description is inconsistent with the Brown Act. We demand that the Oversight Board immediately cure the violation by rescinding the action taken on Special Meeting Item 3 and complying with the Brown Act prior to directing the Successor Agency to take action with respect to the "LAX Noise Mitigation Properties."

Government Code Section 54960.1 requires the Oversight Board either to cure or correct its actions, or to inform us of its intent not to do so, within 30 days from the receipt of this demand. If the Oversight Board fails to cure or correct its violations as demanded and required by law, our client intends to seek judicial invalidation of the action (along with its costs and reasonable attorneys' fees) pursuant to Government Code Section 54960.1.

Sincerely,

John C. Heintz

DEMAND FOR JURY TRIAL

Plaintiff MSG Forum, LLC ("MSG Forum") for its complaint against defendants the City of Inglewood ("City"), the Successor Agency to the Inglewood Redevelopment Agency ("Successor Agency"), the Inglewood Parking Authority ("Parking Authority"), the City of Inglewood City Council ("City Council"), and Mayor James T. Butts ("Mayor Butts")[1], in his individual and representative capacity, states and alleges as follows:

NATURE OF THE ACTION.

1. This action arises out of a scheme orchestrated by Mayor Butts, the City, the Parking Authority, the Successor Agency, and others to defraud MSG Forum out of its leasehold and contractual property interest in 15 acres of property located within the City. This fraudulent scheme was designed to allow the City to enter into an agreement providing for the conveyance of the property to the Los Angeles Clippers to be used as the site for an arena competitive with the Forum – in direct violation of the City's promises, express contractual commitments, and legal obligations. At the center of this fraud lies Mayor Butts, who serves not only as Mayor of the City, but also as Chairperson of the Parking Authority and the Successor Agency – two ostensibly "independent" government agencies that directly participated in and abetted the illicit scheme. Mayor Butts – in conjunction with the City, the Parking Authority, and Successor Agency (and others) – fraudulently secured from MSG Forum its rights to lease and acquire 15 acres of City-owned land, eliminated the City's obligation to provide 2,275 substitute parking spaces at the property, and denied MSG Forum's right to ensure a competitive arena was not built down the street.

2. The Forum, located within the City at the intersection of Prairie Avenue and Manchester Boulevard and adjacent to the then Hollywood Park horse racing track property, opened as the home to the Los Angeles Lakers in 1967. For years, the Forum was the home to the Lakers and the Los Angeles Kings as well as a major concert venue. During that time, the Forum used the land adjacent to Hollywood Park for overflow parking. Following the departure of the Lakers and the Kings from the Forum in 1999, Forum Enterprises, Inc. ("FEI") purchased

[1] References to "Mayor Butts" shall mean and include "Chairman Butts" in the context of his role as Chairman of the Successor Agency and the Parking Authority.

the Forum and used it as the sanctuary for Faithful Central Bible Church. The CEO of FEI was Bishop Kenneth C. Ulmer, and the COO and General Counsel of FEI was Pastor Marc T. Little. For a period of time, while the Forum was owned by FEI, the General Manager of the Forum was Gerard McCallum. FEI attempted to market the Forum as a concert venue, but was unable to compete effectively with other more modern concert venues in the Los Angeles region. As a result, the Forum became a financial burden for FEI.

3. MSG Forum began discussions with FEI regarding a possible acquisition of the Forum in 2010. Shortly after his 2011 election, Mayor Butts quickly inserted himself into the discussions and sought to induce MSG Forum to acquire and renovate the property. Mayor Butts explained that he needed the Forum renovation project to be the catalyst for the future development and growth of the City.

4. Even at that early stage of discussions between the City and MSG Forum, one of the key elements of the proposed renovation of the Forum, and the negotiations between MSG Forum and the City, was the need for and availability of an overflow parking area to serve the Forum for certain events, as well as the need to identify a long-term parking solution for the Forum.

5. On August 12, 2011, MSG Forum and FEI entered into an agreement pursuant to which MSG Forum secured the rights to purchase the Forum. Following extensive negotiations with the City, led by Mayor Butts, on January 30, 2012, FEI and MSG Forum entered into an Owner Participation Agreement (the "OPA") with the City.

6. As explained in the OPA, the City had determined that the revitalization of the Forum was crucial to the economic vitality of the City. MSG Forum and the City also acknowledged in the OPA that, to remain competitive in Southern California, the Forum required significant rehabilitation and restoration. The end result would be a state-of-the-art venue that would revitalize an underutilized civic asset.

7. In accordance with the OPA's terms, MSG Forum would invest not less than $50 million in the rehabilitation of the Forum, and the City would provide $18 million in financing, using funds from the Inglewood Redevelopment Agency made available through the City, to

assist in the overall Forum rehabilitation (the "City Loan"). Pursuant to the OPA terms and related documents, the City Loan has been (in part) and will be forgiven over a scheduled ten-year period, provided that MSG operates the Forum as a venue for public and private events, concerts, award shows, exhibitions, sporting events, and other events customary for an arena.

8. Then, in May 2012, MSG Forum, FEI and the City entered into a Development Agreement, pursuant to California Government Code sections 65864 *et seq.*, to facilitate and further support the Forum's renovation and to provide additional assurances to MSG Forum regarding future actions by the City with respect to the Forum. A true and correct copy of the Development Agreement is attached hereto as **Exhibit 1**.

9. As part of the Development Agreement, and consistent with the OPA, MSG Forum committed to invest no less than $50 million in the Forum renovation project. MSG Forum guaranteed that it would sell a minimum of 300,000 tickets annually – and, as a result, the City would be guaranteed a substantial amount of per-ticket revenues – each year during the agreement's thirty-year term. If MSG Forum was ever unable to meet the minimum required ticket sales, it would pay the City the difference. Pursuant to the Development Agreement, the amount paid to the City is $2.24 per ticket, and the minimum ticket sales threshold over the term of the Development Agreement is 9,000,000 total tickets. Effectively, the per-ticket fee charged by the City serves to repay to the City the $18 Million City Loan (with interest). To date, MSG Forum has paid millions to the City in connection with the sale of tickets to events at the Forum.

10. In return for its substantial investment, considerable financial and business risk, and thirty-year commitment, MSG Forum required a guarantee that the City would not take any actions which would undermine the competitiveness of the Forum – at least not without MSG Forum's consent. The City thus expressly committed that it would not engage in "any action or proceeding" without MSG Forum's consent, that would cause "a material adverse impact on the use, operation, functionality, accessibility, or *economic competitiveness* of the Forum[.]" (Development Agreement, §§ 8, 8.1(b) (emphasis added).)

11. A critical concern for MSG Forum, which it communicated to the City near the outset of negotiations in 2011, was the need for overflow parking for certain Forum events. For

several decades, the Forum had used parking areas on an immediately adjacent property (now part of the overall Hollywood Park/NFL stadium development site). However, at that time this parking area was owned by an entity affiliated with Walmart Inc. and was not generally available for Forum overflow parking. In addition, the areas immediately adjacent to Hollywood Park and the proposed Walmart site were slated for commercial development in connection with the Hollywood Park redevelopment project, which was coordinated by Stockbridge, a real estate investment firm led by Terry Fancher ("Stockbridge"), together with Wilson Meany, a real estate development firm led by Christopher Meany ("Wilson Meany"). The continued availability of these parking areas for Forum use was uncertain. MSG Forum was thus unwilling to proceed with its investment in the Forum without assurances from the City that it would provide adequate long-term overflow parking near to the Forum.

12. As a result, and in an effort to address MSG Forum's key concerns regarding the need for overflow parking for certain Forum events, the City, through the office of Mayor Butts, offered to lease to MSG, with an option to purchase, 15 acres of City-owned land near the intersection of Century Boulevard and Prairie Avenue as an overflow parking area for the Forum. The 15-acre site encompassed over 50 parcels of land. These parcels were not all contiguous, but were separated (in part) by parcels of land owned by the Successor Agency. MSG Forum therefore requested the inclusion of the Successor Agency parcels that were adjacent to and interconnected with the City-owned property. MSG Forum was advised by the City and Mayor Butts that the Successor Agency parcels could not be made available for lease out of concern that such a transaction would violate the Dissolution Act, State legislation that dissolved community redevelopment agencies and laid out rules to dispense with existing assets and properties of those agencies.

13. MSG Forum and the City entered into a parking lease/option agreement in March 2013 (the "Parking Lease"). Under the Parking Lease, MSG Forum leased 15 acres of City-owned parcels of land at Century Boulevard and Prairie Avenue (the "Parking Lease Property") as overflow parking sites for events at the Forum, for a seven-year term, with options to extend. MSG Forum also secured the right to purchase the Parking Lease Property for a specified price.

In return, MSG Forum agreed to pay the City $200,000 annually. A true and correct copy of the Parking Lease is attached hereto as **Exhibit 2**.

14. As a result of these agreements and the commitments made by the City, MSG Forum ultimately invested more than $100 million in purchasing and rehabilitating the Forum property, successfully transforming it into one of the premier live music venues in the country. The Forum officially reopened on January 15, 2014, with a concert by the world famous rock band The Eagles. Through MSG Forum's efforts, the Forum is now one of the top concert venues nationally, generating substantial revenues for the City.

15. MSG Forum also invested approximately $90,000 to improve the Parking Lease Property for use as overflow parking for Forum events and paid hundreds of thousands of dollars in connection with the Parking Lease's annual payment requirement. Payments related to the Parking Lease were made through June 2017.

16. In June 2015, Steve Ballmer – the former CEO of Microsoft, who had recently bought the Los Angeles Clippers – publicly announced that he intended to explore alternative "options" for the Clippers' home arena in anticipation of the termination of the Clippers' lease at Staples Center in 2024.

17. As a result, in October 2015, MSG Forum discussed with Mayor Butts the possibility of the Clippers coming to Inglewood. These conversations centered around the Forum and the Forum property. MSG Forum offered to introduce Mayor Butts to Mr. Ballmer and to work together to see if there could be an opportunity to bring the Clippers to the Forum site. Nothing came of these initial discussions regarding the Clippers, and Mayor Butts did not pursue the idea with MSG Forum. Instead, without discussing the issues with MSG Forum, Mayor Butts set about to negotiate secretly with the Clippers to build a new competitive arena in Inglewood.

18. Following the announcement in 2016 of a new NFL stadium on the Hollywood Park site next to the Forum, MSG Forum, the Mayor and the new owner of the Hollywood Park site, the Kroenke Group (Mr. Kroenke also owns the Los Angeles Rams), held discussions about the parking needs of the NFL stadium and the Forum. Wilson Meany, as the developer of

Hollywood Park, along with Stockbridge, have had extensive involvement with the City in connection with the proposed development of the Hollywood Park property into a large-scale mixed-use development and the site of an NFL stadium. Christopher Meany led the development efforts for Hollywood Park with respect to the City. In addition, Gerard McCallum, a close confidant of Mayor Butts and formerly the Executive Vice President of FEI, the prior owner of the Forum, had become an executive with Wilson Meany around 2006. Mr. McCallum heads up government relations for Wilson Meany and is directly responsible for working with Mayor Butts and the City of Inglewood. Mr. McCallum and Mayor Butts communicate frequently by text. Mr. Meany and Mr. McCallum were involved in the discussions with MSG Forum and Mayor Butts, which revolved around using the adjacent Hollywood Park site (the former Walmart site) as an overflow parking site for the Forum, and using the Forum site for overflow parking for the NFL stadium. Mr. Meany and Mr. McCallum were aware of and knew of the existence of the Parking Lease and the importance of off-site parking for the Forum.

19. Throughout 2016 and early 2017, MSG Forum and Mayor Butts had dozens of discussions regarding overflow parking for the Forum and the need to find a better long-term overflow parking solution. At no time during these discussions did Mayor Butts indicate that he was secretly negotiating with the Clippers to build a competitive arena in Inglewood using the very same land MSG Forum had leased for parking.

20. Indeed, unbeknownst to MSG Forum, Mayor Butts had begun secretly negotiating an Exclusive Negotiating Agreement ("ENA"), which would give the Clippers the exclusive right to use the Parking Lease Property and surrounding land to build a new competitive arena in Inglewood. Mayor Butts's secret negotiations with the Clippers went forward despite Mayor Butts, Melanie McDade (Mayor Butts's executive assistant, who often acts on his behalf on City matters), the City, the Parking Authority, and the Successor Agency having full knowledge that the City was leasing the Parking Lease Property to MSG Forum and that MSG Forum had the right to buy the Parking Lease Property. Tellingly, neither Mayor Butts nor any official of the City informed MSG Forum of these secret negotiations, despite the fact that Mayor Butts, Ms.

McDade, and MSG Forum were in regular discussions at that time regarding the Parking Lease Property and other parking options for the Forum.

21. On January 5, 2017, in connection with these discussions regarding parking issues involving the Forum, Mayor Butts suddenly requested that MSG Forum not use his official City email account to communicate. Instead, Mayor Butts instructed MSG Forum to use his gmail account for confidentiality. Mayor Butts also began increasing the use of his personal cellphone to text and call regarding City business. Clearly, Mayor Butts did not want a paper trail evidencing his bad acts.

22. The Mayor did not disclose to MSG Forum the existence of his covert negotiations with the Clippers. Instead, in early 2017, Mayor Butts began pressuring MSG Forum to terminate the Parking Lease by telling MSG Forum that the City needed the Parking Lease Property so that it could use the land for a "technology park." This was a complete falsehood. Nonetheless, Mayor Butts repeatedly requested that MSG Forum give up the Parking Lease Property so that he could implement a "Silicon Beach" in Inglewood. Needing to maintain its existing overflow parking, MSG Forum initially resisted. The Mayor then increased the intensity of his requests, telling MSG Forum that the development opportunity for the Parking Lease Property was critical to the future of the City.

23. In and around late March 2017, Mayor Butts repeatedly called and pressed MSG Forum, saying that he had a tenant for the technology park "on the hook," and that he and the City needed MSG Forum to terminate the Parking Lease immediately. Mayor Butts made it clear that the termination of the Parking Lease was now necessary and of utmost importance to him and the City. At no time did the Mayor disclose that he was then secretly negotiating with the Clippers to build their arena on the very site of the Parking Lease Property.

24. During these discussions, Mayor Butts promised that he and the City would work to ensure that MSG Forum was provided with suitable alternative overflow parking. In reliance on Mayor Butts's repeated assurances that the Parking Lease Property would be used for a technology park, and his promise to secure a suitable alternative overflow parking solution for

MSG Forum, and in light of Mayor Butts's position in the City, MSG Forum reluctantly acquiesced and agreed to terminate the Parking Lease.

25. MSG Forum and Mayor Butts each signed a Lease Termination Agreement (the "Parking Lease Termination") on April 3, 2017. However, Mayor Butts was not authorized by the City Council to enter into the Parking Lease Termination as the Parking Lease Termination was never approved or ratified by the City Council. Mayor Butts's execution of the Parking Lease Termination was thus an *ultra vires* act and of no force or consequence.

26. The next day, on April 4, 2017, MSG Forum emailed Mayor Butts memorializing their conversations regarding the purported termination of the Parking Lease. In the April 4, 2017 email, MSG Forum noted, "[w]e understand your desire to develop the land we had leased and do not want to stand in the way of progress in the City[,]" referencing the technology park that Mayor Butts had repeatedly discussed and acted so committed to developing. Had MSG Forum known of Mayor Butts's and the City's true intentions and their secret negotiations with the Clippers, MSG Forum never would have signed the Parking Lease Termination.

27. On April 28, 2017, just weeks after the Parking Lease was purportedly terminated, representatives of the Clippers, the City, the Parking Authority, and the Successor Agency, as part of their continuing secret negotiations, exchanged drafts of the ENA, which would provide the Clippers (through Murphy's Bowl, a related development company) the exclusive right to acquire the Parking Lease Property and other adjacent and interconnected properties owned by the Successor Agency. Wilson Meany was listed in the ENA as one of the key parties to receive notices related to the ENA.

28. No notification was ever provided by Mayor Butts, Ms. McDade, or any other representative of the City to MSG Forum of the existence of the secret negotiations between the Clippers and the City, the Parking Authority, and the Successor Agency. On the contrary, Mayor Butts, the City, the Parking Authority, and the Successor Agency made concerted efforts to ensure MSG Forum had no idea that such negotiations were occurring. The Parking Lease Property was critical to the assembly of the proposed site of the Clippers arena. Without the

Parking Lease Property, the Clippers arena could not be located at Century Boulevard and Prairie Avenue.

29. Just two months after signing the Parking Lease Termination, in the middle of June 2017, MSG Forum learned for the first time that the City was not, in fact, using the Parking Lease Property for the claimed technology park. Nor did Mayor Butts or the City ever intend to use it for a technology park. At approximately 1:00 a.m. EST, on June 14, 2017, a senior executive of MSG Forum, who was in New York, received a call from Mayor Butts. Mayor Butts told the executive of the announcement, to be made in just a few hours, that the City was entering into an ENA with the Clippers to build a competitive arena at the site of the Parking Lease Property. Needless to say, the executive expressed his shock and dismay at this complete betrayal, and demanded that Mayor Butts and the City cure their breach and undo the fraud they had committed. Unbeknownst to MSG Forum, the Mayor and other City officials had already contacted the media to pitch their story for public release.

30. On June 15, 2017, the City publicly announced its plan to enter into an ENA with Murphy's Bowl regarding the construction of a private, competitive arena on a proposed "Site," which encompassed the very same Parking Lease Property that MSG Forum had been induced to give up based on the City's represented desire to build a technology park. A depiction of the ENA Site as compared to the Parking Lease Property taken from MSG Forum is presented in **Exhibit 3**. The City, the Successor Agency, and the Parking Authority then rushed to hold a "special meeting" to approve the ENA that same day, in violation of California's Ralph M. Brown Act ("Brown Act") due to the lack of sufficient notice. In return for entering into the ENA, Murphy's Bowl paid the City $1,500,000. Afterwards, Mayor Butts boastfully proclaimed on his own website that he had begun negotiations with the Clippers on January 15, 2017—months *before* falsely telling MSG Forum that he needed the Parking Lease Property for a "technology park." A true and correct copy of Mayor Butts's online announcement is attached as **Exhibit 4**.

31. In August and September of 2017, the City sought State legislation, SB 789, to, among other things, expedite review of the proposed Clippers arena under the California

Environmental Quality Act, reduce the requirements for assessing the environmental impacts of the Clippers arena, and expedite the eminent domain process to allow the City to acquire private lands and businesses. Due to widespread opposition from many environmental groups and local residents, as well as MSG Forum, SB 789 was not approved by the California legislature.

32. The proposed arena (contemplated in the ENA and the subsequently adopted Amended and Restated ENA) competes directly with and would be highly damaging to the Forum. Indeed, the Notice of Preparation of a Draft Environmental Impact Report and Public Scoping Meeting ("NOP") for the new arena, published by the City on February 20, 2018, indicates that the Clippers arena will host 100 to 150 "family shows, concerts, conventions and corporate events" each year. This competing arena would be located less than a mile-and-a-half from the Forum property on Prairie Avenue – in birdseye view from the Forum's famed balcony and across the street from the Hollywood Park property and Hollywood Park Casino. Christopher Meany is President of Hollywood Park Casino Company LLC.

33. The City's approval of the ENA, its support for SB 789, its issuance of the NOP, and Mayor Butts's and the City's relentless pursuit of a competitive arena are in complete contradiction of the essential agreements between the City and MSG Forum, and are in direct violation of numerous contractual commitments by the City, including (among many others) its obligation not to take any actions materially adverse to the operation or economic competitiveness of the Forum.

34. After the City approved the ENA on June 15, 2017, MSG Forum promptly gave the City (as well as the Parking Authority and Successor Agency) written notice of these claims, including the multiple breaches of the written agreements with MSG Forum and the deliberate fraud committed by Mayor Butts in connection with the Parking Lease Termination. Nonetheless, the City, the Parking Authority, and the Successor Agency refused to take any corrective action, and instead summarily denied MSG Forum's claims.

35. On September 28, 2017, MSG Forum repeated these claims in another letter addressing the Amended And Restated ENA. Once again, MSG Forum reiterated that the construction of a rival arena breached the Development Agreement. Once again, MSG Forum

reiterated that the Parking Lease Termination was invalid because MSG Forum's consent was procured by fraud.

36. Through this action, MSG Forum asks the Court to enforce MSG Forum's rights and to protect MSG Forum against further harm caused by the deceptive and wrongful actions of Mayor Butts and the other defendants.

THE PARTIES.

37. Plaintiff MSG Forum, LLC is a Delaware Limited Liability Company. MSG Forum operates a 17,800-seat, multi-purpose indoor arena in Inglewood, California commonly known as the Forum.

38. Defendant City is a municipal corporation and charter city organized and existing under the laws of the State of California. As used herein, the term "City" includes, without limitation, the City's employees, agents, officers, boards, commissions, departments, members, and other representatives.

39. Defendant Successor Agency to the Inglewood Redevelopment Agency is the legal entity responsible for overseeing the winding down of the affairs of the former Redevelopment Agency of the City of Inglewood under the Dissolution Act, including disposing of redevelopment assets and properties. On or about January 10, 2012, the City elected to become the Successor Agency pursuant to the dissolution legislation (AB X1 26, as amended by AB 1484). The former Inglewood Redevelopment Agency was officially dissolved on or about February 1, 2012.

40. Defendant Inglewood Parking Authority is a subdivision and parking agency of the City.

41. Defendant City Council of the City of Inglewood is the duly-elected legislative body that represents the citizens of Inglewood, California.

42. Defendant James T. Butts Jr. is an individual and the current mayor of Inglewood, California. In addition, at all relevant times, Mayor Butts was and is the Chairperson of both the Successor Agency and the Parking Authority. Mayor Butts is sued in his individual capacity and

as a representative of the City, the Successor Agency, and the Parking Authority. On information and belief, Mayor Butts is a resident of Inglewood, California.

43. Does 1 through 25, inclusive, are sued herein pursuant to California Code of Civil Procedure section 474 under fictitious names inasmuch as their true names and capacities are presently unknown to MSG Forum. MSG Forum will amend this complaint to designate the true names and capacities of these parties when the same have been ascertained. MSG Forum is informed and believes, and on that basis alleges, that Does 1 through 25, inclusive, were employees, agents or alter egos of defendants, or are otherwise responsible for all of the acts hereinafter alleged. MSG Forum is informed and believes, and on that basis alleges, that the actions of Does 1 through 25, inclusive, as alleged herein, were duly ratified by defendants, with each Doe acting as the employee, agent or alter ego of defendants, within the scope, course, and authority of the agency. Defendants and Does 1 through 25, inclusive, are collectively referred to herein as "defendants."

JURISDICTION AND VENUE.

44. This Court has jurisdiction over all causes of action asserted in this complaint pursuant to the California Constitution Article VI, section 10, and California Code of Civil Procedure section 410.10, because no cause of action contained herein is given by statute to other trial courts and the amount in controversy exceeds $25,000.

45. Venue in this Court is proper pursuant to California Code of Civil Procedure sections 394(a) and 395(a).

GENERAL ALLEGATIONS.

The Forum.

46. The Forum is located at 3900 West Manchester Boulevard, in Inglewood, California. It was built in 1967, and soon became one of the best-known sports and entertainment venues in the United States, and a landmark in the Los Angeles region. For more than three decades, the Forum – nicknamed the "Fabulous Forum" by the press – played host to multiple local professional sports teams, including the Los Angeles Lakers of the National Basketball Association ("NBA") and the Los Angeles Kings of the National Hockey League

("NHL"). The Forum also served as a successful concert venue, and hosted a variety of concerts, sporting and other events, including the 1984 Olympics. The Forum is scheduled to host Olympic events for the 2028 Olympics.

47. In 1999, the Lakers and the Kings left the Forum and moved to the newly constructed Staples Center in downtown Los Angeles (the Clippers also moved to Staples Center that year). After their departure, the Forum was used as a sanctuary for Faithful Central Bible Church, and saw limited use as a concert venue. By 2010, however, the Forum was in desperate need of renovation and modernization.

48. In 2010, MSG Forum became potentially interested in purchasing and reviving the Forum, and entered into discussions with FEI, the Forum's owner at that time, regarding the Forum's purchase and renovation.

The Election Of Mayor Butts And Negotiations With MSG Forum.

49. James Butts was elected Mayor of the City in January 2011. After his election, Mayor Butts quickly inserted himself into the ongoing negotiations between FEI and MSG Forum. He expressed enthusiasm about the possibility of attracting a major investor to the City and assured MSG Forum that he would fully support the Forum project. Mayor Butts also stated that he viewed MSG Forum's investment in the Forum as a key economic catalyst for the City.

50. Eventually, after a series of negotiations spearheaded by Mayor Butts, the City, FEI, and MSG Forum entered into the OPA, which required the City to provide $18 million in financing – using funds from the Inglewood Redevelopment Agency made available through the City – to assist in MSG Forum's purchase and rehabilitation of the Forum. The OPA explicitly reflected the City's determination that "the revitalization of the Forum is important to the economic vitality of the City. The rehabilitation and modernization of the Forum, and the resulting attractiveness of the City as an entertainment destination, will serve as a focus for development throughout the City and assist in the attainment of the City's economic development goals. . . . In this regard, the Parties have identified a need within the Inglewood community for a large state-of-the-art venue serving the City of Inglewood and surrounding communities. To ensure its competiveness with other venues in Southern California, the Parties

acknowledge and agree that the Forum requires significant rehabilitation and restoration . . . The rehabilitation and conservation of the Forum . . . will result in a state-of-the-art venue that will . . . revitalize an underutilized civic asset[.]"

51. Under the OPA, the $18 million City Loan was contingent on MSG Forum investing at least $50 million in the Forum's rehabilitation. The OPA and related documents further provide that the City Loan will be forgiven over a scheduled ten-year period, provided that MSG operates the Forum as a venue for public and private events, concerts, award shows, exhibitions, sporting events, and other events customary for an arena.

52. In or about May 2012, MSG Forum and FEI entered into a Development Agreement with the City pursuant to California Government Code sections 65864 *et seq*.

53. In the Development Agreement, the City expressly declared the importance of MSG Forum's investment in, and long-term operation of, the Forum to the City: "City has determined that it is in the best interests of City to encourage the productive renovation of the Forum and secure a commitment to the long-term operation of the Forum so that it can be preserved as a resource and serve as a catalyst for the economic revitalization of City." (Development Agreement, Recital D.)

54. The parties further recognized that MSG Forum would be required to make significant investments in the Forum to ensure its economic competitiveness:

> The Forum is a potentially historic landmark that has been used as a large-scale sports and entertainment venue since its completion in the late 1960s. More than a decade ago, the major sports teams that occupied the Forum departed from City, causing the reduction of the economic and other public benefits previously associated with the operation of the Forum. . . . To ensure its competitiveness with other venues in Southern California, the Forum requires significant conservation, enhancement, renovation, restoration, remediation and rehabilitation (the "Rehabilitation Improvements"), which due to the possible significance of the Property will be undertaken in conjunction with the terms and conditions of this Agreement[.]

(Development Agreement, Recital D (emphasis removed).)

55. At that time, the Forum was in need of tens of millions of dollars in renovation and upgrades in order to bring it up to standards for a modern concert facility.

56. As part of the Development Agreement, and consistent with the OPA, MSG Forum agreed to invest a minimum of $50 million in renovating and rehabilitating the Forum. (Development Agreement, § 14.1.)

57. The Development Agreement mandates (among other requirements) that MSG Forum "sell a minimum of 300,000 Tickets each Performance Year (the 'Yearly Ticket Sales Minimum')" throughout the agreement's 30-year term. (Development Agreement, § 13.1 (emphasis removed).) The City receives $2.24 from each of these tickets sold. (Development Agreement, §2.55.) If MSG Forum fails to meet the Yearly Ticket Sales Minimum for a sufficient length of time, then it must make "Shortfall Payments" to the City. (Development Agreement, § 13.6.) Because the City receives specified tax revenues (or compensatory Shortfall Payments) in connection with the sale of each ticket, MSG Forum effectively guaranteed that the City would receive a substantial amount of annual income, regardless of the Forum's financial performance. In effect, the combination of the Yearly Ticket Sales Minimum and the per-ticket fee paid to the City serves to guarantee the repayment of the $18 million City Loan (with interest).

58. In return for the tremendous investment and financial and business risk that MSG Forum was undertaking in connection with the proposed Forum project, MSG Forum required contractual guarantees from the City before it would enter into the Development Agreement. As the City itself determined, these guarantees were necessary to "assure that [MSG Forum] may plan to use and operate the Property as a venue *with certainty*[.]" (Development Agreement, Recital J (emphasis added).)

59. Foremost among these contractual guarantees was the City's explicit agreement that it would not engage in "any action or proceeding," without MSG Forum's consent, that would cause "a material adverse impact on the use, operation, functionality, accessibility, or economic competitiveness of the Forum[.]" (Development Agreement, § 8.1(b).) This provision was vital to MSG Forum's willingness to enter into the Development Agreement. Without it, MSG Forum would not have agreed to the deal or to invest over $100 million.

60. The Development Agreement further obligates the City (as well as MSG Forum) to "take all actions and do all things, and to execute . . . any and all documents and writings that may be necessary or proper to achieve the purposes and objectives of this Agreement." (Development Agreement, § 36.)

61. Moreover, in recognition of the importance of the rights established by the Development Agreement, MSG Forum and the City also provided for an attorneys' fees provision, stating, "[i]f either Party brings an action or proceeding (including, without limitation, any cross-complaint, counterclaim, or third-party claim) against the other Party by reason of a Default, or otherwise arising out of this Agreement, the Prevailing Party in such action or proceeding shall be entitled to its costs and expenses of suit, including but not limited to reasonable attorneys' fees[.]" (Development Agreement, § 24.)

62. The Development Agreement has a thirty (30) year term, lasting through 2044. (Development Agreement, § 6.2.)

63. In addition to being the City's lead negotiator, Mayor Butts signed the Development Agreement on behalf of the City.

The Parking Lease.

64. A critical concern for MSG Forum was ensuring that the Forum would have adequate overflow parking for certain Forum events. As far back as 2011, MSG Forum made clear to the City that overflow parking for Forum events was a fundamental component of the success of the Forum and that MSG Forum needed confidence in the parking situation before it would make a substantial investment in the Forum.

65. For several decades, the Forum had used parking areas on an adjacent site (now all part of the Hollywood Park/NFL Stadium development site). However, during 2011 through 2013, as a result of the unavailability of the adjacent site owned by a Walmart affiliated entity and Stockbridge's and Wilson Meany's plans to develop a major commercial and residential project on the Hollywood Park site, overflow parking to support events at the Forum was uncertain, exacerbating MSG Forum's existing concerns about parking. MSG Forum would not

have been willing to undertake the Forum project without an acceptable long-term overflow parking solution.

66. In assessing potential parking options during its negotiations with the City, MSG Forum discovered a series of vacant parcels located near the intersection of Century Boulevard and Prairie Avenue. The City informed MSG Forum that these parcels were owned by the City and the Successor Agency. The parties initially discussed leasing all of these parcels to MSG Forum, but the City and the Successor Agency subsequently determined that leasing the Successor Agency-owned parcels would violate the Dissolution Act. The City and the Successor Agency declined to include the Successor Agency parcels in the Parking Lease.

67. Accordingly, on or about March 12, 2013, MSG Forum and the City executed the Parking Lease with respect to the more than 50 parcels of City-owned land comprising approximately 15 acres, effective July 9, 2013.

68. Pursuant to the Parking Lease, in return for an annual payment of $200,000, MSG Forum had the right to use the Parking Lease Property "twenty-four (24) hours per day, every day of the year, primarily for parking and activities or uses ancillary thereto." (Parking Lease, § 4.1.) The Parking Lease further granted MSG Forum the right to purchase the Parking Lease Property for a total purchase price of $6,900,000 (subject to certain adjustments). (Parking Lease, § 12(a).)

69. The initial term of the Parking Lease was seven (7) years with certain options to extend. (Parking Lease, § 2.2.) The City was not contractually entitled to terminate the Parking Lease prior to the end of this seven-year period unless MSG Forum had obtained the contractual right to use, and had in fact used for at least 18 months, alternative overflow parking with a capacity of at least 2,275 parking spaces. (Parking Lease, § 2.4(b).) Similarly, the City could elect to develop the Parking Lease Property during the term of the Parking Lease only if (1) the development was for a "compatible use," and (2) the development provided for a minimum of 2,275 parking spaces for events held at the Forum in a manner that was reasonably acceptable to MSG Forum. (Parking Lease, § 4.3.)

70. The Parking Lease also requires that the City indemnify MSG Forum against any "claims, liabilities, damages, liens, judgments, penalties, losses, costs and/or expenses (including reasonable out-of-pocket attorneys' and consultants' fees and expenses)" arising out of or relating to, among other things "[the City's] breach of any of its representations, warranties or covenants under [the Parking Lease.]" (Parking Lease, § 6.2.) The Parking Lease makes clear that the indemnification requirement survives termination of the Parking Lease. (Parking Lease, § 6.2.)

71. Finally, the Parking Lease also contains an attorneys' fees provision, stating "[i]f either Party brings an action or proceeding (including, without limitation, any cross-complaint, counterclaim, or third-party claim) against the other Party by reason of a default, or otherwise arising out of this Lease, the Prevailing Party in such action or proceeding shall be entitled to its costs and expenses of suit, including but not limited to reasonable attorneys' fees[.]" (Parking Lease, § 13.6.)

72. Mayor Butts signed the Parking Lease on behalf of the City.

73. After entering into the Parking Lease, MSG Forum invested approximately $90,000 to grade and improve the Parking Lease Property and paid hundreds of thousands of dollars for their contractual rights. While the Parking Lease Property was not (and was never intended to be) the primary parking facility for the Forum, it served a back-up role as overflow parking that could be used when necessary. MSG Forum used the Parking Lease Property for overflow parking when other parking facilities became unavailable.

MSG Forum's Renovation And Rehabilitation Of The Forum.

74. In reliance on the terms and contractual obligations set forth in the OPA, the Development Agreement, and the Parking Lease, MSG Forum broke ground and completed the renovation and modernization of the Forum in 2013.

75. In addition to addressing the overall rehabilitation of the Forum, MSG Forum completely updated and reinvented the Forum as a state-of-the-art entertainment venue. Among other things, MSG Forum renovated the stage and seating area (which includes roughly 17,800 seats), installed a new LED ceiling, added new food and beverage options, new bathrooms, new

dressing rooms and other artist amenities, restored the legendary Forum Club, and implemented the latest technical improvements to create a state-of-the-art concert venue.

76. While bringing the Forum into the twenty-first century from a technical and amenities perspective, MSG Forum also maintained its unique historic appearance. As a result of MSG Forum's efforts, the Forum was officially listed on the National Register of Historic Places in 2014. MSG Forum also received awards from the Los Angeles Conservancy, California Preservation Foundation, and the National Trust for Historic Preservation in recognition of its efforts to restore and preserve the Forum.

77. In total, MSG Forum invested well over $100 million in purchasing and rehabilitating the Forum property, more than doubling its obligation to the City to invest $50 million. As a result of this investment, the Forum was transformed into a world-class music and entertainment venue. The Forum reopened on January 15, 2014, with a concert by the world-famous rock band The Eagles. Since then, the Forum has hosted hundreds of concerts and other events. The Forum is now one of the top concert venues nationally, generating substantial revenues for the City.

78. MSG Forum remains committed to the ongoing success of the Forum, and has invested more than $10 million in additional improvements in the Forum since it reopened in January 2014.

The Clippers Begin To Explore Relocation Options.

79. The Clippers' lease at the Staples Center terminates at the end of 2024. As a result, the Clippers began assessing alternative locations to host the team. As early as June 2015, Steve Ballmer – the former CEO of Microsoft, who had recently bought the Clippers – announced that he intended to explore alternative "options" for the Clippers' home arena in anticipation of the termination of the Clippers' lease.

80. In October 2015, MSG Forum discussed with Mayor Butts the possibility of the Clippers coming to Inglewood. These conversations centered around the Forum and the Forum property. MSG Forum offered to introduce Mayor Butts to the Clippers' owner and to work together to see if there could be an opportunity to bring the Clippers to the Forum site.

Ultimately, nothing came of these discussions with Mayor Butts regarding the Clippers. Instead, unbeknownst to MSG Forum, Mayor Butts devised a plan to secretly negotiate with the Clippers, apart from MSG Forum, to build a completely new arena in Inglewood to compete with the Forum.

81. On February 24, 2017, the *Los Angeles Times* reported that the Clippers were considering working with Stan Kroenke to build an arena on the same site that will host the Rams' and Chargers' NFL football stadium. In the wake of this announcement, MSG Forum reached out to Mayor Butts to see if there was any truth to the story. Mayor Butts assured MSG Forum that the Clippers were not relocating to Mr. Kroenke's property, and that Mayor Butts would never agree to a deal like that without first discussing the proposal with MSG Forum and seeking its approval.

Mayor Butts Induces MSG Forum To Sign The Parking Lease Termination Purportedly So The City Can Create A "Technology Park" In Inglewood.

82. Throughout 2016 and early 2017, MSG Forum was engaged in negotiations with the Kroenke Group – which had previously acquired the Walmart site in 2014 and had recently acquired the Hollywood Park site from Stockbridge – regarding the use of land adjacent to the Forum for overflow parking purposes. Mayor Butts inserted himself into these negotiations early on, and served as the intermediary and primary point of contact between the parties. At the time, MSG Forum believed that Mayor Butts was acting in the Kroenke Group's and MSG Forum's best interests to find a long-term overflow parking solution for each. After Mayor Butts's secret negotiations with the Clippers came to light, however, it became clear that Mayor Butts was instead attempting to secure an alternative parking agreement so that he could get the Parking Lease Property back for the City in order to make it available to the Clippers. A formal parking agreement with the Kroenke Group never materialized, although the Kroenke Group is allowing the Forum patrons to park on the Hollywood Park property on an informal, interim basis.

83. Since at least the start of 2017, Mayor Butts repeatedly told MSG Forum that his dream was to use the Parking Lease Property and surrounding area to develop a technology park

in Inglewood, similar to the "Silicon Beach" that had developed in Playa Del Rey and other Southern California locations.

84. In early 2017, when it became clear to Mayor Butts that he was not going to be able to broker a parking agreement between MSG Forum and the Kroenke Group, Mayor Butts began to pressure MSG Forum into terminating the Parking Lease even before securing a long-term alternative parking arrangement. In a series of telephone calls in and around January, February, and March of 2017, Mayor Butts repeatedly told MSG Forum that he needed the Parking Lease Property to develop the technology park. Mayor Butts told MSG Forum that the City desperately needed the land back, and Mayor Butts assured MSG Forum that he would secure a permanent parking solution for MSG Forum. Mayor Butts made clear that the termination of the Parking Lease was, according to him, essential to the City. At no time did Mayor Butts mention to MSG Forum that he was in active negotiations with the Clippers.

85. At the same time, Mayor Butts took steps to limit the evidence of his discussions with MSG Forum. On January 5, 2017, in connection with the continuing discussions regarding parking issues involving the Forum, Mayor Butts requested that MSG Forum not use his official City email account. Instead, Mayor Butts instructed: "Please use this gmail account for confidentiality." Mayor Butts also called and texted frequently from his personal phone to engage in City business.

86. In or around March 2017, Mayor Butts misrepresented to MSG Forum that the City needed the land back immediately, because he had a tenant for the technology park "on the hook." When MSG Forum asked Mayor Butts who the new tenant would be ("Is it Apple? Is it Amazon?"), Mayor Butts told MSG Forum that he could not reveal the tenant's name. At no point during these discussions did Mayor Butts tell MSG Forum that he wanted to take the land back in order to develop a competitive arena for the Clippers that would host precisely the same types of events and concerts as the Forum.

87. Mayor Butts repeated the request for MSG Forum to terminate the Parking Lease in a series of calls with MSG Forum, which occurred, among other days, on March 24, 2017,

March 29, 2017, and April 3, 2017. The intensity and directness of the requests made it clear this was now not just a request, but a demand by Mayor Butts.

88. Because a technology park would in no way be competitive with the Forum or otherwise adversely impact its operations, knowing that the Development Agreement and OPA were specifically focused on ensuring the competiveness of the Forum, believing that Mayor Butts would secure the promised permanent parking solution for MSG Forum, and wanting to preserve MSG Forum's relationship with Mayor Butts and the City, MSG Forum felt it had no choice and agreed to accommodate Mayor Butts's demand to terminate the Parking Lease.

89. Accordingly, in reasonable reliance on Mayor Butts's representations that the Parking Lease property would be used for a technology park and that Mayor Butts would secure an alternative parking solution for MSG Forum, on April 3, 2017, MSG Forum signed "Termination Agreement No. 1" with the City (the "Parking Lease Termination"), which purported to terminate the Parking Lease and MSG Forum's right to use and purchase the Parking Lease Property. A true and correct copy of the Parking Lease Termination is attached hereto as **Exhibit 5**.

90. Mayor Butts countersigned the Parking Lease Termination purportedly on behalf of the City. Unbeknownst to MSG Forum at the time, however, Mayor Butts was not acting within his authority on behalf of the City when he signed the Parking Lease Termination purportedly on the City's behalf. The City Council did not authorize the Parking Lease Termination in advance of Mayor Butts's purported execution of it, nor did it ratify Mayor Butts's action after the fact.

91. The day following MSG Forum's signing of the Parking Lease Termination, on April 4, 2017, MSG Forum sent an email to Mayor Butts memorializing some of their previous conversations regarding the Parking Lease. In particular, MSG Forum noted, "[w]e understand your desire to develop the land we had leased and do not want to stand in the way of progress in the City." MSG Forum also made clear its understanding that Mayor Butts would work with MSG Forum to find a long-term solution to the Forum's parking needs. Had MSG Forum

known of Mayor Butts's and the City's true intentions and their secret negotiations with the Clippers, it never would have signed the Parking Lease Termination.

92. Since June 15, 2017, Mayor Butts has provided MSG Forum no further assistance in finding a permanent overflow parking solution at the Forum. MSG Forum has been unable to secure any other long-term agreement for overflow parking for the Forum.

93. By Mayor Butts's own public statement, he has admitted that he began negotiations with the Clippers on January 15, 2017. (Ex. 4.) At no time during the period from January 15, 2017, through April 3, 2017, or for that matter through June 14, 2017, did Mayor Butts disclose to MSG Forum the existence of the negotiations with the Clippers.

The City Announces Its Intent To Build A Competitive Arena.

94. The City did not use the Parking Lease Property for a technology park, nor did Mayor Butts or the City ever intend to do so. Instead, on June 15, 2017, the City, the Successor Agency, and the Parking Authority held a "special meeting" to publicly approve an ENA with Murphy's Bowl (a private developer related to the Clippers), regarding the construction of a competitive arena on a proposed "Site," which encompassed the Parking Lease Property.

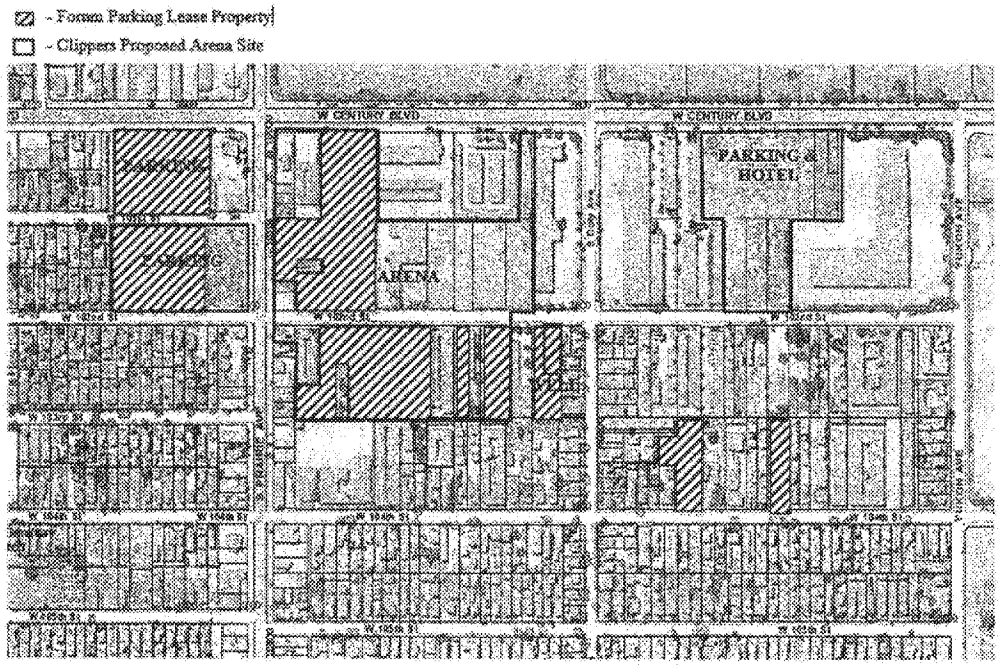
95. The June 15, 2017 special meeting violated the Brown Act, as insufficient notice of the meeting was given to the public. Indeed, the City, the Parking Authority, and the Successor Agency ultimately noticed and held a second special meeting on July 21, 2017, to "redo" their unlawful approval of the ENA.

96. Shortly thereafter, in response to public outcry regarding (among other things) the use of eminent domain to condemn private homes to construct the arena called for in the ENA, the City, the Parking Authority, and the Successor Agency held yet another meeting on August 15, 2017, at which they approved an Amended and Restated ENA. While the Amended and Restated ENA modified certain provisions of the original ENA, it still identified the Parking Lease Property as part of the "Site" for the proposed arena.

97. The City, the Parking Authority, and the Successor Agency's decision to secretly negotiate and enter into the ENA, and the Amended and Restated ENA, are the subject of

multiple legal actions, including actions brought under the California Public Records Act and the California Environmental Quality Act.

98. Pursuant to the ENA (and the Amended and Restated ENA), Murphy's Bowl was required to pay the City a non-refundable payment of $1,500,000. In return, the City, the Parking Authority, and the Successor Agency agreed to a three-year exclusive negotiating period, during which they would negotiate a "Disposition and Development Agreement" with Murphy's Bowl to construct an 18,000- to 20,000-seat NBA arena in Inglewood. The ENA sets forth the proposed "Site" of the new arena, and specifically identifies the Parking Lease Property as part of this Site. Below is a graphical representation of the proposed "Site," and the Parking Lease Property located therein. (Ex. 3.) It incorporates additional details about the site of the arena as explained in the City's NOP.



99. Since the announcement of the ENA, Mayor Butts and other City officials have made clear that they are committed to building the arena contemplated in the ENA. During the June 15, 2017 hearing at which the ENA was announced, for example, Mayor Butts responded to criticism regarding the City's failure to comply with the Brown Act, stating: "We're going to do

the deal." Mayor Butts later told reporters that he expects construction of the arena to be completed within five years.[2]

100. In addition, the City and Mayor Butts sought to have the California legislature pass special legislation to expedite the City's approval of the Clippers arena. Mayor Butts lobbied the legislature for passage of SB 789 and testified at a State legislative committee hearing to urge adoption of SB 789. Mayor Butts and Melanie McDade urged the Inglewood Chamber of Commerce to support SB 789 despite the fact that MSG Forum was a member of the Chamber of Commerce. Mayor Butts also sought the support of LA Metro, of which he is the Second Vice Chair of the Board of Directors, for passage of SB 789. The City employed and utilized lobbyists to seek passage of SB 789. In addition, Murphy's Bowl also employed lobbyists to support SB 789. SB 789 was opposed by many environmental groups and local residents, as well as MSG Forum. Ultimately, the legislature did not pass SB 789.

101. The proposed arena, which would be located less than a mile-and-a-half from the Forum on the same street as the Forum, is substantially similar in size to the Forum and will host the very same concerts and other events currently held at the Forum. Indeed, the NOP issued by the City on February 20, 2018 indicates that the arena will likely host 100 to 150 "family shows, concerts, conventions and corporate events" each year.

102. The new arena is directly competitive with the Forum's operations, including its position as a leading concert venue. There are currently only two other arenas in the Los Angeles area that host events of comparable size to those held at the Forum: the Honda Center in Anaheim and Staples Center in downtown Los Angeles. Adding a third competitive venue less than two miles from the Forum would put tremendous strain on the Forum's ability to book events and concerts, and would directly and substantially undermine the economic competitiveness of the Forum.

---

[2] *See, e.g.*, ABC 7, *Inglewood City Council OKs Negotiations for New Clippers Arena* (June 15, 2017) (available at http://abc7.com/sports/inglewood-oks-negotiations-for-new-clippers-arena/2103367/).

103. As such, the City's decision to enter into the ENA, seek SB 789 legislation, issue the NOP, and materially facilitate the construction of the new arena is in direct violation of its express and implied commitments under the Development Agreement, as well as the Parking Lease, and MSG Forum's rights thereunder.

MSG Forum Discovers That Mayor Butts And The City Began Secretly Negotiating With Murphy's Bowl In January 2017.

104. Shortly after the City's sudden announcement of the ENA on June 15, 2017, MSG Forum submitted Public Records Act requests to the City, the Successor Agency, and the Parking Authority. These requests sought information regarding the proposed arena, the ENA, and the public agencies' approval of the ENA.

105. In response to Public Records Act requests, the City, the Successor Agency, and the Parking Authority claimed that they had virtually no documents evidencing their discussions and negotiations with the Clippers. As such, the City, the Successor Agency, and the Parking Authority produced virtually no emails, drafts, memo, reports, messages, texts, calendar entries, or other documents. Nonetheless, the very small handful of documents produced in response to these public record requests made clear that the City had been secretly negotiating with Murphy's Bowl regarding the construction of an NBA arena in Inglewood since at least January 15, 2017. These negotiations were not disclosed to anyone, including the public, when they were occurring. Indeed, MSG Forum first learned of the proposed arena when Mayor Butts called MSG Forum on June 14, 2017. Nevertheless, at a minimum, according to Mayor Butts's admission and the scant few documents produced, these negotiations were ongoing throughout January, February, March, and April of 2017, when Mayor Butts was actively and fraudulently inducing MSG Forum to terminate its rights under the Parking Lease by falsely representing that the City intended to use the Parking Lease Property for a technology park.

MSG Forum Serves The City, The Parking Authority, And The Successor Agency With Notices Of Claims In Accordance With The Government Claims Act.

106. On July 17, 2017, pursuant to California Government Code sections 900 *et seq.*, MSG Forum served written notices of claim on the City, the Successor Agency, and the Parking

Authority, based on the same underlying facts and issues alleged in this complaint. Among other things, the July 17, 2017 notices of claim expressly withdrew MSG Forum's consent to the Parking Lease Termination, explaining that MSG Forum had been fraudulently induced into signing the same and demanding rescission.

107. In a letter dated September 6, 2017, the City denied the claims asserted in MSG Forum's July 17, 2017 notice of claim against the City. Neither the Successor Agency nor the Parking Authority responded to MSG Forum's July 17, 2017 notices of claim against them.

108. In response to the subsequent approval of the Amended and Restated ENA, on September 18, 2017, MSG Forum served amended written notices of claim on the City, the Successor Agency, and the Parking Authority. Among other things, the September 17, 2017 notices of claim again stated MSG Forum's desire to rescind the Parking Lease Termination, which it had been fraudulently induced into executing, and also notified the City of its default under the Development Agreement.

109. In a letter dated October 4, 2017, the City denied all of the claims asserted in MSG Forum's September 18, 2017 amended notice of claim against the City. The Successor Agency and the Parking Authority also denied MSG Forum's amended notices of claim on October 4, 2017.

Mayor Butts's Entry of the Parking Lease Termination was an *Ultra Vires* Act and the Parking Lease Termination is Void *Ab Initio*.

110. The City Council is the governing body of the City, and the City Charter provides that all legislative and charter powers "granted to and vested in [C]ity of Inglewood shall be vested in and exercised by the council," Art. VI § 10, which "may take official action only by the passage or adoption of ordinances, resolutions or motions," Art. VI § 11. While Mayor Butts as Mayor signs all contracts on behalf of the City, Art. XX § 1, such contracts must first be approved by the City Council through an ordinance, resolution, or motion, unless the City Council has otherwise delegated its authority. *See* Art. VI § 11.

111. The Owner Participation Agreement, the Development Agreement, and the Parking Lease were all duly authorized by the City Council and approved at City Council meetings.

112. The City Council did not hold any meeting, however, approving the Parking Lease Termination, nor did it enter any ordinances or resolutions authorizing Mayor Butts to enter such an agreement on its behalf. MSG Forum is thus informed, and believes, and on that basis alleges that Mayor Butts's purported execution of the Parking Lease Termination was in excess of his delegated powers and is an *ultra vires* act. Accordingly, even absent the issue of whether MSG Forum's consent was induced by fraud, the Parking Lease Termination is void *ab initio*.

FIRST CAUSE OF ACTION.

Breach of Contract (Development Agreement).
(Against the City and the City Council.)

113. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 112, inclusive, as if fully set forth herein.

114. In or about May 2012, MSG Forum and the City, through the actions of the City Council, entered into the Development Agreement, which is a legally binding, properly executed, valid and enforceable written contract.

115. MSG Forum performed all of its obligations under the Development Agreement, except for those excused by the City's material breaches (and/or other misconduct), through the actions of the City Council, set forth in this Complaint.

116. The City, through the actions of the City Council, has intentionally and materially breached its obligations under the Development Agreement.

117. Among other provisions, the City, through the actions of the City Council, breached Section 8 of the Development Agreement, which prohibits the City from taking actions that would have a materially adverse effect on the operations or economic competitiveness of the Forum. The ENA and the Amended and Restated ENA call for the construction of an 18,000- to 20,000-seat arena that is directly competitive with, and located less than a mile-and-a-half from,

the Forum. As the NOP makes clear, the Clippers arena will host concerts, family shows, conventions, and corporate or civic events. The City's actions, caused by the decisions of the City Council, including the approval of the ENA and the Amended and Restated ENA, have materially adversely impacted the Forum and, absent judicial relief, will continue to do so in direct violation of the Development Agreement.

118. In addition, section 36 of the Development Agreement requires the City to "take all actions and do all things, and to execute . . . all documents and writings that may be necessary or proper to achieve the purposes and objectives of this Agreement." (Development Agreement, § 36.) The Development Agreement's stated purpose is to secure the "long-term operation of the Forum so that it can be preserved as a resource and serve as a catalyst for the economic revitalization of City[,]" and "[t]o ensure its competitiveness[.]" (Development Agreement, Recital D; *see also id.* at Recital J (purpose of Development Agreement is to "assure that [MSG Forum] may plan to use and operate the Property as a venue with certainty").) Only three years after the opening of the renovated Forum as provided for by the Development Agreement, the actions taken by the City, as a result of the decisions of the City Council, including the approval of the ENA and the Amended and Restated ENA, the attempt to secure State legislation to expedite the Clippers arena, and the issuance of the NOP, all threaten the economic competitiveness of the Forum and directly undermine the purposes and objectives of the Development Agreement.

119. As a direct and proximate result of the City's material breach of its duties and obligations under the Development Agreement, through the actions of the City Council, MSG Forum has suffered and, absent judicial relief, will continue to suffer, substantial damages.

120. Pursuant to section 22 of the Development Agreement, "the sole and exclusive judicial remedy for any Party in the event of a Default by the other Party shall be an action in mandamus, specific performance, or other injunctive or declaratory relief." (Development Agreement, § 22.) Absent injunctive relief, MSG Forum will be irreparably harmed if the City, through the actions of the City Council, is permitted to proceed with the construction of a competitive arena pursuant to the ENA and the Amended and Restated ENA. Accordingly,

MSG Forum is entitled to injunctive relief in the form of an order prohibiting the City and the City Council from continuing to pursue the construction of a competitive arena pursuant to the ENA or the Amended and Restated ENA.

121. In addition and in the alternative, to the extent the Development Agreement's limitation on monetary relief is deemed inapplicable or unenforceable, MSG Forum seeks to recover monetary damages in an amount to be proven at trial.

SECOND CAUSE OF ACTION.

Breach of the Implied Covenant of Good Faith and Fair Dealing (Development Agreement).
(Against the City and the City Council.)

122. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 121, inclusive, as if fully set forth herein.

123. In or about May 2012, MSG and the City, through the actions of the City Council, entered into the Development Agreement, which is a legally binding, properly executed, valid and enforceable written contract.

124. All contracts entered into in California, including the Development Agreement, contain an implied covenant of good faith and fair dealing, requiring that the parties to the contract not act unreasonably or in bad faith to deprive others of the benefits or rights under the contract. This covenant imposes upon each contracting party the duty to do everything that the contract presupposes that the party will do to accomplish the purpose of the contract.

125. The stated purpose of the Development Agreement is to secure the "long-term operation of the Forum so that it can be preserved as a resource and serve as a catalyst for the economic revitalization of City[,]" and "[t]o ensure its competitiveness[.]" (Development Agreement, Recital D; *see also id.* at Recital J (purpose of Development Agreement is to "assure that [MSG Forum] may plan to use and operate the Property as a venue with certainty").)

126. As set forth above, MSG Forum performed all of its obligations under the Development Agreement, except for those excused by the City's material breaches (and/or other misconduct), through the actions of the City Council, set forth in this Complaint.

127. The City, through the actions of the City Council, materially breached the Development Agreement's implied covenant of good faith and fair dealing. In particular, the City's secret negotiations with the Clippers and approval of the ENA and the Amended and Restated ENA, which call for the construction of an 18,000- to 20,000-seat arena that is directly competitive with, and located less than a mile-and-a-half from, the Forum, violated the implied covenant of good faith and fair dealing. The City's actions, through the City Council, are the definition of bad faith. The City, through the actions of the City Council, has thus threatened the "long-term operation of the Forum" and the Forum's economic competitiveness. The City, through the City Council, likewise similarly undermined the "certainty" that MSG Forum sought and was guaranteed by the Development Agreement.

128. In addition, the ENA and the Amended and Restated ENA and the construction of a competitive arena for the Clippers improperly undermine MSG's ability to comply with its obligations under the Development Agreement. Section 13 of the Development Agreement, for example, requires MSG Forum to sell a certain number of tickets to events at the Forum each year. (Development Agreement, § 13.1.) If MSG Forum is unable to sell the minimum number of tickets, then it must make "Shortfall Payments" to the City. (Development Agreement, § 13.6.) In seeking to build a competitive arena, the City, through the City Council, is directly and adversely impacting MSG Forum's ability to meet its minimum ticket sales requirement.

129. As set forth above, absent injunctive relief, MSG Forum will be irreparably harmed if the City, through the City Council, is permitted to proceed with the construction of a competitive arena pursuant to the ENA and the Amended and Restated ENA. Accordingly, MSG Forum is entitled to injunctive relief in the form of an order prohibiting the City and the City Council from continuing to pursue the construction of a competitive arena pursuant to the ENA or the Amended and Restated ENA.

130. In addition and in the alternative, to the extent the Development Agreement's limitation on monetary relief is deemed inapplicable or unenforceable, MSG Forum seeks to recover monetary damages in an amount to be proven at trial.

THIRD CAUSE OF ACTION.

Rescission of Parking Lease Termination.
(Against the City and the City Council.)

131. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 130, inclusive, as if fully set forth herein.

132. This cause of action is pled as an alternative to the Eleventh Cause of Action for Declaratory Relief, which alleges that the Parking Lease Termination was void *ab initio* because Mayor Butts lacked authority to enter it. In the event that Mayor Butts was authorized to enter the Parking Lease Termination on behalf of the City, MSG Forum is nonetheless entitled to rescind the Parking Lease Termination because MSG Forum's consent thereto was procured by fraud.

133. As set forth above, Mayor Butts and the City induced MSG Forum to sign the Parking Lease Termination by assuring MSG Forum that the City would use the Parking Lease property for a technology park, and by further assuring MSG Forum that Mayor Butts and the City would secure an alternative long-term overflow parking solution for the Forum. The City and the City Council did not, however, use the Parking Lease Property for a technology park or comparable development, nor did Mayor Butts, the City, or the City Council ever intend to do so. Instead, Mayor Butts, the City, the City Council, the Successor Agency, and the Parking Authority had been in secret negotiations with Murphy's Bowl prior to Mayor Butts's request that MSG Forum terminate the Parking Lease and his blatantly false statements to MSG Forum that the City would use the Parking Lease property for a technology park (and that these parcels would serve as the foundation of a new "Silicon Beach" in Inglewood).

134. None of the above-described representations of use of the Parking Lease Property for a technology park or "Silicon Beach" by Mayor Butts were true. On information and belief, Mayor Butts made these statements knowing they were false and/or made these statements recklessly and without regard for their truth and with no intention to perform his promise.

135. Mayor Butts intended that MSG Forum rely on these representations in an effort to induce MSG Forum to terminate the Parking Lease.

136. Unaware that Mayor Butts had no intention to fulfill his promise to use the Parking Lease Property for a technology park, or his promise to secure an alternative long-term overflow parking solution for the Forum, MSG Forum reasonably relied on these representations and agreed to terminate the Parking Lease. Accordingly, on April 3, 2017, MSG Forum signed the Parking Lease Termination.

137. Thus, MSG Forum's consent to the Parking Lease Termination was obtained by fraud. Thus, even in the event that Mayor Butts was authorized to enter the Parking Lease Termination on behalf of the City notwithstanding the fact that the City Charter does not grant him that power, MSG Forum is nonetheless entitled to rescission of the Parking Lease Termination and reinstatement of the Parking Lease on the basis of Mayor Butts's fraud.

FOURTH CAUSE OF ACTION

Breach of Contract (Parking Lease).
(Against the City and the City Council.)

138. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 137, inclusive, as if fully set forth herein.

139. On March 12, 2013, MSG Forum and the City, through the actions of the City Council, executed the Parking Lease, with an effective date of July 9, 2013. The Parking Lease is a legally binding, properly executed, valid and enforceable written contract. As set forth above, the Parking Lease Termination is invalid, both because MSG Forum's consent to the Parking Lease Termination was obtained by fraud, and because Mayor Butts exceeded his authority as mayor by executing it unilaterally without prior approval from City Council as required by the City Charter. Given that neither MSG Forum nor the City consented to the entry of the Parking Termination Agreement, the Parking Lease remains valid, binding, and enforceable as between MSG Forum and the City.

140. MSG Forum performed all of its obligations under the Parking Lease, except for those excused by the City's material breaches (and/or other misconduct), through the actions of the City Council, set forth in this Complaint.

141. The City, through the actions of the City Council, has intentionally and materially breached its obligations under the Parking Lease.

142. Among other provisions, the City, through the actions of the City Council, breached its obligation under Section 4.1 of the Parking Lease to allow MSG Forum to "use the entire Property twenty-four (24) hours per day, every day of the year, primarily for parking and activities or uses ancillary thereto." Since at least April 2017, the City, through the actions of the City Council, has denied MSG Forum the use of the Parking Lease Property. Indeed, pursuant to the ENA and the Amended and Restated ENA, the City, through the actions of the City Council, has agreed that it will *not* make this land available to anyone other than Murphy's Bowl.

143. In addition, the City, through the actions of the City Council, breached Section 4.3 of the Parking Lease, which states that the City "may elect to undertake new development of all or a portion of the Property for a compatible use, provided that any such development must provide for and not interfere in any way with [MSG Forum's] ability to continuously park a minimum of 2,275 vehicles for events held at the Forum . . . in a manner that does not include any additional incremental costs to [MSG Forum] and that is reasonably acceptable to [MSG Forum.]" MSG Forum has not accepted the use of the Parking Lease Property for a competitive arena. The City, through the City Council, has entered into agreements (*i.e.*, the ENA and the Amended and Restated ENA) to develop the property subject to the Parking Lease into a competitive arena. This is not a "compatible use," and has not been reasonably agreed to by MSG Forum. Moreover, the City, through the actions of the City Council, failed to ensure that MSG Forum is and will be able to continuously park 2,275 vehicles on the site, much less that MSG Forum's parking accommodations are "reasonably acceptable" to MSG Forum.

144. Further, the City, through the actions of the City Council, has breached MSG Forum's contractual right to purchase the Parking Lease Property in accordance with Section 12(a) of the Parking Lease.

145. As a direct and proximate result of the City's material breach of its duties and obligations under the Parking Lease, through the actions of the City Council, MSG Forum has suffered, and will continue to suffer, substantial damages in an amount to be proven at trial.

146. In addition, the Parking Lease is sufficiently certain to allow its terms to be specifically enforced. Due to the unique location of the Parking Lease Property and its ability to provide reliable parking, MSG Forum lacks an adequate remedy at law. As such, MSG Forum seeks specific performance of the Parking Lease, including restoration of the property to MSG Forum's control and reinstatement of MSG Forum's right to purchase the Parking Lease Property.

FIFTH CAUSE OF ACTION.

Indemnification (Parking Lease).
(Against the City and the City Council.)

147. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 146, inclusive, as if fully set forth herein.

148. On March 12, 2013, MSG Forum and the City, through the City Council, executed the Parking Lease, with an effective date of July 9, 2013. The Parking Lease is a legally binding, properly executed, valid and enforceable written contract. As set forth above, the Parking Lease Termination is invalid, both because MSG Forum's consent to the Parking Lease Termination was obtained by fraud, and because Mayor Butts exceeded his authority as mayor by executing it unilaterally without prior approval from City Council as required by the City Charter. Given that neither MSG Forum nor the City consented to the entry of the Parking Termination Agreement, the Parking Lease remains valid, binding, and enforceable as between MSG Forum and the City.

149. MSG Forum performed all of its obligations under the Parking Lease, except for those excused by the City's material breaches (and/or other misconduct), through the actions of the City Council, set forth in this Complaint.

150. Pursuant to Section 6.2 of the Parking Lease, the City "shall indemnify, protect, defend and hold harmless [MSG Forum] from and against any and all claims, liabilities, damages, liens, judgments, penalties, losses, costs and/or expenses (including reasonable out-of-pocket attorneys' and consultants' fees and expenses) arising out of, involving, or in connection with . . . [the City's] breach of any of its representations, warranties or covenants under this

Lease[.]" The Parking Lease also makes clear that the indemnification requirement survives termination of the Parking Lease. (Parking Lease, § 6.2.)

151. Pursuant to Sections 4.1, 7.1(b), 8.1(a) and 8.1(d) of the Lease Agreement, the City warranted, among other things, that MSG Forum "may use the entire Property twenty-four (24) hours per day, every day of the year"; that the City would "ensure the provision of appropriate resources and coordination for parking on the [Parking Lease Property]"; that the City "has full right, power, and authority to own and convey the Property;" and that the City "is not aware of any facts or circumstances . . . which would prevent [MSG Forum] from using the Property for its intended use primarily as parking."

152. By engaging in the above-described conduct, and affirmatively taking steps to prevent MSG Forum from using the Parking Lease Property as intended, the City, through the actions of the City Council, has breached its representations, warranties and/or covenants under the Parking Lease. MSG Forum is accordingly entitled to indemnification of all losses, costs and/or expenses (including reasonable out-of-pocket attorneys' and consultants' fees and expenses) arising out of the City's breaches.

SIXTH CAUSE OF ACTION.

Breach of the Implied Covenant of Good Faith and Fair Dealing (Parking Lease). (Against the City and the City Council.)

153. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 152, inclusive, as if fully set forth herein.

154. On March 12, 2013, MSG Forum and the City, through the actions of the City Council, executed the Parking Lease, with an effective date of July 9, 2013. The Parking Lease is a legally binding, properly executed, valid and enforceable written contract. As set forth above, the Parking Lease Termination is invalid, both because MSG Forum's consent to the Parking Lease Termination was obtained by fraud, and because Mayor Butts exceeded his authority as mayor by executing it unilaterally without prior approval from City Council as required by the City Charter. Given that neither MSG Forum nor the City consented to the entry

of the Parking Termination Agreement, the Parking Lease remains valid, binding, and enforceable as between MSG Forum and the City.

155. All contracts entered into in California, including the Parking Lease, contain an implied covenant of good faith and fair dealing, requiring that the parties to the contract not act unreasonably or in bad faith to deprive others of the benefits or rights under the contract. This covenant imposes upon each contracting party the duty to do everything that the contract presupposes that the party will do to accomplish the purpose of the contract.

156. As set forth above, MSG Forum performed all of its obligations under the Parking Lease, except for those excused by the City's material breaches (and/or other misconduct), through the actions of the City Council, set forth in this Complaint.

157. In the Parking Lease, the City, through the actions of the City Council, represented that it "owns fee title to the Property and has full right, power, and authority to own and convey the Property." (Parking Lease, § 8.1(a).) Further, the Parking Lease grants MSG Forum the right both to use the property subject to the Parking Lease and to purchase the Parking Lease Property if it elects to do so. (Parking Lease, § 12.)

158. By failing to disclose to MSG Forum the existence of the negotiations with the Clippers for the very same property that is the subject of the Parking Lease and by inducing MSG Forum to sign the Parking Lease Termination, and entering into the ENA and the Amended and Restated ENA – pursuant to which the City agreed *not* to convey the Parking Lease property to anyone other than Murphy's Bowl, the City, through the actions of the City Council, has improperly thwarted MSG Forum's rights under the Parking Lease.

159. As a direct and proximate result of the City's material breach of the implied covenant of good faith and fair dealing, through the City Council's actions, MSG has suffered substantial damages in an amount to be proven at trial.

SEVENTH CAUSE OF ACTION.

Fraud (Intentional Misrepresentation; Fraudulent Inducement; False Promise). (Against Mayor Butts.)

160. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 159, inclusive, as if fully set forth herein.

161. As set forth above, Mayor Butts, by his own admission, engaged in secret negotiations with the Clippers regarding the Parking Lease Property, which Mayor Butts knew had been leased to MSG Forum. Mayor Butts never disclosed the secret negotiations to MSG Forum, and the negotiations had at their core the goal of depriving MSG Forum of the rights to the Parking Lease and the Parking Lease Property.

162. As further set forth above, in a series of telephone calls in or around January, February, and March of 2017, Mayor Butts induced MSG Forum to sign the Parking Lease Termination, by repeatedly assuring MSG Forum, that the City would use the Parking Lease Property for a technology park to implement a "Silicon Beach" in Inglewood, and by further assuring MSG Forum that Mayor Butts would secure an alternative long-term overflow parking solution for the Forum. In or around March 2017, Mayor Butts further misrepresented to MSG Forum that he needed the land back immediately, because he had a tenant for the technology park "on the hook." The City did not, however, use the Parking Lease Property for a technology park or comparable development, nor did Mayor Butts or the City ever intend to do so. Instead, Mayor Butts, the City, the Parking Authority, and the Successor Agency had been in secret negotiations with Murphy's Bowl prior to Mayor Butts's request that MSG Forum terminate the Parking Lease and his misrepresentations to MSG Forum that the City would use the Parking Lease property for a technology park.

163. None of the above-described representations by Mayor Butts was true. In fact, they were blatantly false. On information and belief, Mayor Butts made these statements knowing they were false and/or made these statements recklessly and without regard for their truth and with no intention to perform his promise.

164. Mayor Butts intended that MSG Forum rely on these representations in an effort to induce MSG Forum to terminate the Parking Lease.

165. Unaware that Mayor Butts had no intention to fulfill his promise to use the Parking Lease Property for a technology park, or his promise to secure an alternative long-term overflow parking solution for the Forum, and unaware that Mayor Butts was not authorized by the City Council to terminate the Parking Lease, MSG Forum reasonably relied on the representations of Mayor Butts and agreed to terminate the Parking Lease. Accordingly, on April 3, 2017, MSG Forum signed the Parking Lease Termination.

166. On June 15, 2017, the City, along with the Successor Agency and the Parking Authority, entered into the ENA (and subsequently entered into the Amended and Restated ENA), which calls for the construction of a competitive arena on a proposed "Site," which encompasses the very same property that was subject to MSG Forum's Parking Lease with the City.

167. As a direct and proximate cause of Mayor Butts's conduct, MSG Forum has sustained and will continue to sustain damages. MSG Forum's reliance on Mayor Butts's representations and promises was a substantial factor in causing its harm. MSG Forum is thus entitled to damages in an amount to be proven at trial.

168. In committing the acts alleged herein, Mayor Butts is guilty of oppression, fraud and/or malice within the meaning of California Civil Code section 3294, entitling MSG Forum to punitive or exemplary damages in an amount appropriate to punish Mayor Butts and to make an example of Mayor Butts to the community.

EIGHTH CAUSE OF ACTION.

Intentional Interference with Contract (Development Agreement and Parking Lease). (Against Mayor Butts, the Successor Agency, the Parking Authority, and the City Council.)

169. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 168, inclusive, as if fully set forth herein.

170. On or about May 15, 2012, MSG Forum and the City entered into the Development Agreement, a legally binding, properly executed, valid and enforceable written contract.

171. On March 12, 2013, MSG Forum and the City entered into a parking lease agreement (the Parking Lease) with an effective date of July 9, 2013, a legally binding, properly executed, valid and enforceable written contract.

172. Mayor Butts, the Successor Agency, the Parking Authority, and the City Council are not parties to the Development Agreement or the Parking Lease.

173. At all material times, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council were aware of MSG Forum's contractual relationship with the City and, in particular, the Development Agreement and the Parking Lease. Mayor Butts, the Successor Agency, the Parking Authority, and the City Council, through their wrongful acts and conduct alleged herein, intended to and did cause a disruption of MSG Forum's contractual relationships with the City. Among other things, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council encouraged the City to enter into the ENA and the Amended and Restated ENA and to pursue the development of a competitive arena adjacent to the Forum, which will materially adversely impact the use, operation, functionality, accessibility, and/or economic competitiveness of the Forum in violation of the City's obligations under the Development Agreement and the Parking Lease.

174. In addition and in the alternative, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council knew that encouraging the City to enter into the ENA and the Amended and Restated ENA and to pursue the development of a competitive arena adjacent to the Forum was substantially certain to cause a disruption in the City and MSG Forum's contractual relationship under the Development Agreement and/or the Parking Lease.

175. In addition, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council encouraged the City to induce MSG Forum to enter into the Parking Lease Termination to terminate MSG Forum's rights under the Parking Lease.

176. As a proximate result of the wrongful and unjustified acts of Mayor Butts, the Successor Agency, the Parking Authority, and the City Council, as alleged herein, MSG Forum has sustained and will continue to sustain substantial damages, in an amount to be proven at trial.

177. The wrongful conduct of Mayor Butts, the Successor Agency, the Parking Authority, and the City Council was a substantial factor in causing MSG Forum's harm.

178. In committing the acts alleged herein, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council are guilty of oppression, fraud and/or malice within the meaning of California Civil Code section 3294, entitling MSG Forum to punitive or exemplary damages in an amount appropriate to punish Mayor Butts, the Successor Agency, the Parking Authority, and the City Council, and to make an example of them to the community.

NINTH CAUSE OF ACTION.

Intentional and Negligent Interference with Prospective Economic Advantage. (Against Mayor Butts, the Successor Agency, the Parking Authority, and the City Council.)

179. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 178, inclusive, as if fully set forth herein.

180. At all material times, an economic relationship existed between MSG Forum and the City. This relationship held probable future economic benefit or advantage to MSG Forum.

181. Mayor Butts, the Successor Agency, the Parking Authority, and the City Council knew of the relationship between the City and MSG Forum. On information and belief, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council intended to interfere with MSG Forum's economic relationship with the City, or in the alternative, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council knew that encouraging the City to enter into the ENA and the Amended and Restated ENA and pursue the development of a competing arena adjacent to the Forum was substantially certain to interfere with this economic relationship and to cause MSG Forum to lose in whole or in part the probable future economic benefit or advantage of the relationship.

182. In addition and in the alternative, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council knew or should have known that this relationship would be

disrupted if they encouraged the City to enter into the ENA and the Amended and Restated ENA and to pursue the development of a competing arena adjacent to the Forum.

183. In addition, in approving the ENA, the Successor Agency, the Parking Authority, and the City Council violated the Brown Act by giving insufficient notice to the public, and the Successor Agency violated the Dissolution Act and/or the City's Long Range Property Management Plan by failing to obtain Oversight Board approval prior to entering into the agreement with the City.

184. Further, to lure the Clippers to Inglewood and facilitate execution of the ENA, Mayor Butts committed fraud, as alleged in this complaint, against MSG Forum.

185. By the wrongful conduct alleged herein, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council did, in fact, disrupt MSG Forum's relationship with the City.

186. As a proximate result of the wrongful and unjustified acts of Mayor Butts, the Successor Agency, the Parking Authority, and the City Council, MSG Forum has sustained and will continue to sustain substantial damages, in an amount to be proven at trial.

187. The wrongful conduct of Mayor Butts, the Successor Agency, the Parking Authority, and the City Council was a substantial factor in causing MSG Forum's harm.

188. In committing the acts alleged herein, Mayor Butts, the Successor Agency, the Parking Authority, and the City Council are guilty of oppression, fraud and/or malice within the meaning of California Civil Code section 3294, entitling MSG Forum to punitive or exemplary damages in an amount appropriate to punish Mayor Butts, the Successor Agency, the Parking Authority, and the City Council, and to make an example of them to the community.

TENTH CAUSE OF ACTION.

Declaratory Relief.
(Against the City and the City Council.)

189. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 188, inclusive, as if fully set forth herein.

190. MSG Forum contends that: (a) by entering into the ENA and the Amended and Restated ENA, and pursuing a competitive arena adjacent to the Forum that will materially adversely impact the use, operation, functionality, accessibility, and/or economic competitiveness of the Forum, the City, through the actions of the City Council, has breached its obligations under the Development Agreement; (b) the City acquired MSG Forum's consent to the Parking Lease Termination by breach of the obligations of the Parking Lease, breach of the implied covenant of good faith and fair dealing of the Parking Lease, and through the fraudulent actions of Mayor Butts, and, as a result, the Parking Lease Termination is null and void; (c) given that the Parking Lease Termination is null and void, the Parking Lease is still in full force and effect; and (d) by entering into the ENA and the Amended and Restated ENA, the City, through the actions of the City Council, has breached its obligations under the Parking Lease.

191. On the other hand, the City and the City Council dispute each of MSG Forum's contentions as set forth above, including by denying MSG Forum's notice of claim on September 6, 2017, and thereafter denying MSG Forum's amended notice of claim on October 4, 2017.

192. An actual controversy now exists between MSG Forum and the City and the City Council relating to whether:

a. by entering into the ENA and the Amended and Restated ENA, and pursuing a competitive arena adjacent to the Forum that will materially adversely impact the use, operation, functionality, accessibility, and/or economic competitiveness of the Forum, the City, through the actions of the City Council, has breached its obligations under the Development Agreement;

b. the City acquired MSG Forum's consent to the Parking Lease Termination by breach of the obligations of the Parking Lease, breach of the implied covenant of good faith and fair dealing of the Parking Lease, and through the fraudulent actions of Mayor Butts, and, as a result, the Parking Lease Termination is null and void;

c. given that the Parking Lease Termination is null and void, the Parking Lease is still in full force and effect; and

d. by entering into the ENA and the Amended and Restated ENA, the City, through the actions of the City Council, has breached its obligations under the Parking Lease.

193. Pursuant to section 1060 of the California Code of Civil Procedure, MSG Forum is entitled to a declaration regarding MSG Forum's and the City's and the City Council's rights and obligations with respect to the Development Agreement, the Parking Lease Termination and the Parking Lease, and that MSG Forum's contentions set forth in paragraph 190 are correct. Such a declaration is necessary and appropriate.

ELEVENTH CAUSE OF ACTION.

Declaratory Relief.
(Against the City and the City Council.)

194. MSG Forum incorporates herein and realleges the allegations in paragraphs 1 through 193, inclusive, as if fully set forth herein.

195. As set forth above, the City Council is the governing body of the City and the Charter provides that all legislative and charter powers "granted to and vested in [C]ity of Inglewood shall be vested in and exercised by the council" (Art. VI § 10), which "may take official action only by the passage or adoption of ordinances, resolutions or motions[.]" (Art. VI § 11)

196. While Mayor Butts signs all contracts on behalf of the City (Art. XX § 1), contracts must first be approved by the City Council's ordinance, resolution, or motion, unless the Council has otherwise delegated its authority. (Art. VI § 11)

197. The Parking Lease Termination was an official act requiring City Council approval by ordinance, resolution or motion. Indeed, Mayor Butts himself has acknowledged that "The City Council is the governing body of the City, and the Mayor may only take official action by way of the City Council passing or adopting ordinances or resolutions."

198. MSG Forum is informed and believes, and on that basis alleges, that the City Council did not pass or adopt any ordinance, resolution, or motion authorizing Mayor Butts to enter into the Parking Lease Termination on behalf of the City.

199. Accordingly, MSG Forum contends that Mayor Butts's execution of the Parking Termination Agreement on behalf of the City was an *ultra vires* act and of no force or consequence.

200. MSG Forum withdrew its prior consent to the Parking Lease Termination on July 17, 2017 after it learned that its consent was procured by fraud, and reiterated such withdrawal by multiple letters, dated September 18, 2017, and July 17, 2018. MSG Forum's withdrawal of its consent meant that, as of July 17, 2017, the City Council could no longer approve or ratify Mayor Butts's *ultra vires* act of signing the Parking Lease Termination.

201. MSG Forum contends that, given that neither MSG Forum nor the City consented to the entry of the Parking Lease Termination, the Parking Lease Termination is of no legal effect; and accordingly the Parking Lease remains valid, binding, and enforceable between the MSG Forum and the City.

202. An actual controversy thus now exists between MSG Forum and the City and the City Council relating to (a) whether the Parking Lease Termination is void *ab initio* because it was beyond the scope of Mayor Butts's powers under the City Charter, and (b) whether accordingly, the Parking Lease remains in full force and effect between the City and MSG Forum.

203. Pursuant to section 1060 of the California Code of Civil Procedure, MSG Forum is entitled to a declaration regarding MSG Forum's and the City's and the City Council's rights and obligations with respect to the Parking Lease Termination and the Parking Lease, and that MSG Forum's contentions set forth above are correct. Such a declaration is necessary and appropriate.

PRAYER FOR RELIEF.

WHEREFORE, MSG Forum respectfully prays for the following relief against all defendants (and any and all other parties who may oppose MSG Forum in this lawsuit) jointly and severally:

1. For rescission of the Parking Lease Termination and reinstatement of the Parking Lease;
2. For an injunction prohibiting the City, the City Council, the Parking Authority, and the Successor Agency from continuing to pursue a competitive arena that will materially adversely impact the use, operation, functionality, accessibility, and/or economic competitiveness of the Forum;
3. For an order requiring specific performance of the Parking Lease, including a specific order that all of MSG Forum's rights and interests in the Parking Lease Property be fully restored;
4. For declaratory relief stating that the City, through the actions of the City Council, is in breach of the Development Agreement, that MSG Forum's consent to the Parking Lease Termination was obtained by fraud and the Parking Lease Termination is therefore invalid, that the Parking Lease is still in full force and effect, and that the City, through the actions of the City Council, is in breach of the Parking Lease;
5. For declaratory relief stating that Mayor Butts's purported entry of the Parking Lease Termination on the City's behalf was an an *ultra vires* act and of no force or consequence, and that accordingly the Parking Lease remains valid, binding, and enforceable between MSG Forum and the City.
6. For compensatory damages in an amount to be proven at trial;
7. For any additional general, special, consequential or incidental damages permitted and according to proof;

8. For punitive damages in an amount appropriate to punish the defendants and make an example of the defendants to the community;

9. For indemnification pursuant to the Parking Lease;

10. For an award that defendants pay all of MSG Forum's costs and attorneys' fees to the extent required by contract or by law;

11. For all interest, as permitted by law; and

12. For such other relief as the Court deems just and proper.

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF LOS ANGELES

INGLEWOOD RESIDENTS AGAINST TAKINGS AND EVICTIONS, Plaintiff and Petitioner, v. SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; OVERSIGHT BOARD TO THE SUCCESSOR AGENCY TO THE INGLEWOOD REDEVELOPMENT AGENCY; LOS ANGELES COUNTY SECOND DISTRICT CONSOLIDATED OVERSIGHT BOARD and DOES 1-10; Defendants and Respondents, MURPHY'S BOWL LLC, a Delaware Limited Liability Company; ROES 10-20; Real Parties in Interest.	CASE NO.: BS174709 **FIRST AMENDED VERIFIED PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR INJUNCTIVE RELIEF PURSUANT TO THE RALPH M. BROWN ACT AND CALIFORNIA ENVIRONMENTAL QUALITY ACT** (Code Civ. Proc. §§ 1085, 1094.5 and 526; Gov. Code §§ 54950 et seq.; Pub. Resources Code §§ 21000 et seq.) Assigned for all purposes: Hon. Mitchell Beckloff, Dept. 86

INTRODUCTION

1. Petitioner and Plaintiff Inglewood Residents Against Takings And Evictions ("Petitioner") hereby alleges violations[1] of the Ralph M. Brown Act, Government Code section 54950 et seq. and the California Environmental Quality Act, by the Successor Agency to the Inglewood Redevelopment Agency ("Successor Agency") and the Oversight Board To The Successor Agency To The Inglewood Redevelopment Agency ("Oversight Board")[2] (collectively, "Respondents"). These violations benefited Real Party in Interest Murphy's Bowl LLC (the "Developer").

2. The Brown Act, also known as the California open meeting law, has a clear and forcefully stated purpose: "In enacting this chapter, the Legislature finds and declares that the public commissions, boards and councils and the other public agencies in this State exist to aid in the conduct of the people's business. It is the intent of the law that their actions be taken openly and that their deliberations be conducted openly. [¶] The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know. The people insist on remaining informed so that they may retain control over the instruments they have created." (Gov. Code § 54950.)

3. To accomplish these vital goals, the Brown Act, inter alia, (1) requires that an agenda be posted at least 72 hours before a regular meeting, (2) requires the

---

[1] Petitioner concurrently submits a Notice of Lodging of First Amended Petition to detail the amendments that have been made to the Petition following this Court's ruling on October 2, 2019 that the Petition for Writ of Mandate did not sufficiently state a cause of action for violation of the California Environmental Quality Act, with 20 days leave to amend.

[2] As explained below, as of July 1, 2018, the Successor Agency was dissolved and its powers, duties, and liabilities were taken over by the Los Angeles County Second District Consolidated Oversight Board. For clarity's sake, this petition refers to the Oversight Board throughout but such reference includes the Second District Consolidated Oversight Board.

agenda include a brief description that is informative to the public of the action to be taken, and (3) forbids action on any item not on that agenda. In this way, the Brown Act serves to facilitate public participation in all phases of local government decisionmaking and to curb misuse of the democratic process by secret legislation of public bodies. (*San Joaquin Raptor Rescue Center v. County of Merced* (2013) 216 Cal.App.4th 1167, 1176.)

4. At its June 19, 2018 meeting, Respondent Successor Agency took action on a matter not properly noticed putting Petitioner and the public in a position where they could not have reasonably understood the nature of the action or the implications of the same. The Office of the Successor Agency formally recommended to the Board of the Successor Agency that the Board request approval from the Oversight Board to implement the Successor Agency's Long Range Property Management Plan ("LRPMP"). The implementation requested is a required initial step in the transfer of 13 parcels of property that would be used for construction of a sports arena project ("Land Transfer") for the Clippers professional basketball team. However, neither the notice for the meeting, the agenda nor the available meeting materials specifically identify the land or the reasons for the Land Transfer in a way that would adequately inform the public of the nature of the action the Successor Agency purported to take. Respondents made clear through email communications that the purpose of requesting the Resolution approving the Land Transfer was for an arena project for the Clippers.

5. At its June 27, 2018 meeting, Respondent Oversight Board similarly took action on a matter not properly noticed putting Petitioner and the public in a position where they could not have reasonably understood the nature of the action or the implications of the same. During this meeting, the Oversight Board passed Resolution No. 18-OB-003, which directed the Successor Agency to dispose of the 13 parcels at issue—parcels comprising all Successor Agency-owned land within the site identified in an exclusive negotiating agreement ("ENA")—pursuant to implementation of the

Amended LRPMP. This Resolution was drafted with input from Murphy's Bowl attorneys who represented the Clippers' interests. However, neither the notice for the meeting, the agenda, nor the available meeting materials specifically identify the land or the reasons for the Land Transfer in a way that would adequately inform the public of the nature of the action the Oversight Board purported to take. Respondents made clear through email communications that the purpose of the Resolution approving the Land Transfer was for the Clippers Arena Project.

6. The Land Transfer would dispose properties that are included within an Exclusive Negotiating Agreement ("ENA") among the City of Inglewood, the Successor Agency, the Inglewood Parking Authority and Murphy's Bowl LLC for a sports arena for the Clippers basketball team (the "Arena Project").

7. These meetings violated the Brown Act. The Successor Agency and Oversight Board failed to inform the public that they were taking actions in furtherance of the effort to dispose properties pursuant to an agreement with extensive potential impacts on thousands of Inglewood residents and businesses. The agenda for each meeting merely stated each agency would act to implement the Long Range Property Management Plan, without stating what that implementation entailed. Contrary to Brown Act requirements, this description was overly vague and uninformative. It did not inform the public that the property disposition actions are taken in furtherance of the ENA for the Clippers Arena and involving Murphy's Bowl LLC. It failed to inform the public that the 13 parcels being transferred are specifically designated in maps in the ENA for construction of the Arena Project.

8. This failure to adequately inform the public is consistent with and further evidence of the City of Inglewood's, and its related entities', deliberate attempts to obfuscate the true nature of actions taken to facilitate the Clippers Arena Project. Such actions were the subject of Karen Foshay's March 15, 2018 article entitled "Documents Show How Inglewood Clippers Arena Deal Stayed Secret." This article included a

complete copy of a June 9, 2017 email between Clippers and City of Inglewood representatives stating "the entity [Murphy's Bowl LLC] will have a generic name so it won't identify the proposed project." In fact, in a letter to the Inglewood City Council, Los Angeles County District Attorney Jackie Lacey even stated that such actions were "*concerted efforts* between representatives of the city and the Murphy's Bowl LLC to limit the notice given to the public . . . contrary to the spirit of the Brown Act." (Jackie Lacey, Los Angeles County Dist. Atty's Off., letter to Inglewood City Council, May 17, 2019, emphasis added.)

9. Respondents' actions reflect a continuing course of conduct deliberately designed to obfuscate the subject of public business being conducted. These actions violate the Brown Act.

10. Additionally, Petitioner challenges the Respondents' actions under the California Environmental Quality Act ("CEQA"). Respondents have forced the filing of this action by ignoring California's procedural rules and laws designed to ensure environmental protection, ignoring the interests of the community, and rushing to facilitate a sports arena development that could displace families and businesses, small and large, for a billionaire's benefit. Respondents' actions, recommending and approving disposal of the 13 Successor Agency parcels within the ENA Site, effectuate the Land Transfer pursuant to the ENA[3] for the Arena Project.

11. The ENA sets forth and specifically details the Arena Project's scope and even defines it as a "Project." The level of detail the ENA and staff report contain on the Arena Project was more than enough to complete environmental review. The ENA states that Respondents will convey property "to the Developer for development as a premier and state of the art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats as well as related landscaping,

---

[3] The ENA was amended and restated on August 15, 2017 but its essential terms remained the same and was approved by the Oversight Board on September 7, 2017. Therefore, this Petition refers throughout to "the ENA" and, where relevant, "the Revised ENA."

parking and various other ancillary uses related to and compatible with the operation and promotion of a state-of-the-art NBA arena on the Site." (ENA, at pp. 1-2.) The staff report for the June 15, 2017, special meeting also confirms that the ENA's purpose is to "facilitate the development of a premier and state-of-the-art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats." The Arena Project's size and location are all that is needed for the City to conduct environmental review as they establish the parameters of the project's impacts. The ENA was followed in February 2018 by a Notice of Preparation ("NOP") of an environmental impact report, which provided further detailed description of the proposed arena project. No additional information was needed to study the Arena Project's environmental impacts, yet the Respondents seem to have kicked the proverbial can down the road and decided to possibly do environmental review later. Thus, the ENA, staff report, and NOP show that the Arena Project is detailed enough to require preparation of an EIR *now*, as CEQA demands. (Pub. Resources Code § 21151; see also *Save Tara v. City of West Hollywood* (2008), 45 Cal.4th 116, 130-31 [environmental review must occur early enough to "influence key public decisions" but late enough so as not to impede the "exploration and formulation" of projects].) Respondents' decision to ignore their obligations under state law cannot and should not be countenanced.

12. Despite specifically defining the Arena Project in the ENA, Respondents have prepared no environmental review for the Arena Project before taking actions to transfer the 13 Successor Agency parcels via the recommendation and approval of Resolution No. 18-OB-003. The Successor Agency already agreed that for three years it would "not negotiate with or consider any offers or solicitations from, any person or entity, other than the Developer, regarding a Disposition and Development Agreement for the sale, lease, disposition, and/or development of the Site." (ENA, at § 2(a).) At the same time, the LRPMP required that the Successor Agency disposed of the parcels within

three years of the date of the LRPMP, or else they would be transferred to the city for future development under prescribed guidelines. (OVERSIGHT AR[4] 2:82-84.)

13. Respondents' decision to approve the transfer of 13 Successor Agency parcels prior to completing environmental review violates CEQA. CEQA prohibits a government entity from taking actions that foreclose alternatives or potential mitigation measures before performing the requisite environmental review. The request and subsequent Oversight Board Resolution to transfer the 13 Successor Agency parcels create significant commitments to and momentum for the Arena Project. As such, Respondents will undoubtedly ignore the environmental impacts that any future environmental review may uncover, and potentially superior alternative projects, in pursuit of the Arena Project. The Land Transfer will result in significant environmental impacts that must be analyzed in an Environmental Impact Report ("EIR"), disclosed to the public and considered by Respondents prior to passing a Resolution to direct the Land Transfer. Respondents' failure to do so violated CEQA.

14. Respondents' disregard for the community's and the City's well-being, of their obligations under CEQA, for how the Land Transfer and the Arena Project will significantly impact the environment, and the requirement to comply with the Brown Act's agenda description requirements necessitate this challenge to Respondents' respective purported approvals of the Land Transfer.

PARTIES TO THIS PROCEEDING

15. Petitioner Inglewood Residents Against Takings And Evictions is an unincorporated association that opposes the ENA, the Land Transfer, and the City's, Successor Agency's, Parking Authority's, and Oversight Board's approvals to facilitate the development of the Arena Project by Developer in a residential area and the use of eminent domain to acquire property to develop the Arena Project. Petitioner and its members will be adversely impacted by the Land Transfer as it will result in significant

[4] The administrative record in this matter has been lodged with the Court, and Petitioner has objected to that record as incomplete.

impacts to the environment including blight and urban decay, the loss of existing businesses and jobs, and will facilitate development that is inconsistent with the City's Zoning and General Plan. Petitioner and its members will also be adversely impacted by the environmental impacts created by the Arena Project's construction and operation, including impacts to air quality, traffic congestion, nighttime lighting, and noise.

16. Respondent and Defendant Successor Agency is responsible for overseeing the winding down of redevelopment activity at the local level under the Redevelopment Law, including managing existing redevelopment projects, making payments on enforceable obligations, and disposing of redevelopment assets and properties. On or about January 10, 2012, pursuant to the Redevelopment Law dissolution legislation (AB Xl 26 as amended by AB 1484), the City elected to be the Successor Agency to the Redevelopment Agency of the City of Inglewood. The Redevelopment Agency was officially dissolved on or about February 1, 2012.

17. Respondent and Defendant Oversight Board To The Successor Agency To The Inglewood Redevelopment Agency is the governing body of the entity that under the Health and Safety Code must approve Successor Agency agreements with the City of Inglewood prior to the Successor Agency approving those agreements. Inglewood's Mayor Butts was the chair of the Oversight Board at all times relevant to this action.

18. Respondent and Defendant Los Angeles County Second District Consolidated Oversight Board is the successor in interest to the Oversight Board. Pursuant to Health and Safety Code Section 34179 subdivision (j), as of July 1, 2018, the Oversight Board was dissolved and its duties, responsibilities, and liabilities were taken over by the Second District Consolidated Oversight Board.

19. Real Party in Interest, Murphy's Bowl LLC, is a Delaware Limited Liability Company. Real Party in Interest is the designated developer of the Arena Project under the ENA.

20. Petitioner does not know the true names or capacities, whether individual, corporate, associate or otherwise, of Respondent Does 1 through 10, or of Real Parties in Interest Roes 10-20, inclusive, and therefore sues said Respondents and Real Parties in Interest under fictitious names. Petitioner will amend this Petition to show their true names and capacities when and if the same has been ascertained.

JURISDICTION AND VENUE

21. This Court has jurisdiction over this proceeding pursuant to California Code of Civil Procedure section 1085 and 1094.5; and Government Code sections 54960, 54960.1, and 54960.2; and Public Resource Code sections 21168 and 21168.5.

22. Venue in this Court is proper pursuant to Code of Civil Procedure section 394, in that Respondents are located within the County of Los Angeles.

23. Petitioner has complied with the requirements of Government Code section 54960.1 and 54960.2 by delivering to the Oversight Board on June 29, 2018 a letter demanding that the Oversight Board cure or correct and cease and desist its Brown Act violations.

24. Petitioner has complied with the requirements of Government Code section 54960.1 and 54960.2 by delivering to the Successor Agency on June 29, 2018 a letter demanding that the Successor Agency cure or correct and cease and desist its Brown Act violations.

25. Neither Respondent responded to these letters.

THE RALPH M. BROWN ACT.

26. The Brown Act provides that "[a]t least 72 hours before a regular meeting, the legislative body of the local agency, or its designee, shall post an agenda containing a brief general description of each item of business to be transacted or discussed at the meeting, including items to be discussed in closed session. A brief general description of an item generally need not exceed 20 words. The agenda shall specify the time and location of the regular meeting and shall be posted in a location that is freely accessible to

members of the public and on the local agency's Internet Web site, if the local agency has one." (Gov. Code § 54954.2 subd. (a)(1).)

27. The Brown Act further provides that "[n]o action or discussion shall be undertaken on any item not appearing on the posted agenda, except that members of a legislative body or its staff may briefly respond to statements made or questions posed by persons exercising their public testimony rights under Section 54954.3." (Gov. Code § 54954.2 subd. (a)(3).)

CALIFORNIA ENVIRONMENTAL QUALITY ACT

28. The CEQA Guidelines require "all phases of project planning, implementation, and operation" to be considered in the Initial Study for a project. (Guidelines §15063, subd. (a)(1).) CEQA defines a project as "the whole of an action, which has a potential for resulting in either a direct physical change to the environment, or a reasonably foreseeable indirect physical change in the environment." (Guidelines § 15378, subd. (a).)

29. CEQA is not merely a procedural statute. CEQA imposes clear and substantive responsibilities on agencies that propose to approve projects, requiring that public agencies not approve projects that harm the environment unless and until all feasible mitigation measures are employed to minimize that harm. (Pub. Resources Code§§ 21002, 21002.1, subd. (b).)

30. Agencies may not undertake discretionary actions that could have a significant adverse effect on the environment, or limit the choice of alternatives or mitigation measures, before complying with CEQA. (Guidelines §15004, subd. (b)(2).) The "lead agency," which is the public agency that has the principal responsibility for carrying out the project, is responsible for conducting an initial study to determine, in consultation with other relevant state agencies, whether an environmental impact report, a negative declaration, or a mitigated negative declaration will be prepared for a project.

(Pub. Resources Code §§ 21067; 21080.l, subd. (a); 21083, subd. (a).) Accordingly, public agencies may not "take any action" that furthers a project "in a manner that forecloses alternatives or mitigation measures that would ordinarily be part of CEQA review of that public project." (*Save Tara*, *supra*, 45 Cal.4th at 138.)

31. Thus, CEQA does not permit the postponement of environmental review "to the point where the 'bureaucratic and financial momentum'" has built up "irresistibly behind a proposed project 'thus providing a strong incentive to ignore environmental concerns.'" (*Save Tara*, *supra*, 45 Cal.4th at 135.)

32. Failure either to comply with the substantive requirements of CEQA or to carry out the full CEQA procedures so that complete information as to a project's impacts is developed and publicly disclosed constitutes a prejudicial abuse of discretion that requires invalidation of the public agency action regardless of whether full compliance would have produced a different result. (Pub. Resources Code § 21005.)

GENERAL ALLEGATIONS

33. On June 15, 2017, the City, the City Council, the Successor Agency, and the Parking Authority each purported to hold a special meeting (the "Special Meeting") pursuant to Government Code Section 54956. At the Special Meeting, Respondents purported to approve the ENA among the City, the Successor Agency, the Authority and the Developer "to facilitate the development of a premier and state-of-the-art National Basketball Association ('NBA') professional basketball arena consisting of approximately 18,000 to 20,000 seats."

34. On July 20, 2017, Petitioner filed a petition alleging violation of CEQA and fair meeting requirements.

35. The Inglewood City Council held a meeting on August 15, 2017. At the August hearing, the City Council approved a "Revised ENA" which contained many of the same terms as the prior ENA and a revised map of the project area purporting to reduce the area of potential eminent domain use. City councilmembers stated it was not

the City's intention to take houses or a church by eminent domain. A map attached to the Revised ENA removed many residences from the boundaries of the project area. However, the Mayor and other councilmembers refused to forego the use of eminent domain altogether.

36. On September 7, 2017, Inglewood's Oversight Board to the Successor Agency to the Inglewood Redevelopment Agency, which is chaired by the Mayor of Inglewood, approved the Revised ENA as consistent with a long range property management plan and Redevelopment Dissolution Law.

37. The ENA provides for the conveyance of certain real property within a defined "Site"—including property owned by the City ("City Parcels"), by the Successor Agency ("Agency Parcels") and by third parties ("Potential Participating Parcels")—to the Developer, for the Arena Project.

In approving the ENA, Respondents did not consider the environmental impacts of the ENA. No environmental review was conducted with respect to the ENA's approval. The ENA is a project under CEQA that has the potential to result in significant physical changes in the environment. Respondents erred by not conducting environmental review for the ENA.

38. On February 20, 2018, the City of Inglewood issued a Notice of Preparation (NOP) of an EIR for the Arena Project, months after the ENA was approved. The City anticipated that review of the Arena Project and certification of the EIR would be conducted while the ENA was still in effect, effectively preventing the City and Respondents from considering alternatives to the Clippers Arena Project. (See Presentation, City of Inglewood, *Inglewood Basketball and Entertainment Center, Environmental Impact Report Scoping Meeting*, Mar. 12, 2018, available at https://www.cityofinglewood.org/DocumentCenter/View/11789/Inglewood-Basketball-and-Entertainment-Center-Scoping-Meeting-Presentation [stating that the Final EIR was

expected to be completed in Summer 2019, two years into the ENA's three year exclusivity period].)

39. On June 19, 2018, Respondent Successor Agency took steps to implement the ENA by calling a meeting about the 13 parcels in question and preparing a staff report and agenda. Neither the Agency staff report nor the meeting agenda explained that the 13 disposed parcels were in furtherance of the Clippers Arena Project. The Successor Agency's agenda for the June 19, 2018 meeting stated the following:

> **A.** CSA-3. OFFICE OF THE EXECUTIVE DIRECTOR
>
> Staff report recommending approval to request that the Oversight Board for the Successor Agency of the Former Inglewood Redevelopment Agency adopt a Resolution, *directing the Successor Agency to implement the State of California Department of Finance approved Long-Range Property Management Plan,* as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable disposition requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements. (Emphasis added.)

40. Contrary to Brown Act requirements, the Successor Agency's agenda description was overly vague, uninformative, and inadequate. It does not inform the public that the property disposition actions are taken in furtherance of the ENA for the Clippers Arena and involve Murphy's Bowl LLC. It fails to inform the public, and does not alert the public to the fact, that the 13 parcels being transferred are specifically designated in maps in the ENA for construction of the arena project. The agenda language cloaks the Land Transfer by stating that the requested resolution will merely direct the Successor Agency to "implement" the LRPMP with respect to the 13 parcels. This was misleading. The LRPMP provides that upon disposal pursuant to the LRPMP, the properties in question, B-1, B-2, and B-3, will be *developed* according to a particular process. (OVERSIGHT AR 2:83-84.) The LRPMP provides guidelines for this process. (*Ibid.*) Thus, passing a resolution to implement the LRPMP with respect to the 13 parcels is not a trivial act, but rather a concerted effort to commence the Land Transfer necessary for Murphy's Bowl to develop the Clippers Arena Project. Respondents acknowledged this City requirement to sell the parcels for development. In a June 27, 2018 email to

Artie Fields, Inglewood City Manager, Successor Agency Manager Margarita Cruz stated "The approval of the LRPMP gave us three years to either sell the property or transfer them to the city. The city will then be required to sell them following a specific process. I will look this up." (OVERSIGHT AR 91:1527.) With the ENA, the City could contemplate no development other than the Clippers Arena Project. In other words, because the ENA prevented the City from selling the 13 parcels to any party other than the Clippers, the Successor Agency's approval of the transfer of these 13 parcels to the City was an essential step in the Clippers arena's development because but for this transfer from the Successor Agency to the City, the City could not transfer the 13 parcels from the City to the Clippers.

41. The Successor Agency reiterated the cloaked, misleading language from the meeting agenda in its staff report. (OVERSIGHT AR 5:97.)

42. The Successor Agency also failed to make available the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements" to the public.

43. The Successor Agency's failure to adequately inform the public is consistent with and further evidence of the City of Inglewood's deliberate attempts to obfuscate the true purpose of these actions—to facilitate the transfer of 13 Successor Agency parcels to Murphy's Bowl for the Clippers Arena project. This purposeful obfuscation by the City and Murphy's Bowl was reported by Karen Foshay in a story entitled "Documents Show How Inglewood Clippers Arena Deal Stayed Secret," for KCET on March 15, 2018 and is available at https://www.kcet.org/shows/socal-connected/documents-show-how-inglewood-clippers-arena-deal-stayed-secret. This story reported a June 9, 2017 email between Clippers and City of Inglewood representatives stating "the entity [Murphy's Bowl LLC] will have a generic name so it won't identify the proposed project." Therefore, the City and Murphy's Bowl purposefully obscured the identity of the parties involved in the ENA and subsequent

transactions with a "generic name." Further, the Inglewood City Council's and Successor Agency's approval of the ENA was discussed at a special meeting, rather than a regular meeting, so as to "reduce the time required to give public notice from 72 hours to 24 hours before the meeting." (Jackie Lacey, Los Angeles County Dist. Atty's Off., letter to Inglewood City Council, May 17, 2019.) Given the purposeful obfuscation of the project name and the attempts to reduce the length of public notice through the use of a special meeting, LA District Attorney Jackie Lacey has stated that the actions by the City and Murphy's Bowl "indicate concerted efforts" to violate the Brown Act. (*Ibid.*)

44. Leaving no doubt, emails produced by Respondents further evidence that the purpose of the request and subsequent Resolution to dispose of the 13 parcels was to permit a formal transfer of the parcels to Murphy's Bowl in order to commence the Clippers Arena Project. In a December 6, 2017 email, Successor Agency Manager Margarita Cruz wrote to the city accountant requesting information about the Agency parcels, stating that "The answers to these questions are very important to the Clippers project." (OVERSIGHT AR 56:1426.)

45. In a January 11, 2018 email, Ms. Cruz wrote to a colleague, requesting information about the property appraisal requirements when the Successor Agency "sell[s] property that we bought with FAA funds." (OVERSIGHT AR 58:1430.) This shows that the Successor Agency would sell the purportedly FAA-funded parcels.

46. In a February 13, 2018 message, Ms. Cruz wrote to a real estate appraisal firm, requesting appraisal of the parcels at issue. (OVERSIGHT AR 59:1431.) In this email, Ms. Cruz stated that "[t]he City and the Successor Agency own land in the ENA clippers area." (*Ibid.*) She also stated that "[w]e are looking at trying to complete the *transfer* of this property prior to June 30, 2018 which is when the Successor Agency's Oversight Board becomes a County board." (*Ibid.* emphasis added.) This confirms that the Successor Agency understood the request and approval of the June 2018 Resolution

to be a definitive step in the process of transferring the 13 parcels to the Murphy's Bowl and the Clippers.

47. Further demonstrating that the Successor Agency, itself, recognized that the purpose of seeking a resolution from the Oversight Board was to commence the Land Transfer to Murphy's Bowl, in a June 4, 2018 email, Ms. Cruz wrote to Olga Castaneda, Acting Secretary of the Oversight Board: "I have a request for an [Oversight Board] meeting on either June 20 or June 27. ***Its related to a property transfer***." (OVERSIGHT AR 62: 1436 [emphasis added].) Again, the resolution applied only to the 13 Successor Agency owned parcels falling within the ENA Site and the proposed Clippers Arena Project.

48. In a June 18, 2018 email, one day before the Successor Agency meeting in which the Successor Agency Board Members were to discuss requesting approval from the Oversight Board to dispose of the 13 parcels at issue, Ms. Cruz wrote to Artie Fields: "I noted that they placed the Murphys bowl meeting at the same time as we are scheduled to meet. Is it ok if I attend the Murphy's bowl meeting instead?" (OVERSIGHT AR 74: 1487.) Clearly, the Successor Agency considered the request for a Resolution approving the transfer as an approval of the transfer of land for the Clippers Arena itself.

49. On June 19, 2018, the Board Members of Respondent Successor Agency approved the action to request that the Oversight Board approve of the disposal of 13 parcels of property that would be used for construction of the Clippers sports arena project—in violation of CEQA and the Brown Act. The following properties are the subject of the resolution and are included within the ENA area:

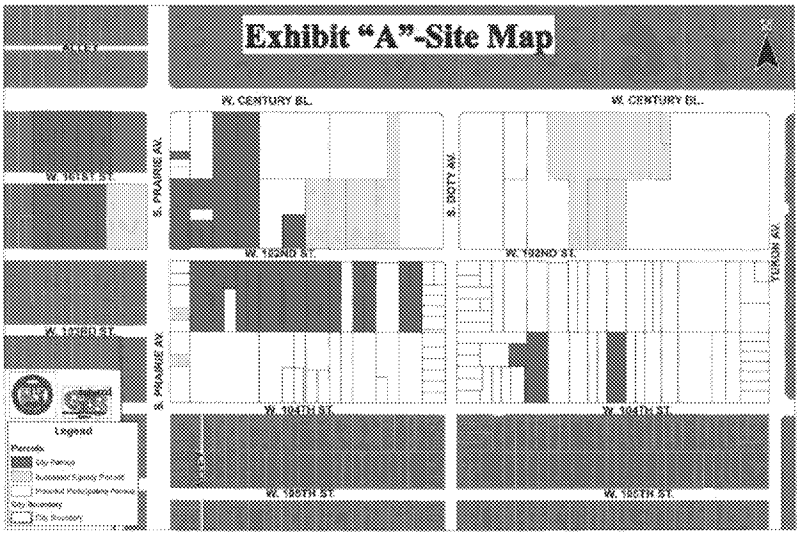
Property Name	**Parcel Number on LRPMP Inventory**[5]
a. Prairie & 101st (B-1.1)	1
b. Prairie & 102nd (B-1.2)	2, 3

[5] The LRPMP inventory includes a total of 46 parcels comprising 14 properties. (OVERSIGHT AR 2:49.) The remaining 33 parcels are not included in the resolution, and are not identified in the ENA as part of the Study Area Site.

c. 102nd Street (B-2) 4, 5, 6, 7, 8

d. Century & Prairie (B-3) 9, 10, 11, 12, 13

For reference, the ENA's Site Map is included below. The above-designated properties are marked in yellow:



50. Real Party in Interest Murphy's Bowl LLC, the group developing the Clippers Arena Project, apparently had a role in drafting Resolution 18-OB-003. Between June 4, 2018 and June 13, 2018, attorneys for the City of Inglewood and Murphy's Bowl exchanged draft versions of the resolution that eventually became 18-OB-003. (OVERSIGHT AR 63:1437-1441; AR 66:1444-1452; AR 67:1453-1455; AR 69:1459-1462; AR 71:1474-1481.) During this revision process, in a June 12, 2018 email to an attorney for Murphy's Bowl, Royce Jones, attorney for the Respondents, expressed a desire for concealing the ENA and the Clippers Arena Project from the public approval process for the resolution:

> Both Gustavo and I have reviewed your draft resolution and felt that the referencing and reaffirming the terms of the Amended ENA in the resolution was inconsistent with the approach I described as wanting to take by simply having the SA [Successor Agency] request the OB [Oversight Board] directing the SA to implement the approved LRPMP by disposing of the "Noise Mitigation Properties" . . . . Given the spirit of things here in Inglewood, specifically referencing and/or reaffirming the Amended ENA

> and the proposed basketball arena during as part of the public entity approval process would likely generate all kinds of unwarranted attention to what is simply a SA action an OB resolution approval action with respect to the implementation of the approved LRPMP. (OVERSIGHT AR 66:1444.)

This shows not only that Respondents were working with Murphy's Bowl to approve the Land Transfer, but that Respondents knew that their actions would likely be subject to public and legal scrutiny, and thus actively concealed that the purpose of the Resolution was to transfer parcels for the Clippers Arena project.

51. Respondent Oversight Board on June 27, 2018 took definite steps to implement the ENA by approving Resolution 18-OB-003, which directed the Successor Agency to "dispose of the Mitigation Properties in accordance with the amended LRPMP." (OVERSIGHT AR 4:95.) This action violated the Brown Act and CEQA. The Oversight Board failed to inform the public that the properties are proposed to be disposed of pursuant to an agreement with extensive potential impacts on thousands of Inglewood residents and businesses. The brief description on the Oversight Board agenda for its June 27, 2018 meeting stated:

> Adoption of Resolution by the Oversight Board to the Successor Agency of the former Inglewood Redevelopment Agency *Directing the City of Inglewood as the Successor Agency to former Inglewood Redevelopment Agency to Implement the approved Long-Range Property Management Plan*, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements. (Emphasis added.)

52. Contrary to Brown Act requirements, the Oversight Board's agenda description was overly vague and uninformative. It does not inform the public that the action to be discussed, adoption of Resolution 18-OB-003, would effectively authorize the disposal of land to Murphy's Bowl LLC for the Clippers Arena. It likewise fails to inform the public, and does not alert the public to the fact, that the 13 parcels being transferred are specifically designated in maps in the ENA for construction of the Arena Project. As discussed above, the Resolution's direction to the Successor Agency to "implement" the LRPMP is a cloaked direction to dispose the 13 parcels. The ENA,

approved in 2017, committed Respondents to exclusive negotiations with Murphy's Bowl for a three year period, and the LRPMP required the Successor Agency to sell or transfer the properties by 2018. Thus, the Resolution was a definitive step and a legal commitment to a definitive course of action (i.e., the transfer of land from the Successor Agency to the City) that cleared the pathway for this Land Transfer, as the Successor Agency was bound to negotiations with Murphy's Bowl for the entire remaining time it had to dispose of the parcels pursuant to the LRPMP. Absent the Successor Agency's approval of the Land Transfer, the City could not fulfill its commitments under the ENA to Murphy's Bowl.

53. Respondents clearly knew—and concealed—that the Resolution at issue during the Oversight Board meeting was related to the Clippers Arena. In a June 21, 2018 email, six days before the Oversight Board meeting, Margarita Cruz wrote: "Is that list for people wanting information on Murphys bowl coming up?" (OVERSIGHT 79: 1499.)

54. In another email dated June 21, 2018, Ms. Cruz wrote to Olga Castaneda, attaching requests for notice concerning actions taken relating to the ENA with Murphy's Bowl ENA. In that email, Ms. Cruz stated: "These people have requested a copy of the agenda since it related to the property for Murphy's bowl. (OVERSIGHT 80:1500.) The requests for notice are labeled in handwriting "Murphy's Bowl (Clippers)." (*Id.* at 1501-02.)

55. The Oversight Board also failed to make available the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements" to the public.

56. Respondent Oversight Board approved Resolution 18-OB-003, which directed the Successor Agency to implement the LRPMP with respect to only properties B-1 through B-3. It authorized disposal of the 13 parcels that are included within the ENA, stated above. No other Successor Agency-held properties are addressed. Based on

information and belief, the Successor Agency has not since authorized the transfer of any other Successor Agency-held land to the City pursuant to the LRMP.

57. In recommending and approving disposal of the 13 parcels, Respondents did not evaluate the potential environmental impacts of the Land Transfer. Respondents' failure to consider the Land Transfer's potential environmental impacts violated CEQA.

58. Petitioner on June 29, 2018, pursuant to Government Code section 54960.1, demanded that the Oversight Board cure or correct its violations of the Brown Act within 30 days. The Oversight Board failed to do so.

59. Petitioner on June 29, 2018, pursuant to Government Code section 54960.1, demanded that the Successor Agency cure or correct its violations of the Brown Act within 30 days. The Successor Agency failed to do so.

60. The Land Transfer is a "project" under CEQA, as defined by Guidelines section 15378. Respondents' actions to recommend and approve disposal of the 13 parcels is an "approval" under CEQA as defined by Guidelines section 15352. The Land Transfer may cause a direct and/or reasonably foreseeable indirect environmental change. Therefore, the Land Transfer is subject to CEQA review.

61. In failing to subject the Successor Agency request and subsequent Oversight Board resolution authorizing disposal of the 13 parcels to CEQA review, Respondents ignored the impact that the Land Transfer will have on the environment. Respondents are prohibited from engaging in negotiations with anyone other than the Developer regarding the potential development of the Site. (ENA, § 2(a).) Further, the ENA prohibits Respondents from selling or otherwise transferring to third parties their interests in any property on the Site. (ENA, § 11.)

62. In failing to subject their decisions to recommend and approve the Land Transfer to CEQA review, Respondents did not consider, and did not inform the public of, direct and reasonably foreseeable indirect environmental impacts that will occur as a

result of the Land Transfer, including but not limited to land use consistency and urban decay and blight.

63. The actions taken by Respondents to recommend and approve disposal of the 13 parcels are subject to CEQA because they will result in significant land use impacts.

64. In sum, Respondents have failed to consider the Land Transfer's potential and reasonably foreseeable environmental impacts, including:

- Environmental impacts of noise, traffic, air pollution, aesthetics, and other impacts;
- Effects on land use inconsistent with the City's General Plan; and
- Increases in urban decay and blight.

FIRST CAUSE OF ACTION

(Failure to Comply with CEQA: Failure to Conduct Initial Study and/or Environmental Assessment)

65. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

66. CEQA applies "to discretionary projects proposed to be carried out or approved by public agencies. . . ." (Pub. Resources Code, § 21080, subd. (a).)

67. CEQA defines a "project" as "an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment. . . ." (Pub. Resources Code, § 21065.) The Guidelines define "project" as "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment." (Guidelines, § 15371, subd. (a).)

68. The Guidelines define "approval" to mean "the decision by a public agency which commits the agency to a definite course of action in regard to a project intended to be carried out by any person." (Guidelines § 15352, subd. (a).)

69. Respondents' recommendation and approval of disposal of the 13 parcels required for the Clippers Arena constitutes a discretionary project that will cause foreseeable, adverse physical changes to the environment and is, therefore, subject to CEQA review. (See *City of Livermore v. LAFCO* (1986) 184 Cal.App.3d 531 [adoption of revisions to sphere-of-influence guidelines constitute a "project" subject to CEQA review because the revisions reflected a major policy shift relating to where growth would occur and what the focus of urban development would be].) The approval of the disposition was a commitment to a definite course of action as far as the Respondents were concerned. Under the ENA's exclusivity provision, the land could not be transferred to any parties other than parties to the agreement including the Clippers for a period of at least three years.

70. Respondents failed to consider, avoid or mitigate the individual and cumulative impacts of reasonably foreseeable environmental impacts resulting from the recommendation and approval of the Land Transfer. Such impacts include noise, traffic, air quality, aesthetics, land use inconsistency, urban decay and blight.

71. Respondents violated CEQA and failed to proceed in the manner required by law, committed a prejudicial abuse of discretion, and acted arbitrarily and capriciously in their approval of the Land Transfer because, without limitation, Respondents failed to subject the Land Transfer to an Initial Study or other environmental assessment as CEQA requires.

72. Petitioner has served the California Attorney General with a copy of this amended verified petition, along with a notice of its filing, in compliance with Public Resources Code section 21167.7.

73. Petitioner has provided written notice of the commencement of this action to Respondents, in compliance with Public Resources Code section 21167.5.

74. Petitioner has performed any and all conditions precedent to filing a CEQA action against Respondents, and has exhausted any and all available administrative remedies to the extent required by law.

SECOND CAUSE OF ACTION

(Failure to Comply with CEQA: Improper Deferral of Environmental Analysis)

75. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

76. Petitioner is informed and believes and thereon alleges that Respondents have deferred analysis under CEQA for the Arena Project.

77. Petitioner is informed and believes and thereon alleges that the recommendation to request approval of the Land Transfer, and subsequent approval Resolution commit Respondents to a definite course of action with respect to the Arena Project by, for example, defining now, before any CEQA studies occur, which parts of the City should be considered for the proposed Arena Project and the acceptable size of the proposed Arena Project.

78. Respondents' recommendation to request approval of the Land Transfer, and subsequent approval Resolution commit them to a definite course of action that will cause numerous adverse environmental effects that should have been studied in an EIR before the Land Transfer was approved.

79. By approving the Land Transfer, Respondents have displayed a level of commitment to the Arena Project that is more than sufficient to constitute a "project approval."

80. By approving the Land Transfer, Respondents have circumscribed or limited their discretion with respect to future environmental review, mitigation measures, project alternatives and alternative locations.

81. The Guidelines are clear that Respondents are barred from taking actions "that would have a significant adverse effect or limit the choice of alternatives or mitigation measures, before completion of CEQA compliance." (Guidelines § 15004, subd. (b)(2)(emphasis added).)

82. Petitioner is informed and believes and thereon alleges that Respondents' approval of the Land Transfer constitutes such an unauthorized action because it limits Respondents' choices of methods to eliminate and/or mitigate adverse environmental impacts generated by the Land Transfer.

83. Petitioner is informed and believes and thereon alleges that the Land Transfer constitutes a prejudgment by Respondents on the proposed Arena Project and the proposed Site.

84. Petitioner is informed and believes and thereon alleges that the Land Transfer commits Respondents to a definite course of action and so constrains Respondents' exercise of police power such that the future CEQA review envisioned by the Land Transfer is rendered an unlawful post hoc rationalization for decisions and commitments already made.

85. Any later-performed environmental analysis will be influenced in its discussion of impacts, mitigation and alternatives by the significant funds already given to the City by the Developer.

86. Respondents have violated CEQA and failed to proceed in the manner required by law, committed a prejudicial abuse of discretion, and acted arbitrarily and capriciously in their approval of the Land Transfer because Respondents committed themselves to a definite course of action, i.e. the Arena Project, before complying with CEQA, and improperly deferred CEQA analysis of the Arena Project to a later time.

THIRD CAUSE OF ACTION

(Violation of Ralph M. Brown Act, Gov. Code § 54954.1 and 54954.2)

87. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

88. The purpose of the Ralph M. Brown Act is to "aid in the conduct of the people's business" by encouraging public participation in government decision making. (Government Code §54950.)

89. In furtherance of its goal of public participation, the Brown Act requires that at least 72 hours before a regular meeting, a legislative body must post an agenda containing a "brief description" of each item of business to be acted upon at the meeting. (Government Code § 54954.2(a)(1).)

90. The legislative body may not take any action on an item not appearing on the posted agenda, except in certain situations not applicable here. (Government Code §§ 54952(a)(3), 54954.2(b).)

91. The Successor Agency violated the Brown Act by failing to properly list in the agenda for the June 19, 2018 Successor Agency meeting the actions to be taken at that meeting. Specifically, the posted agenda listed no item of business describing that the Successor Agency would consider disposition of properties included within an Exclusive Negotiating Agreement between the City of Inglewood, the Successor Agency, the Parking Authority, and Murphy's Bowl, LLC for construction of a sports arena.

92. The Successor Agency agenda for the meeting disclosed only that the Successor Agency would "request that the Oversight Board for the Successor Agency of the Former Inglewood Redevelopment Agency adopt a Resolution, directing the Successor Agency to implement the State of California Department of Finance approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable disposition

requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements."

93. The Successor Agency failed to inform the public that it was proposing to dispose of properties pursuant to an agreement with extensive potential impacts on hundreds of Inglewood residents and businesses. The Successor Agency failed to inform the public of any connection between the listed agenda item and the construction of the Arena Project.

94. The Successor Agency failed to make available to the public the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements."

95. Thus, the agenda's description was overly vague, and the Successor Agency's action was not adequately or accurately described on the agenda, in violation of the Brown Act.

96. The Successor Agency further violated the Brown Act by not making available the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements to the public.

97. Petitioner was prejudiced by this violation because it was denied the opportunity to prepare and provide meaningful comments to the Successor Agency on the implementation of the amended Long-Range Property Management Plan, the applicable disposition requirements of the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements," the disposition of Parcels 1 through 13, and the interaction between the disposition of the properties and the Arena Project or to ascertain the extent to which the implementation of the Long-Range Property Management Plan or requirements of the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements" would affect the interests of Petitioner's members.

98. On June 29, 2018, pursuant to Government Code section 54960.1(b), Petitioner timely submitted a demand to the Successor Agency to cure or correct the action taken on June 19, 2018 in violation of the Brown Act. The Successor Agency did not respond.

99. The Oversight Board violated the Brown Act by failing to properly list in the agenda for the June 27, 2018 Oversight Board meeting the actions to be taken at that meeting. Specifically, the posted agenda listed no item of business describing that the Oversight Board would consider disposition of properties included within an Exclusive Negotiating Agreement between the City of Inglewood, the Successor Agency, the Parking Authority, and Murphy's Bowl, LLC for construction of a sports arena.

100. The Oversight Board agenda for its June 27, 2018 meeting disclosed the Board would consider: "Adoption of Resolution by the Oversight Board to the Successor Agency of the former Inglewood Redevelopment Agency Directing the City of Inglewood as the Successor Agency to former Inglewood Redevelopment Agency to Implement the approved Long-Range Property Management Plan, as amended, with respect to the Long-Term Use and Disposition of the LAX Noise Mitigation Properties, B-1.1 through and including B-3, representing Parcels 1 through and including 13, subject to the applicable Disposition Requirements of the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements." The Oversight Board failed to inform the public that it was proposing to dispose of properties pursuant to an agreement with extensive potential impacts on thousands of Inglewood residents and businesses. The Oversight Board failed to inform the public of any connection between the listed agenda item and the construction of a sports arena.

101. Thus, the agenda's description was overly vague, and the Oversight Board's action was not adequately or accurately described on the agenda, in violation of the Brown Act.

102. The Oversight Board Agency further violated the Brown Act by not making available the Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements to the public.

103. Petitioner was prejudiced by this violation because it was denied the opportunity to prepare and provide meaningful comments to the Oversight Board on the implementation of the amended Long-Range Property Management Plan, the applicable disposition requirements of the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements," the disposition of Parcels 1 through 13, and the interaction between the disposition of the properties and the Arena Project or to ascertain the extent to which the implementation of the Long-Range Property Management Plan or requirements of the "Federal Aviation Administration grant agreements and Los Angeles World Airports letter agreements" would affect the interests of Petitioner's members. For these reasons, the Oversight Board's action at its June 27, 2018, including adoption of a resolution directing implementation of the approved Long-Range Property Management Plan, as amended, with respect to the disposition of Parcels 1 through 13, must be declared null and void, pursuant to Government Code section 54960.1(a).

104. On June 29, 2018, pursuant to Government Code section 54960.1(b), Petitioner timely submitted a demand to the Oversight Board to cure or correct the action taken on June 27, 2018 in violation of the Brown Act. The Oversight Board did not respond.

105. For the reasons stated above, the Successor Agency' action taken on June 19, 2018 and the Oversight Board's action taken on June 27, 2018 with respect to LRPMP 1-13 must be declared null and void, pursuant to Government Code section 54960.1(a).

106. Without a writ of mandate and declaratory and injunctive relieve provided for by the Brown Act, Petitioner is informed and believes, and on that basis alleges, that

it and other interested persons, citizens, and taxpayers will be irreparably harmed because they will be denied notice of and the opportunity to participate in the Successor Agency's and Oversight Board's meetings, a right guaranteed by law. Government Code Section 54960(a) provides that any interested person, such as Petitioner, may commence an action by mandamus, injunction, or declaratory relief for the purpose of stopping or preventing violations or threatened violations of the Brown Act.

FOURTH CAUSE OF ACTION

(Injunction Against Further Pursuit of the Land Transfer Until Respondents Comply with CEQA and the Brown Act)

107. Petitioner incorporates herein and realleges the allegations in prior paragraphs, as if fully set forth herein.

108. Respondents failed to comply with CEQA and the Brown Act prior to recommending to request approval, and subsequently approving the Land Transfer. Petitioner therefore prays for a preliminary and permanent injunction against Respondents and any of their agents from taking any further action to advance the Land Transfer and/or Arena Project unless and until such time as Respondents comply with their mandatory duties under CEQA, the Brown Act, and all other applicable environmental rules, regulations and procedures.

109. Petitioner has no adequate remedy other than that prayed for herein in that the subject matter is unique and monetary damages would therefore be inadequate to fully compensate Petitioner for the consequences of Respondents' actions in their continued failure to comply with CEQA and the Brown Act with respect to the Project and the Land Transfer. Petitioner therefore seeks, and is entitled to, injunctive relief under Code of Civil Procedure section 526 et seq., and to a stay, preliminary and/or permanent injunction.

PRAYER FOR RELIEF

WHEREFORE, Petitioner and Plaintiff prays for relief as follows:

1. For a peremptory writ of mandate:

a. directing Respondents Successor Agency and the Oversight Board, and each of them, to rescind and set aside their actions take on June 19, 2018 and June 27, respectively; and

b. enjoining Respondents Successor Agency and the Oversight Board, their respective officers, employees, agents, boards, commissions, and all subdivisions from granting any authority, permits, or entitlements as part of the Arena Project or the Land Transfer; and

c. commanding Respondents Successor Agency and the Oversight Board, and each of them, to immediately suspend all activities in furtherance or implementation of the Land Transfer until such time as environmental review has been completed in compliance with CEQA.

2. For a preliminary and permanent injunction against Respondents Successor Agency and the Oversight Board, and each of them, and any of their agents, enjoining them from further pursuing the Land Transfer and/or commencing work under the Land Transfer unless and until such time as Respondents comply with their mandatory duties under CEQA and all other applicable environmental rules, regulations and procedures.

3. For a declaration that the Successor Agency actions of June 19, 2018, including the adoption of a resolution implementing the long range property management plan are null and void due to the Board's violations of the Brown Act;

4. For a declaration that the Oversight Board actions of June 27, 2018, including the adoption of a resolution directing the Successor Agency to implement the long range property management plan are null and void due to the Board's violations of the Brown Act;

5. For an award of its costs of suit and litigation expenses, including, without limitation, attorneys' fees incurred herein as permitted or required by law.

6. For attorneys' fees as authorized by Government Code section 54960.5 and Code of Civil Procedure section 1021.5; and

7. For such other relief as the Court deems just and proper.

Dated: October 18, 2019

VERIFICATION

I, the undersigned, declare that I am authorized by Inglewood Residents Against Takings and Evictions, Petitioner in this action, to sign this petition. I have read the foregoing First Amended Verified Petition For Writ Of Mandate and know the contents thereof, and the same is true of my own knowledge.

I declare under penalty of perjury that the foregoing is true and correct. Executed this 9 day of October 2019 at Inglewood, California.

Wanetta Smith

PROOF OF SERVICE

I am employed by Chatten-Brown, Carstens & Minteer LLP in the County of Los Angeles, State of California. I am over the age of 18 and not a party to the within action. My business address is 2200 Pacific Coast Highway, Ste. 318, Hermosa Beach, CA 90254. October 21, 2019, I served the within documents:

FIRST AMENDED VERIFIED PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR INJUNCTIVE RELIEF PURSUANT TO THE RALPH M. BROWN ACT AND CALIFORNIA ENVIRONMENTAL QUALITY ACT

☐ **VIA UNITED STATES MAIL.** I am readily familiar with this business' practice for collection and processing of correspondence for mailing with the United States Postal Service. On the same day that correspondence is placed for collection and mailing, it is deposited in the ordinary course of business with the United States Postal Service in a sealed envelope with postage fully prepaid. I enclosed the above-referenced document(s) in a sealed envelope or package addressed to the person(s) at the address(es) as set forth below, and following ordinary business practices I placed the package for collection and mailing on the date and at the place of business set forth above.

☐ **VIA OVERNIGHT DELIVERY.** I enclosed the above-referenced document(s) in an envelope or package designated by an overnight delivery carrier with delivery fees paid or provided for and addressed to the person(s) at the address(es) listed below. I placed the envelope or package for collection and overnight delivery at an office or a regularly utilized drop box of the overnight delivery carrier.

☐ **VIA MESSENGER SERVICE.** I served the above-referenced document(s) by placing them in an envelope or package addressed to the person(s) at the address(es) listed below and provided them to a professional messenger service for service. (A declaration by the messenger must accompany this Proof of Service or be contained in the Declaration of Messenger below.)

☒ **VIA ONE LEGAL E-FILE E-SERVICE .** By submitting an electronic version of the document(s) to One Legal, LLC, through the user interface at www.onelegal.com.

☐ **VIA ELECTRONIC SERVICE.** I caused the above-referenced document(s) to be sent to the person(s) at the electronic address(es) listed below.

I declare that I am employed in the office of a member of the bar of this court whose direction the service was made. I declare under penalty of perjury under the laws of the State of California that the above is true and correct. Executed on October 21, 2019, at Hermosa Beach, California 90254.

Attorneys for Petitioners/Plaintiffs

SUPERIOR COURT OF CALIFORNIA
COUNTY OF LOS ANGELES

UNLIMITED JURISDICTION

SAULO EBER CHAN; MSG FORUM, LLC, a Delaware Limited Liability Company,

Petitioners and Plaintiffs,

v.

GAVIN C. NEWSOM, Governor of California; JOINT LEGISLATIVE BUDGET COMMITTEE of the California Legislature,

Defendants and Respondents.

MURPHY'S BOWL LLC,

Real Party in Interest.

CASE NO. 20STCP00126

VERIFIED PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR INJUNCTIVE AND DECLARATORY RELIEF

Petitioners-Plaintiffs Saulo Eber Chan and MSG Forum, LLC (MSG Forum) allege as follows.

INTRODUCTION

1. This petition challenges the Legislature's decision to confer special privileges on Real Party in Interest Murphy's Bowl LLC (Murphy's Bowl) regarding the construction of a new sports and entertainment venue for the Los Angeles Clippers in the City of Inglewood, in violation of the California Constitution. In order to protect and preserve California's environment, California's environmental laws establish requirements that all significant new developments must satisfy. The Legislature, however, enacted Assembly Bill No. 987 (AB 987)[1] to exempt a single private party's proposed basketball arena from full compliance with those environmental laws. AB 987 by its terms applies solely to a single development project: the construction of *one* specific arena in *one* designated location for *one* particular entity—the Los Angeles Clippers National Basketball Association franchise. With respect to this project, AB 987 undermines the robust environmental protections that California law would ordinarily provide to the residents of Inglewood and neighboring communities. AB 987 also strips the judiciary of any power to review Murphy's Bowl's eligibility for these privileges, while reserving that power for one of the Legislature's own committees. As set forth in detail below, AB 987 violates the California Constitution in multiple respects: It is invalid "special" legislation under clearly established California Supreme Court precedent; it grants the Legislature power reserved for the executive and judicial branches; and it curtails the judiciary's constitutional jurisdiction to review executive action in favor of review by a single legislative committee, violating the Constitution's separation of powers. The Court should issue a writ of mandate to prevent the further implementation of this unconstitutional statute.

2. Murphy's Bowl seeks to construct an arena in the City of Inglewood to serve as the new home for the Los Angeles Clippers, among other purposes. Like other significant new developments in California that involve discretionary decisions by local, regional, and state

---

[1] Cal. Envtl. Quality Act: Sports and Entm't Project, Assemb. B. 987, 2018 Legis. Sess. (Cal. 2018).

agencies, the City of Inglewood and Murphy's Bowl must comply with the California Environmental Quality Act (CEQA). Cal. Pub. Res. Code §§ 21000 et seq. As required by CEQA, a "lead agency"—here the City of Inglewood—must prepare, publish, and seek public input on an Environmental Impact Report (EIR) for the project.

3. Full compliance with CEQA, which requires both the input of multiple public agencies and the participation of the public, is critical to achieving the statute's important purpose of informing decision makers and the public about the environmental effects of significant developments prior to government agencies approving those developments. In so doing, CEQA helps hold decision makers accountable for actions that could have long-term and far-reaching environmental effects. CEQA contains a generally applicable framework for judicial review of EIRs, Cal. Pub. Res. Code §§ 21167-21168.5, and judicial review of those decisions helps ensure the faithful implementation of the statute's goals. Judicial review of EIRs is commonplace for major development projects and is typically a lengthy process because of the numerous and sometimes difficult environmental issues involved.

4. In addition to the general CEQA statute, the Legislature also enacted legislation, known as the Jobs and Economic Improvement Through Environmental Leadership Act of 2011 (AB 900), designed to streamline judicial review of certain types of projects subject to CEQA. This category of projects, known as Environmental Leadership Development Projects (ELDPs), were deemed beneficial to the State such that the Legislature has directed that the judicial review process for such projects be expedited. *See* Cal. Pub. Res. Code §§ 21178-21189.3. Under AB 900, any developer may apply to the Governor to determine if the developer's project meets the specific criteria established by AB 900 and have its project certified as an ELDP. If the Governor certifies that a project meets the required environmental and economic standards, the judicial review of any CEQA challenges may be expedited in various ways. *See* Cal. Pub. Res. Code § 21168.6.8(f); Cal. R. Ct. 3.2221, 3.2227.

5. Even though CEQA thus provides a generally applicable framework for judicial review of projects subject to CEQA, and AB 900 provides a generally applicable framework for expediting judicial review of projects meeting criteria established by AB 900, the Legislature

enacted separate legislation to grant even greater benefits to one specific developer: Murphy's Bowl. AB 987 by its terms applies exclusively to a single project that will be built on a specific plot of land in Inglewood, and AB 987's language, structure, and legislative history leave no doubt that this project is the construction of a new arena at a specific location for the Clippers. In many ways, AB 987 is similar to AB 900. For example, both statutes attempt to expedite judicial review of any challenge to a covered project's EIR so that it is completed within 270 days. *See* Cal. Pub. Res. Code §§ 21185, 21168.6.8(f). But AB 987 also provides the Clippers' project with privileges not enjoyed by ELDPs under AB 900. Most prominently, AB 987 lowers the environmental and other standards that the Clippers' project would otherwise have to meet to be certified as an ELDP under AB 900. For example, AB 900 requires that a project achieve a "15-percent greater standard for transportation efficiency than for comparable projects"—essentially, that a greater number of visitors to the completed project will arrive through carpooling and mass transit—at the time the project facility opens. *Id.* § 21180(b)(1). Under AB 987, on the other hand, the Governor can certify the Clippers' project if it will achieve that standard by *2030*, and requires only that a 7.5% reduction be achieved by completion of the first Clippers' basketball season. *Id.* § 21168.6.8(a)(3)(B).

6. AB 987 eliminates all judicial power to review the Governor's decision to certify the Clippers' project. *See id.* § 21168.6.8(c)(2)(A) (Governor's certification "findings are not subject to judicial review"). In place of judicial review, the Legislature provided one of its own *committees* with the sole power to review (and veto, if it chooses) the certification decision—without the protections that accompany judicial proceedings. *See id.* § 21168.6.8(c)(2)(B)(i) (directing Governor to "submit [certification] determination, and any supporting information, to the Joint Legislative Budget Committee for review and concurrence or nonconcurrence").

7. The Governor certified the Clippers' project under AB 987 on December 11, 2019. The proposed project, however, falls far short of satisfying even AB 987's comparatively lax standards. For example, the evidence submitted during the certification process demonstrates clearly that the Clippers' project will *never* achieve the "15-percent greater standard for transportation efficiency" that AB 987 requires; nor will it achieve the statutorily mandated 7.5%

reduction before the end of the first Clippers' basketball season. If the Clippers' project proceeds in its current form, it will inflict severe traffic congestion, pollution, and many other harms on Inglewood and its residents.

8. AB 987 is unconstitutional for at least three reasons. First, over 100 years ago, the People of California determined that the Legislature would not be allowed to use legislation to grant special privileges to a select few, and expressly prohibited in the California Constitution the enactment of any "special statute" where a "general statute can be made applicable." *See* Cal. Const. art. IV, § 16. AB 987 is indisputably a "special statute." It was enacted even though CEQA contains a generally applicable statutory framework for judicial review, and even though AB 900 is a generally applicable statute providing for streamlined judicial review for a variety of qualifying projects. Thus, not only *can* a general statute be "made applicable" within the meaning of the constitutional prohibition, the Legislature already *has* enacted such statutes. The Legislature nonetheless enacted AB 987 as special, one-off legislation for the benefit of a single private party. AB 987 is accordingly unconstitutional under well-established California Supreme Court precedent.

9. Second, the California Constitution prohibits the Legislature's attempt to protect the Clippers by insulating the Governor's certification from judicial challenges. The California Constitution allocates original jurisdiction to the superior courts, the courts of appeal, and the Supreme Court. *See* Cal. Const. art. VI, § 10. The "Legislature is not free to defeat or impair that jurisdiction," *see Gerawan Farming, Inc. v. Agricultural Labor Relations Board*, 247 Cal. App. 4th 284, 294 (2016), including by exempting executive fact finding from judicial review, *see People v. Tenorio*, 3 Cal. 3d 89, 93 (1970). AB 987, however, unlawfully insulates the Governor's certification findings from judicial review. *See* Cal. Pub. Res. Code § 21168.6.8(c)(2)(A) (providing that the Governor's "determination that each of the conditions specified" for streamlined judicial review are satisfied is "not subject to judicial review"). This jurisdiction stripping also renders AB 987 unconstitutional.

10. Third, the Legislature's attempt to empower one of its committees, the Joint Legislative Budget Committee, to review the Governor's determination in lieu of judicial review

is also unconstitutional. The California Constitution vests all "legislative power" in "the California Legislature," reserving for the executive and judicial branches the powers to "faithfully execut[e]" the law and to interpret it. Cal. Const. art IV, § 1; *Bodinson Mfg. Co. v. Cal. Emp't Comm'n*, 17 Cal.2d 321, 326 (1941). The Legislature cannot assign to itself core judicial or executive functions, *Carmel Valley Fire Protection Dist. v. California*, 25 Cal. 4th 287, 298 (2001), nor can it limit the jurisdiction of the courts, *Yuba River Power Co. v. Nev. Irrigation Dist.*, 207 Cal. 521, 524-25 (1929). AB 987 interferes with these well-established separation of powers principles by assigning a core judicial function (review of the Governor's determination of project eligibility) to the Legislature while stripping from the courts any power to review such a determination. Cal. Pub. Res. Code § 21168.6.8(c)(2). Further, even with respect to legislative matters, only the Legislature as a whole can wield legislative power—it cannot be delegated to a subsidiary body. *See Cal. Radioactive Materials Mgmt. Forum v. Dep't of Health Servs.*, 15 Cal. App. 4th 841, 872 (1993) ("[T]he Legislature cannot constitutionally delegate legislative authority to one house and certainly cannot delegate its authority to a committee."). AB 987, however, allows for legislative *committee* review of the Governor's certification decision. Cal. Pub. Res. Code § 21168.6.8(c)(2)(B)(i). Therefore, even if it were a proper exercise of the "legislative power" for the Legislature to reserve the power to veto the Governor's determination—itself a constitutionally dubious proposition—that power cannot be exercised by a legislative committee, as AB 987 provides. Worse still, in this case, the purported power to concur with or veto the Governor's determination was actually exercised by a single member of the committee, not even the committee itself. AB 987 is unconstitutional for these reasons as well.

11. This petition seeks (i) a writ of mandate to compel the Governor to withdraw his certification of the Clippers' project under AB 987 and (ii) a declaration that AB 987 is unconstitutional for the reasons set forth in this petition.

PARTIES TO THIS PROCEEDING

12. Plaintiff and Petitioner Saulo Eber Chan is a resident of the City of Inglewood.

13. Plaintiff and Petitioner MSG Forum, LLC, is, and at all times mentioned herein was, a Delaware limited liability company. Petitioner operates the Forum, a 17,800-seat multi-

purpose indoor arena, located at 3900 West Manchester Boulevard, Inglewood, CA, 90305. MSG Forum has invested over $120 million in purchasing and rehabilitating the Forum, and it is now one of the top concert venues nationally.

14. Defendant and Respondent Gavin C. Newsom is the Governor of the State of California. Governor Newsom is sued in his official capacity. Governor Newsom resides in the County of Sacramento.

15. Defendant and Respondent the Joint Legislative Budget Committee is a joint standing committee of the California State Legislature. The Joint Legislative Budget Committee resides in the County of Sacramento.

16. Real Party in Interest Murphy's Bowl is a Delaware limited liability company with its principal place of business in Bellevue, Washington. Murphy's Bowl is the development entity seeking to construct a new basketball and entertainment center in the City of Inglewood, to serve as the new home of the LA Clippers National Basketball Association (NBA) franchise and for other uses.

JURISDICTION AND VENUE

17. This Court has jurisdiction over the causes of action asserted in this Petition and Complaint pursuant to the California Constitution Article VI, section 10, and Code of Civil Procedure sections 410.10, 1060, 1085, and 1103.

18. Venue in this Court is proper because Defendants/Respondents are public officers and this Court sits in the county in which the cause arose. *See* Cal. Civ. P. Code § 393.

19. This Court has personal jurisdiction over Murphy's Bowl because it has purposefully availed itself of California's benefits and the controversy at issue arises out of its contacts with California.

GENERAL ALLEGATIONS

A. CEQA

20. CEQA is a comprehensive legislative scheme designed to protect and preserve California's environment. *See* Cal. Pub. Res. Code § 21000 *et seq.* CEQA is founded on the principle that "the maintenance of a quality environment for the people of this state now and in the

future is a matter of statewide concern." *Id.* § 21000(a). The California Legislature enacted CEQA to achieve four related goals: to "(1) inform the government and public about a proposed activity's potential environmental impacts; (2) identify ways to reduce, or avoid, environmental damage; (3) prevent environmental damage by requiring project changes via alternatives or mitigation measures when feasible; and (4) disclose to the public the rationale for governmental approval of a project that may significantly impact the environment." *Union of Med. Marijuana Patients, Inc. v. City of San Diego*, 7 Cal. 5th 1171, 1184-85 (2019) (quoting *Cal. Bldg. Indus. Ass'n v. Bay Area Air Quality Mgmt. Dist.*, 62 Cal. 4th 369, 382 (2015)).

21. The chief tool CEQA uses to accomplish these goals is the EIR. "CEQA requires an EIR whenever a public agency proposes to approve or to carry out a project that may have a significant effect on the environment." *See Laurel Heights Improvement Ass'n v. Regents of Univ. of Cal.*, 47 Cal. 3d 376, 390 (1988). The EIR must be complete before the agency can "approv[e] the project." *Id.* at 391. The agency responsible for approving or carrying out the project is known as the "lead agency." Cal. Pub. Res. Code §§ 21067, 21151. The lead agency is also responsible for preparing or contracting out the preparation of the EIR. *Id.* § 21151(a). The EIR must accurately describe the proposed project, analyze any expected environmental impacts, identify mitigation measures to reduce those impacts, and evaluate alternatives to the proposed project. Because the EIR must be certified by public officials, the EIR "protects not only the environment but also informed self-government." *Sierra Club v. Cty. of Fresno*, 6 Cal. 5th 502, 512 (2018) (quoting *Laurel Heights Improvement Ass'n*, 47 Cal. 3d at 392). It is also "paramount" that the lead agency "consider[] [the] public interests" as expressed through public participation before the agency. *See County of Inyo v. Yorty*, 32 Cal. App. 3d 795, 810 (1973). Only in this way can CEQA's purposes be fulfilled and the public, "[b]eing duly informed, can respond accordingly to action with which it disagrees." *Laurel Heights*, 47 Cal. 3d at 392.

22. To ensure that the lead agency adequately assesses environmental impacts and discusses mitigation and reasonable alternatives, the Legislature made EIRs judicially reviewable to determine whether the agency has "proceeded in a manner required by law" and whether the agency's determination is "supported by substantial evidence." *Vineyard Area Citizens for*

Responsible Growth, Inc. v. City of Rancho Cordova, 40 Cal. 4th 412, 426 (2007); *see also, e.g.*, *Cal. Clean Energy Comm'n v. City of Woodland*, 225 Cal. App. 4th 173, 210 (2014) (EIR deficient because "it does not assess or consider mitigation for transportation energy impacts"); *City of Santee v. Cty. of San Diego*, 214 Cal. App. 3d 1438, 1455 (1989) (EIR deficient because "the analysis of the project alternatives and mitigation measures is incomplete").

23. CEQA provides a generally applicable framework for judicial review of an EIR. Cal. Pub. Res Code § 21167.1(a). That framework, among other things, establishes various statutes of limitations, briefing deadlines, and procedures for the preparation of the record that a court will review. *See, e.g., id.* §§ 21167, 21167.4, 21167.6. With respect to the record, the generally applicable CEQA framework "provides flexibility as to how the record of proceedings is prepared." *Coalition for Adequate Review v. City and Cty. of San Francisco*, 229 Cal. App. 4th 1043, 1051 (2014). A petitioner challenging an EIR under this framework may choose from among three options when preparing the record of proceedings. The petitioner may: (1) let the lead agency prepare the record of proceedings, (2) prepare the record of proceedings itself, or (3) agree with the other parties on an alternative method of preparation. *See* Cal. Pub. Res. Code § 21167.6(b). Records produced by the lead agency are frequently incomplete, and so frustrate judicial review. *See, e.g., Mejia v. City of Los Angeles*, 130 Cal. App. 4th 322 (2005) (agency-prepared record was incomplete). And occasionally, agency-prepared records suffer from other deficiencies. *See, e.g., Citizens for Ceres v. Superior Court*, 217 Cal. App. 4th 889 (2013) (agency-prepared record included documents allegedly protected by attorney-client privilege and attorney work product doctrine). Thus, a petitioner's ability to assemble the record is a valuable procedural right.

24. In 2011, the Legislature enacted a framework for streamlined judicial review of EIRs for a general class of significant projects. That framework is established under AB 900. *See* Cal. Pub. Res. Code §§ 21178-21189.3. The California Legislature enacted AB 900 "to provide unique and unprecedented streamlining benefits under the California Environmental Quality Act for projects" that both generate jobs and provide opportunities to implement innovative environmental protection mechanisms. *Id.* § 21178.

25. The projects that qualify for and may take advantage of AB 900's streamlined review process are known as ELDPs. There are three types of ELDPs. Most relevant for this case is an Entertainment Project—a "residential, retail, commercial, sports, cultural, entertainment, or recreational use project." *Id.* § 21180(b)(1).

26. To qualify for AB 900's streamlined review, an Entertainment Project must satisfy certain conditions. The California Air Resources Board (CARB) must determine that the project "does not result in any net additional emission of greenhouse gases." *Id.* § 21183(c). The project must also "result in a minimum investment of one hundred million dollars in California upon completion of construction," and create certain high-wage jobs. *Id.* § 21183(a), (b). And the Entertainment Project must also be "certified as LEED gold or better by the United States Green Building Council" and must "achieve[] a 15-percent greater standard for transportation efficiency than for comparable projects." *Id.* § 21180(b). If the Governor finds that the necessary conditions are satisfied, he may "certify" the Entertainment Project as an ELDP, thereby rendering it eligible for AB 900's streamlining benefits. *Id.* § 21182.

27. AB 900's streamlining benefits for certified ELDPs are significant. Challenges under CEQA to AB 900-certified projects, "including any potential appeals therefrom," must "be resolved, to the extent feasible, within 270 days of the filing of the certified record of proceedings with the court." *Id.* § 21185. The plaintiff in a CEQA challenge ordinarily is allowed to prepare the record of the proceedings, *id.* § 21167.6(b), but under AB 900, the lead agency is responsible for preparing the record "concurrently with the administrative process" and may therefore mold the record to best support its EIR, *id.* § 21186(a). The judicial proceedings themselves are also expedited in numerous respects. *See* Cal. R. Ct. 3.2220-3.2231. For example, briefing on the CEQA challenge occurs on an expedited schedule. *Id.* at 3.2227. A failure to comply with that briefing schedule may trigger unusually severe penalties, such as dismissal. *Id.* at 3.2221. As such, eighteen project developers have utilized the AB 900 process since it was enacted, including for such projects as the Golden State Warriors' arena in San Francisco and the Apple Campus 2 in Cupertino.

28. AB 900 was originally set to sunset on January 1, 2015, and to confer benefits only

on projects certified before June 1, 2014. *See* Cal. Pub. Res. Code §§ 21189.1, 21189.3 (2012). The law has been re-enacted multiple times, however, and is currently scheduled to sunset on "January 1, 2021 . . . unless a later enacted statute extends or repeals that date." Cal. Pub. Res. Code § 21189.3. Under the present statute, a project must have been certified by January 1, 2020, in order to enjoy the streamlining advantages. *Id.* § 21181. Despite other developers' successful use of AB 900, Murphy's Bowl chose not to avail itself of AB 900 but instead sought special legislation for its private benefit.

B. AB 987

29. Even though CEQA already provides a generally applicable framework for judicial review and AB 900 provides an effective, generally applicable exception triggering streamlined procedures for qualifying projects, in late 2018, at the request of Murphy's Bowl and the City of Inglewood, the Legislature enacted AB 987 to grant streamlined benefits to one particular project. AB 987's text makes clear that the statute exists to confer a special benefit on *one* and only *one* specific project: construction of the Los Angeles Clippers' new arena in Inglewood.

30. The legislative record leaves no doubt that AB 987 is a special statute for the benefit of the Clippers. For example, AB 987 is codified under a title that begins "Authorization for Governor to certify *specified* sports and entertainment project in City of Inglewood." *See* Cal. Pub. Res. Code § 21168.6.8 (emphasis added). AB 987 explicitly applies solely to an "18,000 to 20,000 seat arena" built to host NBA "basketball games and other spectator events," along with associated structures like a practice facility, a sports medicine clinic, retail space, and a hotel. *Id.* § 21168.6.8(a)(2), (3), (5). AB 987 defines the area in which that project is to be constructed by reference to specific assessor parcel numbers, streets, and intersections in Inglewood. *Id.* § 21168.6.8(a)(5). It is unmistakable on the face of AB 987 that the statute exists for the sole purpose of benefiting the Clippers.

31. Although the text of AB 987 does not explicitly admit as much, its legislative history does so repeatedly. For example, AB 987's author identified the bill's beneficiary as the "Los Angeles Clippers NBA basketball team." *See* Assemb. B. 987 (Version: June 7, 2018) Before the Cal. S. Judiciary Comm. R. (June 26, 2018); *see also* Assemb. B. 987 (Version: June 7, 2018)

Before the Cal. S. Comm. on Envt'l Quality (June 20, 2018) (mentioning the Los Angeles Clippers by name); Assemb. B. 987 (Version: August 27, 2018) Before the Cal. Assem. Comm. on Nat. Res. (August 31, 2018) (same).

32. Although it is reserved solely for the Clippers' project, numerous components of AB 987 mirror AB 900. Like AB 900, AB 987 provides for expedited CEQA review upon the Governor's certification of the Clippers' project. And, as under AB 900, the Clippers' project must satisfy certain conditions to be eligible for the Governor's certification under AB 987. Cal. Pub. Res. Code § 21168.6.8(c)(2)(A). A number of those conditions are substantively identical to the conditions set forth in AB 900. For instance, the Governor must find that the Clippers' "project will result in a minimum investment of one hundred million dollars . . . in California upon completion of construction," and that the Clippers' project will create certain high-wage jobs. *Id.* § 21168.6.8(b)(1), (2)(A). The CARB must also determine that the Clippers' project will "not result in any net additional emission of greenhouse gases." *Id.* § 21168.6.8(b)(3). Others, as noted, are unique to the Clippers project—*i.e.*, whereas an AB 900 project *may* ultimately host NBA games, AB 987 applies *only* to a project that will host NBA games. *See id.* § 21168.6.8(a)(2).

33. As compared to AB 900, however, AB 987 lightens the burden for the Clippers' project in two important respects. First, whereas under AB 900 a comparable project must be certified as LEED Gold[2] from the outset, *id.* § 21180(b)(1), AB 987 gives the Clippers' project until one year after "the completion of the first NBA season" to obtain LEED Gold certification, *id.* § 21168.6.8(a)(3)(A). Second, whereas under AB 900 a comparable project must propose to immediately achieve "a 15-percent greater standard for transportation efficiency than for comparable projects," *id.* § 21180(b)(1), under AB 987 the Clippers' project must only achieve a "7.5-percent" improvement "by the end of the first NBA season," and a "15-percent" improvement "not later than January 1, 2030," *id.* § 21168.6.8(a)(3)(B). These are material advantages that would enable the Clippers to construct and operate their arena more quickly and inexpensively than similarly situated developers and without comparable environmental benefit and oversight.

---

[2] The Leadership in Energy and Environmental Design (LEED) is a green building certification program. A LEED Gold certification is the second highest of four possible certifications that the United States Green Building Council will award to a commercial development.

34. AB 987 expressly precludes judicial review of the Governor's certification decision. *Id.* § 21168.6.8(c)(2) (Governor's certification findings "not subject to judicial review"). In lieu of judicial review, the statute provides for review by the Joint Legislative Budget Committee, which has 30 days in which to "concur[]" or "nonconcur[]" in the Governor's decision. *Id.* § 21168.6.8(c)(2)(B).

35. There was significant controversy surrounding AB 987's enactment. The Legislature touted the City of Inglewood's minority population as a basis to justify AB 987. *See* AB 987, ch. 961, § 2, 2018 Cal. Legis. Serv. 6363, 6369 (West) (purporting to justify the "special statute" on the basis that "the City of Inglewood" has "the largest minority population in the United States"). But there was in fact significant opposition from this part of the Inglewood community. As AB 987's legislative history notes, over "3,000 low income African American and Latino residents will be directly impacted" by construction of the Clippers' arena because of how close the arena will be to their homes. Assemb. B. 987 (Version: June 7, 2018) Before the Cal. S. Judiciary Comm. R.(June 26, 2018). Many of Inglewood's minority residents signed petitions objecting to the new Clippers arena, protested at City Council meetings, and voiced their opposition at a press conference held by the Clippers. *Id.* Ultimately, as the legislative history reflects, these residents felt that they were "ignored by the Mayor, the City Council and the Clippers," who charged ahead with the bill notwithstanding the community's objections. *Id.*

36. The legislative history establishes that there was no demonstrated need for AB 987. The Senate Committee on Environmental Quality noted that "other sports venues have abided by CEQA and still were able to successfully build stadiums and arenas." *See* Assemb. B. 987 (Version: June 7, 2018) Before the Cal. S. Comm. on Envt'l Quality (June 20, 2018). That Committee further noted that the Clippers have a lease to play at the Staples Center in downtown Los Angeles through 2024, which would afford plenty of time to use established CEQA processes proceeding on a normal timeline. *Id.* In light of those considerations, the Senate Committee on Environmental Quality suggested that the Legislature "may wish to consider whether this bill is prudent" or whether it might be "more appropriate" for the Clippers' project to go through the AB 900 process. *Id.* Echoing that sentiment, the Senate Judiciary Committee noted that AB 900

"provides for expedited review under an established framework that lacks many of the infirmities" of AB 987. *See* Assemb. B. 987 (Version: June 7, 2018) Before the Cal. S. Judiciary Comm. R. (June 26, 2018).

37. The Legislature brushed aside these concerns and enacted AB 987, justifying its action as follows: "The Legislature finds and declares that a special statute is necessary and that a general statute cannot be made applicable within the meaning of Section 16 of Article IV of the California Constitution because of the unique circumstances of the construction of a major new sports venue in the City of Inglewood, a city with the largest minority population in the United States, which will provide essential economic stimulus."

38. As noted, an AB 987 certification confers similar advantages on the Clippers' project as an AB 900 certification would have without requiring the Clippers to establish that their project will provide the same environmental and economic benefits that AB 900 would have demanded. The Legislature, however, never identified what "unique circumstances" warrant this special treatment for the Clippers' project. Although the Legislature cited Inglewood's large minority population, and the possibility that the new sports and entertainment venue might provide an economic stimulus, the Legislature never explained why either factor justifies exempting this project from the prerequisites to certification under AB 900. There does not appear to be any legitimate reason why the presence of a minority community would mean that environmental goals to protect that community should be reduced. The Legislature also did not explain, and nor is it apparent, why the Clippers would have been unable to comply with the relevant AB 900 conditions that apply to other projects or why the City of Inglewood is uniquely less deserving of the protections that those conditions afford. *See supra* ¶ 36.

39. AB 900's sunset also does not present a legitimate reason for AB 987's enactment. The Clippers announced their arena project in Inglewood in June 2017. Because the Clippers' lease at the Staples Center does not expire until 2024, there was ample time for the Clippers to proceed by way of the general and standard process established by CEQA. Even assuming, however, that the Clippers believed that streamlined CEQA review was necessary, the Clippers could have proceeded under AB 900 by applying in 2017 or 2018 or 2019. And even if the

Legislature or the Clippers determined that, for whatever reason, there was insufficient time to proceed under AB 900 prior to its sunset date, the Legislature could simply have extended AB 900, as it has done multiple times before.

C. The Clippers' Project And Its Impacts

40. The Los Angeles Clippers currently play at the Staples Center, but their lease terminates at the end of 2024. In June 2017, Inglewood publicly announced its plan to enter into an exclusive negotiating agreement with Murphy's Bowl for Murphy's Bowl to construct and operate an arena on the southeast corner of Century Boulevard and Prairie Avenue in Inglewood.

41. Mr. Chan and MSG Forum, through its ownership and operation of the Forum, are longtime members of the Inglewood community and have significant concerns about the Clippers' project. The Clippers' arena would be approximately 1 mile from Mr. Chan's home and less than 1.5 miles from the Forum. The Clippers' project will substantially increase traffic in the area, increase pollution, and cause other quality of life issues in Inglewood. Mr. Chan does not want to be exposed to these deleterious effects. Likewise, for these and other reasons, the Clippers' arena will harm the operations of the Forum.

42. In the summer of 2017, Murphy's Bowl/the Clippers apparently determined that the benefits of AB 900 were not sufficient and announced its support for SB 789—special legislation that would have, among other things, abbreviated and limited the CEQA process for one project and one project only, the Clippers' proposed arena in Inglewood, and conferred other benefits on the Clippers. Despite the Clippers' lobbying efforts, the bill died in the Legislature in September 2017. The Clippers elected not to proceed under AB 900.

43. Undeterred by the defeat of SB 789, in June 2018, the Clippers and Inglewood announced their support for AB 987. The Clippers and Inglewood actively lobbied for AB 987 throughout its consideration in the Legislature until the bill was enacted in late-September 2018. The Clippers again elected not to proceed under AB 900.

44. In early January 2019, the Clippers (through Murphy's Bowl) submitted their application for certification under AB 987 to the Governor's Office of Research and Planning (the "Inglewood Basketball and Entertainment Center Project AB 987 Application").

45. The Governor issued his determination to certify the Clippers' project on December 11, 2019, and a single member of the Joint Legislative Budget Committee "concurred" with that certification on December 20, 2019—without the Committee even convening a meeting.

46. The certification decision and record of materials submitted in the certification proceedings demonstrate clearly that AB 987's requirements were not met. For example, AB 987 requires certification that "[t]he project creates high-wage, highly skilled jobs that pay prevailing living wages," that it creates "construction jobs and permanent jobs for Californians," and that it "helps reduce unemployment." Cal. Pub. Res. Code § 21168.6.8(b)(2). The certification decision's only apparent "finding" related to these requirements is that the "prevailing and living wage requirements of Public Resources Code 21168.6.8(b)(2) will be satisfied." There was, however, no evidence supporting that finding, and the certification decision did not address the creation of permanent jobs or the reduction of unemployment.

47. Similarly, although AB 987 "requires a transportation demand management program that . . . will achieve and maintain a 15-percent reduction in the number of vehicle trips" by 2030, Cal. Pub. Res. Code § 21168.6.8(a)(3)(B), the evidence shows that the Clippers' project as currently certified will *never* achieve that reduction or the 7.5% reduction that the statute requires by the end of the Clippers' first basketball season. Yet, there is no recourse to challenge such errors in the certification process because AB 987, on its face, precludes judicial review.

48. There is, however, evidence that the Clippers' project as certified will cause substantial harm to Inglewood and its residents. The City of Inglewood has stated that the City is "transit starved." Yet the proposed Clippers' arena will add over 3 million trips a year to the local street system in an already congested neighborhood, all without an effective transportation demand management program in place. Inglewood is likely to suffer severe gridlock if the project as certified is the one that is constructed. The Clippers' project also appears poised to generate several hundred thousand metric tons of greenhouse gas emissions without offsetting those emissions. Mr. Chan, the Forum, and the residents of Inglewood should not suffer environmental impacts just so Murphy's Bowl/Clippers can construct an arena more quickly and inexpensively.

/ / /

CAUSES OF ACTION

49. Based on the allegations herein, the following causes of action are alleged.

FIRST CAUSE OF ACTION

(Violation of Cal. Const. art IV, § 16)

50. The foregoing allegations are incorporated by reference.

51. The California Constitution provides that a "local or special statute is invalid in any case if a general statute can be made applicable." Cal. Const. art IV, § 16(b).

52. A statute is "special" if it "confers particular privileges . . . upon a class of persons arbitrarily selected from the general body of those who stand in precisely the same relation to the subject of the law." See *Serve Yourself Gasoline Stations Ass'n v. Brock*, 39 Cal. 2d 813, 820 (1952).

53. AB 987 is a special statute. The Los Angeles Clippers and its affiliate Murphy's Bowl were hand-picked from a class of entities who construct comparable projects and who stand in precisely the same relation regarding judicial review of an EIR. Indeed, the Legislature expressly declared AB 987 to be a "special statute" when it enacted it. AB 987, ch. 961, § 2, 2018 Legis. Serv. 6363, 6369 (West) ("The Legislature finds and declares that a special statute is necessary and that a general statute cannot be made applicable within the meaning of Section 16 of Article IV of the California Constitution . . . .").

54. CEQA is a general statute that is readily applicable to the Clippers' project. *Cf. Ventura Cty. Harbor Dist. v. Bd. of Supervisors of Cty. of Ventura*, 211 Cal. 271, 279 (1930) (describing "Code of Civil Procedure" as general statute). And another general statute—AB 900—confers the benefit of streamlined proceedings on projects comparable to the Clippers'. That is, for "retail, commercial, sports, cultural, entertainment, or recreational use" projects, such as the Clippers' project, AB 900 provides for streamlined judicial review of EIR challenges upon certification by the Governor that certain conditions are satisfied.

55. Where, as here, a "special statute" is layered on top of a pre-existing applicable "general statute," the special statute is *per se* invalid. *See Harbor Dist. v. Bd. of Supervisors*, 211 Cal. 271, 278 (1930) ("[I]n no instance have we found that, where a general law fully applicable

and complete on the subject is in existence, a special law has been upheld."); *White v. Church*, 185 Cal. App. 3d 627, 631 (1986) (same).

56. To the extent the Legislature's purposes are relevant, none can save AB 987 from constitutional infirmity. There is simply no justification for enacting this special statute. While the Legislature said that there were "unique circumstances" involved, that it desired "economic stimulus," and that Inglewood has "the largest minority population in the United States," AB 987, ch. 961, § 2, 2018 Cal. Legis. Serv. 6363, 6369 (West), those wholly conclusory statements cannot support enactment of a special statute. *See Consol. Printing & Publ'g Co. v. Allen*, 18 Cal. 2d 63, 70-71 (1941) (determining a special law unconstitutional when no special circumstances justified the law); *Cullen v. Glendora Water Co.*, 113 Cal. 503, 515-16 (1895) (same).

57. AB 987 is *per se* invalid, and is in any event not supported by any constitutionally sufficient justification for a special statute.

SECOND CAUSE OF ACTION

(Violations of Cal. Const. art. III, § 3; art. VI, §§ 6, 10)

58. The foregoing allegations are incorporated by reference.

59. Article III of the California Constitution provides for the separation of the "legislative, executive, and judicial" powers of the state government. Cal. Const. art. III, § 3. Article VI of the California Constitution provides that the "judicial power of this State is vested in the Supreme Court, courts of appeal, and superior courts, all of which are courts of record." *Id.* art. VI, § 1. Article VI also provides that "[t]he Supreme Court, courts of appeal, superior courts, and their judges have original jurisdiction in habeas corpus proceedings" and "in proceedings for extraordinary relief in the nature of mandamus, certiorari, and prohibition"; "Superior courts have original jurisdiction in all other causes." *Id.* art VI, § 10. "[W]here the judicial power of courts, either original or appellate, is fixed by constitutional provisions, the legislature cannot either limit or extend that jurisdiction." *See Chinn v. Superior Court*, 156 Cal. 478, 480 (1909).

60. The California Supreme Court has repeatedly held that no branch of government may "arrogate to itself the core functions of another branch" or "materially impair the inherent functions of another branch." *Carmel Valley Fire Protection Dist. v. State*, 25 Cal. 4th 287, 304

(2001), 29 Cal. 4th 616, 662 (2002).

61. AB 987 provides that the Governor's statutorily mandated "findings" in support of his certification decision "are not subject to judicial review." Cal. Pub. Res. Code § 21168.6.8(c)(2)(A).

62. AB 987 further provides the Legislature with the sole authority to review the Governor's findings in support of his certification decision. *Id.* § 21168.6.8(c)(2)(B).

63. AB 987's assignment of judicial authority to the Legislature and elimination of judicial review of the Governor's findings violates the California Constitution. *See People v. Tenorio*, 3 Cal. 3d 89, 93 (1970) (invalidating statute that allowed prosecutors to exercise power "in a totally arbitrary fashion" as an unlawful "concentration of power in the executive . . . to be exercised . . . without possibility of judicial review").

THIRD CAUSE OF ACTION

(Violation of Cal. Const. art IV, § 1, 8, subd. (b))

64. The foregoing allegations are incorporated by reference.

65. The California Constitution provides that the "legislative power of this State is vested in the California Legislature which consists of the Senate and Assembly, but the people reserve to themselves the powers of initiative and referendum." Cal. Const. art IV, § 1. "The Legislature may make no law except by statute and may enact no statute except by bill." *Id.* § 8(b)(1). Furthermore, "[n]o bill may be passed unless, by rollcall vote entered in the journal, a majority of the membership of each house concurs." *Id.* § 8(b)(3).

66. Under the California Constitution, "the Legislature cannot constitutionally delegate legislative authority to one house and certainly cannot delegate its authority to a committee." *Cal. Radioactive Materials*, 15 Cal. App. 4th at 872; *see also Carmel Valley Fire Protection Dist. v. State*, 25 Cal. 4th 287, 304 (2001) (noting it "would be unconstitutional if [a law] permitted a single house of the Legislature to suspend a departmental mandate without concurrence of both houses and presentment to the Governor").

67. AB 987 violates the California Constitution's separation of powers by subjecting the Governor's decision to certify the Clippers' project to review by the Joint Legislative Budget

Committee. Cal. Pub. Res. Code § 21168.6.8(c)(2)(B).

68. Here, a single member of the Joint Legislative Budget Committee exercised that purported review power, without even convening a meeting of the Committee—further offending California's separation of powers principles.

FOURTH CAUSE OF ACTION

(Code Civ. Proc. § 1060 (Declaratory Judgment))

69. The foregoing allegations are incorporated by reference.

70. AB 987 violates the California Constitution because it creates a special statute where a general statute can be made applicable, eliminates judicial review of the Governor's fact-finding when certifying the Clippers' project, and subjects the Governor's decision to certify the Clippers' project to review by the Joint Legislative Budget Committee.

71. It is appropriate that the court issue a declaratory judgment pursuant to Cal. Civ. Proc. Code § 1060 declaring that AB 987 violates the California Constitution's proscription on special statutes, Cal. Const. art IV, § 16, vesting of Legislative power in the full Legislature, Cal. Const. art IV, § 1, and vesting of original jurisdiction in the courts, Cal. Const. art VI, § 10.

PRAYER FOR RELIEF

WHEREFORE, Mr. Chan and MSG Forum respectfully pray for the following relief:

(1) A writ of mandate to compel the Governor to withdraw his certification of the Clippers' project under AB 987;

(2) A declaration that AB 987 is unconstitutional because it is an impermissible special statute and because it strips the courts of their power to review the Governor's actions while providing instead for review of those actions by one legislative committee;

(3) An order directing the recovery of costs of suit incurred herein from Defendants/Respondents and/or Real Party, jointly and severally; and

(4) Such other and further relief as this Court deems just and proper.

/ / /

Objections to IBEC Project, DEIR and FEIR;
State Clearinghouse No. 2018021056

EXHIBIT 11

Dear Governor Newsom,

I oppose the Clippers arena in Inglewood as the plan stands now, and I hope that you will deny their request for speeding up the process (Clearinghouse Tracking Number 2018021056). One of the biggest considerations in this ability is the reduction of gases from the project, both in our neighborhood and in the larger L.A. area. The Clippers are clearly trying to get away with doing the absolute minimum to reduce gases in our community. But that is the way they have been doing this. They did not meet with us before they announced their project and in the last 2 and ½ years it has been silence. Nothing about how big the project is. Is it 100,000 square feet or 1,000,000 square feet or more. Nothing about how many cars are going to be in the parking structures (which are right next to homes). We have no idea what the answers are. Isn't is kind of important to know this stuff before you say okay?

This is NOT the way to get community support for the arena, and it speaks to the way the Clippers have treated our community from the start. With disrespect.

I oppose the Clippers application for and hope that you will deny it until and unless they meet with the community, develop real plans and programs and agree to increase their commitment to reducing local emissions WITHIN our community.

Thank you for your consideration.

Hello,

I am writing to voice concerns about the proposed Inglewood arena (#2018021056) and the application submitted by "Murphy's Bowl" for streamlining the CEQA process. It was my understanding that this arena would bring NEW jobs to Inglewood, but it seems like the plan is to just move the jobs from one area to another. Plus, these are low-paying concession jobs. Working a few nights a week for minimum wage is not what the law requires.

If this is true, then what are the benefits for us who live in the general area? We will face many drawbacks – pollution, noise, construction, crowds, and insane traffic. But what is the upside? Please remember that many residents do not have the money to attend professional basketball games. And not many of us will not get to play basketball so what real jobs are there? Make them tell you what are these big time jobs that can support a family.

This project has failed to live up to one of the main requirements laid out in the law. I know Mr. Ballmer is so rich it won't make a difference what we say. I hope that our new governor DENIES this application.

Thank you.

Ezequiel Martinez
10215 Doty Ave 90303
424-204-3704

Estimada oficina del gobernador,

Le escribo para pedirle que rechace la solicitud Centro de baloncesto y entretenimiento, de Inglewood, No. 2018021056.

Este proyecto hace un trabajo muy pobre cuando se trata de emisiones de gases de efecto invernadero. Uno de los principales argumentos a favor de la ley estatal fue que llevaría a los proyectos a realizar inversiones locales para reducir la cantidad de gases de efecto invernadero que emiten. Estas inversiones locales pueden ayudar a las comunidades proporcionando dinero y empleos. Sin embargo, el Centro de Baloncesto y Entretenimiento de Inglewood hace solo lo mínimo para reducir las emisiones de gases de efecto invernadero en el área de Inglewood. Están proporcionando energía solar para nuestros hogares. No. ¿Están ayudando a eliminar nuestros coches de gasolina? No. No están haciendo ninguna inversión real en nuestra comunidad para reducir estos gases. Realmente van a agregar mucho más tráfico y humo de automóviles a nuestra comunidad.

Esto no es lo que los partidarios de la ley anunciaban cuando pedían a las personas que apoyaran la ley.

Murphy´s Bowl y los Clippers pueden hacerlo mejor que esto. Ellos están tratando de hacer lo menos posible. Por favor, rechace esta solicitud o hágales hacer cosas reales en nuestra comunidad para que sea mejor para nosotros. Y haga que trabajen con nuestra comunidad antes de aprobar algo. Después de 2 años desde que anunciaron este proyecto, casi no se ha hablado con la comunidad. Todavía no sabemos realmente cuál es el proyecto. Imagínate 2 años y no tenemos ni idea. ¿Por qué? Porque el señor Ballmer sabe que el dinero compra lo que necesita en Sacramento.

Sinceramente,

Janae Clark
3655 W 105th St
Inglewood Ca

Janae Clark

Dear Governor's Office,

I am writing to ask you to turn down the application for the Inglewood Basketball and Entertainment Center, No. 2018021056.

This project does a very poor job when it comes to greenhouse gas emissions. One of the main arguments in favor of the state law was that it would lead projects to make local investments to reduce the amount of greenhouse gas they emit. These local investments can help communities by providing money and jobs. However, the Inglewood Basketball and Entertainment Center does only the bare minimum to reduce greenhouse gas emissions in the Inglewood area. Are they providing solar for our homes. No. Are they helping to remove our gas cars. No. They are not making any real investment in our community to reduce these gases. They are really going to add a lot more traffic and car fumes to our community.

This is not what the supporters of law were advertising when they asked people to support the law.

Murphy's Bowl and the Clippers can do better than this. They are trying to do as little as possible. Please turn down this application or make them do real things in our community to make it better for us. And have them work with our community before you approve anything. After 2 years since they announced this project, there has been almost no talking to the community. We still don't really know what the project is. Imagine 2 years and we have no idea. Why? Because Mr. Ballmer knows that money buys what he needs in Sacramento.

Sincerely, Janee Clark

3655 W 105th St Inglewood CA 90305
(424) 227-1191

Dear sir,

Regarding AB 987 project number 2018021056, I ask that you reject the application for giving away our rights and letting them streamline the Inglewood Basketball and Entertainment Center.

This project is a bait and switch. It was advertised as a great job generator for our community, but it does not comply with the requirement to create high wage, highly skilled jobs that pay a living wage and employ a skilled and trained workforce. Instead, the project will just move mostly low skilled, low paid jobs from L.A. Live to Inglewood. Ninety percent of these jobs will be minimum wage jobs, and it will be the same people doing the jobs and are doing them today. We all know there are part time jobs, hired by a concession company. These are not jobs that can support a family. With all due respect, these are not the jobs our community needs and these are not the jobs we were promised by the sponsors and supporters of the law.

People in the Inglewood area would like to see brand new jobs in specialized fields, such as sports medicine, business management, marketing, and other careers. Unfortunately, those are not the jobs being proposed by the Clippers. They are concession workers, security guards, and cleaning people. And last I checked not many of us qualify for a position on the basketball team. Please make clear that California's laws must be followed and deny this application for a project that falls far short of what we were promised and the legal requirement.

Thank you,

(310)994 9815

3627 W. 104ST #4.

Buen día,

Les escribo hoy porque estoy profundamente preocupado por el proyecto de la cancha de básquetbol en Inglewood (Proyecto # 2018021056). El proyecto no es solo un campo de básquetbol sino muchas otras cosas. Y no tenemos idea de cuán grande es este proyecto.

Me preocupa cómo este proyecto masivo afectará el vecindario y la calidad de vida en general en nuestro pequeño vecindario al lado de este gran proyecto. No somos una comunidad rica y no tenemos los medios para contratar expertos para responder estas preguntas, y los Clippers no están haciendo nada para ayudarnos. De hecho, parece que están tratando de ocultar los impactos dañinos del proyecto.

No hay una descripción en la aplicación acerca de cómo se verá esta enorme instalación, qué tan alta será, cuántos autos vendrán a ella, ni siquiera los metros cuadrados del plan. No creo que sea posible evaluar los impactos de este gran proyecto sin esta información básica. Estoy especialmente preocupado porque este proyecto se ubicará inmediatamente al lado de las casas y apartamentos. Los niños, las personas mayores y otras personas respirarán el humo de miles de automóviles casi todos los días. La idea de que mucha gente vendrá en autobús es una tontería. Hoy tenemos problemas para llegar a nuestros hogares cuando el Forum tiene un concierto. El tráfico está respaldado a lo largo de las praderas y otras calles durante mucho tiempo.

Espero que el Gobernador rechace la solicitud de este proyecto hasta que sepamos más sobre lo que los Clippers están tratando de construir en nuestro vecindario. Por favor asegúrese de que los Clippers respondan estas preguntas. Y danos tiempo para ver las respuestas y hacer preguntas. Vas a afectar nuestros derechos. Con suerte, nos incluirás en ese proceso. Los residentes de nuestro vecindario donde se va a atascar este gran proyecto tienen derecho a saberlo.

Gracias.

JESUS SANTANA

TEL 310 672 8607

Good day,

I am writing to you today because I am deeply concerned about the basketball arena project in Inglewood (Project # 2018021056). The project is not just a basketball arena but a lot of other things. And we have no idea how big this project is.

I am worried about how this massive project will impact the neighborhood and general quality of life in our little neighborhood right next to this big project. We are not a rich community and we don't have the means to hire experts to answer these questions, and the Clippers are not doing anything to help us. In fact, it looks like they are trying to hide the project's harmful impacts.

There is no description in the application about how this enormous facility will look, how tall it will be, how many cars will come to it, or even the square footage of the plan. I do not think it is possible to assess the impacts of this big project without this basic information. I am especially concerned because this project will be located immediately next to homes and apartments. Children, seniors and others will be breathing fumes from thousands of cars almost every day. The idea that a lot of people will come by buses is silly. Today we have trouble even getting to our homes when the Forum has a concert. Traffic is backed up all along Prairie and other streets for long times.

I hope the Governor will turn down this project's application until we know more about what the Clippers are trying to build in our neighborhood. Please make sure the Clippers answer these questions. And give us time to see the answers and ask questions. You are going to affect our rights. Hopefully, you will include us in that process. The residents of our neighborhood where this big project is going to be stuck have a right to know.

Thank you.

JESUS SANTANA

To Whom It May Concern,

I am a resident of Inglewood and I strongly oppose the Clippers application to streamline the environmental process for their new arena (#2018021056). I understand that the application requires the Clippers to explain how they will avoid making traffic worse in Inglewood and that one of their suggestions is to transport people to the new arena by bus.

Anyone who has ever tried to drive around Inglewood before an event at the Forum knows that "bussing people in" would be absolutely no help. Cars cannot even get to the Forum on time. Imaging adding the Clippers and then buses. Common sense says it just won't work. I ask you to come here on a night when the Forum has a major act.

Inglewood is a residential area for the most part -- we do NOT want more traffic!! If the Clippers arena is built there will be three major stadiums in Inglewood. That is **too many.** Mayor Butts pushed for a rail connection to Inglewood, but the MTA says it would cost close to a billion dollars. Please review that study. The only way to make this work is for a real connection to the arena from the train station. Mr. Ballmer has enough to pay for it.

I believe the Clippers are not meeting the requirements of the law. I hope their application will be rejected until a realistic plan can be created to deal with traffic. And then make them share it with the community. So we can a have real ability to be part of the process.

Thank you. Jose peralta

3701 64 ST apt 2

Dear Office of Planning & Research,

I am seriously concerned about the Clippers arena project in Inglewood (#2018021056). I am worried about the impact that ANOTHER huge stadium will have on my neighborhood and do not think the Clippers are serious about helping out the people of this community.

I heard about the measures included in the application to give the Clippers' owner the right to move fast. We know nothing about the project. No one has meet with our neighborhood. No one even shared with us their application. We do not think their approach to bringing in new jobs makes any sense. They promise that the arena will bring many new "high wage jobs" to the area. But what's really happening is that the team is just moving jobs and events from Staples Center to Inglewood. Where are the new high wage jobs? Where are the career opportunities? Very few people will be able to support a family on a minimum wage job a few nights a week.

In other words, these are NOT new jobs. And they are generally not "high wage" jobs, either. What a letdown.

Please reject this application. MANUEL VAZQUEZ

Thank you for your time. 10301 S Doty Ave

Inglewood - 90303

Manuel Vazquez

Soy residente de Inglewood y NO creo que el proyecto del Centro de Baloncesto y Entretenimiento de Inglewood (# 2018021056) deba aprobarse para moverse rápido. Este proyecto se anunció en junio de 2017. ¿Desea saber cuántas reuniones han tenido los Clippers con los residentes que vivirán al lado de este proyecto? Ninguna. No se reunieron con nosotros para compartir la información del proyecto. No hemos visto nada sobre este proyecto.

Tenemos muy poca información sobre esta arena. La aplicación no dice qué tan alta o grande será la arena, cuál será su superficie cuadrada, o cuántos lugares de estacionamiento planean incluir. Tampoco dice nada sobre el ruido que viene de la arena, o las luces. Prácticamente no hay detalles de ningún tipo. Al señor Ballmer no le importamos. Todo lo que quiere es su "hogar" para los Clippers y no le importa cómo está lastimando a nuestros hogares y nuestras familias.

Necesitamos información para entenderla y para asegurarnos de que el proyecto cumpla con los estándares ambientales. La gente del Sr. Ballmer le dijo al estado que este iba a ser el mejor proyecto ambiental de la historia. Y no habría impactos para nuestros niños, adultos mayores y comunidad. Creo que se nos debe esta información, por lo que tenemos una idea de lo que está llegando a nuestra comunidad. Esa información debe ser dada a todos nosotros. Deberíamos ver todo esto antes de que decida acelerar el proceso para un multimillonario. No soy un multimillonario pero espero tener algunos derechos.

Me opongo a este proyecto y creo que será malo para mi familia y nuestra calidad de vida. También me opongo a la aplicación para movernos rápido porque nos deja en la oscuridad sobre lo que realmente se construirá en este vecindario residencial, junto a hogares y personas. Lástima a los Clippers por dejarnos a todos en la oscuridad.

Sinceramente,

Marin Frisch
3647 W. 104th St #5
Inglewood Ca 90303
(424) 419-9146

I am a resident of Inglewood and I do NOT think the Inglewood Basketball and Entertainment Center project (# 2018021056) should be approved for moving fast. This project was announced in June 2017. Do you want to know how many meetings the Clippers have had with us residents who will be next to this project? None. They did not meet with us to share the project information. We have not seen anything about this project.

We have very little information about this arena. The application doesn't say how tall or large the arena will be, what its square footage will be, or how many parking spots they plan to include. It also says nothing about noise to come from the arena, or lights. There are practically no details whatsoever. Mr. Ballmer does not care about us. All he wants is his "home" for the Clippers and he does not care how he is hurting our homes and our families.

We need information to understand it and to be sure that the project meets environmental standards. Mr. Ballmer's people told the state this was going to be the best environmental project ever. And there would be no impacts to our children and seniors and community. I believe we are owed this information so we have an idea of what is coming into our community. That information should be given to all of us. We should see this all before you decide to speed up the process for a billionaire. I am not a billionaire but I hope I have some rights.

I oppose this project and think it will be bad for my family and our quality of life. I also oppose the application for moving fast because it leaves us in the dark about what will actually be constructed in this residential neighborhood, next to homes and people. Shame on the Clippers for leaving us all in the dark.

Sincerely,

Marion Frison

Inglewood Ca 90303

A quien corresponda en relación con el proyecto Clippers (2018021056),

Estoy escribiendo esta carta porque tengo muchas serias preocupaciones sobre el nuevo proyecto de arena deportiva de los Clippers que se propone para Inglewood.

Nuestra comunidad se ha quedado en la oscuridad sobre muchos detalles importantes con respecto a este plan. Nadie se ha reunido con nosotros ni nos ha hablado sobre este proyecto, que enviará miles de automóviles a nuestra comunidad y tendrá un gran impacto negativo en nuestro vecindario, donde viven miles de personas. Tenemos muchos niños y personas mayores que viven al lado de este gran proyecto.

Casi no hemos recibido información sobre qué tan grande será, qué tan alto será, qué aspecto tendrá, etc. Nada.

Entiendo que al estado también se le ha proporcionado muy poca información sobre este proyecto. No entiendo cómo puede revisar un proyecto y aprobar una solicitud cuando no conoce los conceptos básicos del proyecto, como su altura, cuántos espacios de estacionamiento tendrá o cualquier información real sobre su diseño. . Aunque esta aplicación tiene muchas páginas, no hay suficiente información específica incluida para permitir que el estado apruebe esta solicitud.

Espero que se niegue a aprobar cualquier solicitud relacionada con este proyecto hasta que se proporcione esta información básica.

Sinceramente, Nicole McAllister 3627 W. 104th St. Apt #8

Nicole McAllister 323 (632) 7593

To whom it may concern regarding the Clippers project (2018021056).

I am writing this letter because I have many serious concerns about the new Clippers sports arena project that is proposed for Inglewood.

Our community has been left in the dark about many important details regarding this plan. No one has met with us or talked to us about this project, which will send thousands of cars into our community and have a huge negative impact on our neighborhood, where thousands of people live. We have many children and older people living right next door to this massive project.

We have received almost no information about how big it will be, how tall it will be, what it will look like, etc. Nothing.

I understand that the state has also been provided with very little information about this project. I don't understand how you can review a project and approve an application when you don't know the basics about the project, such as how tall will it be, how many parking spaces it will have, or any real information about its design. Even though this application has many pages, there's not nearly enough specific information included to allow the state to approve this application.

I hope you will refuse to approve any applications related to this project until this basic information is provided.

Sincerely, Nicole McAllister

3627 W. 109th St. Apt. #B
(323) 632-7593

Public comment on the Inglewood Basketball and Entertainment Center, Number 2018021056

Please make the Clippers start all over on the application for the Inglewood Basketball and Entertainment Center, Number 2018021056. This application has many flaws. It includes very little information about the project, like what it will look like or how many cars it will handle. It also tries to lower greenhouse gas emissions on the cheap, in a way that will not bring much benefit to Inglewood. Also it really doesn't provide real long term good paying jobs for us community folks. Beer and hot dog sellers don't get paid a whole lot.

When the supporters spoke in favor of this law, they focused on all the good things that come with reducing greenhouse gases locally. These supporters said that "mitigation" projects would generate investment dollars and create jobs right here in the Inglewood community.

These projects would have other benefits as well, such as helping residents lower their electricity bills and improving health, such as by planting trees. Instead the Clippers arena want to do as little as they possibly can to meet their requirement to reduce greenhouse gas emissions. It may save them money, but it is not good for Inglewood and it is not the law that we were promised.

Please say NO to this project.

Sincerely, Oral Logan

310 419 4942

Inglewood Ca
90303 Apt 42

A la Oficina de Planificación e Investigación de California,
Rechace la solicitud AB 987 para el Centro de Baloncesto y Entretenimiento de Inglewood, No. 2018021056. A la aplicación le falta información importante sobre el proyecto, como:

- ¿Qué tan grande será el proyecto (pies cuadrados, etc.)?
- ¿Qué tan alto será el proyecto?
- ¿Qué tan altos serán los garajes de estacionamiento, que se encuentran en nuestro vecindario al lado de las casas?
- ¿De qué se construirán la arena y otros edificios?
- ¿Cuánto concreto se va a utilizar?
- ¿Cuántos autos tendrán los garajes de estacionamiento?
- ¿Cómo manejará la comunidad miles de autos adicionales en nuestro vecindario?

El solicitante de este proyecto, el equipo de baloncesto de los Clippers, se ha negado a compartir detalles básicos sobre esta propuesta tan importante. Esta información será muy importante para decidir si el proyecto cumple con los requisitos de la ley. ¿No deberíamos hablar con nosotros? ¿No deberíamos estar involucrados en el proceso? ¿Cómo puede alguien averiguar si el proyecto será respetuoso con el medio ambiente y qué tipo de impacto tendrá en el vecindario si no se proporcionan detalles?

Por favor, no apresure este proyecto a través. En su lugar, solicite esta información básica para que usted, y el público, puedan entender realmente lo que quieren construir en Inglewood. Y asegúrese de que la información esté disponible para el público, para que todos puedan verla. Y danos tiempo para revisarlo.

Muchas gracias, Reynol Rodriguez

323-834-1582
3647 W. 104th St #6
Reynol Rodriguez

To the California Office of Planning and Research,

Please reject the AB 987 application for the Inglewood Basketball and Entertainment Center, No. 2018021056. The application is missing important information about the project, such as:

- How large the project will be (square footage, etc.)?
- How tall the project will be?
- How tall the parking garages will be, which are located in our neighborhood next to homes?
- What the arena and other buildings will be made of?
- How much concrete is going to be used?
- How many cars the parking garages will hold?
- How the community will handle thousands of additional cars in our neighborhood?

The applicant for this project, the Clippers basketball team, has refused to share basic details about this very important proposal. This information will be very important in deciding whether the project meets the requirements of the law. Shouldn't we be talked to. Shouldn't we be involved in the process? How can anyone figure out whether the project will be environmentally friendly and what kind of impact it will have on the neighborhood if no details are provided?

Please do not rush this project through. Instead, please ask for this basic information so that you, and the public, can really understand what they want to build in Inglewood. And make sure the information is available to the public, so everyone can see it. And give us time to review it.

Thank you very much, Reynol Rodriguez

323-834-1582
3647 W 104th St #4
Reynol Rodriguez

To whom it may concern,

I am writing about Project #2018021056, the basketball arena in Inglewood proposed by the L.A. Clippers. This application ignores the spirit of the law by doing as little as possible to lower the emissions of greenhouse gases (GHG) locally, in the Inglewood area.

Lowering GHG can be a big help to a local area. In this case, it should mean that new dollars are spent in the local area, helping businesses and hiring local workers. For example, this could include energy efficiency programs that also help local residents and businesses save money on utility bills. These energy efficiency programs also put people to work, doing things like installing solar panels, retrofitting homes, insulating buildings, etc. But there is none of that.

Instead of these locally programs, the Clippers plan to just write a check to receive many of their GHG reductions. They will look for the cheapest programs around. And we will get nothing. Except lots of traffic and car emissions. This will do nothing to help Inglewood residents or the community, and as I said it ignores the spirit of this law. Please say NO to the Inglewood arena.

Sincerely, 3620 w 102 st #4C1
Inglewood CA 90303
323 978 7202
Rosario Hernandez

AB 987 Application #2018021056

Dear Governor's Office,

I have many concerns about the Clippers arena project. The biggest, by far, is the impact it will have on local traffic. I was relieved to learn that the new law requires a strong top flight traffic management program that will get cars off the street, but the program proposed by the Clippers doesn't make any sense to me.

The idea that putting thousands of people on buses from transit centers will "solve" the traffic problem is crazy. This idea is especially foolish when you realize the Forum and new NFL stadium will be operating at the same time. If they are all active at the same time, it will be disruptive for residents and unpleasant for everyone. It may also be outright dangerous. Plus, I highly doubt many people going to games and concerts will want to take a train and a bus, which sounds extremely inconvenient. Did the Clippers share with you the studies that transit use is going down in LA? Did the Clippers show you want it is like when the Forum has a big concert? It can take almost an hour to get down Prairie from the freeway.

I strongly oppose this plan and hope the Clippers application to streamline the EIR process is denied.

Saulo E Chan

A quien le interese,

Soy un vecino preocupado y te escribo sobre el proyecto de los Clippers arena en Inglewood (Número de seguimiento 2018021056). Me opongo firmemente a este proyecto por varios motivos, y espero que esta carta sea leída y considerada antes de que el gobernador decida ayudar a los Clippers a quitarnos nuestros derechos y actuar tan rápido. Los Clippers no han proporcionado información a la comunidad. ¿Cómo están los Clippers haciendo esto sin probar toda la información? No se nos ha dado ninguna información. Nada.

Tengo muchas preocupaciones sobre el proyecto y los efectos potencialmente dañinos que tendrá sobre nosotros. Tenemos muchos niños y personas mayores en nuestra comunidad. Sé que la gente pobre parece que no importan. Los multimillonarios ricos importan.

Lo que más me preocupa es lo poco que sabemos sobre el proyecto. Aparte de una ubicación, no he visto ninguna imagen de este gran proyecto, ubicado junto a miles de casas y apartamentos. ¿Alguien te ha dicho cómo será? Que tan alto es. Cuántos carros habrá allí. La aplicación que enviaron los Clippers ni siquiera incluye información sobre el tamaño del proyecto Arena. ¿Cómo puedes entender los impactos si no sabes qué tan grande es?

Creo que esta es información básica que el gobernador y los residentes de la comunidad deberían tener antes de que algo avance con el proyecto. SCARLY NOYOLA (909) 454-9792)

Mejor,

3647 W. 104th St Apt #2

Inglewood Ca 90303

Scarly Noyola

To Whom It May Concern,

I am a concerned neighbor writing to you about the Clippers arena project in Inglewood (Tracking Number 2018021056). I adamantly oppose this project for a number of reasons, and hope this letter is read and considered before the governor decides to help the Clippers take away our rights and move so fast. The Clippers have provided no information to the community. How are the Clippers doing this without proving all the information? There has been no outreach to us. Nothing.

I have many concerns about the project and the potentially harmful effects it will have on us. We have many children and older people in our community. I know that poor people often seem like they don't matter. Rich billionaires matter.

What worries me most is how little we know about the project. Aside from a location, I have not seen any pictures of this huge project, located right next to thousands of homes and apartments. Has anyone told you what it will look like. How tall it is. How many cars will be there. The application the Clippers submitted doesn't even include information about how big the arena project is going to be. How can you understand the impacts if you don't know how big it is?

I feel this is basic information that the governor, and community residents, should have before anything moves forward with the project.

Best, Sierra Nuccio (909) 454 9792

3647 W 109th St #2

Sierra Nuccio

Dear sir/madam,

I am writing concerning the Inglewood Basketball and Entertainment Center, Project #2018021056.

Traffic is already a serious problem in Inglewood. Even the city knows it and agrees. The City has said that the area has no transit and traffic is a nightmare. The plan by the Clippers to bring people by buses to come to arena events is not going to happen. The Clippers will do nothing to decrease congestion. We are being sold down the river.

The program proposed by the Clippers is not serious. To be honest, it is a joke. There are no specific promises, and no way to hold the Clippers responsible for its failure.

This is a terrible location for a major new events venue. It is going to increase overall traffic in the area. The rail lines are not located nearby, and very few people will use public transit to get to and from the arena. The Metro agency said it would cost a billion dollars to make a real connection to the transit stations. I would ask you to come to my neighborhood on a night when just the Forum has a major concert and see what traffic is like.

We don't need another sports venue far from a transit stop in Inglewood – just look at the traffic during a Forum concert. And of course this problem will be much worse once the NFL stadium opens. The Clippers don't get much transit usage even at Staples Center in Downtown LA, which has lots of transit.

Please do what's best for Inglewood and Los Angeles and reject this application. Send the Clippers back to the drawing board and come back with a real plan. Look at the Metro Study. Make Mr. Ballmer pay for the real connection to the train station.

Thank you. Veronica Colmon - 310-904-5068

Veronica Colmon

Querido señor, señora,

Estoy escribiendo sobre el Centro de entretenimiento y baloncesto de Inglewood, Proyecto # 2018021056.

El tráfico ya es un problema grave en Inglewood. Incluso la ciudad lo sabe y está de acuerdo. La Ciudad ha dicho que el área no tiene tránsito y el tráfico es una pesadilla. El plan de los Clippers para llevar a la gente en autobuses a eventos de la arena no va a suceder. Los Clippers no harán nada para disminuir la congestión. Nos están diciendo una gran mentira.

El programa propuesto por los Clippers no es serio. Para ser honesto, es una broma. No hay promesas específicas ni forma de responsabilizar a los Clippers por su fracaso.
Este es un lugar terrible para un nuevo estadio deportivo importante. Va a aumentar el tráfico general en el área. Las líneas de ferrocarril no están ubicadas cerca, y muy pocas personas usarán el transporte público para ir y venir de la arena. La agencia de Metro dijo que costaría mil millones de dólares hacer una conexión real con las estaciones de tránsito. Le pido que venga a mi vecindario en una noche en la que solo el Forum tiene un gran concierto y vea cómo es el tráfico.

No necesitamos otro lugar deportivo lejos de una parada de tránsito en Inglewood, solo mire el tráfico durante un concierto del Foro. Y, por supuesto, este problema será mucho peor una vez que se abra el estadio de la NFL. Los Clippers no tienen mucho uso del transporte, incluso en el Staples Center en el centro de Los Ángeles, que tiene mucho tránsito.
Por favor, haga lo mejor para Inglewood y Los Ángeles y rechace esta solicitud. Envía a los Clippers al tablero de dibujo y regresa con un plan real. Mira el estudio de metro. Haga que el Sr. Ballmer pague por la conexión real a la estación de tren.

Gracias. Veronica Guzman - 310-904-5068
10317 Yukon Ave Inglewood CA 90303
Veronica Guzman

Estimado Representante de OPR,

La propuesta de los Clippers de construir un nuevo estadio en Inglewood haría que nuestras calles locales se parecieran a la autopista 405 en hora punta. El impacto en nuestra comunidad será terrible. Piensa sobre esto. El Forum ya hace que el tráfico se detenga en las noches de concierto. Entonces el nuevo estadio Rams tendrá todo tipo de eventos. Hará que el tráfico sea aún peor. Y luego se construirá todo el proyecto del parque de Hollywood que ya está aprobado. Y el tráfico se detendrá por completo. Entonces, ¿cómo llegarán los autobuses de la estación de tren a la arena, al hotel o al edificio médico? Fácil, no lo harán.

Esperaba que los Clippers hubieran desarrollado una solución inteligente para este problema, pero según la aplicación para el Centro de Entrenamiento y Baloncesto de Inglewood (2018021056), parece que no tienen ideas. Están proponiendo un plan que es completamente irrealista. La idea de poner a miles de personas en los autobuses para llegar a la parada de transporte público más cercana es ridícula, especialmente en los días en que el Forum también está activo. Cuando agregas tráfico desde el estadio Rams y Chargers, será simplemente imposible. Además, ¿qué pasará cuando se construya el resto de Hollywood Park?

Entiendo que la MTA emitió un informe que decía que costaría casi $ 1,000 millones para construir una conexión ferroviaria al área de la arena. ¿Los Clippers compartieron ese estudio contigo? Quizás a Steve Ballmer le gustaría pagar por esta conexión. Tiene muchos billones. No nos hagas sufrir a los residentes por su mala planificación de transporte.
AB 987 exige un estándar más alto. Por favor, no permitas que los Clippers establezcan un terrible precedente al cambiar a nuestra ciudad. Por el bien de Inglewood y el estado de derecho, rechace esta solicitud.

Gracias. Vidal Cano

Dear OPR Representative,

The proposal by the Clippers to build a new arena in Inglewood would make our local streets resemble the 405 freeway at rush hour. The impact on our community will be devastating. Think about this. The Forum already makes traffic come to a stop on concert nights. Then the new Rams stadium will have all kinds of events. It will make traffic even worse. And then the whole Hollywood park project which is already approved will get built. And the traffic will be dead stop. So how will buses get from the rail station to the arena, or hotel, or medical building? Easy – they won't.

I had hoped that the Clippers would have developed a smart solution to this problem, but according to the application for the Inglewood Basketball and Entertainment Center (2018021056) they appear to be out of ideas. They are proposing a plan that is completely unrealistic. The idea of putting thousands of people on buses to get to the nearest transit stop is laughable, especially on days when the Forum is also active. When you add in traffic from the Rams and Chargers stadium, it will be simply impossible. Plus, what will happen when the rest of Hollywood Park is built?

I understand that the MTA issued a report saying it would cost almost $1 billion to build a rail connection to the arena area. Did the Clippers share that study with you? Perhaps Steve Ballmer would like to pay for this connection. He has lots of billions. Don't make us residents suffer for his bad transportation planning.

AB 987 calls for a higher standard. Please don't allow the Clippers to set a terrible precedent by shortchanging our city. For the good of Inglewood and the rule of law, please reject this application.

Thank you.

To whom it may concern at the Governor's Office of Planning and Research,

When I first heard about the new arena proposed by the Clippers, #2018021056, I was excited. I know that in order to be given the right to be streamlined by the state, the project would need to create new high-paying jobs right here in town. I have family and friends who are looking for career jobs in the Inglewood area, and this project could be just what they were looking for.

However, the AB 987 application submitted by Murphy's Bowl shows that this is not the case. They are not creating a significant number of new jobs at the arena, proposed for the intersection of Prairie and Century. Instead, they will be moving low-paying jobs from Downtown L.A. to Inglewood, a distance of about 10 miles. I don't see anyone new benefitting from the "jobs" this project will supposedly create.

Here in Inglewood, we need jobs better than food service and cleaning jobs. Sweeping the new arena or selling popcorn is not a real career. We need solid, middle-class jobs that will support a family. That is what the streamlining law requires, and unfortunately the Clippers are not delivering. The Clippers are not upholding their end of the bargain, so they do not deserve to be "streamlined."

Opposition to Certification of the Inglewood Basketball and Entertainment Center Project under AB 987 (Application No. 2018021056)

Dear Ms. Gordon:

On behalf of Inglewood Residents Against Takings and Evictions ("IRATE"), we object to certification of the Inglewood Basketball and Entertainment Center Project ("Project") pursuant to AB 987. The Project does not meet AB 987's requirements. As proposed, the Project will lead to increased traffic congestion, pollution, and emission of greenhouse gases in Inglewood, directly and negatively impacting the health and well-being of the community and IRATE's members. Perhaps more importantly, the methodology used by the applicant, if accepted by the California Air Resources Board ("CARB") and the Governor, undermines compliance with the State's established Greenhouse Gas ("GHG") goals and established methodologies of air districts. This sets a very dangerous precedent for the entire state. IRATE opposed passage of AB 987 because of its potential harmful effects on the local community. Those concerns are now being realized as AB 987 is being implemented.

AB 987 requires a Project certified under its authority meets rigorous environmental standards. The applicant has failed to adequately describe how the Project will meet those standards required by AB 987 and therefore, the certification should be denied.

There are a number of reasons the application cannot be certified.

A. The Project Results in an *Increase* in GHG Emissions.

Public Resources Code § 21168.8 subdivision (b)(3) requires that the project not cause a net increase in GHGs. To demonstrate net zero GHG emissions, the applicant must show that future Project emissions, minus baseline emissions, minus mitigation measures, equal zero. The applicant manipulates the baseline emissions level to decrease the amount of emissions it must mitigate. This "methodology" runs counter to CEQA and every well-respected air emissions methodology on the books.[1] If accepted by the Air Resources Board (ARB) it will create a precedent that will undermine achievement of the State's GHG reduction standards, and established policies of air agencies.

The applicant's GHG baseline includes the GHG emissions now attributable to its games played at the Staples Center. (Application, Attach. G, pp. 6-7.) The application then takes credit for effectively eliminating, not just relocating, its GHG emissions from its existing operations at Staples Center. This is wrong and unsupportable under CEQA, since Staples Center will continue to operate. The applicant effectively assumes (with no supporting evidence) that nothing will replace the Clippers games currently taking place at the Staples Center, which account for 21% of Staples Center emissions. (Application, Attach. G, p. 9.) The applicant acts as though its move out of the Staples Center is equivalent to demolishing or permanently restricting the capacity of 21% of a refinery or

[1] Existing conditions on the ground at the Project site consist of a hotel, restaurant, commercial building, and light industrial buildings. (Application Attachment G, p. 7.) These are the source of the GHG emissions that should be included in the baseline. Existing conditions do not, and should not, include GHG emissions from other facilities such as the Staples Center, Honda Center, and others that the application includes. The Supreme Court in *Communities For A Better Environment v. South Coast Air Quality Management Dist.* (2010) 48 Cal.4th 310 ("*CBE*") explained in detail how a baseline is to be determined. The Court stated: "To decide whether a given project's environmental effects are likely to be significant, the agency must use some measure of *the environment's state absent the project*, a measure sometimes referred to as the "baseline" for environmental analysis." (*CBE, supra,* 48 Cal.4th 310, 315, emphasis added.) The Supreme Court has thus held the appropriate baseline is "the physical *conditions actually existing at the time of analysis*." (*Id.* at 316, emphasis added.) The Supreme Court quoted various cases stating actual conditions at the time of analysis must be the baseline for analysis: "the baseline for CEQA analysis must be the "existing physical conditions in the affected area" ([citation]), that is, the "'real conditions on the ground.'"" ([citations].) (*CBE, supra,* 48 Cal.4th at 321.)

power plant (in this case Staples Center), in order to take credit for eliminating that portion of its emissions. This is, of course, absurd, and unsupported by any proof.

The departure of the Clippers from Staples Center cannot be shown to result in any physical reduction in Staple's capacity to cause GHG emissions, or any reduction in its operating capacity. Staples Center will continue to fully operate and will attempt to book new events for those dates, replacing the GHG emissions from the Clippers' games with emissions from new events to a currently unknown degree, perhaps 100%. The applicant has not, to IRATE's knowledge, secured a covenant from Staples that it will permanently reduce its capacity by 21% to account for the departing Clippers games, nor could that reasonably be expected. The operating capacity of Staples will not be reduced in any manner, and the only reasonable assumption is that it will continue to be used, perhaps fully used, with corresponding GHG emissions.

In addition, the applicant assumes that about half of the non-basketball events to be scheduled at the IBEC facility would be "market-shifted" from other event facilities, such as the Honda Center, and that the GHGs now generated by those events would be eliminated, not just relocated; the application assumes that these events will never be replaced by any other events at those other facilities. (Application Attach. G, pp. 9-10.) The applicant does not show that it has secured any permanent reduction on operating capacities of these facilities, nor is there any evidence that these events will, in fact, relocate from Staples, Honda Center, the Forum or any other venue to the new Clippers arena, or that the GHG emissions they cause will actually be eliminated. The application simply assumes that events will shift from existing event facilities to IBEC, and that no such shifted events will be replaced by new ones. The application, in essence, assumes a zero-sum total of GHG emissions from events in the Los Angeles area of the types that the IBEC facility would serve; if these events move to IBEC, no additional events will occur to replace them. The assumption that existing facilities serve every possible event of this kind, and that building a new facility (here, the IBEC) will not and cannot lead to the occurrence of additional such events, is not supported by evidence in the application, and therefore cannot be taken at face value. The application has not made the required case for these GHG reductions.

The application's baseline methodology asserts that over 300,000 tons of CO2 emissions will simply disappear when the Project is built. (Application Attachment G, p. 25.) Because they "disappear," the applicant asserts it does not need to offset those emissions. This, of course, is a fallacy. Those emissions are simply relocated, not eliminated. As an analogy, imagine the following: a new subdivision is built. The project developer asserts that the people moving to the new homes are simply moving to the new subdivision from existing homes, therefore there is no net increase in GHGs or any criteria pollutants. Or a new refinery is built, and the oil and gas refiner asserts that the

refinery will reduce the market share of other existing refineries, thereby there is no increase in GHG or criteria pollutants. No responsible approving agency would accept such arguments.

Accepting the applicant's assertions as a demonstration of net-zero GHG emissions would not only be wrong, it would fly in the face of the state's role leading the country on climate change and would be setting a dangerous precedent for future development. Every developer, manufacturer, refiner, and other source of emissions would attempt to zero out GHG emissions by relying on the market-shifted concept without actual proof that the reductions will occur. The implications for methodology sleight of hand is tremendously adverse for the state. The requirement of AB 987 is net zero, not a magic trick or a baseline calculation that will completely turn on its head years of established guidance from air agencies and CEQA.

B. The Application Fails to Demonstrate Sufficient Local GHG Mitigation Measures.

The applicant does not comply with AB 987's mandate that "[n]ot less than 50 percent of the greenhouse gas emissions reductions necessary to achieve [net zero emissions] shall be from local, direct greenhouse gas emissions reduction measures." (Health and Saf. Code § 21168.6.8 subd. (j)(3).) This directive was included to ensure that the local community is not burdened with shouldering the full weight of the Project's harmful emissions.

The applicant could have proposed significant local measures such as solar installations on neighboring homes, energy efficiency retrofits of area businesses, and other local meaningful measures, especially since the Project would be surrounded by disadvantaged communities where such programs are sorely needed. It does not. The applicant cheats by inflating its baseline, taking credit for TDM reductions that will never be achieved, and then using generic GHG offsets without any local measures to achieve a "pretend" reduction in GHG. That is not what AB 987 requires. When the baseline is corrected to include only existing emissions sources on the Project site, the Project's proposed local mitigation measures are closer to 14% of the total required rather than the 57% that the application asserts.

Finally, the applicant treats the 50% local reduction requirement as a ceiling. It is not. It is a floor. The applicant can only look to reduce GHG emissions outside of Inglewood using credits or other methods if it is infeasible to do so locally. The applicant has not shown this. The applicant is gaming the requirements of AB 987 and shortchanging the local community.

C. The Project Fails to Include Reasonable, Feasible, and Effective GHG Emission Reduction Mitigation Measures Implemented By Other Sports Venues.

The Project fails to implement effective GHG mitigation measures that have been implemented around the country by other sports venues. We attach excerpts from a report by the Natural Resources Defense Council ("NRDC Report") entitled "Game Changer," on the energy consumption and GHG reductions that have been made by other sports stadiums, for comparison purposes. (Enclosure 1.) The NRDC Report shows what a sports venue that is genuinely trying to reduce its environmental footprint can do; this applicant falls woefully short.[2] NRDC's Report sets forth actual examples of sports venues that are implementing measures far superior to those that have been identified in the AB 987 application for the Project. Some of the highlights of that report are discussed below.

1. The Clippers' Participation in NBA's Environmental Performance Program Should be Guaranteed.

The IBEC application does not mention the Clippers' participation in the NBA's Green Initiative (NRDC Report, p. 26-27) including but not limited to the Green Week program. The NRDC Report states "Each of the league's 30 teams hosts Green Week community service events such as tree plantings, recycling drives, and park clean-up days to get involved in the league's greening initiative." (Report, p. 27.) The applicant must explain if and how it intends to participate in and promote the NBA Green Initiative at the IBEC.

2. Heat Island Effect Reduction.

The Miami Heat basketball team "added 9,161 square feet of canopies to reduce the heat island effect." (NRDC Report, p. 45.) There is no mention of heat island reduction in the applicant's discussion of construction or energy usage. (See Application, p. 5, Attachment G, p. 17.) Heat island effect reduction must be incorporated.

---

[2] The NRDC Report is available at https://www.nrdc.org/sites/default/files/Game-Changer-report.pdf.

3. Environmental Management System.

The Staples Center is the first U.S. arena to achieve ISO 14001 certification for an environmental management system (EMS), a written program setting forth environmental goals and practices. (NRDC Report, p. 56 and p. 58.) The applicant in contrast does not mention any EMS. An EMS should be required.

4. Energy usage measures must be improved.

The applicant proposes to include solar cells only on "the main arena building roof." (Application, p. 5.) Other building roofs are available and should be used for solar cells as well. The project includes large parking structure facilities, a retail complex, and a hotel. (Attachment A-2.) No explanation is provided for why these roofs cannot be used for solar cell placement in addition to the main arena building roof.

The Staples Center includes a 1,727-panel solar array. (NRDC Report, p. 56.) There is no statement of the number of panels planned for installation by the applicant. The Staples Center also uses a number of greening accomplishments, many of which are not mentioned by the applicant. These include "Low-voltage lighting relays"; "electronic ballast instead of magnetic ballast"; "variable speed drives on all air handlers and one chiller"; "time schedules for and photo cell control of exterior lighting"; "Super-efficient three-phase motors". (NRDC Report, p. 56.)

The Trail Blazers "partnered with Pacific Power and the Bonneville Environmental Foundation for the purchase of 100 percent renewable energy programs." Senate Bill 100, sponsored by Senator De Leon and approved by the Governor on September 10, 2018 states "it is the policy of the state that eligible renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers and 100% of electricity procured to serve all state agencies by December 31, 2045." (See also KCET, "Heat," infra, Video mark 22:46.) The Project applicant as it seeks the Governor's certification of Environmental Leadership status should commit to 100% renewable energy usage by 2045 as well.

The NRDC report states the Home Depot Center, which is home of the LA Galaxy soccer team and is not far away from Inglewood, "participates in Southern California Edison's Demand Response programs, which enable it to manage energy use to avoid statewide demand peaks." (NRDC Report, p. 103.) The LA Galaxy "participated in the Bonneville Environmental Foundation's Solar 4R Schools program, which installs solar panels on a school in the winning team's region." (*Ibid.*) The applicant should commit

to installing solar roofs and similar measures within the local area before relying on purchasing offset credits to mitigate its impacts.

5. Recycling must be promoted, including during Project operations.

The applicant proposes to recycle 75 percent of its construction demolition material. (Application, p. 5.) The applicant makes no statement or commitment to any level of recycling *during* operations.

The Rose Garden Arena, home of the Portland Trail Blazers, has a more effective recycling program that includes recycling during operations: "More than 80 percent of operations waste is diverted from local landfills." (NRDC Report, p. 64.) Philips Arena, home of the Atlanta Hawks, "sends its plastic, aluminum, glass, cardboard and paper waste to SP Recycling." (NRDC Report, p. 99.) Furthermore, "Paper products, including paper towels, bathroom tissue, and copier paper, are all 100 percent post-consumer recycled content." (NRDC Report, p. 99.)

D. The Applicant Relies on Purchased GHG Offsets That are not Supported by Evidence.

The application states that 39,486 MMTCO2e of GHG emissions, or about 38% (more than one-third of the total) of the GHG reductions claimed by the applicant will be produced as co-benefits of conventional air pollutant emissions reductions and/or from purchased GHG offsets (reductions from other GHG sources). (Application, p. 22.) The application does not specify what portion of this 38% of GHG reductions will come as co-benefits (nor the conventional air pollutant control measures that will produce them), and what portion from GHG offsets. The validity of whatever portion is supposedly coming from purchased offsets is not supported by evidence in the application.

The California Health and Safety Code establishes strict requirements for GHG offsets. They must be "real, permanent, quantifiable, and enforceable" and "in addition to any greenhouse gas reductions otherwise required by law or regulation, and any other greenhouse gas emission reduction that would otherwise occur." (Health and Saf. Code § 38562, subds. (d)(1) and (2).) The application states that offsets will be "verified by a third party accredited by ARB" (Application, p. 23), giving as examples of such third parties three carbon offset registries that ARB has used in the state Cap-and-Trade program for reducing GHG emissions. (See Cal. Code of Regs., tit. 17, § 95801, et seq.) Unfortunately, there are no such ARB-accredited registries. The ARB does not approve or accredit any carbon offset registries for any use other than in the state's Cap-and-Trade program, nor does it vouch for any registry for use outside that program.

The Air Resources Board recently issued the following statement regarding carbon registries in response to a reporter's questions:

> The California Air Resources Board has approved offset project registries to aid in the implementation of the compliance offset program component of the state's Cap-and-Trade Program. The registries perform mainly administrative functions in ensuring that eligible offset projects have submitted required documentation and obtained third-party verification pursuant to the Cap-and-Trade Regulation and applicable CARB-approved Compliance Offset Protocols. CARB then reviews and approves all offset projects before issuing what are known as "compliance-grade offset credits" that are the equivalent to allowances and can be used by regulated entities in the Cap-and-Trade Program to meet a very limited portion (up to 8 percent) of their annual compliance obligations.
>
> The offset project registries, as well as other organizations, also operate voluntary offset markets, where they issue voluntary offset credits that are NOT eligible to transition to compliance-grade offset credits. The voluntary market is completely separate from the compliance market and CARB does not oversee it in any way, nor does CARB regulate how voluntary credits are used. More information on CARB's Compliance Offset Program is available here: https://www.arb.ca.gov/cc/capandtrade/offsets/offsets.htm.
>
> . . .
>
> CARB's Compliance Offset Program for the Cap-and-Trade Regulation is specifically limited to offset projects within the United States, although offset credits issued in Quebec or Ontario are also eligible for use since we have linked the California Cap-and-Trade Program with the cap-and-trade programs in those two jurisdictions. CARB does not issue compliance offset credits to international projects. Internationally generated credits are available through the voluntary market, which, as we mentioned above, is completely separate from offset credits that can be used in our Cap-and-Trade Program. CARB does not track voluntary credit prices nor who can use them.

(ARB statement issued January 28, 2018, by Stanley Young, CARB Office of Communications Director.) Thus, the ARB has not endorsed, does not regulate or "accredit," and does not oversee or warrant in any way any carbon registries in the voluntary market, even those registries that the ARB uses in the Cap-and-Trade compliance program. There are no ARB "accredited" registries for the applicant to use.

Nor does the application specify what procedures would be used to verify the effectiveness and enforceability of the offsets on which it relies. The ARB regulations

impose extremely tight requirements on all offsets used in the Cap-and-Trade program, to ensure that the offsets used there actually are real, permanent, verifiable, and enforceable (see Cal. Code of Regs., tit. 17, § 95801, et seq.), and only ARB itself issues the actual offset credits, not any carbon registry. No such tight requirements are provided in the application, and there is no comparable procedure in the application to demonstrate the validity of any such purchased offsets. Indeed, the application is rather casual in its treatment of this very complex and highly controversial subject. IRATE notes that ARB also limits the use of purchased GHG offsets to only *8%* of a covered source's GHG emissions, not *38%*, as the application here would allow. (Cal. Code of Regs., tit. 17, §§ 95854 and 95856 subd. (h)(1)(A).) There is no justification in the application for relying on purchased offsets for such a large portion of the proposed arena's GHG emissions.

The applicant seeks certification as an Environmental Leadership Project to avoid some aspects of CEQA to which other developers are held; in return, the state of California should hold the applicant here to similar standards for GHG emissions offsets as it holds the sources in the Cap-and-Trade program. There is no reason to suppose that a private party has similar expertise to the ARB's in determining the validity of a GHG offset, and it is not clear that any competent air quality agency will approve or oversee the obtaining and verification of the GHG offsets the applicant proposes to buy. Reliance on private carbon offset registries that are not accredited or overseen by the ARB or any other government agency is risky and unproven. Such questions must be thoroughly explored and settled prior to approval of this application.

Once built, the IBEC cannot be redesigned, and will be difficult and expensive to retrofit, should its purchased offsets fail. Offsets of conventional pollutants in significant amounts are subject to permit conditions and monitoring by the South Coast Air Quality Management District. Greenhouse gas emissions are not subject to such monitoring, nor does the application provide any method for monitoring the success – or failure – of the purchased GHG offsets on which it relies for more than a third of its required GHG emissions reductions.

Further, the application is extremely vague as to where the offsets will be obtained, stating only that "the project sponsor will, to the extent feasible, place the highest priority on purchase of offset credits that produce emission reduction within the City of Inglewood or the boundaries of the South Coast Air Quality Management District." (Application, p. 23.) No definition of the term "feasible" is given, although IRATE suspects that the per-ton price of the offsets may be the determining factor. Under this brief and vague directive, local offsets, with their substantial potential for local co-benefits such as decreased local emissions of conventional pollutants and increased job opportunities, may be put into economic competition with international offsets that, due to cheaper labor costs in developing countries, will almost always tend to

be cheaper. The result may well be that local offsets, with their local co-benefits, will be found unavailable and infeasible when they are, in fact, technologically feasible, but merely have a higher purchase price than international offsets.

The criteria for exactly where the proposed offsets will be sought should be fully defined and disclosed before the application can be deemed complete or can be approved.

E. The Application May Underestimate Human Health Risks.

The applicant's use of a seriously flawed methodology for its GHG emissions analysis has additional consequences beyond an increase in GHG emissions. GHG emissions and local criteria pollutant emissions are closely correlated. By underestimating the GHG emissions of the Project and failing to properly mitigate those emissions locally, the applicant has also underestimated the local criteria pollutant emissions of the Project. Therefore, the health impacts to the community of Inglewood may also be underestimated. Exposure to criteria pollutants such as NOx, PM10, PM2.5, and diesel particulate matter (designated as an airborne toxic contaminant by the Air Resources Board, and as known to the State of California to cause cancer by the state's experts pursuant to Proposition 65 [Cal. Code of Regs., tit, 17, § 93000; tit. 27, § 27001, respectively] lead to health impacts, including respiratory and cardiovascular problems, and potentially cancer. The applicant does not account for these increased health risks, which is contrary to AB 987's mandate that the Project should "maximize public health, environmental and employment benefits" by reducing GHG emissions "in the project area and in the neighboring communities." The real-world consequences of building the arena as described in the application are completely contrary to what Governor Brown made clear was required in his signing message. The applicant is continuing to show its disdain for the local residents as it has done through this entire process.

The emission of GHGs contributes to climate change, which in turn creates serious public health impacts. Dr. Marc Futernick, an Emergency Physician, and others explained these concerns on a recent KCET program "Heat" SoCal Connected Season 9, Episode 6. (https://www.kcet.org/shows/socal-connected/episodes/heat ("Heat Video").) Dr. Futernick stated that "This [climate change] is the biggest threat to human health right now in the world and I am not alone in thinking that….This is going to increase mortality significantly." (Dr. Futernick; Heat Video mark 4:06.) Dr. Rupa Basu, an epidemiologist with the California Environmental Protection Agency (CalEPA) on the same program stated: "When it is hot outside we see heart attacks, … cerebral vascular diseases such as stroke, kidney disease, adverse birth outcomes such as premature births, stillbirth from low birth weight, and some respiratory diseases such as asthma attacks. Climate change is causing increased deaths and illnesses." (Dr. Basu; Heat Video mark 5:45.) Dr. Basu's pioneering work is connecting the health impacts of extreme heat and

climate change. For every 10 degree increase in temperature, the rate of deaths increases 2.3%. (Heat Video mark 6:11.) "People are dying at epidemic levels because of climate change." (Dr. Basu, Heat Video mark 6:43.)

"Climate change is currently impacting the health of our community. People are dying at an increased rate and suffering all kinds of other illness related to the changes that are a result of global warming." (Dr. Futernick, Heat Video mark 23:46) "The price is incalculable because what it will cost to deal with the asthma of a child who is five when that individual becomes an adult….You tell me." (Attorney General Becerra, Heat Video mark 23:52.) "We need to reverse [the effects of climate change] to protect the health of our patients…. This is not theoretical… This is real." (Dr. Futernick, Heat Video mark 25:20.)

Alex Hall at the UCLA Center for Climate Science projects a doubling of the number of extremely hot weather days by mid-century. (Heat Video mark 10:08.) In urban areas, the urban heat island effect is particularly bad as blacktop and concrete absorbs heat. "Los Angeles is particularly impacted because of the urban heat island effect." (Dr. Basu, Heat Video mark 9:05.)

Climate change's effects are particularly hard on environmental justice communities. (Dr. Futernick, Heat Video Mark 12:49; Dr. Basu, Heat Video Mark 12:33.) One phrase that is used is that "Climate change starts in our hood." (Jan Victor Anderson, organizer, East Yard Communities for Environmental Justice; Video mark Heat Video mark 13:56.) Disadvantaged communities are "where people feel [climate change] first and worst." (Sylvia Betancourt of the Long Beach Alliance for Children With Asthma; Heat Video mark 14:36.) Senator Kevin De Leon recognizes the need to address climate change as an environmental justice issue. (Sen. De Leon; Heat Video mark 16:48.) "When days and nights are hot, city dwellers are the first to run into trouble." (Heat Video mark 20:44; citing https://www.sciencenews.org/article/are-we-ready-deadly-heat-waves-future.) "Heat claims more lives than floods, hurricanes and other weather." (Heat Video mark 20:47 citing https://www.sciencenews.org/article/are-we-ready-deadly-heat-waves-future.) Climate change is a reality that must be seriously addressed by government at all levels by requiring mitigation of GHG emissions to the greatest extent feasible. (Heat Video mark 19:36 [NASA Climate Reality webpage with 1.3 million followers prior to being removed.]) According to David Pettit of the Natural Resources Defense Council, current federal government policies will lead to a 7 degree Fahrenheit increase in global temperatures by 2100, "which would be total economic and human disaster." (Heat Video mark 22:24.) An Environmental Leadership project in California should demonstrate true environmental leadership in mitigating GHG impacts.

F. The Project is Inconsistent with SCAG's RTP/SCS.

AB 987 requires that the Project be consistent with a Regional Transportation Plan/Sustainable Community Strategy ("RTP/SCS") that meets California Air Resources Board's ("CARB") targets for reducing GHG emissions. (Health and Saf. Code § 21168.6.8 subd. (a)(3)(D).) It is not.

Southern California Association of Governments 2016-2040 RTP/SCS is focused on reducing vehicle miles traveled ("VMT"). The project will, in fact, increase VMT. The Clippers currently play at the Staples Center. Staples is in downtown Los Angeles, an area rich in transportation infrastructure. Heavy rail, light rail, Metro buses, Santa Monica's Big Blue Bus, Foothill Transit, DASH, and private shuttles and pedestrian amenities permitting easy access to the Staples Center from millions of square feet of existing high rise offices and tens of thousands of dense multifamily housing are all present in downtown. Billions of dollars have been invested in transit in the downtown Los Angeles area. None of that is present in Inglewood. The Clippers are proposing to move from the transit-rich area of downtown Los Angeles to what the applicant calls a "transit starved" area. (California Senate Judiciary Committee hearing, June 26, 2018, Video mark 2:26:18.) The closest Metro Rail stop is 0.8 miles away from the proposed project (Application, Attach. D, p. 10), a significantly greater distance than the preferred one-quarter mile away.

The Clippers are moving from a dense urban area to a suburban area. Attendees of Clippers games and concerts held at Staples Center have a variety of options to choose from to travel to and from sports events. If the Clippers games are moved to Inglewood, the existing downtown Los Angeles transit options disappear, which will almost certainly result in more attendees traveling by personal vehicle to events, contrary to the application's optimistic assumptions.[3] It is reasonable to assume that the move from downtown Los Angeles to Inglewood will increase VMT, and the applicant has not proven otherwise by solid evidence. Instead, the application states that "The trip length for attendees was based on the weighted average trip distance of 19.38 miles for LA Clippers game attendees at the Staples Center" (Application, Attach. G, p. 11), despite the move from downtown Los Angeles to the suburbs. Inglewood is approximately 13 miles from downtown Los Angeles. And it cannot be seriously argued that somehow transit usage in Inglewood will be better than transit usage in downtown Los Angeles.

[3] For example, the application optimistically assumes that 10% of IBEC event attendees will use shared mobility services like Uber, Lyft, or taxis, compared with 4% now, simply because the IBEC will have "a staging area for shared mobility services." (App., Attach. D, p. 10.)

California recognizes that reducing VMT is a key to hitting its climate targets in the coming decades. ("California's 2017 Climate Change Scoping Plan" (ARB, 2017), pp. 25, 77-78.) Not only will certifying this Project run afoul of AB 987 requirements, it will also make it harder for the state to reach its climate goals. The question here, in part, is whether the Governor can certify the construction of this arena away from the dense core of Los Angeles, and placed instead in a suburban location, as being consistent with the applicable 2016-2040 RTP/SCS. Certification of this project as consistent with the 2016-2040 RTP/SCS would have serious implications for how other jurisdictions and other developers will view what compliance with the 2016-2040 RTP/SCS means. Years of hard work, legislative and administratively, by the Governor will be impacted by any such certification. This is not like what the Oakland A's are doing in moving to an urban location in Oakland well served by transit. This is not like what the Warriors did in moving to an urban location in downtown San Francisco well served by transit. This is the antithesis of those relocations as it creates and increases total VMTs rather than reducing them.

G. The Application's Transportation Demand Management Program ("TDM") Fails to Demonstrate a 15% Reduction in the Number of Vehicle Trips.

Public Resources Code § 21168.6.8 subdivision (a)(3)(B)(i) requires "a transportation demand management program that, upon full implementation, will achieve and maintain a 15-percent reduction in the number of vehicle trips, collectively, by attendees, employees, visitors, and customers as compared to operations absent the transportation demand management program." The application falls far short in a variety of ways in demonstrating how it will achieve this directive.

First, the application makes the assertion that 34% of attendees will arrive by some mode of transportation other than a personal car. Compare this to the Clippers current home, the Staples Center in downtown Los Angeles, which currently sees only 20% of its attendees arrive by some mode of transportation other than a personal car. (Application, Attach. D, p. 11.) The applicant is expecting the percentage of game attendees arriving by mode other than personal car to triple (from 11% to 34%, Application, Attach. D, pp. 12-13) at a location whose closest transit stop is nearly a mile away. (Application, Attach. D, p. 10.) The Clippers testified in Sacramento during legislative hearings on AB 987 that Inglewood was "transit starved." (California Senate Judiciary Committee hearing, June 26, 2018, Video mark 2:26:18.)

The Staples Center in downtown Los Angeles benefits from a subway stop right outside its doors, whereas the Project location's nearest existing and proposed subway stops are almost a mile away. Assuming that there will be an increase in public transit use

when transit is farther away is unsupported by reality. Applying simple logic to the question makes this easy. Does anyone realistically think that attendees to events at the proposed new arena are going to drive to a Metro station somewhere, get on Metro and take it to Inglewood, then get on a 45-person bus for a drive through the congested streets on Inglewood to get to the proposed Project arena? And then do that in reverse at 10 pm or possibly later at night?

A detailed analysis should also be provided for expected travel times on a shuttle to the proposed arena on a day when the Forum has a capacity event. Anyone who has gone to a concert at the Forum knows that it is a horrendous problem to try to get there on Manchester Boulevard or Prairie Avenue. Imagine what will happen when concurrent events occur at the Forum and the new Clippers arena. To suggest that shuttles will be able to get quickly and efficiently from the transit stop two miles away to the Clippers' arena is wishful thinking, and is certainly not supported by evidence.

The applicant also uses flawed assumptions and incorrect logic in calculating the number of vehicle trips the Project generates. The applicant assumes that the transit profile of its attendees will remain constant regardless of the type of event at the proposed arena. The applicant uses data derived from "current attendees of LA Clippers games at Staples Center" to forecast the transportation habits at the new arena for *all* types of events. This is clearly flawed as attendees of concerts or convention (trade show) attendees and other non-Clippers games are far less likely to use public transit than are repeat attendees of Clippers games. The Staples Center is literally on the same property as the LA Convention Center, in close proximity to thousands of downtown hotel rooms. Are convention attendees going to leave downtown and go to an arena? Further, the application confidently predicts that the new IBEC facility will book many non-sports events, including concerts and family events. It does not show that families will choose to transport their children to and from the arena by transit, including when the event may end late at night. Nor does it provide persuasive evidence that concert-goers or young people on dates will choose to use Metro and shuttles to attend these events. It simply assumes these things. By assuming that all events are the same with respect to transit use, the application may have dramatically underestimated the number of vehicle trips associated with the Project.

The applicant also fails to provide enough details to allow a sound evaluation of its proposed TDM program. AB 987 requires the applicant's TDM program to include "a specific program of strategies, incentives, and tools…with specific annual status reporting obligations…." The application does not include any discussion of how the TDM program results will be verified or reported on an annual basis as AB 987 requires. The applicant even acknowledges that the TDM program is not finalized stating "The measures included in the IBEC TDM Program are subject to further refinement and

revision." (Application, p. 6.) The TDM program is thus simply a list of goals that are subject to change without any plan to verify that the goals are being met.

These shortfalls make evident that the applicant has failed to demonstrate compliance with AB 987's mandate to reduce the number of vehicle trips by 15%. And there is no evidence it can meet 7.5% reduction after the first NBA season. The applicant must revise its application to correct these errors and provide greater detail into how it plans to meet AB 987's rigorous requirements.

Conclusion.

We respectfully request that the Governor not certify the Project. It does not meet the requirements of AB 987. The Project increases GHGs emissions and VMT, relies on unproven and unreliable GHG offsets, and puts Inglewood residents' health at risk. The applicant needs to provide substantial additional information and analysis to support its contention that it meets AB 987. The public must have a right to review any such submissions.

Thank you for your consideration.

Sincerely,

Douglas P. Carstens

About NRDC

NRDC (Natural Resources Defense Council) is a national nonprofit environmental organization with more than 1.3 million members and online activists. Since 1970, our lawyers, scientists, and other environmental specialists have worked to protect the world's natural resources, public health, and the environment. NRDC has offices in New York City, Washington, D.C., Los Angeles, San Francisco, Chicago, Montana, and Beijing. Visit us at www.nrdc.org.

NRDC's policy publications aim to inform and influence solutions to the world's most pressing environmental and public health issues. For additional policy content, visit our online policy portal at www.nrdc.org/policy.

About Green Sports Alliance

Green Sports Alliance is a non-profit organization with a mission to help sports teams, venues and leagues enhance their environmental performance. Alliance members represent over 100 sports teams and venues from 13 different sports leagues.
Please visit www.greensportsalliance.org for additional information.

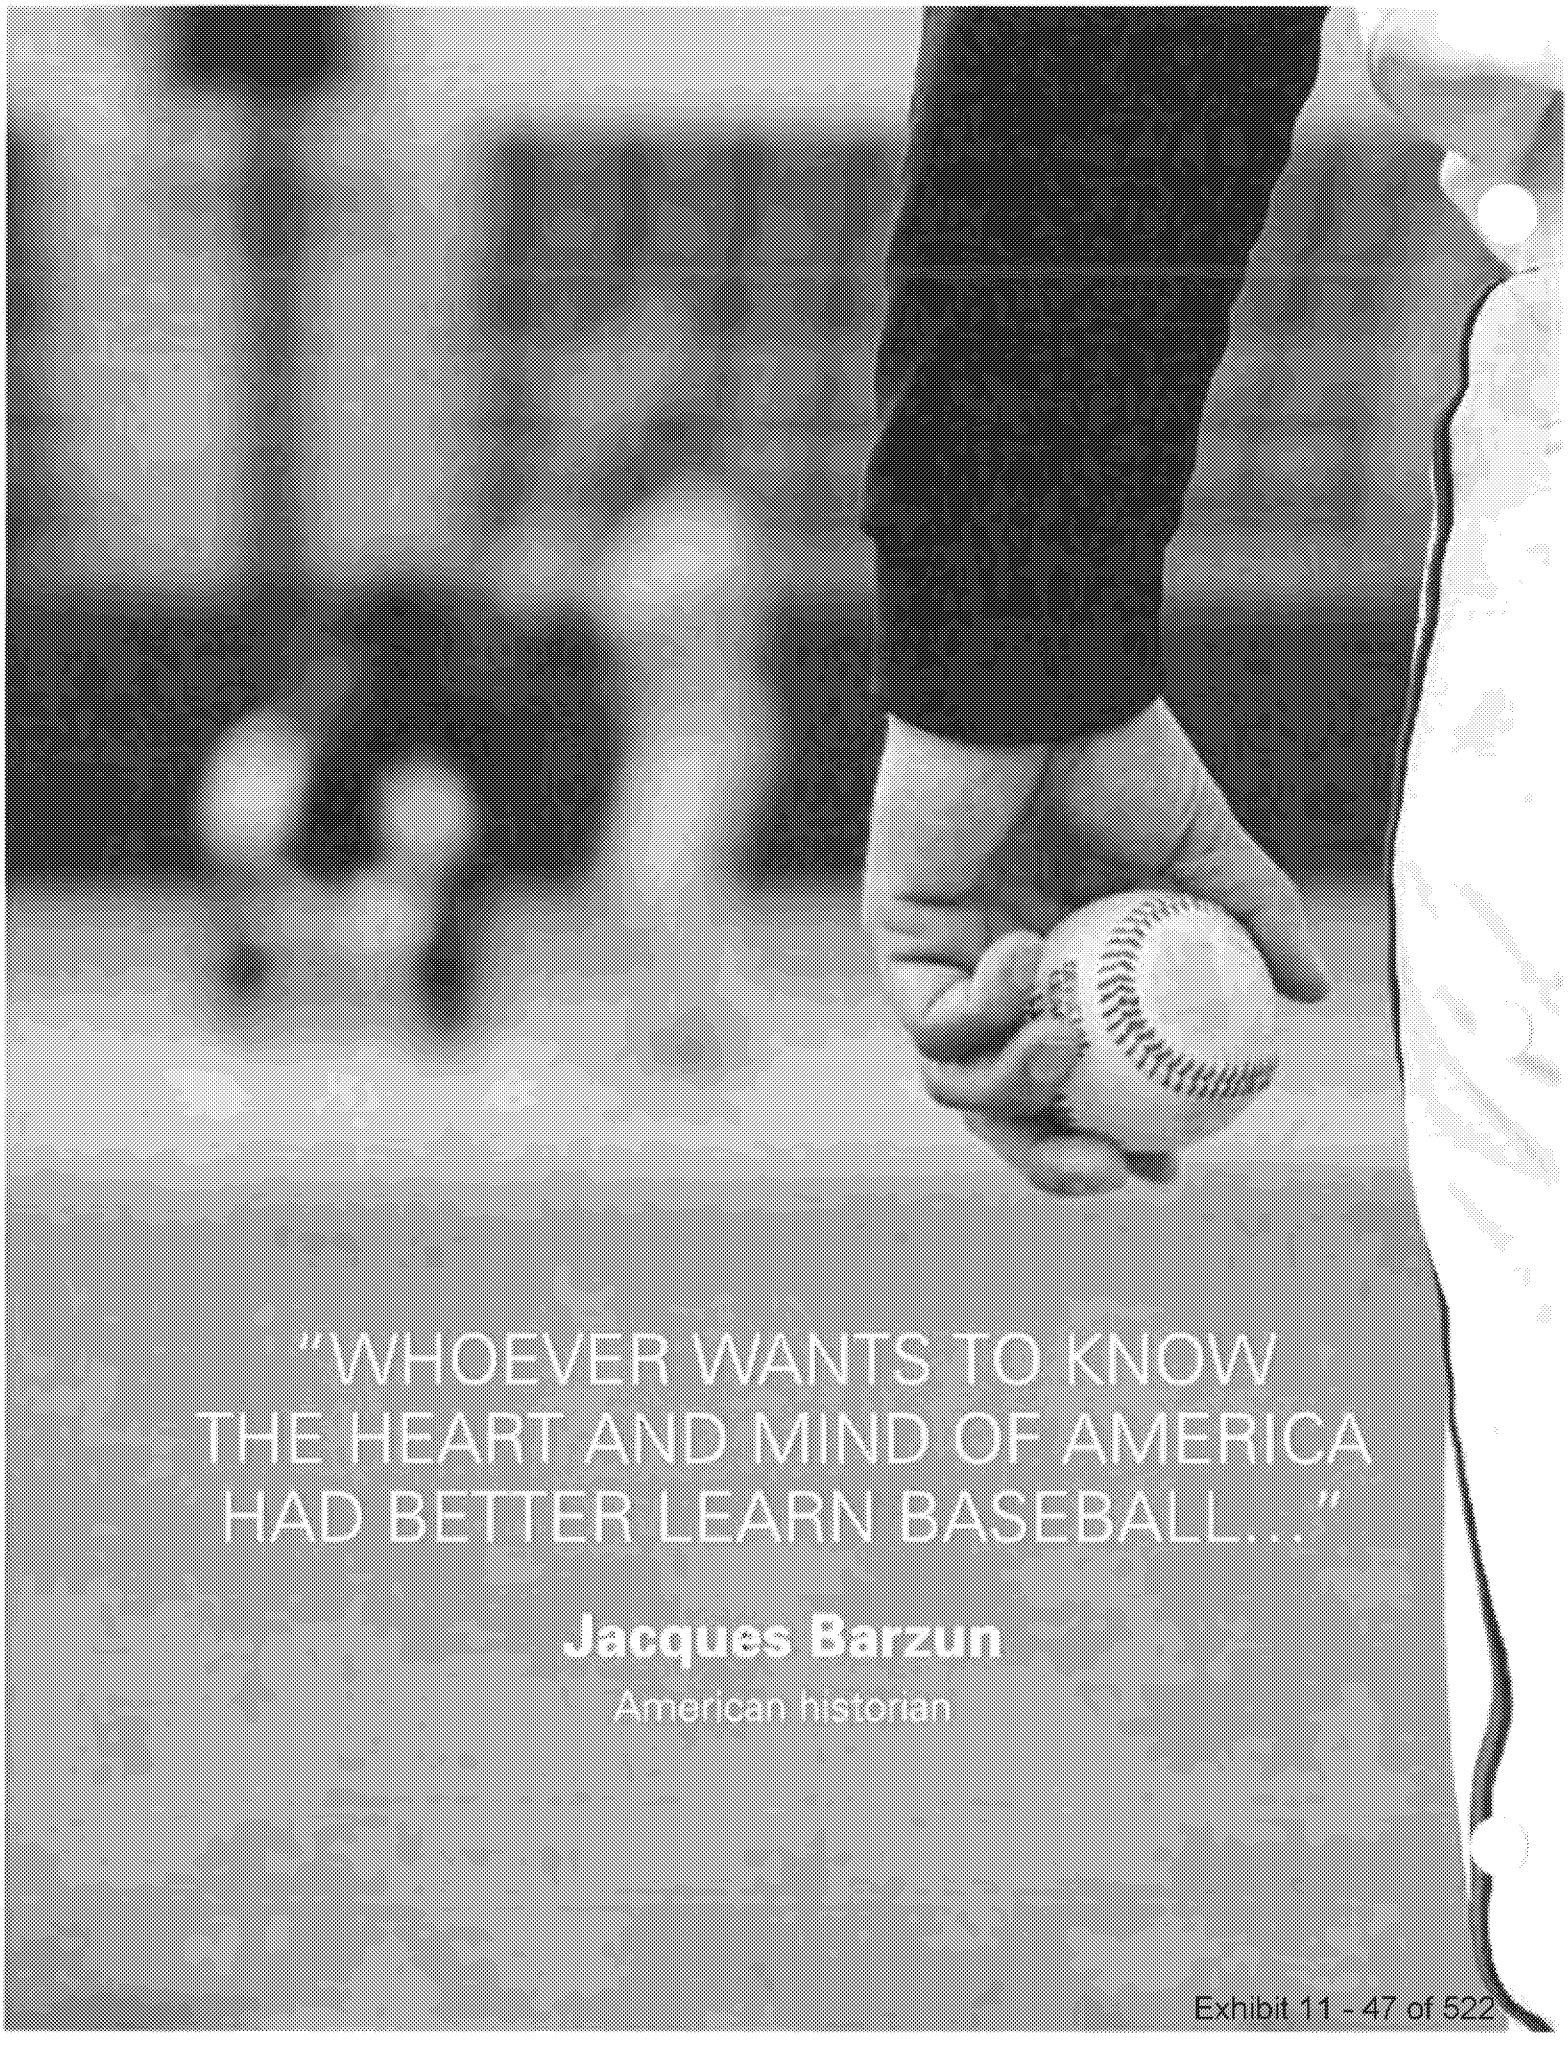
Robert Redford,
NRDC Trustee,
and father of the sports greening movement.



"WHOEVER WANTS TO KNOW
THE HEART AND MIND OF AMERICA
HAD BETTER LEARN BASEBALL..."

Jacques Barzun

American historian

Having been honored to serve as the Commissioner of Major League Baseball since 1992, I have often said that our game is a social institution with enormous social responsibilities. I still often marvel at the examples of Jackie Robinson, whose courage generated what remains our game's proudest and most powerful moment, and Roberto Clemente, whose spirit of humanitarianism shines a light on the difference that one person can make for those in need.

Forty years after Jackie Robinson and Roberto Clemente left us all too soon, their vibrant legacies continue to remind us of the impact that our game, as a common thread for so many, can have on important social issues. One of those issues is care for our environment. As an outdoor game played in fields, parks and backyards across the country and around the globe, our sport is closely aligned with the environment. I am proud that Major League Baseball has taken substantial action to do its part to protect it.

In 2006, I was introduced to the Natural Resources Defense Council (NRDC) by Bob Fisher, a principal partner of the Oakland Athletics and an NRDC trustee. MLB then began an alliance with NRDC to identify and promote best sustainable operating practices and to coordinate and share existing practices by the Clubs. Soon thereafter, Major League Baseball conducted a survey of all 30 of our Clubs, documenting the broad range of sound environmental practices that they have implemented in their communities. Guided by NRDC, Major League Baseball used the results to develop an environmental stewardship program—the first designed by a professional sports league. Since then, MLB has assembled operations guides tailored to each Club, incorporated environmentally sensitive practices into the World Series and All-Star Week, and created a software program to collect and analyze stadium operations data. These efforts have helped us formulate a series of best practices, which have reduced the environmental footprint of our 30 Clubs.

In 2011, more than 73 million fans attended Major League games. In addition to recycling paper, cans and bottles at its 2,430 regular-season games each year, Major League Baseball has a significant global platform from which its fans can be educated about the importance of environmental stewardship. Our Clubs have helped instill in fans the practical steps they can take in order to make a difference. Collectively, the potential environmental reduction that can be achieved is meaningful.

While there is more work to be done, it is my great hope that the work of Major League Baseball and its Clubs can stand as an example and inspire others to join in this vital effort. Major League Baseball pledges to continue to devote its time, energy, influence and resources toward making lasting contributions to our fans, their communities and our society as a whole.

In my two decades as Commissioner, I have seen our sport take important strides forward on this essential issue. Environmental stewardship resonates with all of us who love baseball and seeing it played on green grass and under blue skies. As we strive to fulfill our social responsibilities, the national pastime will continue to protect our natural resources for future generations of baseball fans and set an example about which they can be proud.

Major League Baseball Commissioner Allan H. (Bud) Selig

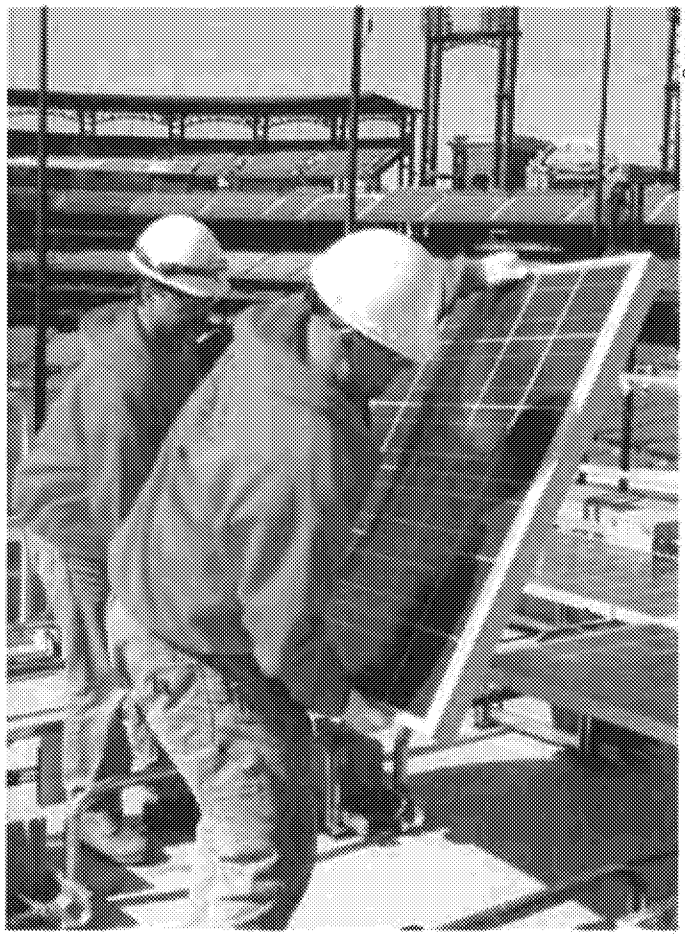
TABLE OF CONTENTS

EXECUTIVE SUMMARY

The professional sports industry includes some of the world's most iconic, inspirational and influential organizations. In a cultural shift of historic proportions, the sports industry is now using its influence to advance ecological stewardship. North America's professional leagues, teams and venues have collectively saved millions of dollars by shifting to more efficient, healthy and ecologically intelligent operations. At the same time, the sports greening movement has brought important environmental messages to millions of fans worldwide. Sport is a great unifier, transcending political, cultural, religious and socioeconomic barriers. It also wields a uniquely powerful influence, both cultural and economic, that provides much-needed leadership in sustainable practices and, in so doing, promotes a nonpolitical public commitment to environmental protection.

This report provides a collection of never-before-assembled case studies of the sports industry's most prominent and successful greening initiatives from across North America. In compiling this information, our goal is to celebrate the sports industry's growing embrace of environmental stewardship as more and more sports leagues, teams and venues invest in energy efficiency, water conservation, recycling, renewable energy, safer chemicals and fan engagement focused on remedying some of our most pressing environmental problems. A principal objective of this report is to educate sports professionals, their supply chains and millions of fans about the business case for greening, from achieving cost savings and enhancing brands to developing new sponsorship opportunities and strengthening community ties.

The sports greening success stories featured in this report provide valuable lessons for organizations of all types, whether they are involved with the sports industry or not, highlighting what teams, venues and league jewel events are doing to protect our planet and educate their fans. Each of the team and venue case studies includes four sections that help explain the greening process: (1) Why go green: what motivated teams and venues to start greening? (2) Where to start: how did teams and venues begin, who was involved, and which greening initiatives were investigated first? (3) Challenges overcome and ongoing: challenges teams and venues faced, tactics they used to meet these challenges, and hurdles they still face; and (4) Lessons from the field: important lessons from team and venue experiences as they implemented their green initiatives.



©Microgrid Solar

PROFESSIONAL SPORTS IS PROVING THE BUSINESS CASE OF GOING GREEN

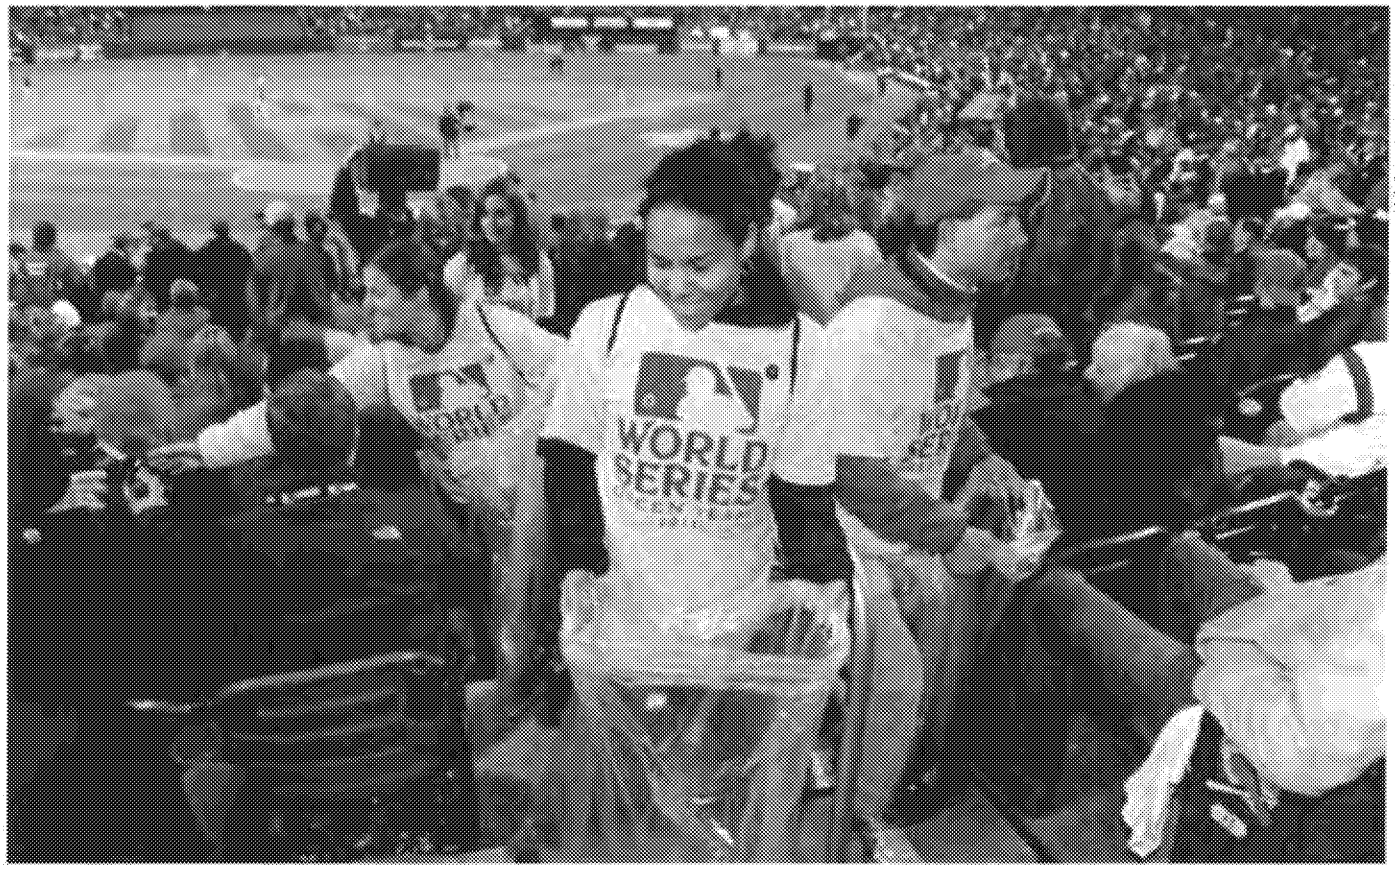
- **Greening provides direct financial savings:** In this report you will learn about the team that saved approximately $1.5 million in utility costs (electricity, natural gas, water and sewer service) from 2006 to 2011 by reducing natural gas use by 60 percent, electricity use by 30 percent and water use by 25 percent. In this report you will also learn precisely how much it cost one major arena in the southeast to achieve LEED Certification.
- **Greening attracts sponsors:** In this report you will learn about the venue that saved $1.6 million in a single year due to its greening efforts; it also attracted about $1 million in new corporate sponsors that aligned with the greening efforts.
- **Greening provides competitive advantage to attract tenants and entertainment clients:** This report includes a profile of the venue where being environmentally conscious has significantly improved brand image and provided a point of market differentiation, which has attracted new clientele and corporate partners. For this venue, going green has provided a platform to attract entertainers who want to play in green venues.
- **Greening enhances the fan experience:** In this report you will learn about one team's efforts to post recycling signs around its venue and provide recycling bags for tailgaters, an initiative that resonates so much with the community that fans roll up their sleeves to help hand out and fill up the recycling bags, which are later picked up by the team.
- **Greening strengthens community ties:** Aside from the operational benefits of going green, this report will tell you about the team that says it has received only positive feedback about its greening initiatives, including thousands of favorable media articles, local community achievement awards and immense fan applause, proving these efforts are worthwhile beyond the business case by representing the core values of the surrounding community. You will also learn about the largest public recycling event in the history of New York City, sponsored by Major League Baseball.
- **Greening builds local economic growth:** You will also learn about one team's investment in onsite renewable energy, which not only directly benefits the environment but also contributes to local clean-tech jobs and helps to boost the local economy by stimulating the state's clean-tech manufacturing industry.

Key findings from the case studies include these:

- All Commissioners of professional sports leagues in the United States have made commitments to environmental stewardship and are actively encouraging the teams in their leagues to incorporate sustainable measures into their operations.
- 15 professional North American stadiums or arenas have achieved LEED green building design certifications, 18 have installed onsite solar arrays, and virtually all have developed or are developing recycling and/or composting programs.
- Among all sports leagues, Major League Baseball has the best-developed environmental data measurement program, followed by the National Hockey League and the National Basketball Association.
- Of the 126 professional sports teams in the five major professional North American leagues, 38 teams have shifted to renewable energy for at least some of their operations, and 68 have energy efficiency programs.
- All of the large sports concessionaires, that collectively feed tens of millions of people each year, have developed environmentally preferable menus for at least some of their offerings.
- All Jewel events, including the World Series, the Super Bowl, the Stanley Cup playoffs, the NBA Playoffs and Finals, the MLS Cup, the US Open Tennis Championships and all of the league All-Star Games, now incorporate greening initiatives into their planning and operations.
- All leagues educate their fans about environmental issues, in particular the need to recycle and to reduce energy and water use.

Perhaps most important, millions of pounds of carbon emissions have been avoided, millions of gallons of water have been saved, and millions of pounds of paper products are being shifted toward recycled content or eliminated altogether.

Certainly much work remains to be done, but it is heartening to note that teams and leagues across North America are implementing meaningful changes and educating tens of millions of fans about environmental stewardship. Collegiate athletics, alongside minor leagues, high school athletics and other organized youth sporting events, are the next frontier for the sports greening movement. Many college athletics departments nationwide have already undertaken impressive environmental initiatives, from LEED-certified facilities and onsite solar arrays to recycling challenges between schools. Colleges are just beginning to tap into the enormous potential to benefit their bottom line and engage their huge communities of sports fans on issues of environmental stewardship.



©MLB Photos/ Tim Parker

THE SPORTS INDUSTRY OFFERS THE POTENTIAL FOR UNPARALLELED OUTREACH TO MILLIONS OF FANS AND BUSINESSES VIA THE SCREENING OF ENVIRONMENTAL PUBLIC SERVICE ANNOUNCEMENTS (PSAS) AND OTHER FORMS OF FAN ENGAGEMENT. FOR EXAMPLE, TO DATE THE SPORTS GREENING PSAS THAT NRDC CREATED IN PARTNERSHIP WITH THE NBA, THE NHL, MLB AND THE USTA HAVE REACHED AN ESTIMATED 45 MILLION PEOPLE VIA BROADCAST TELEVISION AND IN-ARENA SCREENINGS. SEE THESE VIDEOS ABOUT THE IMPORTANCE OF ENVIRONMENTAL STEWARDSHIP AT WWW.NRDC.ORG/GAME-CHANGER.

The motivation for sports to engage in greening is simple. The games we love today were born outdoors, and without clean air to breathe, clean water and a healthy climate, sports would be impossible. In fact, nature is the ultimate source of all economic value. No commerce or culture is possible without clean air and water; fertile topsoil; a chemically stable atmosphere; raw materials for food, energy and medicine; or the natural processing of waste by the millions of species inhabiting our soil, water and air. It is the availability of these wells of natural capital that makes sports and other types of human activities possible. Business leaders must devote the same level of effort to keeping this natural capital intact that they devote to more traditional capital. The sports industry's increasing demand for ecologically better products can help industrial leaders understand and embrace that goal.

This report is a celebration of the sports industry's impressive environmental accomplishments to date, of the extraordinarily important work being done largely behind the scenes, out of the spotlight. This document confirms that going green is savvy business, enabling teams and venues to cut operating costs, strengthen corporate branding, attract sponsors and enhance the fan experience, while providing many environmental benefits. Ideally, the practical examples and expert recommendations included in this report will inspire many more sports teams, and the businesses that service them, to follow their good example. The lessons from those who manage sports facilities will help us move toward ecological stability, crucial for social and economic prosperity. Current and future generations depend on these efforts, and on the prospect that others the world over will notice and emulate this industry's inspiring greening work.

CHAPTER 1: WHY GREENING SPORTS MATTERS

The sports industry's growing embrace of energy efficiency, renewable energy, recycling, water conservation, safer chemicals and healthier food is educating millions of fans about the importance of protecting the environment and natural resources on which we all depend. Through their leadership on the field, court or rink, professional and collegiate sports—and their sponsors—are showing their many fans practical, cost-effective solutions to some of our planet's most dire ecological issues.

Sports leagues, teams and venues are adopting environmental practices to improve their operations and save money while using their unique cultural and economic influence to demonstrate to thousands of businesses and millions of people how to be better environmental stewards. Yet, despite the impressive strides this industry is already taking to protect the environment, the sports greening movement is just beginning. The potential is enormous for professional sports to help move society toward more sustainable practices and lead our economy to a stronger future.

It goes without saying that sports are a hugely popular, economically influential industry. And while team loyalties vary and sports management practices differ, there is one thing we can all agree on: Sports belong to no particular political party. Consequently, perhaps no other industry is better suited to confirm that environmental stewardship has become a mainstream, nonpartisan issue. Hundreds of millions of people of all political, social, religious and economic backgrounds watch sporting events each year, and the global supply chain of the sports industry includes the largest and most influential corporations in the world. In fact, while only 13 percent of Americans say they follow science, 61 percent identify themselves as sports fans.[1]

Consider how culturally influential sports can be: Jesse Owens in 1936, debunking the Aryan supremacy myth. Billie Jean King beating Bobby Riggs in the first female-versus-male professional tennis match, a big step toward pay equality. Passage of Title IX, leading to financing for women's athletics. Muhammad Ali's conscientious objection to the Vietnam War and his role as a spokesman for civil rights. Magic Johnson's openness about his HIV/AIDS infection, which helped to destigmatize that illness. Jackie Robinson breaking the race barrier in Major League Baseball.

Consider as well the combined visibility and market influence of the Super Bowl; the World Series; hockey's Stanley Cup playoffs and Winter Classic; the NBA playoffs and finals; the US Open Tennis Championships; the pro basketball, baseball, hockey and soccer all-star games; and international soccer's World Cup competition. Now consider the value of mobilizing that combined influence to promote greening.

Greening is the process of reviewing operations and procurement policies with an eye toward reducing environmental impacts. It is an ongoing enhancement process that all businesses need to engage in to advance sustainability. The ecological threats we face are real. We have a narrowing window of opportunity in which to limit the ecological damage we are causing, to reduce global warming impacts, to save our oceans and the fisheries they support, and to protect biodiversity and our last remaining wild spaces.

If the sustainable economy does not exist, then it needs to be built. Overwhelmingly it will be built by the private sector. Government, of course, has an irreplaceable role to play in building the infrastructure needed for commerce and culture. Government must also encourage ecologically intelligent private sector investments through incentives and smart regulations. To date, however, government has failed to provide incentives and regulations that will adequately encourage sustainable investments at the scale needed. Indeed, most government incentives and regulations continue to encourage and subsidize ecologically ignorant manufacturing.

There is no single business undertaking or law that can solve our many ecological problems. Rather, it will require countless contributions from every corner of society. However small our day-to-day actions may seem, our collective purchases add up to meaningful regional and global impacts. Most individuals and businesses can do only relatively small things, whether it's buying products made with recycled content, purchasing renewable energy, driving a fuel-efficient car, or conserving water. What is clear, however, is that everyone has to do something to address the ecological pressures we collectively face. And the many small ecological initiatives being implemented throughout the world of sports are adding up, offering us the hope that we can turn current ecological trends around.

Pages intentionally omitted

programs launched in 2011 that include metal tennis ball can top recycling, and composting in kitchens and the Food Village dining area. In addition to collecting organic waste from kitchens and restaurants for composting, cooking oil is recovered for conversion into biodiesel fuel. The Open's landfill diversion rate increased by almost 30 percent in 2011 from 2010, with over 200 tons of waste diverted from landfill.

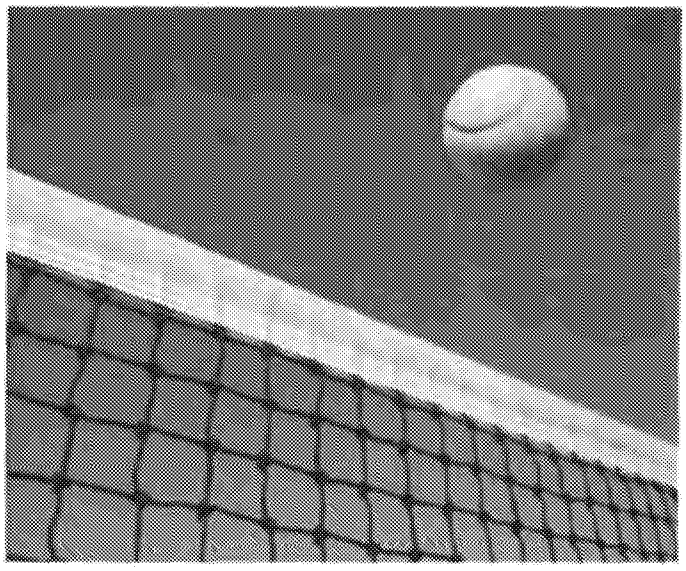
■ **REUSE:** 70,000 tennis balls used during the matches and practices at each Open are reused by USTA tennis programs or donated to community and youth organizations throughout the country.

■ **FOOD:** Levy Restaurants provides ecologically preferable paper products made from post-consumer recycled paper, switching 2.4 million virgin paper napkins to 100 percent post-consumer content in 2008. In addition, through its partnership with Levy, the US Open's local and organic food offerings represented 34 percent of the menu in 2011, with expanded use of organic produce and meats from local farms, and all food serviceware in the Food Village was compostable.

■ **PAPER:** In 2008, the USTA switched the paper it used for game day drawsheets to 100 percent post-consumer recycled content, and in so doing saved 2,123 gallons of wastewater and avoided generating 441 pounds of CO_2-equivalent greenhouse gases and 129 pounds of solid waste. Currently, all paper products used on the grounds, including tickets, maps, tournament guides, restaurant passes, parking flyers, and napkins, include at least 30 percent post-consumer content. Many printed materials (program, drawsheet, etc.) are printed on paper certified by the Forest Stewardship Council. All paper towel dispensers have been replaced with motion-sensor dispensers.

■ **TRANSIT:** The USTA encourages US Open fans to use public transportation during the tournament, including a program first funded by NRDC and now supported by Esurance that distributes over 2000 metro cards to attendees, and through US Open-specific MTA advertisements urging fans to take the subway to the USTA Billie Jean King National Tennis Center. In 2011, 60 percent of fans took mass transit to the US Open, up from 32 percent in 2000.

■ **OUTREACH:** NRDC produced environmentally-educational PSAs featuring Venus Williams, Billie Jean King, and doubles champions Bob and Mike Bryan that were shown throughout the grounds of the USTA Billie Jean King National Tennis Center, including on the Arthur Ashe Stadium jumbotron, at the 2008 US Open (and at subsequent USTA events). The PSAs educated fans and attendees about the environmental benefits of recycling, taking mass transit, buying local and organic food, and using recycled-content



paper, as well as directing them to www.nrdc.org for more information. Two additional Green USTA PSAs produced in 2010 feature Alec Baldwin. NRDC's Eco-Tips reminding fans to reduce, reuse, and recycle are promoted in the US Open Daily Draw-Sheet, at USOpen.org/USTA.com, and in voice announcements heard throughout the grounds. Over 100,000 wallet-sized NRDC eco-tips cards were distributed to 2008 US Open attendees, directing fans to www.nrdc.org. In 2011, the USTA began posting these tips through its social media channels.

■ **MERCHANDISE:** Green products featured as part of the overall US Open Collection of merchandise have included 100 percent organic cotton t-shirts (designed by Heidi Klum and Billie Jean King), hats comprised of 50 percent post-consumer plastic (each hat containing the equivalent of two one-liter recycled plastic bottles), cinch backpacks (each containing the equivalent of six recycled plastic bottles), and reusable totes made from 80 percent post-consumer content. A portion of the proceeds from the US Open organic collection was donated to Unisphere, Inc., the non-profit organization dedicated to maintaining and preserving Flushing Meadows Corona Park, home of the US Open.

"The USTA is committed to reduce its ecological impact and continuously seeks new ways to be at the forefront of the global effort to preserve the environment," said Gordon Smith, executive director and chief operating officer, USTA. "Our dedication to US Open's greening efforts will create a lasting legacy for the environment, as well as encourage tennis fans from all over the world to be environmental stewards."

"If we just take small steps," adds Billie Jean King, "it will lead to big change."

NATIONAL BASKETBALL ASSOCIATION ALL-STAR GAME AND GREEN WEEK

The NBA began working with NRDC's sports greening project in 2007 to enhance the environmental profile of the league. NRDC and NBA launched the league's greening initiative by creating an environmental policy statement that established the league's goal to improve their environmental performance, and presented their sustainability initiative as an institutional priority.

"Through the NBA Green initiative, the league and its teams are taking steps to become a more environmentally responsible organization," said NBA Commissioner David Stern. "With the NRDC's invaluable partnership, we have implemented recycling programs, installed energy- and water-saving fixtures, encouraged the use of sustainable supplies, and promoted the use of mass transit. We know there is more we can do, and we look forward to continuing to work with the NRDC and our teams to help protect our environment."

During the launch of the NBA's green initiative, NRDC assisted the league with environmental assessments at their front offices and at the NBA Store in New York City. NRDC offered strategic advice to the NBA Store on improving their procurement and operational practices, including waste and paper reduction, better paper procurement, low-VOC and environmentally friendly cleaning products and paints, an improved recycling program, and energy-efficiency improvements. At NRDC's suggestion, the NBA removed all plastic items containing the chemical BPA that might come in contact with children. This NBA initiative was four years before the U.S. FDA recommended removing BPA from plastics.

Environmental features have also been incorporated into the NBA's offices and staff events. For instance, the NBA's company-wide picnic in June 2009 reduced the use of disposable utensils, recycled all aluminum cans and plastic bottles, and used 100 percent post-consumer recycled paper products such as sandwich wrap, inner cartons and trays, napkins, and shopping bags.

Soon after the launch of the league's environmental initiative, the "NBA Green" program was formed under the NBA's philanthropic NBA Cares program, and NRDC created customized Greening Advisors that were distributed to all NBA teams and posted on the NBA's HomeCourt intranet site. These web-based advisors provide a comprehensive toolkit for teams and arenas to green their operations.

In an effort to highlight their growing environmental initiatives and engage fans, sponsors, partners, and players, the NBA held its first-ever NBA Green Week in April 2009 at all NBA arenas around the country. As with subsequent Green Weeks, the league held auctions to support environmental efforts, sponsored hands-on community service projects, and featured special on-court apparel.

The inaugural 2009 Green Week also marked the launch of the NBA Green website at www.nba.com/green, including NRDC green tips for home and office, videos and news about team and player greening efforts, and links to resources such as NRDC's Greening Advisor for NBA. In early 2012, the NBA collaborated with NRDC to produce a public service announcement about the league's greening initiative. This PSA was shown in all arenas and on broadcast TV, including ESPN, ABC-TV, TBS, and TNT, as well as NBA-TV, and was viewed by more than 17 million people. The PSA showcased NBA's commitment to renewable energy, recycling, water conservation, and reduced packaging. NBA plans to air this PSA each Green Week in the future, and possibly during its All-Star Game and playoffs.

"One of the things we do well at the NBA is share information and best practices among all of our teams," said Kathy Behrens, executive vice president of social responsibility and player programs for the NBA. "We're

obviously incredibly competitive when it comes to the game and the action on the court. But off the court, we really focus on the things that we can learn from each other, and a lot of what you see on the NBA Green website is really designed to help educate our teams and fans."

The NBA continues to sponsor Green Week each year, working closely with NRDC to continuously improve environmental attributes.

For example, the NBA engages in a number of environmental messaging initiatives. The league's official outfitter, adidas, has provided All-Star players with shirts featuring the NBA Green logo and made from 50 percent recycled polyester. During nationally broadcast games throughout Green Week, players also wore NBA Green headbands, wristbands, and socks made from 45 percent organic cotton. NBA.com held an online auction of Spalding basketballs incorporating 40 percent recycled content and autographed by NBA players. The NBA Store, NBAStore.com, and select team retailers also offered organic cotton NBA Green t-shirts, hats, socks, headbands, and wristbands for purchase, along with recycled-content Spalding basketballs.

Each of the league's 30 teams hosts Green Week community service events such as tree plantings, recycling drives, and park clean-up days to encourage fans to get involved in the league's greening initiative. Teams have also hosted in-arena Go Green Awareness Nights, including promotions of "greener living" tips and auctions to support environmental protection organizations.

"Thanks to great guidance from the NRDC, the NBA and our teams continue to implement new measures to reduce energy consumption and waste throughout all of our business areas," said Kathy Behrens. "NBA Green Week highlights the importance of environmental protection while encouraging fans to do their part by incorporating green habits into their daily lives."

In 2010, league partner HP worked with the Miami HEAT, the Houston Rockets, and the Dallas Mavericks on special service projects throughout NBA Green Week, including a beach clean-up event, and refurbishing homes with Rebuilding Together.

Also during the 2010 NBA Green Week, the NBA Store in New York City hosted a footwear drive to collect slightly worn athletic shoes for donation to Hoops 4 Hope, a global nonprofit organization teaching life skills through basketball to youth in southern Africa. Customers who brought in shoes received a 20 percent discount on purchases of new athletic shoes.

During the 2011 NBA Green Week, the NBA and Sprint launched a Facebook application called "Unlimited Acts of Green," designed to help fans make greener choices in their daily lives. The app included a list of green acts for fans to select from, including cell phone recycling, and displayed the resulting environmental benefits associated with all fan pledges, including amounts of greenhouse gases, electricity, and water saved.

Other NBA event greening initiatives have included:

- NRDC assisted in greening NBA's EuropeLive tour in October 2008, which featured NBA games in four countries in Europe. The 02 arenas being used in London and Berlin were a showcase for sustainability, as they already had in place many environmental features. In London, this included the diversion of 100 percent of food waste for composting and 100 percent of used cooking oil for biodiesel; advanced recycling programs for glass, plastic, paper, and cardboard, which diverted 60 percent of all waste from landfills; a rainwater catchment and recycling system and other water conservation measures; enhanced transportation options that enabled 75 percent of attendees to take mass transit; and energy-efficient lighting, HVAC equipment, and building structure.

- NRDC began its NBA All-Star Game greening collaboration at the 2008 NBA All-Star Game in New Orleans by arranging for an energy audit of the New Orleans Arena and adjacent Louisiana Superdome and Convention Center. NRDC helped the NBA to improve the existing recycling program at the arena to include plastic bottles and aluminum cans, to procure 100 percent recycled content bathroom tissue at the arena, and to provide hybrid cars for staff transportation during the event.

- The 2009 All-Star Game in Phoenix provided the US Airways Center with a chance to showcase their newly installed solar power system. The 1,100-panel solar array, spanning 18,000 square feet atop a parking garage at the arena, is capable of generating approximately 332 MW of energy annually. That's enough energy to power the US Airways Center for 26 Suns home games—the equivalent of eliminating the release of 44,000 pounds of carbon dioxide each year. The NBA also purchased Green-e certified windpower RECs from Arizona Public Service, the US Airways Center's utility, to offset the equivalent of 1,500 megawatt hours of power used at the 2009 All-Star Game. Additionally, the NBA purchased carbon offsets for all generator use at US Airways Center during the All-Star Game, and for the All-Star Game Jam Session and NBA Block Party.

- The 2009 All-Star Game also incorporated comprehensive recycling and waste reduction efforts. An expanded recycling program was implemented at US Airways Center, NBA All-Star Jam Session, the NBA All-Star Block Party, the Phoenix Convention Center, and Heritage Square (during the NBA welcome party) for plastic bottles and aluminum cans. Recycling PSAs were aired in US Airways Center and at the Jam Session and NBA Block Party to remind all attendees to recycle their cans and bottles at all events.

- The 2009 All-Star Game also encouraged and promoted public transportation options with maps, schedules and information provided through the Jam Session website. Paper products, including Jam Session brochures, credentials, office copy paper, media guides, and tickets, were printed using soy inks on paper with post-consumer recycled content that was manufactured using windpower.

Subsequent All-Star Games have continued to expand on these positive environmental initiatives, incorporating individual measures appropriate to each venue. Some additional examples of NBA All-Star Game successes include:

- Ongoing purchase of renewable energy credits and carbon offsets to balance power consumed at the All-Star Games.
- Expanding recycling services in facilities used in All-Star events.
- Avoiding potentially harmful polyvinyl chloride (PVC) plastics in producing banners.
- Showcasing the use of an electric vehicle used for Jam Van, with solar panels powering interior accessories.

In addition, the NBA has partnered with host cities and recycling organizations, as well as companies such as Sprint, to conduct electronics recycling drives in conjunction with All-Star Games and Green Week. The NBA and its partner organizations encourage fans to bring electronics nearing their end of life to their e-recycling events, where they are recycled responsibly by e-Steward certified organizations. Fans dropping off electronics for recycling receive prizes such as tickets to NBA All-Star Jam Session, a four-day interactive basketball event featuring more than 500,000 square feet of NBA All-Star entertainment. During the NBA All-Star Games 2012 in Orlando, the NBA and Sprint collected 23,000 pounds of used electronics for recycling.

LESSONS FROM THE FIELD

CREATE THE RIGHT WORK ENVIRONMENT: For those just getting started or struggling to get green initiatives off the ground, Costa suggests going back to basics by creating the right work environment for success. "You've got to really circle the wagons. You need to create a different mindset and environment based on cooperation," he explains. "Meet and talk through every aspect of these issues, from the financial to the emotional to the practical to the fundamental realities of your business and partners."

ESTABLISH A DIVERSE AND DEDICATED GREEN STEERING COMMITTEE (ESPECIALLY FOR PURSUING LEED): Start by getting the right people together. "We'd recommend establishing a steering committee made up of a variety of people from many departments within the company and from external partners that come together and are dedicated to the process," says Costa. "The desire and the resources all need to be in alignment to make it happen. No single person can get this done. You need a collaborative group of people with the vision, passion and commitment to put their money where their mouth is. That takes courage and conviction."

INVOLVE ALL PARTNERS: Given the complex nature of ballpark services, the Giants involve all venue stakeholders including PG&E (sponsor), ABM Services (building and facilities management), Centerplate (hospitality and concessions), Toro Irrigation (landscape management), and Recology (waste management) to ensure successful ballpark-wide integration of green initiatives. They also recommend capitalizing on the opportunity to share your green story by having your partners assist you in telling it. Involving stakeholders will increase the volume of your voice and the penetration of the message.

HOLD REGULAR GREEN MEETINGS TO STAY ON TOP OF MARKET TRENDS: Costa likens the rapidly changing green-tech space (such as the lighting industry) to the Apple iPad. "What's good yesterday may not be so good tomorrow, and you find yourself constantly questioning when to invest in upgrades if newer and newer versions continue to be released," he explains. "The iPad is actually a great analogy for what it feels like trying to stay on top of the many increasingly efficient technologies available in the marketplace." For instance, Felder points out, "the packaging that was available five years ago wouldn't have allowed us to be where we are now."

The Giants use regular meetings with their partners to keep themselves informed on new products. "We do evaluations of our product use during every home stand and have regular meetings with our partners on an ongoing basis. We use a combination of internal staff research and the advice of external partners like PG&E, Recology and Centerplate to vet the market for new products and technologies," says Costa. "Centerplate is a particularly helpful resource because they are able to learn a lot from working with a lot of venues across the country on these issues."

"We also look for technological trends in the marketplace," adds Felder. "ABM, our engineering group, has done a lot of work with us on lighting and does a lot of research on electronic products for us."

COORDINATE WITH OTHER BUYERS TO HELP WITH PRODUCT COST AND AVAILABILITY: Partner with other teams, venues and even other companies in your area to harmonize purchasing requests and build the market for environmentally friendly products.

GOING GREEN IS AN INVESTMENT: "The single greatest issue that we face today is that it's not inexpensive to go green. That's just being flat-out honest," say Costa. "You will need to spend some money." Though Costa believes strongly in the benefits of increased efficiency (including resource savings, financial savings, favorable press, brand enhancement, environmental benefits, public health benefits and the strengthening of community ties), he says, "You are constantly balancing cost and the willingness of your partners to adapt."

"Achieving LEED certification is a six-figure application process and requires you to devote staff resources almost exclusively to the LEED application," points out Costa. "It took us about 14 months from the time we started at the beginning of 2009 until we got certified in March of 2010." Felder agrees that large projects like pursing LEED certification may be difficult to justify financially in the short term. "You could say that LEED certification was an expense that might have been hard to justify, but what we're finding is that it really does pay off over time."

PURSUE GREEN INITIATIVES INCREMENTALLY: It's often more affordable to pursue incremental upgrades and work your way around a facility. "No one can do it all at once, unless they have unlimited resources," says Costa. "Most teams need to take on smaller, incremental initiatives that you orchestrate the right way, in concert with your whole system, to continue to make progress every day," he explains. "We take a dogmatic, methodical approach to greening."

Case Study

AMERICANAIRLINES ARENA, HOME OF THE MIAMI HEAT

ARENA STATS

Location: Miami, Florida
Began Construction: February 6, 1998
Opened: December 31, 1999
Seating Capacity: 19,600
Owner: Miami-Dade County
Operator: Basketball Properties Ltd.
Venue Uses: NBA games, WWE wrestling matches, family shows and concerts
Construction Cost: $297 million (in 2012 dollars)
LEED Certification: Certified LEED for Existing Buildings: Operations and Maintenance in April 2009

THE HEAT'S GREENING STORY: MOTIVATIONS, CHALLENGES AND LESSONS FROM THE FIELD

The Miami HEAT have been sports industry leaders in green building initiatives and comprehensive tracking of facility-wide resource use since AmericanAirlines Arena became LEED-certified for existing buildings: operations and maintenance (EBOM) in the spring of 2009. For the better part of a year the HEAT worked on enhancing their operations in a race against the Atlanta Hawks to win the first LEED Certification for an arena in the National Basketball Association. The showdown culminated in a dead heat when the Green Building Certification Institute, a subset of the U.S. Green Building Council, awarded AmericanAirlines Arena and Philips Arena, the home of the Hawks, LEED certification on the same day, April 7, 2009.

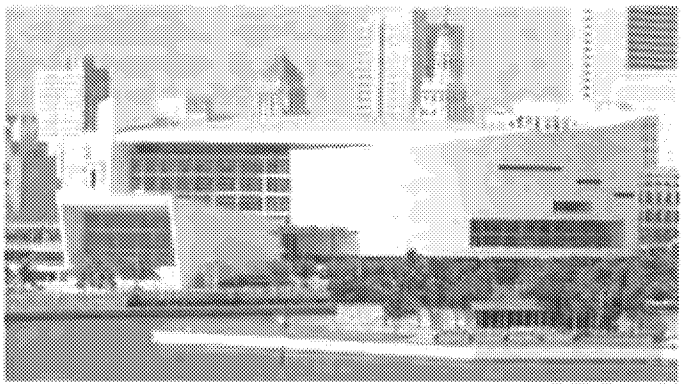
With a LEED certification under their belt, and many cost benefits and positive press mentions to boot, the HEAT are now working toward LEED recertification in 2014, which requires improving on all of their 2009 efficiency achievements.

"IT'S A POINT OF DIFFERENTIATION FOR US FROM A BUSINESS PERSPECTIVE. IT PROVIDES A PLATFORM FOR US TO ATTRACT ACTS AND ENTERTAINMENT THAT WANT TO PLAY IN GREEN VENUES," says Eric Woolworth, president of the HEAT Group's business operations.

WHY GO GREEN?

According to Jackie Ventura, operations coordinator for the HEAT Group, the direct benefits of greening and LEED certification include financial savings, attracting green-based sponsorships, brand enhancement, competitive advantage, raised community profile and improved company culture. "Sustainability equals savings. In one year, thanks to our greening and responsible energy consumption measures, we saved $1.6 million," says Ventura. "We also attracted about $1 million in new corporate sponsors, which include Home Depot and Waste Management, who aligned with our greening efforts as sponsors of our LEED initiative. Being environmentally conscious improves our brand's image so that we now talk with companies that never would have approached us before, such as Johnson & Johnson and Georgia Pacific."

The HEAT also include their green accolades in their pitch to attract performing artists to their arena. When the team first announced its LEED certification and ongoing commitment to greening in 2009, Eric Woolworth, president of the HEAT Group's business operations, said, "It's a point of differentiation for us from a business perspective. It



©Miami HEAT

STANDOUT GREENING ACCOMPLISHMENTS

- The HEAT's energy efficiency initiatives have enabled the AmericanAirlines Arena to consume 53 percent less energy than the average facility of similar size and use, according to EnergyStar's Portfolio Manager.
- The organization replaced 240 lamps in the arena's concession stands and merchandise locations with compact fluorescent lights (14-watt bulbs replaced 60-watt bulbs). This move saves $976 annually and recouped the capital investment in two years.
- The team implemented a building automation system (provided by Johnson Control) to monitor and control heating, cooling and ventilation.
- The HEAT reduced the heat island effect and saved energy by using a more reflective "white" roofing and underground parking.
- The team also added 9,161 square feet of canopies to reduce the heat island effect.
- In 2009, the HEAT achieved a 16.7 percent reduction in potable water use and saved more than $5,000 in water costs through low-flow faucet and toilet upgrades and by increasing plumbing efficiency.
- The HEAT save almost $11,000 annually due to greater irrigation efficiency. All irrigation of planters and landscaped areas is done by a drip system or a soak system that applies water directly to the roots, and all lines have low-flow nozzles. Also, timers are used so that irrigation takes place in the middle of the night in order to minimize evaporation.
- The HEAT permanently installed water meters to measure the consumption of potable water and water used in irrigating all landscaped areas. The meters are monitored on a weekly basis.
- The HEAT established an environmentally preferable purchasing policy and a solid waste management purchasing policy (43 percent of purchases are sustainable).

provides a platform for us to attract acts and entertainment that want to play in green venues."

Woolworth explained that the HEAT pursued greening because they understood the influence their organization has in the community and marketplace. "Achieving LEED certification is a great affirmation of the AmericanAirlines Arena's commitment to energy conservation and environmentally responsible operations," said Woolworth at the announcement of the LEED certification. "Being among the first arenas in the U.S. to be LEED-certified, we hope to inspire businesses of all kinds to think green and make a positive impact on our earth."[1]

The HEAT became devoted to greening not only to show community leadership, improve the efficiency of their operations and benefit the environment, but also because the team wanted to seize the opportunity to be a trailblazer for professional sports. "The HEAT Group, the business operations behind the Miami HEAT team, prides itself on being an innovative organization," says Lorrie-Ann Diaz, director of marketing communications. "As a professional sports franchise, being competitive is part of who we are and what we do, and we're proud to be one of the first major professional sports facilities to achieve the incredibly important LEED certification."

Greening enabled the HEAT to attract positive press and create new community-based opportunities. "We knew that being the first NBA arena to be LEED-certified would attract great publicity," says Ventura, "but as we discovered that it was an exciting way to engage with the city and with the community, we realized how important it was to make greening a big part of our game. Our green work is a great avenue to introduce these concepts to people who don't have access to or don't yet care about these issues. It's a domino effect."

Ventura stresses the importance of magnifying the green message by leveraging the HEAT's brand. "We have so much power in this business. We have incredible access to so many people on a daily basis," she says. "We had over 1.5 million visitors to sporting and entertainment events last year alone. If you impact half of those people and they share it with a couple of other people, the impact adds up. Pretty soon we'll be doing a lot of good."

Manny Diaz, the mayor of Miami at the time of the HEAT Group's LEED certification, promoted the HEAT's greening work as a positive model for local businesses. "The AmericanAirlines Arena is a catalyst for all Miami businesses to invest in a greener future," he said. "The arena's commitment to the earth and our community paves the way for other companies in downtown Miami to follow that path and make a lasting difference."[2]

WHERE TO START?

The HEAT Group first learned about greening opportunities from the NBA head office. In 2007 the NBA established a partnership with the Natural Resources Defense Council (NRDC) to enhance their environmental profile. As part of this program, during the summer of 2008 the NBA worked with NRDC to establish the Commissioner's Initiative on Sustainable Arena Operations and Team Practices. The league also circulated the NRDC Greening Advisor to help all NBA teams learn how to become greener.

The NBA's environmental commitment and NRDC's resources motivated the HEAT Group to find out whether they could achieve LEED certification. "When NRDC got together with the NBA and made some league-wide environmental recommendations, it really kick-started our interest in greening," says Ventura. "We began by looking into LEED to see if we could get certification. Lo and behold, just by doing the checklist on the U.S. Green Building Council website, we were pretty confident that we could pursue

THE HEAT'S LEED CERTIFICATION COST-SAVING ANALYSIS BREAKDOWN

- Total LEED Project Cost: $73,384
  - Registration: $600
  - Certification: $15,000
  - Expedited evaluation (optional): $10,000
  - 550 internal staff hours: approx. $47,592
  - Various manuals: $192
- Total LEED Project Annual Savings: $1,616,480
  - Energy savings: approx. $1.6 million
  - Lighting annual savings: $976
  - Efficient plumbing fixtures: $5,440
  - Responsible landscaping: $10,822

COST SUMMARY

- Total Expense: -$73,384 ($25,792 out-of-pocket)
- Annual Savings: +$1,616,480
- Green Sponsorship: +$1,000,000
- **Full return on investment within one year, plus millions in ongoing annual savings.**

"IT WAS GREAT TO SEE THAT BY BEING FISCALLY RESPONSIBLE WE WERE BEING SUSTAINABLE AS WELL," says Jackie Ventura, operations coordinator for the HEAT Group.

certification."

To work on the LEED application, the HEAT Group put together a "green team" made up of internal staff members and Laura Crave, a LEED Accredited Professional and director of marketing for Dade Paper, one of the HEAT's major vendors. "As LEED certification is such an important element of our green mission, we decided to complete the project in-house, and luckily, most of the staff in our operations department have been part of the HEAT Group for a long time," says Ventura. "Everyone had a solid foundation in the operation of the building, so we knew this was something we could pursue without third-party involvement."

According to Ventura, the HEAT recognized the value of training their staff in efficient building practices while pursuing certification. "Our team of facility managers, engineers and maintenance staff took ownership of the project and made the commitment to become LEED experts themselves," she says. "We were able to complete the process in record time, and the accomplishment was more meaningful because our own team of dedicated professionals made it happen."

Thanks to strong support from the executive staff, particularly Eric Woolworth and general manager Kim Stone, the HEAT Group was able to register the AmericanAirlines Arena for LEED certification on November 18, 2008, just a few months after learning about the LEED opportunity. "Everyone was really on board with getting the initiative done. Our goal was to unveil our certification during the NBA's Green Week in April 2009, and our president and business operators said, 'Make this happen' and 'You have my support,' " says Ventura. "This required that the internal green team's regular duties be delegated to other staff members in the interim. The staff all supported being more sustainable and were happy to contribute to the project wherever they were needed."

The HEAT started with the LEED checklists of prerequisites and credits required to achieve EBOM certification. "We began with the prerequisites because obviously without those you can't follow through with certification," explains Ventura. "We were surprised that we already qualified for all of the LEED prerequisites because, honestly, most of our prior decisions were fiscally motivated."

CHALLENGES: OVERCOME AND ONGOING

Pursuing LEED certification requires investment, including significant up-front capital and staff time. However, the costs associated with green upgrades and LEED certification are minimal relative to the significant utilities savings available for a major facility like the AmericanAirlines Arena. "We spent $1,594,309 during the 2008 calendar year. If we ran the AmericanAirlines Arena at the current national average, we could potentially be spending approximately $3,010,000 annually on energy consumption each year," explains Ventura. "So thanks to our greening work and responsible energy consumption, which is 53 percent more efficient than the average arena, we now save approximately $1.6 million on energy costs annually."

Ventura credits the HEAT's efficient and straightforward LEED application process to consistent and knowledgeable staff, impeccable recordkeeping, responsible utility consumption and easy-to-use electronic blueprints. "We found that most of our practices were already LEED compliant," she says. "We have always been very vigilant about tracking our consumption with electricity, water, gas, et cetera. I have spreadsheets and electronic records of all facility-wide consumption from the opening of the building in 1999, so we were confident that we would meet all of the LEED baselines."

The greatest challenge the HEAT faced was accurately and efficiently completing all of the LEED application paperwork. "We found filling out all of the paperwork in-house was more of a challenge than any other," says Ventura. "Many of the LEED credits required us to put our typical (and some new) practices, like buying recycled content and EPA-recommended efficient products, down on paper as

"WHILE LEED WASN'T NECESSARILY THE IMPETUS FOR A LOT OF OUR EFFICIENCY PROJECTS, IN THE LONG RUN IT HAS SERVED AS THE REASON WHY WE KEEP ADHERING TO AND IMPROVING UPON THE GREENER PRACTICES WE HAD IN PLACE BEFORE," says Ventura

formal policies. None of our prior standard operating procedures addressed these types of practices, so LEED served the dual purpose of allowing us to update our SOPs." The LEED process motivated the HEAT Group to advance environmentally friendly purchasing across more product categories, including cleaning supplies, all paper products, lighting and electronics.

Ventura attributes the ease of implementing green purchasing programs at AmericanAirlines Arena to the HEAT's longstanding vendor relationships and loyalty. "We are very loyal to our vendors. They are also loyal to us and make sure we are the best we can be," she says. "For example, one of our suppliers, Dade Paper, has been in the building since day one. They were really great about going through all of our requirements and communicating about upcoming products. They assisted us in a seamless transition to new products, such as 100 percent recycled paper towels and EPA-recommended foam soap."

Thanks to these strong relationships, the HEAT Group was also able to rely on partners for sponsorship of its LEED-based green initiatives. "We've had an account with Home Depot for about 10 years and they sponsored our first year of LEED certification," says Ventura. "Waste Management has also been in the building since day one. They were very supportive of our LEED application process as well and continue to partner with us to significantly expand our recycling programs. They provide all of the balers, toters, garbage cans and signage for branding. They have also sponsored community outreach programs like our e-Recycling drive in April 2012. The recycling proceeds from all of the electronics went directly to Miami-Dade County Public Schools to aid in their efforts to upgrade technology in classrooms across our county. "

The HEAT's vendors have played a key role in watching the market for new technologies as well. "We make most of the building products purchasing decisions internally for things like lightbulbs and office supplies," explains Ventura. "In terms of our cleaning supplies and larger pieces of equipment, we rely on our vendors to bring us new technologies as they come out. We are very lucky that we have a good relationship with our major vendors, and they are very vigilant about bringing these new products to us. They are very aware that we have high standards and are working on recertification."

The HEAT Group has already started working toward LEED EBOM recertification in 2014, which requires improving on all 2009 green initiatives. This time the organization is aiming for LEED Silver certification. "For recertification, 2009 is our baseline. Our consumption must stay even or below our 2009 figures and we need to implement new green initiatives," Ventura explains. "For example, we've completed installation of virtual frequency drives on the air handlers and have begun adding them to our chilled water pumps as well. We upgraded our hot water gas boiler to a high-efficiency model, which has effectively reduced our gas consumption to a third of what it was in fiscal year 2009—49,907 therms versus 15,574 therms." The HEAT Group has also been upgrading more of its arena's lights to LEDs and purchasing office products with a higher percentage of post-consumer recycled content. "Switching up to LED lightbulbs, which are now more readily available, is logical because although they cost more initially, the extended life expectancy will reduce replacement and long-term spending and will help us earn recertification," says Ventura. "We are very conscious of the decisions we make to ensure they are in line with the recertification process. Thanks to our comprehensive data collection and green building success to date, we can also easily justify new greening projects by showing our executive staff a cost–benefit analysis of why an up-front investment is a good idea in the long term."

LESSONS FROM THE FIELD

GREENING AND LEED CERTIFICATION HAVE MULTIPLE DIVIDENDS; YOU WILL LIKELY RECOUP YOUR INVESTMENT: According to Ventura, the direct benefits of greening and LEED certification include financial savings, green-based sponsorships, brand enhancement, competitive advantage, raised community profile and improved company culture. Despite devoting more than $70,000 to their LEED application, the HEAT's return on investment for all of the green projects included in their LEED process was less than one year, with millions in resource savings since then. "Sustainability equals savings. In one year, thanks to our greening and responsible energy consumption measures, we saved $1.8 million," Ventura notes. "We also attracted about $1 million in new corporate sponsors, which include Home Depot and Waste Management, who aligned with our greening efforts as sponsors of our LEED initiative."

USE THE READILY AVAILABLE ONLINE RESOURCES TO BREAK DOWN THE GREENING PROCESS: "The most important takeaway is not to be overwhelmed by the process, particularly for LEED," says Ventura. "When you begin it can seem very overwhelming, but NRDC, the U.S. Green Building Council, and the EPA have a ton of resources for people trying to be greener and/or achieve LEED certification. It is not as overwhelming or daunting as it seems if you have your information in order and use these resources as a guide."

"WE TREND OUR EVENTS TO SEE WHEN CONSUMPTION PEAKS FOR CHILLED WATER AND ELECTRICITY SO THAT WE CAN ADAPT AND BECOME MORE EFFICIENT," says Ventura. "IF YOU DON'T HAVE THAT INFORMATION AVAILABLE TO YOU, THE BASIC DATA, THERE IS NO WAY TO GET A HANDLE ON WHAT YOU'RE USING AND HOW TO IMPROVE."

TRACK YOUR RESOURCE USE FACILITY-WIDE AND KEEP COMPREHENSIVE RECORDS: "We've been keeping records since day one. We know how much we've consumed and spent since the day we opened," says Ventura. "It has been so helpful to create those baselines for LEED certification. We have numbers, graphs, consumption trends and demand analysis for all of our utilities that can be used as a quick reference guide as needed. We also use the data to help us gauge our budget projections and monitor our peak consumptions."

USE ELECTRONIC BLUEPRINTS OF YOUR FACILITY: "We recommend having accurate final blueprints for your facility. We use computer-aided design. The blueprints are extremely helpful for calculating square footage and dividing building space by type," explains Ventura. "Some LEED credits require you to upload blueprints, so having electronic versions—and someone who can manipulate the documents to showcase only the areas requested for LEED—is very beneficial."

THERE ARE PLENTY OF GREEN ALTERNATIVES TO LEED CERTIFICATION: LEED isn't the only way to be greener and save money. "Form an eco-committee, join EPA's EnergyStar program, increase recycling, reduce water and paper use, adopt LEED's green cleaning requirements, green your supply chain, promote carpools, use renewable energy and raise public awareness," suggests Ventura.

ENGAGE FANS WITH GREEN ACTIVITIES ON THE CONCOURSE: "We had Pepsi's Dream Machine on the concourse. Fans and employees could deposit plastic bottles and turn them into points, which could be redeemed for coupons at local establishments and prizes including mini HEAT souvenirs," says Ventura. "We installed the Dream Machine recycling attraction in partnership with PepsiCo, and the revenue from recycling the plastic bottles and aluminum cans was donated to funds that lend support to U.S. veterans with disabilities, which was another added incentive for fans to participate."

ATTRACT ADDITIONAL PRESS BY HAVING MULTIPLE UNVEILINGS AT ONCE: "We were able to extend our 'green limelight' to about three months by coordinating multiple unveilings at once," says Lorrie-Ann Diaz. "We unveiled our LEED certification three weeks after our 3,400-square-foot, low-energy-consumption LED screen was installed and continue to promote our certification on the front fascia of the building."

CASE STUDY

STAPLES CENTER, HOME OF THE LOS ANGELES CLIPPERS, LOS ANGELES LAKERS, LOS ANGELES KINGS, AND LOS ANGELES SPARKS

ARENA STATS

Location: Los Angeles, California
Began Construction: March 31, 1998
Opened: October 17, 1999
Seating Capacity: 20,000
Owner: AEG
Operator: AEG
Venue Uses: NBA, WNBA and NHL games, concerts, family shows, Grammy Awards and other high-profile events.
Construction Cost: $407 million
ISO 14001 Certification: December 2010

STAPLES CENTER'S GREENING STORY: MOTIVATIONS, CHALLENGES AND LESSONS FROM THE FIELD

STAPLES Center in downtown Los Angeles is undoubtedly one of the busiest arenas in the world, hosting more than 250 events and nearly 4 million guests each year. The arena is home to four professional sports franchises—the NBA's Los Angeles Lakers and Los Angeles Clippers, the NHL's 2012 Stanley Cup Champion Los Angeles Kings and the WNBA's Los Angeles Sparks—and also hosts many high-profile events, including the annual X Games and Grammy Awards. Other notable events include the 2004 and 2011 NBA All-Star Weekends, the 2002 NHL All-Star Game, the 2000 Democratic National Convention, and the 2011 World Figure Skating Championships.

Since the arena opened in 1999, STAPLES Center's operations team has aimed to run it as efficiently as possible. With the help of AEG, STAPLES Center has become a leader in environmentally better practices, boasting a 1,727-panel solar array atop its roof; high-efficiency lighting, equipment, and energy management systems; and waterless urinals, among other initiatives. AEG and STAPLES Center developed an environmental management system (EMS) to guide employees in reducing the environmental impact of STAPLES Center's daily operations. As a result, the STAPLES Center became the first U.S. arena to receive an ISO 14001 certification in 2010.

WHY GO GREEN?

Efficiency and innovation have always been important to STAPLES Center's management team. "We're always reminded by our ownership to save energy, save water, identify state-of-the-art technology and pass on these practices and lessons whenever possible," says Bill Pottorff, vice president of engineering for STAPLES Center and Nokia Theatre L.A. Live. "When you realize that this is truly a priority to our organization, you have to look for ways to do that. Beginning with the planning and design of STAPLES Center in 1998, this has always been our way of life."

"AEG's corporate sustainability program—the collection of information and recognition of the environmental priority—formally started in 2006 when our music branch AEG Live raised the question to our CEO," explains Jennifer Regan, global sustainability director at AEG, STAPLES Center's owner and operator. "They said, 'Hey, we've got artists and staff who care about the environment; we need to address our environmental impact.' The CEO realized that our clients and our content division were telling us that we needed to answer these questions. He turned to the company's corporate office and asked them to put together a green team."

WHERE TO START?

"STAPLES Center's management team have always been early adopters of innovative technology while being proactive in connecting with their corporate, government and community partners to identify best uses for these technologies," says Regan. "For example, they began installing electric charging stations for their guests beginning in 1999 when the arena first opened."

STANDOUT GREENING ACCOMPLISHMENTS

- STAPLES Center is the first U.S. arena to achieve ISO 14001 certification for an environmental management system (EMS), a written program setting forth environmental goals and practices.
- The venue uses AEG's Ecometrics system to measure and report environmental data and performance.
- The center implemented a variety of conservation measures through its EMS to reduce electricity consumption overall by 12 percent.
- It installed a 1,727-panel solar array covering 25,000 square feet of the arena's roof. The 345.6-kilowatt system supplies 5 to 20 percent of the building's energy use (depending on load) and produces 525,000 kilowatt-hours annually, saving an average of $55,000 per year.
- In 2012 a comprehensive lighting retrofit replaced almost 3,000 halogen fixtures throughout the facility with more energy-efficient LEDs, saving nearly $80,000 per year—2 percent of total energy costs.
- Low-voltage lighting relays control the sequence and operation of all task, general and event lighting, illuminating groups for specific times and uses.
- The facility switched to electronic ballast instead of magnetic ballast.
- It uses variable-speed drives on all air handlers and one chiller.
- The center has time schedules for and photo cell control of exterior lighting.
- Super-efficient three-phase motors are in use.
- All 178 conventional urinals were replaced with waterless urinals—for total annual savings of more than 7 million gallons of water and about $28,200 in direct water costs.
- The center documents and achieves at least a 50 percent landfill diversion rate annually in full compliance with California AB 2176, collecting cardboard, wood pallets and electronic waste and, with the help of Levy Restaurants, collecting glass, plastic and aluminum beverage containers.
- Over 90 percent of STAPLES Center cleaning products have green certifications.
- 100 percent of all toilet paper, paper towels and copy paper are a minimum of 30 percent post-consumer recycled content.
- Electrical vehicle charging stations have been installed in adjacent parking lots and structures.
- Public transportation is encouraged through partnerships with Los Angeles Kings, with ticket discounts offered to metro riders and other tenants and promoters.
- Secure bike racks were installed on the venue property, and management is reviewing contracts for bike valet programs for major events.

Most of STAPLES Center's environmental initiatives began with behind-the-scenes efficiency projects. "A lot of it was just best practices in the industry," explains Pottorff. "One of our first projects was putting medium-volt 4160-volt variable frequency drives on our primary chiller here. That was about a 2¼-year payback. Those drives are typically done on 480-volt chillers, and we took it up a level. People had been doing them on medium-voltage chillers for a couple of years, which led us to believe we could go further. It was a fun project because we took a 480-volt drive card and put it into our 4160-volt chiller and basically tricked it. We got everything tweaked and fine-tuned and it's been running great ever since."

AEG's corporate sustainability department set out to develop an environmental program that would provide employees with guidance and the tools necessary to improve AEG's environmental performance. "We had a sustainability committee with leaders from each business unit meeting to develop a sustainability road map. We also included the STAPLES Center team on that committee as their wealth of experience and success stories helped everyone to see how beneficial an environmental and efficiency priority could be," Regan explains. "From the AEG side of the story, beginning in 2008, we engaged industry experts and consultants to help us identify projects and develop the core components of our environmental program, which we now call AEG 1Earth. The core components of the program are AEG's environmental policy, long-term goals and an environmental performance tracking system, AEG Ecometrics. As the home base and flagship venue, STAPLES Center was the test ground for early versions of Ecometrics and several other projects."

In 2008, STAPLES Center participated in a number of energy and water audits, one of which NRDC arranged through the L.A. Department of Water and Power, to analyze the building's energy and water use and identify opportunities for further efficiency enhancements. "We did an energy assessment and identified low-hanging fruit," says Regan. "The energy audit ultimately confirmed the importance of projects that our engineers had already proposed. Ultimately, the results helped the management team prioritize the opportunities and identify rebates." Among these confirmed efficiency opportunities were lighting and equipment retrofits, onsite solar panels, and waterless urinals, all of which have since been implemented.

STAPLES Center also implemented numerous lighting and equipment upgrades. "We've taken basically every incandescent bulb out on all three suite levels and replaced them with LEDs. That's continuing in other areas of the building," says Pottorff. These lighting retrofits, expected to be completed in 2012, will replace more than 3,000 halogen fixtures with LEDs and will save an estimated $80,000 annually in energy costs. "Beyond energy savings, rebates from the utility and lowered labor costs also bring down the costs of this investment," notes Sam Kropp, vice president of building operations for STAPLES Center and Nokia Theatre L.A. Live. "We had our capital outlay and then the utility reimbursed us for a portion of that cost. And, I think most notably, it's the lack of labor needed to change these incandescent bulbs day in and day out that is most appealing. We have about 160 suites that basically had a minimum of six fixtures each, and now we've replaced all that with LEDs. That's a big savings we realized there."

One of the STAPLES Center's biggest projects in 2008 was the installation of a 1,727-panel solar array covering 25,000 square feet of the arena's roof—the largest solar array at any sports facility in the world at the time. The 345.6-kilowatt system produces 525,000 kilowatt-hours annually, saving an average of $55,000 a year. "On a sunny day with a low base load of energy use, the panels provide up to 20 percent of energy use," explains Regan. "Because we have over 250 events per year, including mega-events like the Grammy Awards and NBA and NHL playoffs, the panels provide only 5 percent of our total annual energy use."

By 2009, with a number of impressive efficiency projects under their belt, AEG and STAPLES Center wanted to go a step further in formalizing their environmental program. "We wanted to take on our biggest challenge yet: engaging our staff, vendors and tenants," says Regan. "Collectively, we decided to develop a formal environmental management system to systematize their efforts. They evaluated the prospect of pursuing LEED certification for the building but ultimately decided to go after ISO 14001 certification of their EMS instead."

Regan explains AEG and STAPLES Center's decision: "We were introduced to two key environmental systems in 2007: LEED and ISO 14001. We started to use the LEED standards internally to identify building projects, but they didn't provide much guidance on how to engage and train staff. Having already performed a formal energy audit, AEG was comfortable that the STAPLES Center's operations and engineering team were proficient in terms of building efficiency in line with many of the LEED guidelines," she continues. "We understood LEED's value, but our challenge wasn't in knowing what technology to put in place; it was in understanding how to engage other parts of our venue in the environmental program. So we thought that the most important thing was to engage our employees, and we selected the standard we could use to that end."

Unlike LEED's fixed, environmental infrastructure–based requirements, an EMS is a self-defined written framework describing an organization's environmental best practices and goals, including how to integrate environmental responsibilities into its staff training and job responsibilities. "ISO 14001 does not have a rating system—it identifies the activities and topics that must be addressed but allows the applicant to define how it will address them," Regan explains. "As ISO 14001 is self-defined, some people say it has potential to be a weaker third-party certification. But unlike LEED, ISO 14001 requires an annual third-party audit to ensure you comply with your self-defined program as well as with local and federal laws. LEED might be stronger about prescribing and ranking what environmental features should be implemented, but ISO is stronger in defining how thoroughly to train and communicate your initiatives to staff and how to assign environmental responsibilities throughout your operations," she points out. Although LEED has always been on the agenda for STAPLES Center, Regan says, "LEED doesn't have an annual surveillance audit and doesn't get too prescriptive in terms of staff engagement. Since a lot of our efficiency programs depend on how people manage our buildings, ISO was the first priority for us." The ISO 14001 emphasis on staff training and annual auditing were key reasons why STAPLES Center pursued ISO certification first.

Examining each department and the role of its staff members in the company's environmental performance was an essential piece in the ISO and EMS process. "We did a formal environmental impact assessment and met with the head of each department and identified which job positions in their department had any impact on the environmental impacts of the company," Regan explains. "This process helped the company understand where the impacts were and identified additional ways our staff could play a role in reducing certain impacts. Everyone has a small impact on consumption of paper and electricity. But a thorough review of each department's environmental impact helped us identify specific initiatives for each department. For example, only security could impact the energy consumption of the security scanners by unplugging them at a certain times, while our box office staff could identify additional recycling receptacles that would be needed because their office uses more paper than our other offices."

Developing an EMS has helped expand the environmental program consistently throughout the entire company. Starting in 2010, STAPLES Center created an organization-wide green team that engages all arena divisions in department-specific environmental initiatives. "We engaged all levels of management to create an arena-wide green team," says Regan. "We had relied heavily on operations and engineers, but now with the green team, we are able to engage guest services, human resources, security, our premium-seating staff and our food and beverage partner, Levy Restaurants, which really didn't happen till we did the ISO certification."

Getting the EMS in place required setting aside time each week to focus on documentation work. "The average time to develop an EMS is three hours a week for two months," says Regan. "This mainly encompasses documenting practices

AEG/STAPLES ISO 14001 Certified Environmental Management System

Standard Operating Procedures and Training Include:

- Chemical acquisition forms
- Energy conservation guidelines
- Environmentally preferable procurement guidelines
- Environmental activities risk ranking
- Generator testing procedures
- Green event services
- Landscape and hardscape management plans
- Hazardous communication program
- Hazardous and universal waste program
- Integrated pest management plan
- Lighting policy
- Paint management plan
- Refrigerant audit log
- Solid waste guidelines
- Spill prevention plan
- Water conservation guidelines

that haven't been previously recorded, and occasionally identifying new practices to implement." There is also time spent with ongoing documentation for the EMS, she notes. "The average time to maintain an EMS is three hours per month. This includes training refreshers, green team meetings, identifying new things to implement and updating documentation to reflect changes in process or new practices." Although there is no cost to developing the EMS documentation or process, there are costs to achieve ISO certification. According to STAPLES Center management, the external audit and ISO 14001 certification initially cost between $8,000 and $10,000, with an annual recurring cost of between $1,500 and $3,000, depending on the size of the venue.

The documentation process may be time-consuming, but it pays off. "Everything we do has to be documented, and it was a big deal to set it up—it took over a year," recalls Pottorff. "But once you get it, and get the certification, you realize that it's really beneficial because every little bit of information that we could ever need is right there on the computer."

CHALLENGES: OVERCOME AND ONGOING

One of STAPLES Center's more impressive environmental initiatives was the replacement of the arena's 178 water-flush urinals with waterless urinals in 2008. But this project's approval took some time, explains Pottorff. "My first challenge with the urinals was many years ago. Not many people know this, but I tried to get them in the building two years before they actually happened," he says. Waterless urinals were still an unseasoned technology at the time, and many cities and facilities were still squeamish about their performance in large facilities. "They weren't really approved by the city of Los Angeles, and nobody really knew what to do about them," Pottorff continues. But STAPLES Center's operations and engineering team was adamant about the fixtures' water savings and fought to pilot this technology at the arena. "Funny enough, two years later they're in the building and everybody loves them," Pottorff laughs.

Before 2008, each of the STAPLES Center's urinals consumed 44,000 gallons of water a year. The 178 Falcon waterless urinals that replaced these flush fixtures save more than 7 million gallons of water per year and about $28,200 annually in direct water costs. "We have estimated that we are saving approximately $2,350 per month at STAPLES Center in direct water costs, not factoring in sewer charges and any other municipal taxes," says Pottorff. "Each urinal saves roughly 4.5 hundred cubic feet [of water] per month."

STAPLES Center is a big advocate for the waterless technology and has been able to debunk a lot of the uncertainty surrounding the fixtures with the success of its installation. "People ask us about them all the time," says Pottorff. "Our response is always that they are fantastic, as long as you do the maintenance exactly as it's recommended." Maintenance mainly includes routinely flushing out the pipes and replacing cartridges. "We actually send a camera down random pipes annually, just to have a look in the pipes and see if anything is going wrong," Kropp adds. "And we haven't had any issues yet. We do get an occasional hiccup with it, but it's not like before when we had the water urinals and people would throw paper towels in. We don't have stoppages like we used to with the standard flush urinal." Continuous training of staff about the upkeep of the urinals has contributed to this success, Pottorff explains. "Training is ongoing, and the company, Falcon, will come out whenever we ask them to at no charge and we'll have a refresher course for the maintenance staff," he says.

Even with their strong existing environmental achievements, STAPLES Center executives are constantly looking for ways to improve. Increasing recycling rates is at the top of their to-do list. "We are really working on public recycling at the arena, and that's something AEG 1Earth and Jennifer Regan are key partners in," says Kropp, "in trying to get the appropriate capital to get the right receptacles and branding in the public spaces, as well as the PSAs, and trying to fit that in with game script every night on our center bowl scoreboard. So we're hopeful that we'll succeed in that endeavor, which has been a challenge the last five years."

The current waste program achieves an event waste diversion rate of up to 35 percent, but the operations team is still looking to incorporate a public-facing program, Kropp says. "From an operations standpoint, my biggest challenge right now is finding an aesthetically pleasing receptacle that

AEG Ecometrics Data Collection System

Resources Consumed:

Natural gas
Electricity
Water
Recycled water
Fuel (propane, diesel, petrol, fuel oils 1-4)
Solvents (hazardous)
Paper—janitorial/office
Green cleaning products
Solar power
Biodegradable food service disposables
Sustainable food (local/organic)
Renewable Energy Credits (RECs)

Wastes Generated:

Solid waste—landfill
Recycling
Lamps (controlled)
Electronic (controlled)
Batteries (controlled)
Solvents (hazardous)
Petroleum (hazardous)

Emissions Calculated:

Carbon (CO_2)
Nitrous Oxides (NOx)
Sulfur Dioxide (SO_2)

will handle trash and the sorting of recoverables in the public areas, or at least a portion of them, as opposed to just tackling them back-of-house."

STAPLES Center had a public recycling program in 2005, but the public participation rate was so low that the labor and materials cost of maintaining separate bins was detracting from the more effective back-of-house recycling program. STAPLES Center made the hard decision to focus on behind-the-scenes recycling, explains Kropp. "Our primary efforts right now are back-of-house before and after events, where we do source separation with our operations staff, our food concessionaire Levy Restaurants, and our community recycling partner, the Los Angeles Conservation Corps."

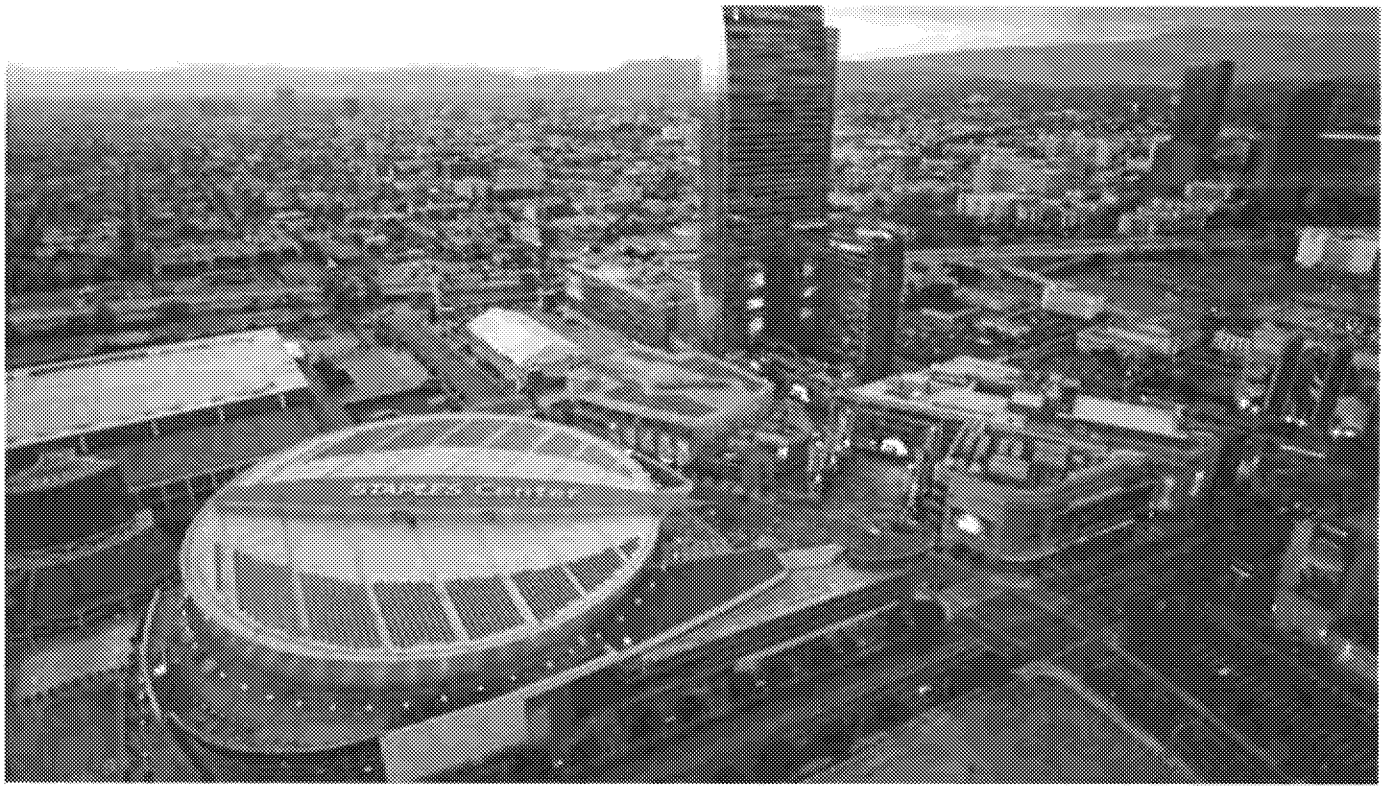
"We do a lot of source separation—that's the key to our diversion here," says Kropp. "Our operations team coordinates the collection of cardboard from all of our tenants, vendors and office staff as well as a robust lightbulb and battery collection that even encourages staff to bring them in from home. For cans and bottles, we allow both Levy Restaurants and the Los Angeles Conservation Corps to take the deposit value [of the recyclables], but we take the diversion rate. Levy Restaurants does sorting in kitchens and behind the bars, and the Los Angeles Conservation Corps will do post-event sorting from the bowl, where, quite frankly, people don't pick up after themselves, and that's the time to capture those recoverable pieces: a cardboard popcorn bin, an Aquafina bottle, an aluminum can. We'll have about eight people here from the Los Angeles Conservation Corps, and every night we'll focus on a specific recoverable."

In 2011, the arena started a composting program in its kitchens. "Our food composting program with Levy Restaurants has taken an incredible amount of weight out of our waste stream, saving a lot of money," says Kropp. "It's a back-of-house program in two of the main kitchens, where most of the food is prepared. It just takes training with the back-of-house chefs, new chefs and kitchen staff. So when they're cutting up a watermelon, waste is going into green receptacles, which are transferred to the loading dock and picked up for composting." The arena has already seen success with this program; in April 2012, for example, it diverted 4.78 tons of food waste from going into the trash.

"The next three steps are linking together the public recycling and composting with fan engagement and sponsorship engagement," says Regan. "AEG's partnership with Waste Management is key to addressing these needs and engaging fans in the program. Their sponsorship includes a recycling information kiosk and a Random Acts of Recycling fan engagement program to reward fans for recycling at games and events."

Engaging fans is "certainly a primary element we have talked about," Kropp adds. "In-arena incentives are one tactic we are introducing to get fans involved. You know, if you take the recoverable item back to the refreshment stand, we have a designated receptacle and maybe we give you a discount off your next Coke. Some kind of incentive to really make the fan think twice about just throwing [a recyclable item] in a trash bin."

"We need to cross over into where every guest at STAPLES Center will know that our operations are green," adds Regan. "ISO was good at getting all of our employees engaged. But I really think that if we put a full-court press on engaging the public in our recycling program, and eventually public composting, we'll achieve a new level of community pride in the venue."



LESSONS FROM THE FIELD

WITH PROPER MAINTENANCE, WATERLESS URINALS SAVE WATER AND MONEY: In 2008 STAPLES Center became one of the first large arenas to install waterless urinals, and it has had great success with them. "We have people calling us saying, 'We've heard good things (and/or bad things) about waterless urinals; we've heard they smell, etc.,'" Pottorff says. "And we always tell them the same thing: If you do the maintenance correctly, you won't have any problems." Making sure the pipes get flushed out and cartridges get replaced routinely is key, explains Kropp, "and we do that quarterly, and religiously."

DEVELOP AN ENERGY MANAGEMENT SYSTEM TO ORGANIZE YOUR EFFORTS: An environmental management system helps to streamline data around sustainability initiatives and provides comprehensive documentation of your progress toward environmental goals. "As a result of the EMS, there was a whole new level of awareness," says Kropp. "OK, so we get that battery bucket in place, then where else are batteries being used? We set up additional buckets and communicate that to staff. Then we document where the batteries go when we're done with them. So when we get audited—'These batteries were taken at this point and this time, and disposed of properly, taken by this particular entity'—that whole process is documented," he adds.

AN EMS CAN PAVE THE WAY FOR LEED: The extensive documentation collected by an EMS can also be helpful with potential building certifications down the road. "That's kind of the reason we went that route; we knew ISO 14001 was a little bit easier to get than LEED, but also a step toward LEED—it kind of paves the road," says Kropp. "I generally like to describe an EMS as the program for your staff and LEED as the program for your building," adds Regan. "I believe they are complimentary, and although they can exist separately, I think an EMS helps people who are pursuing LEED EBOM."

AN ISO CERTIFICATION ENHANCES THE LEGITIMACY OF YOUR PROGRAM TO THE PUBLIC: "Transparency is essential for the success of any corporate environmental program," said Lee Zeidman, senior vice president and general manager of STAPLES Center, Nokia Theatre and L.A. Live, when the ISO certification was granted. "By making our environmental management systems available for third-party review, AEG and STAPLES Center are backing up our 1Earth commitments with aggressive actions to limit our environmental footprint."[1]

CASE STUDY

ROSE GARDEN ARENA, HOME OF THE PORTLAND TRAIL BLAZERS

FACILITY STATS

Location: Portland, Oregon
Began Construction: July 12, 1993
Opened: October 12, 1995
Seating Capacity: 19,980
Owner: Portland Arena Management
Operator: Portland Arena Management
Venue Uses: Professional basketball (NBA), hockey (WHL), concerts, family shows, conventions
Construction Cost: $400 million (in 2012 dollars)
LEED certification: Certified LEED Gold for Existing Buildings: Operations and Maintenance, in January 2010

THE TRAIL BLAZERS' GREENING STORY: MOTIVATIONS, CHALLENGES AND LESSONS FROM THE FIELD

In the sports greening space, the Trail Blazers are true to their name as industry leaders in green building and making a business case for environmentally intelligent operations. In January 2010 the Rose Garden Arena became the first professional sports arena in the United States (and in the world) to achieve LEED Gold certification under the U.S. Green Building Council's Existing Buildings standard.

Three years later, the Blazers are still achieving incremental resource savings in energy, water and waste each year that continue to greatly benefit the team's bottom line. To date the Blazers have saved close to $500,000 in pure profit after recovering their up-front green investments in full.

WHY GO GREEN?

When it comes to environmental stewardship, the Blazers' fans don't just believe it's an important business consideration, they expect it to be there. Many companies in Portland recognize that they have a responsibility to reflect their community's passion for environmental protection in order to attract and maintain a strong clientele. The Blazers realized several years ago that their organization is no different.

The Rose Garden Arena embraced greening to become a community and market role model while also proving the business case of greening. "Being in what is recognized as one of the most sustainable cities on the planet, the Portland Trail Blazers are proud to play a role in Portland's environmental leadership," says Justin Zeulner, director of sustainability and planning for the team. "Ideally, we are playing a role to best represent the core values of our city and surrounding communities."

The Blazers see greening as way to give back to their community. For Zeulner, it comes down to one key question: How can the Trail Blazers make their community better? Through their greening work, the Blazers have found a way to marry community outreach programs with operational savings to create a sustainable program with multiple dividends.

WHERE TO START?

Like most teams, the Blazers started their greening work by getting buy-in and feedback from as many staff members and partners as possible. They created a "sustainability team" made up of interested people from all departments. "The vision to become the leader of sustainability in the sports and entertainment community was initiated using a team approach, not only involving our staff, vendors, partners and business affiliates, but also embracing the support of our fans," says Zeulner. "We feel our accomplishments and progress to fulfill our future goals are only achievable

"THE PORTLAND TRAIL BLAZERS ARE PROUD TO PLAY A ROLE IN PORTLAND'S ENVIRONMENTAL LEADERSHIP. IDEALLY, WE ARE PLAYING A ROLE TO BEST REPRESENT THE CORE VALUES OF OUR CITY AND SURROUNDING COMMUNITIES," says Justin Zeulner, director of sustainability and planning for the team.

using a team effort, which includes support from our staff, management, fans, visitors, suppliers, vendors, business partners and our community. Attempts have been made to connect with all of these stakeholder groups, soliciting feedback and suggestions."

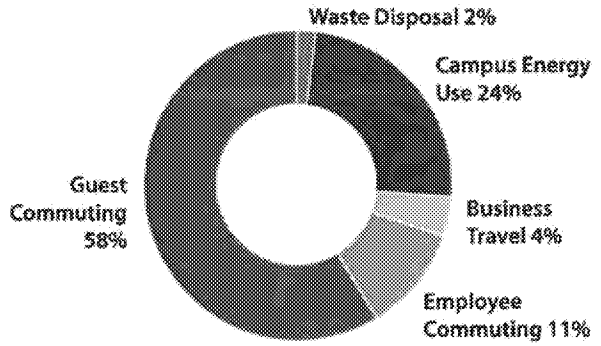
Next, the Blazers decided to hire an external consultant to guide their resource measurement, develop a plan for upgrades and implement greening improvements. "Recognizing that we have a role to play in these larger community objectives, such as enhancing our environmental impact, we started our programs by hiring a local, nationally recognized sustainability consultant, Green Building Services, to accurately measure our current carbon footprint and provide us with a road map toward making significant reductions to these impacts," explains Zeulner. "This involved an extensive Scope 3 analysis and development of several sustainable policies, procedures and programs."

Once the Blazers had mapped out their environmental impacts, they developed a "sustainability charter" to better frame the environmental mission statement that would guide their sustainability efforts. The charter is the Blazers' "driving document that serves as a sustainability road map," according to Zeulner. "The core charter developed to guide our sustainability initiatives, including the development of goals and strategies for each segment of our carbon footprint, was compiled by our sustainability team, a group of over 35 employees from all departments and levels of authority," he explains. "This group was tasked by our president and executives to develop a path that would lead us to become and remain the leader of sustainability within our industry."

Zeulner emphasized that top-level support greatly benefited the growth of the Blazers' green program. "Our sustainability efforts have included senior leadership support, to go along with unfettered dedication by our department leaders and front-line staff," he says. "Executives have paved the way with resources and vision, enabling environmental enhancement projects to be achieved."

Thanks to strong executive leadership on greening, Zeulner's sustainability team was able to quickly get green initiatives happening in departments throughout the Rose Garden's operations. "Food and beverage management has found creative ways to source local and organic foods and developed incentive programs to excite concession and kitchen staff to recycle and compost," Zeulner notes. "Operations teams have implemented purchasing strategies to ensure that we have eliminated toxic cleaning products from our facilities, that strict environmental policies are met regarding renovation and maintenance projects, and that we continue to strive toward zero waste. Guest Services find creative ways to help inform and encourage fans to recycle and compost while visiting the Rose Garden Arena. These are just a few examples."

Portland Trail Blazers Carbon Footprint



CHALLENGES: OVERCOME AND ONGOING

The Blazers decided early on that tracking was essential to their greening program. This decision led to two important investments: first, hiring the Green Building Services consulting team, and second, undertaking an extensive sustainability and carbon footprint analysis (see the above graph for the breakdown of the Blazers' carbon impacts).

Zeulner says that the time and money his team invested in the up-front measuring was quickly returned in resource savings as he was able to more easily identify the "low-hanging fruit." "These assessments and footprint analysis provided a road map for us to implement strategies toward maximizing our environmental performance," says Zeulner. "We started with easy wins that had paybacks of less than a few years, such as energy efficiency projects, implementation of advanced recycling and food waste composting operations, and implementation of environmental purchasing policies. These initial efforts have resulted in hundreds of thousands of dollars of operational savings, with payback met after just about a year."

By starting with the green projects with the greatest return on investment, the Blazers were able to gain momentum to pursue larger initiatives, like LEED certification. "While these projects and procedures were implemented, we made the decision to seek LEED certification for existing buildings through the U.S. Green Building Council," says

"WE STARTED WITH EASY WINS THAT HAD PAYBACKS OF LESS THAN A FEW YEARS, SUCH AS ENERGY EFFICIENCY PROJECTS, IMPLEMENTATION OF ADVANCED RECYCLING AND FOOD WASTE COMPOSTING OPERATIONS, AND IMPLEMENTATION OF ENVIRONMENTAL PURCHASING POLICIES," says Zeulner. "THESE INITIAL EFFORTS HAVE RESULTED IN HUNDREDS OF THOUSANDS OF DOLLARS OF OPERATIONAL SAVINGS, WITH PAYBACK MET AFTER JUST ABOUT A YEAR."

Zeulner. "Implementation of our sustainability initiatives, including LEED, included in-depth meetings with all facility departments, contracted service providers, vendors and suppliers (this includes waste haulers, contractors, etc.). During the meetings, we clearly set expectations, provided context and review of our environmental policies and programs, included training about these topics and developed metrics that would be tracked for all areas to ensure compliance."

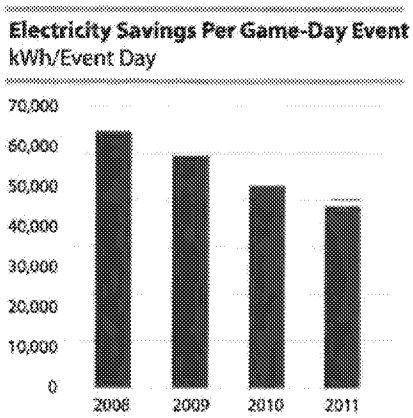
The Blazers sought out additional outside guidance for their LEED process as well. These outside partnerships provided Zeulner's team with expertise on specific topics, such as onsite solar (NRDC) and carbon offsets (Bonneville Environmental Foundation). "Successful development of extensive sustainability programs requires partnerships with public and private enterprises. We sought out advice and leadership from organizations grounded in environmental values such as the NRDC, the U.S. Green Building Council, Cascadia, the Living Future Institute, the Bonneville Environmental Foundation and the EPA," says Zeulner. "These organizations provide unique perspectives pertaining to implementation of best practices and context to more complex issues, such as procurement policies. Our success in reducing environmental impacts would have been more challenging without the support of these partners."

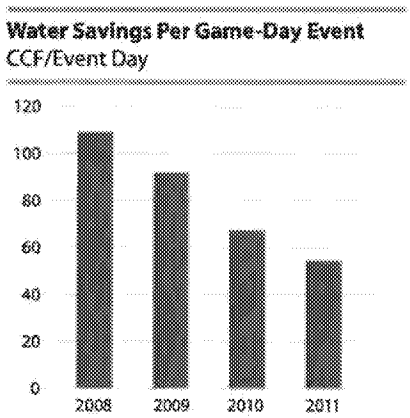
Financing efficiency upgrades and other green initiatives is a constant hurdle, but Zeulner points out that the up-front capital to fund environmental programs can come from a variety of sources. "In addition to internal capital resources, we applied for and received local and federal grant funding," he says. "Grants included financial resources to help implement energy-efficiency projects, recycling and food waste compost programs, installation of electric-vehicle charging stations and bike infrastructure endeavors. As of the end of the 2011 calendar year, we have saved close to $1 million while investing about $500,000, in less than three years."

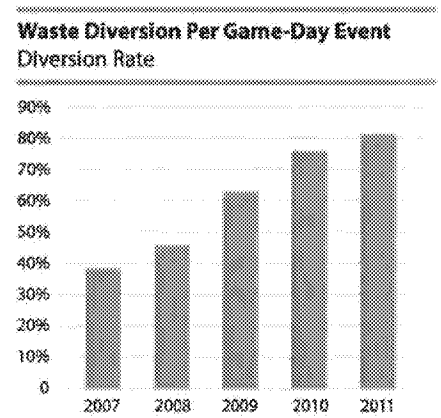
The Blazers were awarded LEED Gold certification, the highest level of LEED certification awarded to any major sports venue to date, in January 2010. Despite this impressive accomplishment, the Blazers still push for ongoing savings across the board (see adjacent graphs of the Blazers' resource savings). Zeulner explains: "We were bestowed with Gold during the first part of 2010. This was a significant milestone for us, but we quickly continued to keep our momentum. We implemented further deep building retrofits; invested further in bike and electric-vehicle infrastructure; developed partnerships with local environmental nonprofits to advance their mission; invested in offsetting 100 percent of our energy, gas and water consumption impacts; joined Business for Innovative Climate & Energy Policy; and helped found the Green Sports Alliance to share best practices within our industry and further the impacts that leveraging professional sports can have on larger global initiatives."

The Blazers have been able to use their greening work to strengthen their community presence and benefit the local economy by building for the future. "We are now assessing projects that go beyond the four walls of our arena and attempting to inspire growth toward development of Eco-Districts," says Zeulner. "This includes looking at things like district energy, shared water management systems, harvesting rainwater, developing gray-water reuse strategies, investing in district-scale food waste-to-energy systems, furthering renewable energy, reducing transportation-related impacts to our region and other projects related to maximizing environmental enhancements."

So far the Portland public has been very receptive to the Blazers' efforts and continue to support the team's expanding







"FUNDING ENVIRONMENTAL PROGRAMS CAN COME FROM VARIOUS SOURCES. IN ADDITION TO INTERNAL CAPITAL RESOURCES, WE APPLIED FOR AND RECEIVED LOCAL AND FEDERAL GRANT FUNDING," says Zeulner. "AS OF THE END OF THE 2011 CALENDAR YEAR, WE HAVE SAVED CLOSE TO $1 MILLION WHILE INVESTING ABOUT $500,000, IN LESS THAN THREE YEARS."

greening program. "Our efforts have only received positive feedback, including thousands of positive media articles, local achievement awards and immense fan applause," observes Zeulner. "The operational savings alone have proved these efforts worthwhile, but beyond the business case, we have supported larger community goals, supported brand development, enhanced the fan experience and made significant connections."

STANDOUT GREENING ACCOMPLISHMENTS

- **Recycling:** More than 80 percent of operations waste is diverted from local landfills. Recycling stations for visitors and a food waste composting program with vendors divert about 1,000 tons annually. 100 percent of food waste is composted.
- **Transportation:** More than 30 percent of Rose Garden attendees use public transportation or alternatives such as bicycle commuting. The team subsidizes transit passes for staff and uses bikes and electric vehicles for onsite operations. 43 percent of Rose Garden staff use alternative transportation.
- **Energy, Gas and Water:** In addition to upgrading to energy efficient lighting and low-flow plumbing fixtures, the Trail Blazers partnered with Pacific Power and the Bonneville Environmental Foundation for the purchase of 100 percent renewable energy programs and Water Restoration Certificates for the Rose Garden. The Blazers cut water use by 17 percent.
- **Purchasing:** The Trail Blazers developed partnerships with suppliers for sustainable purchasing, including more than 95 percent compostable food and beverage serving containers and materials, 100 percent recycled content trash liners, reusable commodities that replace disposables where feasible, green-certified chemicals and equipment, and sustainable food and beverage alternatives for fans.

"THE OPERATIONAL SAVINGS ALONE HAVE PROVED THESE EFFORTS WORTHWHILE, BUT BEYOND THE BUSINESS CASE, WE HAVE SUPPORTED LARGER COMMUNITY GOALS, SUPPORTED BRAND DEVELOPMENT, ENHANCED THE FAN EXPERIENCE AND MADE SIGNIFICANT CONNECTIONS," says Zeulner.

LESSONS FROM THE FIELD

GREENING, INCLUDING LEED CERTIFICATION, CAN BE AN INVESTMENT THAT PAYS OFF: While the up-front investment in major greening upgrades is significant, the payoff is greater. The Blazers invested $560,000 in operations improvements around the Rose Garden. By 2011 the team had recouped $411,000 in energy savings, $165,000 in water savings and $260,000 in waste diversion savings, with a total savings of $836,000. "As of the end of the 2011 calendar year, we have saved close to $1 million while investing about $500,000, in less than three years," says Zeulner. "We forecast that our savings will reach over $1 million by the end of 2012."

DEVELOP AN ORGANIZATION-WIDE GREENING CHARTER TO GUIDE YOUR EFFORTS: Once the Blazers had executive buy-in and a sustainability team assembled, they developed a sustainability charter to better frame the environmental mission statement that would guide their sustainability efforts. "Establishing a charter, our driving document that serves as a sustainability road map, led to the U.S. Green Building Council assignment of LEED Gold certification for the Rose Garden arena in 2010, the first and only existing building in professional sports worldwide to achieve this designation," says Zeulner. The charter included the Blazers' sustainability mission statement, which helped the team plan out and prioritize their green initiatives.

SET PROGRESSIVE GOALS: Zeulner advocates setting progressive goals to spur your green program to higher levels. The Blazers set a goal of carbon neutrality, which requires that they offset more carbon than they produce at the Rose Garden (evaluated using a Scope 3 carbon assessment with the 2007–2008 base year). The Blazers aimed for the highest level of LEED certification to date and achieved it with the guidance of their outside consultants and partners. The Blazers also established a corporate sustainability initiative to incorporate environmental considerations into all internal decisions.

REMEMBER TO CONSIDER IMPROVEMENTS TO EMPLOYEE AND PATRON HEALTH VIA GREENING: Thanks to the LEED certification process, the Blazers significantly improved indoor environmental quality at the Rose Garden. They did this by implementing an internal air quality plan, banning smoking, ensuring all ventilation and filter systems met ASHRAE standards, promoting occupant comfort by providing lighting controls and thermal comfort, and using 54 percent green cleaning products and 73 percent green cleaning equipment to improve indoor air quality.

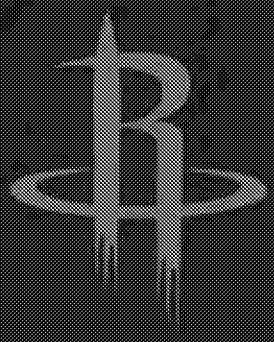
CASE STUDY

TOYOTA CENTER, HOME OF THE HOUSTON ROCKETS



ARENA STATS

Location: Houston, Texas
Began Construction: July 21, 2001
Opened: October 6, 2003
Seating Capacity: 18,400
Owner: Harris County—Houston Sports Authority
Operator: Clutch City Sports and Entertainment
Venue Uses: NBA games, AHL games, concerts, family shows, and conventions
Construction Cost: $255 million (in 2012 dollars)
LEED Certification: LEED Silver for Existing Buildings: Operations and Maintenance in January 2010

THE ROCKETS' GREENING STORY: MOTIVATIONS, CHALLENGES AND LESSONS FROM THE FIELD

The Toyota Center and Houston Rockets had environmental responsibility on their radar even before the arena opened in 2003. "We started before we got into the building. We have always been very environmentally conscious at the Toyota Center—it's always been a part of how we operate," says Sarah Joseph, director of community relations at the Rockets.

The push towards operational efficiency and eventually pursuing LEED certification stems from their green-minded owner, Leslie Alexander. "Environmental responsibility is extremely important to Mr. Alexander," says Scott Manley, director of event operations at Toyota Center.[1] The Toyota Center was the fourth NBA arena to receive LEED certification, earning LEED Silver for Existing Buildings: Operations and Maintenance in 2010. "Applying for LEED was done on a voluntary basis, so we looked at that as an opportunity to take a leadership role," says Manley.

"TOYOTA CENTER HAS A UNIQUE OPPORTUNITY TO SERVE AS AN INDUSTRY LEADER IN THE FUTURE OF SUSTAINABILITY. WE ARE OPERATING IN A MORE ENVIRONMENTALLY CONSCIOUS MANNER AND EDUCATING THE MILLIONS OF PATRONS THAT ATTEND TOYOTA CENTER EVENTS EACH YEAR REGARDING WAYS THEY CAN HELP," says Rockets chief executive officer Tad Brown.

WHY GO GREEN?

By being environmentally responsible in their building and team operations, the Houston Rockets view their green program as a way to lead by example in the community. "Through our efforts with Green Games, aggressive recycling, public outreach initiatives featuring Rockets players, environmental support efforts, and many other programs, we are providing a significant educational support mechanism to our community and fans alike," says Rockets CEO Tad Brown.[2]

By showcasing environmental initiatives at the venue and team community events, the Toyota Center and the Rockets strive to engage their fans and their community in environmentally responsible behavioral changes. This strong commitment to environmentalism is reinforced by the venue's achievement of LEED certification in 2010. "In keeping with [owner] Leslie Alexander's vision of environmental responsibility, we have dedicated many resources over the past few years to gain certification within the LEED program with regards to sustainability and operational efficiency," Brown explains. "This certification serves as validation that our aggressive approach to energy management, recycling and waste reduction programs have made a difference here at Toyota Center and in our community."[3]

The Toyota Center was the first professional sports facility in Texas to get LEED certification in 2010, and, according to Greg Poole, director of facility operations, was among only two or three other buildings in Houston that were LEED-certified at that time.[4] As of 2012, there are now more than 100 LEED-certified buildings in the Houston area.[5]

WHERE TO START?

Though the Toyota Center has long been involved in environmental initiatives, "in 2008 we really made it more formal and started the LEED certification process," explains Joseph. "We launched initiatives on two separate fronts to ensure that environmental awareness was at the center of daily operational activities for Rockets and Toyota Center. First, we began the application process for Toyota Center to become a LEED-certified facility. Secondly, we also established a Rockets Green Committee to develop platforms for guiding our green programs that would be inclusive of staff, fans, and others in the Greater Houston Community."

"On the LEED certification side, Mr. Alexander, our CEO Tad Brown, our CFO Marcus Jolibois, our Assistant GM Scott Manley, and people on the facilities side were involved. Our Director of Facility Operations, Greg Poole, spearheaded our overall efforts to get the LEED certification," says Joseph.

For the Rockets, LEED certification started with collecting baseline data at the building. "When beginning the LEED process, it was important to undergo a comprehensive building survey to establish a baseline from which to expand," Joseph continues. "We partnered with a local engineering firm to assist with the LEED application process." Poole and Manley, along with an eight-person staff, centered the LEED process around five key areas: energy, air quality, water use, reduced chemicals use, and educational outreach.

Aiming for EnergyStar recognition guided the Rockets' energy efficiency initiatives. Poole and his team used EnergyStar Portfolio Manager to compare their building's energy use to similar buildings, which was helpful in gauging their building's energy intensity. "We were always really aggressive in trying to reduce our energy and our footprint," Poole said. "We wanted some validation of what we were doing."

However, this sort of energy comparison can be problematic, Poole notes, since as of yet EnergyStar does not include a sports venue category. "Currently EnergyStar does not have a specific rating or grouping for arenas and stadiums. Arenas attempting to get the points within LEED that are associated with EnergyStar have to submit any data they have, with regards to energy consumption, in hopes that EnergyStar qualifies us in some way."

Another focus area was water use at the arena. The team decided to pursue landscaping efficiency points, reducing their landscaping water use by 50 percent by using native and drought-tolerant plants and installing a drip irrigation system that waters plants at the roots and reduces evaporation. The arena also installed low-flow faucets, toilets, and urinals with automatic sensors that reduce water use by 30 percent compared to conventional building code.

The operations team also addressed air quality at the arena, exceeding American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) requirements.

STANDOUT GREENING ACCOMPLISHMENTS

ENERGY

Through numerous energy efficiency improvements, the arena has reduced overall electricity use by more than 27 percent since 2003, earning EnergyStar recognition. Initiatives include:

- Engaging local entities in retro-commissioning practices
- Installing a Building Automation System
- Installing compact fluorescent light bulbs (CFLs) throughout the venue, saving $70,000 annually
- Installing motion light sensors in offices
- Purchasing renewable energy credits from energy provider

AIR QUALITY

- Increasing indoor air quality exceeding ASHRAE standards, including entry mats that reduce particulates entering building, and MERV 14 air filters on air handlers that reduce energy use

WATER

- Achieving a 50 percent reduction in landscaping water use by using native plants and installing a drip irrigation system
- Installing low-flow faucets, toilets, and urinals, which reduce potable water consumption by 30 percent

REDUCED CHEMICALS USE

- Reducing pesticide use by using Integrated Pest Management (IPM)
- Introducing a high performance green cleaning program including Green Seal-certified products

ENVIRONMENTAL EDUCATION

Earned LEED Innovation points for education programs, including:

- Green Committee projects
- "Green" environmental awareness games
- Community outreach efforts
- Public outreach initiatives featuring the Rockets players
- E-cycling events and tree planting events

ROCKETS GREEN COMMITTEE GOALS

- Be a leader in the Houston community on environmental best practices.
- Drive community activation on environmentally responsible behavior changes.
- Increase community awareness of Rockets' environmental efforts.
- Advance Toyota Center efforts towards LEED certification.

GREEN COMMITTEE ACCOMPLISHMENTS

- Received the 2011 Mayor's Proud Partner Award for Green Initiatives
- Changed behavior within office—lights off policy, recycling of paper and plastic items
- Established the "Green Team of the Game Program"—for each game, youth from schools, non-profits, and sports teams volunteer to pick up recyclable items in the stands and throughout the arena; 400 youth participate each season
- Receive ongoing coverage in local media for green initiatives

"We implemented an indoor air quality program that reduces particulates in the air by going above and beyond the recommended MERV 13 filters to MERV 14 filters used by our air handlers," says Poole. "This reduced particulates in the air as well as energy costs on the air handling units themselves by modifying the type of filter used." Entry mats that reduce particulates from people entering the building were also installed.

Another priority was reducing chemical use in the building. The arena achieved this by training staff in Integrated Pest Management techniques, which reduces the use of pesticides. The cleaning staff also began purchasing green cleaning products, including Green Seal-certified products.

The last focus area of the Toyota Center was creating an educational outreach program, which earned them Innovation points with LEED. This program meshed with the simultaneous efforts of the Rockets Green Committee, which was working to generate environmental awareness with fans, staff, and the local community.

"The Green Committee is made up of a cross section of folks from different departments from all levels of the organization—from coordinators to upper management," explains Ken Sheirr, senior director of marketing operations. "There were about ten people on that committee to help us establish the green policy and procedures that were eventually implemented."

The Rockets Green Committee kicked off their program by engaging and educating their fans on environmental initiatives. "We were one of the first two NBA teams to have an environmental awareness game," says Sheirr. "We basically used that game as an opportunity to communicate our environmental views to our fans. We did things like having our mascot wear a green costume and including environmentally-friendly items such as recyclable cups and canvas bags as part of the night's giveaways. We brought in representatives who are involved in environmental issues throughout the community and let them use that as a platform to distribute their pamphlets or literature. We displayed environmental facts on the screen throughout the game. We've been doing all that for about four years. That was our first major initiative outside of the LEED process."

The next step was getting their staff involved in their program. The Rockets Green Committee instituted organization-wide initiatives to reduce environmental impacts around the facilities, starting with small changes. "We removed all paper cups from the coffee areas, encouraging everyone to use mugs," explains Sheirr.

"We installed automatic sensors that would turn off the lights in offices when people left the room. We sent out communications on the importance of electronics and powering down. We have big recycling stations with graphics set up throughout the administrative area where you can bring in your lightbulbs and batteries from home and we'll

"WE WERE ONE OF THE FIRST TWO NBA TEAMS TO HAVE AN ENVIRONMENTAL AWARENESS GAME," says Ken Shain, senior director of marketing operations. "WE BASICALLY USED THAT GAME AS A PLATFORM TO COMMUNICATE OUR ENVIRONMENTAL VIEWS TO OUR FANS."

recycle them for you. We've done that over the last few years and come up with a few new things to do each year, just to get folks engaged."

These initiatives have made a big difference at the arena, according to Poole. "We have increased our recycling tonnage from just a few tons each month to over 14 tons each month on average," he says. "We implemented a no trash can policy for individual spaces like offices and cubicles…[I]nstead we provided centralized waste stations that separated recyclable material from general waste. This created an opportunity for each person to have to get up and walk to the station and at that point it made them think about what they were discarding and not just throw everything into the general waste stream."

The Rockets also approached local organizations to assist in environmental educational outreach and green community events. "One of the main groups we've worked with is 'Keep Houston Beautiful,'" says Hai Duong, senior community relations coordinator. "They've been a wonderful and major resource in helping us find projects and locations. They've helped us find other partners as well such as the Houston Housing Authority or the Houston Arboretum and many other organizations as well."

This influence has not gone unnoticed; the Rockets won the 2011 Mayor's Proud Partner Award for their green outreach initiatives and community events. Initiatives included a "The Green Team of the Game Program" where youth from schools and social organizations volunteered to help pick up recyclable items during Rockets home games; 5,000 reusable water bottles given out at games; community cleanup events and tree planting events; and an annual "Recyclefest" event collecting electronics, books, clothing, and shoes for recycling and donation. In 2011, the event's organizers collected 14,242 pounds of electronics for responsible recycling; three blue crates, 150 bags, and 10 boxes of clothes and shoes, donated to the Salvation Army; and 12 boxes of books, also donated to the Salvation Army. The Rockets have collected nearly 100,000 pounds of electronics for recycling since launching the program.

CHALLENGES: THOSE OVERCOME AND ONGOING

Earning LEED's Energy points was no small task for the Houston-based arena, whose 750,000 square-foot building is a challenge to keep cool in the summer months, where temperatures hover in the mid-90s an average of 99 days per year. "To cool down the building for an event takes serious amounts of power," Poole says. The building hosted 150 events in 2009, so a high-efficiency cooling system was crucial in order to achieve the necessary energy reductions. When events are not scheduled at the arena, Poole's team makes sure to shut down as many building components as possible.[8]

"We have reduced our overall consumption by 27 percent from when we first opened and our annual goals are to continue finding ways to reduce electrical consumption by 3 percent to 5 percent each year," he says. "This was accomplished by lighting retrofits and equipment modifications, as well as creating the correct culture within our operations that designated energy management as one of the highest priorities in our daily business."

While pursuing LEED gave the Toyota Center a road map to environmental initiatives at the arena, the application process itself was a challenge. "The more [building features] you submit, the harder it is," Poole says. "We're not a typical office building. The information we're supplying is a little bit different from what they want to see. We have to make arguments back and forth for why we feel like we're matching what they're asking for." The Rockets ended up bringing on a consultant from Riehl Engineering to provide day-to-day support for the complicated application process.

Despite these challenges, the Toyota Center is determined to build on its LEED Silver certification and strive for higher certification levels. "We intend to continue improving on our current list of programs and implementing new ones with the eventual goal of reaching the next level of certification," says Joseph.

LESSONS FROM THE FIELD

ESTABLISH A GREEN COMMITTEE AND SET GOALS: The Rockets established a Green Team with representation across the organization. Goals and objectives were determined during initial Green Team meetings, which led to developing a comprehensive environmental program. According to their USGBC project profile, "Seemingly the most important item the project team identified for the success of this project is the necessary cultural shift which must occur with both event attendees and concessions to make LEED certification a reality."[7]

ENGAGE YOUR COMMUNITY IN YOUR ENVIRONMENTAL EFFORTS: With more than 1.5 million fans visiting the arena annually, the Toyota Center has a considerable influence in the community. "Toyota Center has a unique opportunity to serve as an industry leader in the future of sustainability," says Brown. "We are operating in a more environmentally conscious manner and educating the millions of patrons that attend Toyota Center events each year regarding ways they can help." Events that address local environmental issues are a great way to engage the community and educate fans about the environment. "For us, one of the major initiatives from a community standpoint is tree planting, especially now in Houston coming out of a terrible drought over the last summer that led into January of 2011. There was so much damage done to the green space in Houston and the landscape. What we really want to do is figure out a way to get involved in that, whether it's just going out organizing tree-plantings or figuring out a way to raise money," says Joseph.

CASE STUDY

PHILIPS ARENA, HOME OF THE ATLANTA HAWKS

ARENA STATS

Location: Atlanta, Georgia
Began Construction: June 5, 1997
Opened: September 18, 1999
Seating Capacity: 18,729 (basketball) and 21,000 (concerts)
Owner: Atlanta Fulton County Recreation Authority
Operator: Atlanta Spirit, LLC
Venue Uses: NBA/WNBA pro and collegiate basketball games, WWE wrestling matches, family shows, and a variety of concerts
Construction Cost: $298 million (in 2012 dollars)
LEED Certification: Certified LEED for Existing Buildings: Operations and Maintenance in April 2009

THE HAWKS' GREENING STORY: MOTIVATIONS, CHALLENGES AND LESSONS FROM THE FIELD

The Atlanta Hawks have a competitive green streak that came out when they vied with the Miami HEAT to become the first NBA team with a LEED-certified home arena. For eight months, the Hawks worked hard to achieve LEED Certification for Existing Buildings: Operations and Maintenance (EBOM), and the team was awarded the LEED certification on April 7, 2009, becoming the first NBA arena in the world to achieve this certification for an existing facility. Today, many NBA arenas have achieved LEED certification including the Miami HEAT, the Orlando Magic, Houston Rockets, and Portland Trail Blazers.

To earn certification the arena invested in a variety of green improvements almost a decade after the building first opened. These upgrades included: HVAC, chiller, and lighting retrofits; reflective roof materials that reduce cooling needs; and water conservation measures such as low-flow bathroom fixtures that have cut water usage by 2 million gallons.

WHY GO GREEN?

"The building was built with sustainable thoughts in mind as we've always been interested in the environment and our effect," says Barry Henson, vice president of operations. However, Henson explains that as new technologies and building standards were being developed, the Hawks became increasingly interested in how they could further improve. "When we started talking about really getting involved and moving our position forward on greening our arena ownership, executives and marketing group were asking us what we could do better," says Henson, "and that got us thinking about the next level of efficiency and improved operations."

For the Hawks, greening was kicked off by two interests: maximizing operations efficiency, and competitiveness. The LEED green building certification intrigued the Hawks, particularly as it appealed to their desire to be the first arena to achieve LEED certification. "We spoke to other arenas but found no others going with LEED. LEED has gone through so many innovations and there are a lot of things that better fit an office building or school than a 24-hour operating arena like ours," says Henson. "When we decided to pursue LEED certification it helped us blaze a few trails for the U.S. Green Building Council."

WHERE TO START?

The Hawks operations team began by weighing the pros and cons of different greening initiatives and programs to assess which most fulfilled their primary objective of high operational efficiency. "We started by looking into areas such as carbon credits and buying renewable energy credits (RECs), but those are areas that people get involved in that don't really change their operations or policies," says Henson. "LEED was the only answer for us because it gave us the ability to document our policies, make changes where we needed to, and engage ourselves in the entire greening process."

The Hawks brought together a core group of interested staff members from operations, event planning, and marketing to work with a local green building consultant called Southface. This green team led the charge on greening and LEED process, explains Henson, which ultimately also relied on feedback and buy-in from all staff. "Every employee in the arena had a role in changing how we do things, in assembling information and also in researching other greening initiatives out there. It was a total team effort here," Henson emphasizes.

STANDOUT GREENING ACCOMPLISHMENTS

- Low-flow flush toilets, aerator changes and low-flow shower heads as well as management of the cooling system reduced water consumption to save more than 1.95 million gallons of water per year.
- Philips Arena electrical consumption has seen an 8 percent reduction year over year, saving more than 4.5 million kilowatt-hours per year. Philips Arena uses approximately 20 percent less energy than all other U.S. arenas that house two professional sports teams (Philips hosts both the Hawks and WNBA's Atlanta Dream).
- Philips Arena sends its plastic, aluminum, glass, cardboard and paper waste to SP Recycling.
- Philips Arena sends over 12 tons of food waste per year to be turned into compost that is sold and used locally.
- Paper products, including paper towels, bathroom tissue, and copier paper, are all 100 percent post-consumer recycled content.

The Hawks began their on-the-ground work by implementing more environmentally conscious cleaning practices. "The first big change we made was moving towards green cleaning. That was a big change because everyone was used to using bleach, ammonia, and other chemicals," says Henson. "We had training and staff integration in order for our green cleaning staff to get everyone on board. The chemical supplier that we started working with, Southeast Link, has what they call a 'Green University.' So they'll bring a gentleman out who trains our staff as often as we need to make sure that everyone understands the proper operation of the greener equipment and products. They do training both onsite and at their headquarters."

CHALLENGES: THOSE OVERCOME AND ONGOING

The Hawks looked to their peers for greening inspiration. When they were unable to find any LEED-certified arenas to use as a model, Henson's team worked on identifying individual greening projects that the Hawks could take on. "We just wanted to find out the greening initiatives at the other arenas. For example, composting was an initiative we pulled in from another arena," explains Henson.

The Hawks also turned to both publically available resources and a local consultant for advice on which green products to use and how to upgrade their systems. "We have worked with the EPA on some of our initiatives and have used their online resources for guidance," says Henson. "We also worked with Southface on the LEED process, which was a big help to us. We went through some training at their headquarters on certifying buildings and green projects. They helped provide us with a lot of information on how to pursue LEED certification and we took a lot of cues from them from an operational standpoint."

The Hawks had some challenges finding enough space to sort and manage their recyclables onsite, as well as initial local hauling issues. "From a waste diversion standpoint, we are on such a small footprint here that we had to get creative about how to handle those recycled materials and find a company that would accept our recyclables," says Henson. "But we overcame those issues and increased our diversion rate from 5 percent to about 20 percent, if you include the compost diversion. That takes a lot of weight out of our compactors and really reduces our waste bill as well. It's good to be able to divert something and get it to a location where it can be reused."

On the composting side, the Hawks had to work out how to best keep their composting facilities clean and sanitary for employees to manage. "Our composting program is active throughout our back of house. We started doing only the kitchens and food areas but we then expanded into all of our 90+ suites," describes Henson. "These programs require a lot of meetings and a long refining process. We bought some equipment for cleaning the food receptacles. You have to clean those out daily. We've worked through those pains and now it's a pretty seamless process."

Since 2008 the Hawks have also been implementing green strategies to increase their energy savings. "We've been working on our power consumption for several years now," says Henson. "In 2008 we reduced our energy consumption enough to power 1,300 average American homes for a month."

The Hawks' system-wide approach to energy reduction focuses predominantly on commissioning, automated lighting, lighting upgrades and sensors, according to Henson. "Our energy savings are mainly attributable to building commissioning, with new checks and balances of our systems," he explains. "We had our airflow tested to ensure the systems were performing as designed and cut back use where possible. We looked at reducing lighting needs, have done some retrofits and also put some things on an automatic shut down. We put light sensors in offices. We were able to reduce the wattage of the fluorescent lamps from 34 watts to 25, with the same light effect throughout the facility."

Henson's team compared Philips Arena with similar venues nationwide to best evaluate their overall energy savings. "When we were moving through the LEED certification process, we were able to benchmark ourselves against other arenas," Henson explains. "We approached arenas that have a similar climate and events schedule. We tracked 21 percent better than any other building that we talked to in the country in terms of energy use. Additionally, our concert attendance is ranked third in the nation, which makes our energy savings metrics even more impressive."

"WHEN WE WERE MOVING THROUGH THE LEED CERTIFICATION PROCESS, WE WERE ABLE TO BENCHMARK OURSELVES AGAINST OTHER ARENAS," Barry Henson explains. **"WE APPROACHED ARENAS THAT HAVE A SIMILAR CLIMATE AND EVENTS SCHEDULE. WE TRACKED 21 PERCENT BETTER THAN ANY OTHER BUILDING THAT WE TALKED TO IN THE COUNTRY IN TERMS OF ENERGY USE. ADDITIONALLY, OUR CONCERT ATTENDANCE IS RANKED THIRD IN THE NATION, WHICH MAKES OUR ENERGY SAVINGS METRICS EVEN MORE IMPRESSIVE."**

On the other hand, the Hawks recognize that there is always room for improvement and meet regularly to plan their next projects. "We still have meetings to look at new products and procedures," says Henson. "The thing about LEED is that once you get certified everybody calls you with new products which we evaluate based on payback and efficiency. We separate out the projects we want to entertain for future capital expenditure as well as the cost-neutral things that we can change now."

In order to evaluate new products, the Hawks conduct internal research and also solicit advice from partners. "We'll look through new products to determine if they're legit. We talk to the typical user of a product to get their evaluation of it," says Henson. "I also call Southface often and ask them if they've heard of the product or seen it in action anywhere, because they are a great resource for us. We get to the right people to make our decisions and count heavily on the partners who are closest to us in the process."

Up next for the Hawks: a rainwater cistern and 100 percent chemical-free cleaning. "We are working on a couple of water-saving initiatives wherein we collect rainwater, as well as condensation, from our building and use that in our cooling towers instead of using city water. That's one piece that we are actively working on, but it's still in its infancy right now," described Henson. "There are some alternate cleaning initiatives that are looking very enticing as well, which would keep us from using any chemicals whatsoever. We've found a company that makes a product that is both a sanitizer and cleaning agent. You can use it in any spray bottle or cleaning infrastructure that you already have and it eliminates the need for cleaning chemicals of any kind."

LESSONS FROM THE FIELD

PARTNER WITH SPONSORS ON GREEN INITIATIVES: The Hawks have harnessed the green initiatives of numerous local companies in order to enhance and grow existing corporate partnerships and fashion a large percentage of their own employee volunteer projects on community donation drives and reforestation projects.

PARTNER WITH LOCAL ORGANIZATIONS TO GROW YOUR COMMUNITY CONNECTIONS: "We've formed a tight relationship with Habitat for Humanity and with the Atlanta Mission. A lot of the things that we no longer use here are reusable so we try to donate to those two entities as much as possible because it helps take care of Atlanta locally," says Henson. "It has been a benefit for us to get involved in nonprofit groups that are taking care of our local people, often also our fans." The Hawks also participate in Rock and Wrap it Up!, a widely used food donation program. "The group comes and picks up the prepared leftover food; we only have to collect it and get it to a central location," explains Henson. "We try to help as much as we can locally. Many of these issues, environmental and social, should carry over into peoples' home lives. We try to help educate fans, friends and other family members."

PROVIDE DIRECT INCENTIVES TO ENGAGE STAFF IN GREEN ACTIONS: "We are connected to a MARTA [Metropolitan Atlanta Rapid Transit Authority] rail station so we regularly encourage our workers to ride the train. We give them train and bus passes as a perk to encourage them not to drive," explains Henson. "Access to mass transit is a big help as we were able to cut down on our amount of parking as part of our LEED certification."

REPEAT TRAININGS TO EDUCATE BOTH PERMANENT AND TRANSIENT STAFF: "Our type of training programs are really about re-introducing the same idea over and over until our staff takes hold of it. Once they do then they start introducing it to other people," says Henson. "We have so many third-party people working in our building at all times, which can make it difficult to educate everyone. But because the part-time employees are in constant contact with members of our staff, our messages get to those people as well."

HOME DEPOT CENTER, HOME OF THE L.A. GALAXY

First Outdoor Stadium to Be Awarded ISO 14001 Certification in North America

The Home Depot Center, home of the L.A. Galaxy pro soccer team, became the first outdoor stadium in North America to be awarded ISO 14001 certification for its environmental management system in November 2011.[16] "The ISO certification adds structure and transparency to our environmental stewardship commitments by putting all our ideas, programs and best practices on paper," said Katie Pandolfo, general manager of the Home Depot Center. "By having all of our goals and initiatives tracked in one place, the ISO keeps everyone on the same page and holds each of our divisions and employees accountable."[17] The Home Depot Center's energy-saving features include motion sensors connected to the HVAC and lighting systems so these systems are active in a given space only when that space is occupied.[18] To further enhance energy efficiency, the stadium also participates in Southern California Edison's Demand Response programs, which enable it to manage energy use to avoid statewide demand peaks. "One of the things we take pride in across our venues like the Home Depot Center is that sustainability isn't just a buzzword, but part of our smart business operations," said Jennifer Regan, global sustainability director at AEG, which owns the facility. "By cutting back our energy and water use, our participating venues not only reduce their environmental footprint, but also cut their operational costs, which has a direct impact on our bottom line."[19]

The L.A. Galaxy demonstrates its commitment to spreading environmental awareness in the greater Los Angeles community by participating in the Greener Goals Week campaign. As the MLS Cup Champion in 2011, the Galaxy participated in the Bonneville Environmental Foundation's Solar 4R Schools program, which installs solar panels on a school in the winning team's region. This year's 2.1-kilowatt solar array was awarded to KIPP Los Angeles College Preparatory School, located in East L.A. The panels are anticipated to produce 3,034 kilowatt-hours of clean energy per year. Solar 4R Schools also provides students and teachers with hands-on tools to help them learn about the importance of solar, wind and other renewable energy technologies. The kickoff event also included a garden planting project with Galaxy players helping to plant fruit, vegetables, and herbs in the school garden.[20]

FENWAY PARK, HOME OF THE BOSTON RED SOX

Oldest Major League Baseball Stadium Undergoes Facility-Wide Sustainability Upgrade

Built in 1911, Fenway Park is the oldest Major League Baseball stadium currently in use. Despite the venue's age, the Boston Red Sox have undertaken a variety of green initiatives to improve the operations and efficiency of their historic venue. "As stewards of such a storied venue, we recognize our unique position and ability to raise public consciousness about important issues. Our decision to enhance the ballpark's environmental attributes is one born out of a sense of personal responsibility and professional duty," said Tom Werner, the team's chairman, in 2008 during the launch of the Fenway Greening program, which was initiated in partnership with NRDC. "For us, this announcement marks some of the first steps in an ongoing process to make America's most beloved and oldest ballpark also one of America's greenest."[21]

In 2010, Fenway completed an energy audit to investigate ways to reduce energy use and save money. The park now uses LED lighting, which is 90 percent more efficient than the previous lighting. The ballpark also installed 28 solar panels across the roof of the Red Sox dugout. The array supplies 37 percent of the energy needed to heat Fenway's water, thereby avoiding the release of 18 tons of CO_2 each year, the equivalent of planting 4.86 acres of trees.[22] The stadium has also implemented many plumbing renovations, including the installation of waterless urinals, dual flushers, and water-efficient fixtures. Together, these have reduced overall water consumption by 30 percent, saving more than 360,000 gallons each year.[23] All building renovations use locally sourced materials, and new construction has reused more than 800 tons of old bricks and recycled other construction waste. Fenway also plans to install sensor-controlled fluorescent lighting.[24]

©MLB

Fenway also has a Going Green recycling program, which involves a game-day green team of volunteers collecting recyclables and 100 solar-powered BigBelly compactors located around the park, each one able to hold 55 gallons of recyclables. Fenway uses 100 percent recycled content paper for most paper products, including *Red Sox Magazine*, in offices as well as the ballpark. Their concessionaire, ARAMARK, is committed to offering more local, organic food options and using cups, containers and napkins made from recycled content.[25] "With the help of our dedicated staff and valued sponsors, we are continuing our commitment to make Fenway Park friendlier to the environment," said Werner. "We hope that by incorporating both big and small changes in our daily operation, the cumulative effect will mean future generations can enjoy the great game of baseball in a cleaner and more environmentally friendly world."[26]

TARGET CENTER, HOME OF THE MINNESOTA TIMBERWOLVES

First Professional Sports Arena in North America to Install a Green Roof

In September 2009, the Minnesota Timberwolves installed the first green roof on any North American arena, spanning 2.5 acres (115,000 square feet) across the Target Center in Minneapolis.[27] Currently, this is the nation's fifth-largest green roof on any facility. The roof captures nearly 1 million gallons of stormwater a year, which saves $10,000 annually in stormwater charges and prevents runoff into the Mississippi River. In addition, the green roof helps alleviate the urban heat island effect. The roof is planted with a variety of native Minnesotan prairie plants, including lupines, to support the endangered Karner blue butterfly.[28] "The city wanted to make a sustainable choice with this roof," said Tom Reller, senior director of operations for the Target Center.[29]

The Timberwolves have pursued other sustainability initiatives as well, including switching to using a plane for team travel that is 30 percent more energy-efficient than the type previously used; the plane also has an onboard recycling program.[30] The Timberwolves also partner with Juhl Wind, Inc., a wind power developer, to take part in Think Green month, which encourages fans to implement a more eco-friendly lifestyle.[31] At each home game during the month, the Timberwolves honor organizations or individuals helping to preserve the environment and air an in-game public service announcement that promotes the importance of greening. "We are very excited to be part of this interactive and informative program," said Corey Juhl, vice president of project development at Juhl Wind. "We enjoy working with the Timberwolves organization to spread the word and provide education to the community on how each of us can contribute to the preservation of our environment."[32]

CONSOL ENERGY CENTER, HOME OF THE PITTSBURGH PENGUINS

First National Hockey League Arena Awarded LEED Gold Certification in North America

The Pittsburgh Penguins' Consol Energy Center, built in 2010, was the first NHL arena to be awarded LEED Gold certification on August 4, 2010.[33] The project received high marks for water use reduction, recycled materials, regional materials, demolition and construction waste diversion, use of certified wood, and energy efficiency. LEED-qualifying features include increased green space around the outside of the building, locally procured construction materials, improved indoor air quality, efficient lighting and HVAC, maximized use of natural light, use of low-VOC paints and adhesives, purchase of renewable energy for a portion of energy use, and water-efficient plumbing fixtures. "The sustainable building practices that helped the center to achieve LEED Gold certification truly make this facility a world-class arena for Pittsburgh's world-class hockey fans and set a great example for future facilities of this type," said Edward G. Rendell, governor of Pennsylvania at the time.[34]

The Penguins are also committed to supporting the local community. The stadium's concessionaire, ARAMARK, has a menu that emphasizes locally grown ingredients. The Penguins participate in the Rock and Wrap It Up! program, donating unused concession food on game nights to local food banks. With 20,057 pounds of food donated in 2011, the Penguins ranked first among the 24 U.S.-based NHL teams participating in the program that year. "We thank our partners at ARAMARK for their commitment to this very important community program," said David Morehouse, CEO and president of the Penguins. "Food that otherwise would have gone to waste is now being turned into thousands of meals for the Greater Pittsburgh Community Food Bank to provide to those in need. We're proud to be a part of it."[35]

CITIZENS BANK PARK, HOME OF THE PHILADELPHIA PHILLIES

Greatest Purchaser of Green Power in U.S. Professional Sports

In 2008, the Phillies became the first Major League Baseball team to join the EPA's Green Power Partnership program, which encourages organizations to buy certified renewable energy. In June 2012 the Phillies purchased more than 22 million kilowatt-hours of Green-e certified renewable energy in renewable energy certificates (RECs) to offset 100 percent of Citizens Bank Park's electricity use with local clean energy. According to the EPA, this is the largest single purchase of renewable energy to date in professional sports.[36] The annual environmental benefit of this purchase is equivalent to planting 285,000 trees and growing them for a decade. By electing to purchase locally sourced wind- and solar-generated power, the Phillies are also investing in regional clean energy jobs.[37] "We're proud to join Major League Baseball in bringing awareness to fans about how to become more environmentally conscious," said Phillies president, David Montgomery.[38]

As part of their Red Goes Green campaign, the Phillies and Citizens Bank Park also have a strong recycling program. Throughout the ballpark are 40 oversize, 80-gallon recycling containers that accept cardboard, paper, e-waste, plastic, aluminum, and glass. A Red Goes Green Team, consisting of Phillies ball girls and volunteers, collect recyclables during games to boost the diversion rate. The venue has a recycling center for all departments, enhancing back-of-house recycling efforts. In a 2010 carpet replacement project, the Phillies recycled 1,755 pounds of carpet, which is equivalent to the waste generated by one American in a year. The Phillies also participate in the Rock and Wrap It Up! food donation program, giving unsold prepared food to local charities.

CHAPTER 4: RECOMMENDATIONS FOR IMPLEMENTING A SUCCESSFUL SPORTS GREENING PROGRAM

This section contains a set of recommendations that can help teams and venues begin or build upon their environmental programs, based on lessons from some of the most well-developed sports greening initiatives in North America to date. By implementing some of this advice, sports teams and venues can gradually improve operations, strengthen their brand, attract green sponsors and engage with fans on this issue. The recommendations below are diverse, as greening strategies vary according to the needs and capabilities of individual organizations. Consider the following 10 strategies for beginning or improving a greening program:

1. RECOGNIZE THAT SHIFTING TO ENVIRONMENTALLY PREFERABLE PRODUCTS AND OPERATIONS TAKES TIME

The infrastructure that dominates the way goods and services are manufactured and supplied in the marketplace has been built up over many decades. In fact, that existing infrastructure, including environmentally harmful production practices, is often supported by subsidies, regulations and vendor relationships that make it more difficult to implement change. Some initiatives, such as energy efficiency audits and water use audits, can progress promptly. But other adjustments, such as actually changing energy-consuming technologies, measuring impacts, shifting to post-consumer recycled content paper products, developing a recycling-based waste management system and providing ecologically preferable food service, can take a few years to implement.

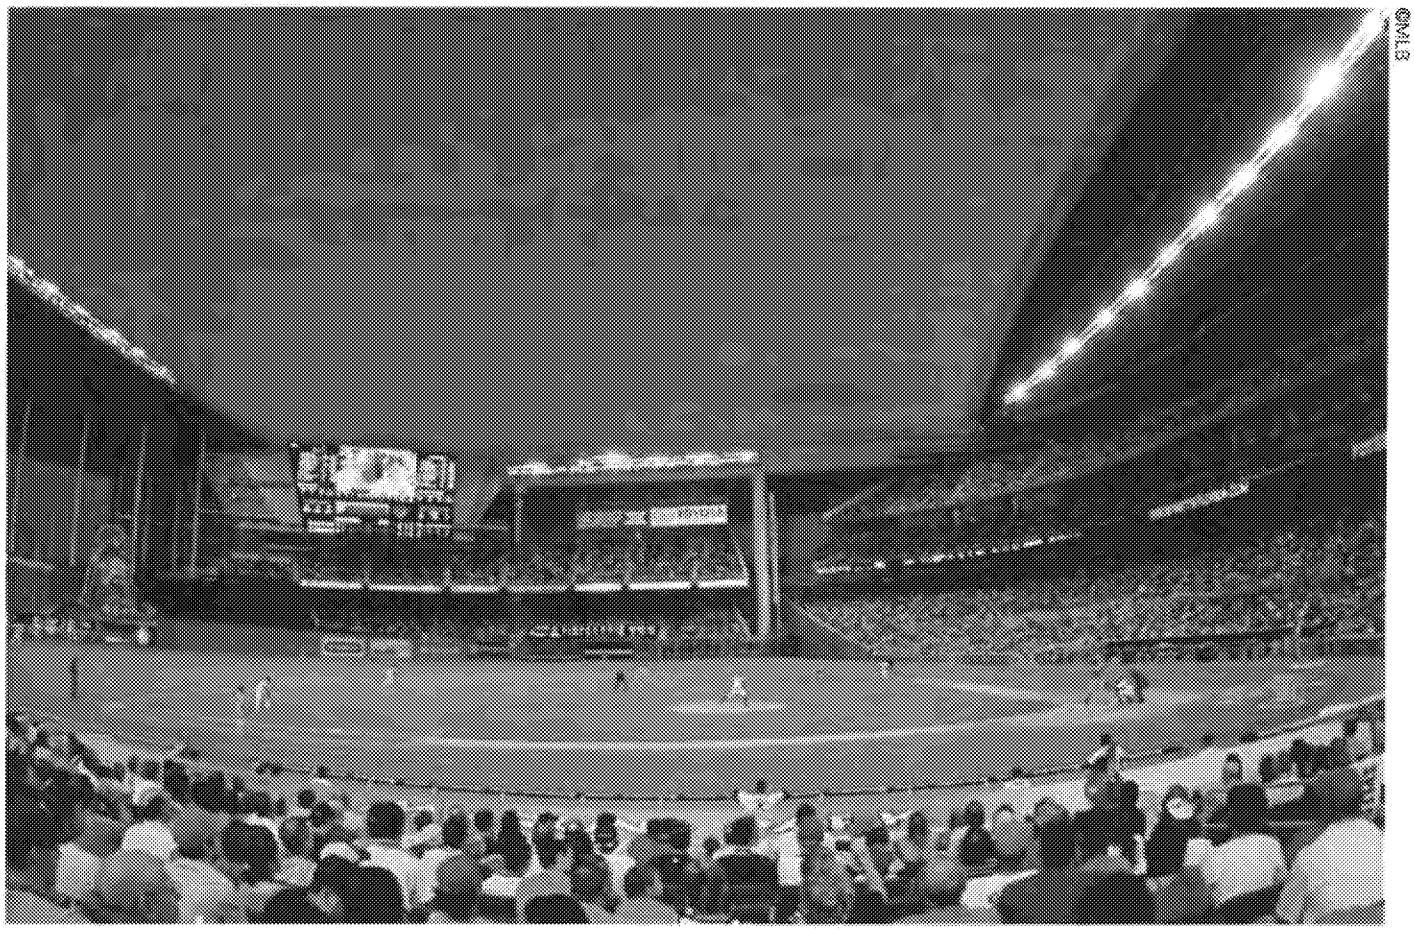
This should not deter you from undertaking the small steps needed to make gradual progress. Give your organization the time it needs to make these adjustments, and let the initiative unfold as slowly as needed to ensure that staff comfort, proper training and implementation, and budgetary restrictions will be respected. This will benefit the longevity and stability of the greening program. Moreover, long-range planning can allow an organization to invest in capital improvements that will save money over time.

2. START WITH EFFORTS THAT HAVE THE FASTEST RETURN ON INVESTMENT: ENERGY, WATER AND PAPER EFFICIENCY PROGRAMS

Starting with cost-saving environmental initiatives helps garner institutional support. Improved efficiency means less waste, which often translates into cost savings as well as savings of energy, water, and other resources. A sports greening program that begins with financially sound environmental initiatives—such as upgrading to more-efficient light bulbs, installing water-efficient fixtures or making double-sided copies and printing less frequently—will help the program gain momentum by cutting costs and attracting interest in other greening opportunities.

3. AUDIT YOUR ENERGY, WATER AND PAPER USE AND YOUR WASTE GENERATION TO SAVE MONEY

Commission an energy, water and waste audit to evaluate opportunities for resource and financial savings. (Many utilities provide free energy audits.) During an energy and water efficiency audit, a trained engineer conducts an analysis of your facility and identifies opportunities for enhanced efficiency that are likely to save your organization money and improve your environmental performance. Using the data collected, your organization can identify the feasibility of various infrastructure upgrades and improved building management systems and the potential for cost savings. Similarly, you can audit waste generation and paper use and identify opportunities to enhance efficiency in those areas.



4. MEASURE YOUR ONGOING OPERATION—TRACK ENERGY, WATER, WASTE AND OTHER ENVIRONMENTAL COSTS

By tracking environmental data such as energy and water use, waste generation, and paper use, you will be able to assess performance and identify opportunities for improvement. Measuring also allows you to set short- and long-term goals and compare your performance with others in the field. Quantifying successes can help determine where your greening investments can make the most impact and can help your organization document progress, inspiring further investment by staff, partners, fans and sponsors. Some leagues are implementing league-wide tracking systems for environmental metrics like energy consumption, water use, waste/recycling, and paper purchasing. Take advantage of your league's measurement program if it's available. Even if your league doesn't yet offer an environmental tracking system, you can track your team's or facility's environmental metrics using tools like the EPA's Portfolio Manager and WasteWise, or even assemble individual spreadsheets with data supplied by vendors and service providers.

5. ESTABLISH A GREEN TEAM LEADER, RECRUIT INTERESTED STAFF FROM ALL DEPARTMENTS, AND GET EARLY BUY-IN FROM LEADERSHIP

Often a greening initiative is launched by a single person who is motivated to implement change, but a successful greening initiative is one that embeds itself in the culture of an organization. A greening initiative must be bigger than a single person, who may at some point leave the organization. Make sure the greening initiative is supported by upper management to promote organization-wide buy-in. One way to involve staff at different levels is to create an organization-wide environmental mission statement. Also develop environmentally preferable purchasing policies and vendor contracts, and other tools supporting your environmental goals.

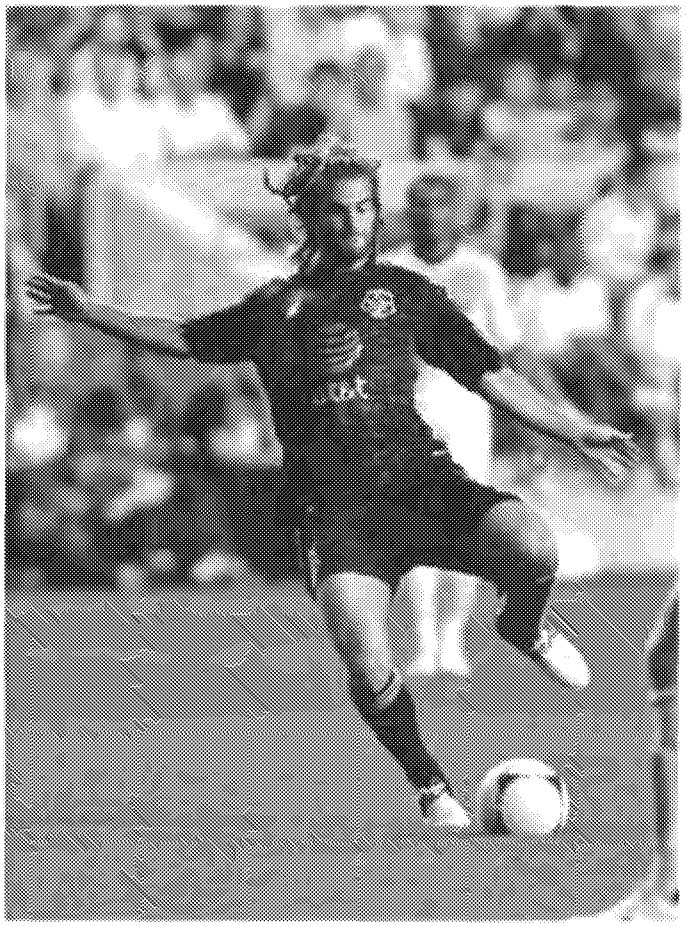
6. REALIZE THAT GREENING IS A JOURNEY, NOT A DESTINATION. THERE IS NO GREEN, ONLY GREENER; AND THERE IS NO BEST, ONLY BETTER, AS NEW PRODUCTS ARE ENTERING THE MARKET ALL THE TIME

Greening means reviewing your operations and procurement with an eye toward reducing environmental impacts. It is an iterative, ongoing process. Greening means not just following a checklist, but integrating environmental criteria into ongoing decision-making about products, services and operations. Make a formal environmental commitment where possible in purchasing policies, vendor contracts and sustainability reporting.

Greening is never really finished, because more efficient, environmentally preferable products and services are entering the market all the time. If you aren't able to find the product or service that meets your environmental needs at a given point, keep looking, and continue to let your vendors know what you want; chances are that the product will be available (and affordable) before long. Education of staff, fans, vendors and partners is also an ongoing process. By visualizing greening as a journey, you can celebrate accomplishments along the way and create a flexible initiative that can respond to changes in internal priorities and in the marketplace.

7. SPONSORS AND VENDORS CAN HELP SUPPORT YOUR GREENING PROGRAM. IDENTIFY WAYS TO WORK WITH PARTNERS TO PROFIT FROM THIS SUPPORT

Greening may lead to sponsorship opportunities with existing or new partners who share your goals of environmental stewardship. Involving sponsors and vendors can provide financial and organizational support to your environmental efforts. These partners may bring funding, advertisements and products to your greening effort. Also talk with your sponsors about funding solar arrays, recycling containers or other environmental enhancements to your facility. Collaboration with sponsors and vendors can also help disseminate information about your greening program into your host community. The community's involvement can also help move the marketplace toward more sustainable behavior. Involving your sponsors and vendors sends a valuable signal to the corporate world that environmental issues are important to your organization.



©MLS

8. GREENING IS A GOOD BRANDING TOOL THAT CAN HELP RAISE YOUR ENVIRONMENTAL PROFILE IN THE COMMUNITY. ENGAGE FANS IN YOUR GREENING PROGRAM AND COMMUNICATE YOUR SUCCESSES

Greening initiatives can provide opportunities for fans to interact with teams in their community. Fan engagement can be as basic as incorporating visible and well-marked recycling bins at a stadium, inviting community participation in green events, or featuring ongoing displays at a sports facility. Public service announcements or other broadcast initiatives can also yield great fan response. Some teams and leagues are modifying their websites and using social media to bring fans into their greening initiatives. Some communities coordinate sports greening initiatives with community goals and information sharing.

©Microgrid Solar

9. AVOID GREENWASHING, BECAUSE OVERSTATING ACCOMPLISHMENTS CAN BACKFIRE

Don't be shy about communicating success stories, but don't greenwash, either. Exaggerating your environmental achievements can undermine your good work and do long-term damage to your brand. There is no shame is announcing a small accomplishment. Indeed, there is no single business undertaking that can solve our many ecological problems. However small our day-to-day actions may seem, our collective purchases add up to meaningful regional and global impacts. Most individuals and businesses can do only relatively small things, whether it's buying products made with recycled content, using renewable energy, driving a fuel-efficient car, or conserving water. What is clear, however, is that everyone has to do something, regardless of how small it might seem, to reduce their ecological footprint.

10. LEARN FROM OTHERS. JOIN THE GREEN SPORTS ALLIANCE AND USE LEAGUE-BASED RESOURCES

Leagues can offer support by sharing information about better practices that other teams and venues have already implemented. MLB, the NHL and the NBA have, or will soon have, environmental data-gathering systems that can help measure progress and identify opportunities to improve. Green Sports Alliance newsletters, conferences and greening committees are other ways to obtain information about greening.

To get started today on greening your team, venue or event, consult the NRDC Greening Advisor at www.greensports.org for in-depth suggestions on how to adopt greener practices. The Greening Advisor is a free, online guide that helps sports leagues, teams and venues implement environmentally intelligent practices to improve the efficiency of operations, uncover opportunities to cut costs, enhance brands and benefit public health. It covers everything from energy audits and arena transportation to purchasing, travel and waste management.

AFTERWORD

Looking back over the past few years at the environmental progress in the professional sports industry and society in general, we can see remarkable progress being made, sometimes smoothly, sometimes in fits and starts. Bright lights of innovation are leading the way forward. The best-in-class examples documented in this report reveal solutions to some of the most pressing environmental challenges we face. We can learn from the innovators described in this report that are working to make their teams, their venues and their leagues more environmentally responsible. With simple operational changes and minimal investments, we can make major strides to reduce the collective footprint of the globally influential sports industry and its supply chain. However, it's clear that even with our best efforts, we still have a long way to go.

The replication and scalability of these greening initiatives is an important part of the work that will move us forward. Replicating successful strategies brings the lessons of the few closer to being business as usual. Once someone has blazed a trail, it becomes easier for all of those who follow. That's one reason to be thankful for the innovative teams featured in this report who have gone out on a limb to seek ways to solve problems before they were fully aware of the solutions. Along the way, technology and market-readiness also improves, often enabling the price of environmentally-preferred products to come down. Consider the growing success of LED lighting over the past few years, making lighting retrofits more practical and the return on investment even stronger. But given the pace of technological and operational improvements, we need to do more than simply repeat the old models. Replicating the past, even the best-in-class examples outlined in this report, will not, by itself, get us to a sustainable future. We need to create new strategies and new tools along the way.

We might consider a sustainability path for our organizations in three stages. First, recognize our responsibility to improve the way we do business, enhancing the performance of our operations and also reducing our environmental impact. Second, accept that significant effort and investment of time and resources will be necessary to actually do the work and to make progress. Third, develop a clearly defined plan and create accountability for implementation within the organization. With a smart plan in place and a strong team to execute it, environmental initiatives can become part of the regular fabric of operations. Finally, by building in measurement and periodic reviews of

the plan, progress and goals, the team can make adjustments, add or reallocate resources when necessary, and help to embed the strategies into the culture of the organization, ensuring success year after year.

Once we have these internal strategies in place, we can connect with and learn from each other, from other venues, other leagues, and other industries, a role that the Green Sports Alliance was envisioned to fill. By learning what's working, sharing what's not, and encouraging collaboration and innovation across the leagues, the Alliance has grown from an inspiring collection of six teams and venues, and founding environmental partners, to include over 50 professional and collegiate teams, representing over 13 professional leagues and over 100 sports facilities. This unprecedented international network continues to grow and allows for the rapid transmission of information from one successful project to an operator just beginning to build a plan. This type of collaboration across silos, across leagues and across geography is both necessary and inspirational. It reminds us that while competition is fierce on the court or the playing field, when it comes to environmental initiatives, we all win when we share our successes.

Sports venues are not alone when trying to address environmental initiatives; in fact, a growing number of companies are discovering how important it is to understand the environmental footprint of their business, and find new ways to reduce costs and reduce impacts. As we look forward to the years ahead, there is an opportunity to learn from the sustainability pioneers in the field, and find new ways to apply their innovations in sports venues and help others along the way. We need those leaders to share what they have learned and build bridges to support those just getting started.

To all the sports organizations out there: Get in the game, keep score, and get recognized for the good work you do. The journey toward more sustainable operations is ongoing, but there are plenty of people and organizations who want to help you succeed, if you just ask. It's really pretty simple. Improve your operations, reduce your environmental impact, and reduce your costs. That's just good business.

RE: Comments on the AB 987 Application for the Inglewood Basketball and Entertainment Center Project (Clearing House Tracking No. 2018021056)

Dear Ms. Gordon:

On behalf of MSG Forum, LLC, we respectfully submit these comments on Murphy's Bowl LLC's application requesting the Governor's certification under Assembly Bill 987 for the Inglewood Basketball and Entertainment Center Project ("IBEC project" or "project"). The application for certification under AB 987 falls far short of AB 987's statutory requirements and should be denied. The negative legal and policy precedent that would be be established by approval of this application canoot be overstated. At a minimum, additional data must be collected and analysis must be completed to define the project and its actual impacts before the Governor can consider the application.

In adopting AB 987, the Legislature conditioned the possibility of extraordinary judicial relief under the California Environmental Quality Act on certification by the Governor, subject to review by the Joint Legislative Budget Committee, that the project meets the highest environmental standards. AB 987's author characterized the bill as "setting a new gold standard for green standards."

Governor Brown, in his signing message, highlighted that:

> [AB 987] allows the Inglewood project to qualify for expedited judicial review if it meets certain standards, including providing traffic reduction benefits and achieving a net zero greenhouse gas standard. This issue requires particular attention here given the potential for high levels of congestion.[1]

[1] *See* Governor Brown's Signing Message, *available at* https://www.gov.ca.gov/wp-content/uploads/2018/09/AB-987-signing-message.pdf.

Governor Brown also noted that "the project must reduce criteria pollutants, a requirement that is not included in the current Environmental Leadership Development Project standards."

The attached extensive review and expert technical analysis compel the conclusion that the project does not meet AB 987's clear, unambiguous, and rigorous mandates, and certainly does not reflect the mandate expressed by Governor Brown. The application lacks essential details about the project that are required for the California Air Resources Board's determination of net zero greenhouse gas emissions and the Governor's certification.[2] This is particularly troubling given the clear commitments made during the legislative hearings. The Governor cannot and should not certify the project under AB 987 based on the current limited record.

Specifically, the application fails to meet AB 987 requirements as follows.

- **The Project's GHG Emissions Are Grossly Underestimated; Net Zero GHGs Are Not Demonstrated** – The project does not achieve net zero Greenhouse Gas (GHGs) emissions. The application fundamentally miscalculates the project's estimated net GHG emissions by applying a baseline methodology that is inconsistent with agency guidance, industry practice and a long-history of Clean Air Act rules governing verifiable emission reductions. The application uses an inflated baseline by taking credit for (i) emissions associated with existing basketball games relocating from Staples Center and no backfilling of those event dates, (ii) emissions from assumed "market shifts" of events from the Forum, Staples Center, and Honda Center to the new arena.

  These "credits" mistakenly assume that Staples Center will not backfill the lost Clippers games with other events (concerts and other events). Further, the applicant fails to demonstrate that such "market shift" will occur and has failed to show that, if an event is relocated from one of these venues to the project, the existing venue would not replace it with any other event.

  - This faulty baseline methodology, if broadly applied, would create a loophole and make it difficult for CARB or any lead agency to estimate and mitigate GHGs from development projects. It would also undermine California's ambitious climate targets, including achieving net zero GHGs by 2045.

    For example, if a new, mixed-use project is built in California, it could be argued that some (or most) of the project's future residents and businesses come from existing California residents and businesses relocating to the site. If the applicant's methodology were applied, however, this hypothetical project could argue that it has almost no new net GHG emissions because the project could assume most of the emissions were

[2] For example the application does not even provide the arena's square footage, number of parking spaces, heights of buildings, or the construction assumptions.

simply being reallocated from other parts of the region, even though the project would not eliminate the existing homes or business sites from which it would draw people. The agency-approved and industry standard approach does not permit this methodology. Only emissions that have been truly eliminated can be credited, such as when onsite uses are demolished to make way for new buildings.

- When correctly calculated, the project's actual GHG emissions are well over 400,000 $MTCO_2e$. This is nearly ***four times higher*** than the 101,623 MTCO2e calculated in the application and this does not even account for the numerous errors and data gaps identified in the attached independent expert report. The applicant fails to achieve net zero GHG as AB 987 requires. The application must be resubmitted with additional information and proper emissions calculations so that the public can review and comment on the project's actual impacts.

- AB 987's author characterized the bill as "setting a new gold standard for green standards." If the applicant is allowed to shortchange the community by grossly understating its emissions and mitigation by using a faulty baseline, the applicant will have gutted the gold standard.

- **50% Mitigation Requirement For Greenhouse Gas Reduction Falls Woefully Short** – Not only does AB 987 require net zero GHG, AB 987 requires that at least 50% of the GHG reductions must come from ***local*** measures. This 50% is a floor and not a ceiling— ***all GHG reductions*** should come from local sources if feasible. When the proper baseline is accounted for (as best that can be calculated based on the incomplete application), ***the applicant's local mitigation only achieves a 14% reduction in project GHGs***. The project's mitigation program leaves a local reduction shortfall (assuming the 50% target) of at least 150,000 metric tons of GHGs and a total shortfall of over 315,000 metric tons of GHGs. Put simply, the project not only fails to be net zero for GHGs, the applicant shortchanges neighboring communities with inadequate local mitigation. The application must be revised and resubmitted with an AB 987-compliant mitigation package.

- **Health Risks on Neighboring Communities Are Not Disclosed and Are Underestimated, Contrary to AB 987** – The applicant's erroneous baseline methodology likely results in a substantial underestimation of the project's local criteria pollutant emissions (PM, NOx, VOCs) and toxic air contaminants (diesel fumes). As the state has concluded, there is a close correlation between ambient levels of pollutants and localized health consequences, including decreased lung function and increases in pulmonary inflammation, asthma development, and congestive heart conditions. Because health risks are directly correlated to local pollutant emissions, the ***health risk impacts on neighboring low-income communities, with significant children and senior populations, are not adequately disclosed or addressed***.

- CARB's Scoping Plan recognizes that local GHG mitigation measures can result in local co-benefits, including reduced pollutants and improved air quality. However, because the applicant has underestimated total GHG emissions by 75%, the applicant's local GHG mitigation proposal is grossly deficient. As a result, the neighboring communities are being shortchanged of the co-benefits of criteria polluntant emission reductions required by AB 987.

- In addition, increased local traffic congestion and vehicle miles traveled (VMT) raises potential serious health risks to residents, including children and seniors, from particulate matter exposure. It is difficult to understand how CARB could determine the project is net zero GHGs when it fails to satisfy the Legislature's mandate to "maximize public health, environmental and employment benefits" by reducing GHG emissions "in the project area and in the neighboring communities."

- **Required Local Offset Credits are Not Being Implemented** – Unlike AB 900, AB 987 establishes strict locational requirements for using offset credits. The project is mandated to first prioritize feasible local offset credits before pursuing any other credits and the applicant cannot use international credits. ***The application fails to commit to any local offset programs***, even though such programs are specified in AB 987, available, and feasible, such as retrofit programs in disadvantaged communities. Given AB 987's strict locational requirements for offset credits, as well as guidance from the Scoping Plan on local offsets, CARB cannot determine the project has met its minimum 50% local mitigation requirement unless the applicant has first identified and commits to all feasible local offset opportunities before non-local offsets are relied upon.

- **The TDM Program Reflects Aspirational Goals, Not a Rigorous Demonstration of Expected and Real Trip Reductions** – The project's Transportation Demand Management (TDM) program's summary conclusions regarding efficacy are belied by the applicant's own statements, the reality of Inglewood's existing and future transit system, and a complete lack of evidence. There is no evidence to support the conclusion that the project's TDM program will achieve the required 7.5% reduction in trips after the first season much less a 15% reduction in trips, as AB 987 mandates. The TDM program is merely a set of goals that are not adequately defined. The TDM program fails to include evidence to support conclusory assumptions and statements and fails to include—as AB 987 requires—enforceable implementation measures for the public or CARB to ensure local GHG emissions and harmful co-pollutants will be reduced. The TDM program does not address the fact that when the project's arena, NFL stadium, and Forum hold simultaneous events, the surrounding roadways will be well beyond failure.

- **The Project Increases Regional VMT** – The application fails to account for significant *increases* in indirect GHG emissions, criteria pollutant emissions, and

VMT caused by moving events from the dense urban core of downtown Los Angeles with immediate adjacency to multiple transit facilities to a location that Inglewood's Mayor, the applicant's consultants, and other elected officials have stated is "transit starved." There can be no legitimate dispute that the project's location is less centrally located, less connected to transit—even taking into account unbuilt projects—and is more dependent on single-occupancy vehicle trips. There is absolutely no dispute that this project will actually worsen traffic conditions for the region and certainly in Inglewood for the people who literally live next door to this proposed project.

- **The Project Conflicts with the RTP/SCS By Increasing VMT and Reducing Transit and Pedestrian Options** – The project is inconsistent with the 2016 Regional Transportation Plan / Sustainable Communities Strategies Plan ("RTP/SCS") adopted by the Southern California Association of Governments ("SCAG") for a number of reasons including because it would decrease access to transit and increase VMT. Moreover, the Applicant has not proven that the project is consistent with the use and density allocations for the area that were submitted by the City of Inglewood to SCAG for the 2016 RTP/SCS.

- **The Application Is Missing Evidence To Support Its Many Other Conclusions** – The application lacks sufficient evidence to support other AB 987 requirements that the project will create high wage, highly skilled jobs, meet LEED's Gold certification standard, satisfy AB 987's waste reduction requirements, or achieve economic investment obligations.

Attached is a detailed technical memorandum, together with supporting expert reports and evidence, on the application's numerous deficiencies in demonstrating compliance with AB 987. For the reasons outlined in the memorandum and attachments, we respectfully request that the Office of Planning and Research ("OPR") recommend that the Governor *not* certify this project. At a minimum, we request that OPR and CARB require the applicant to submit a supllemental application with the following additional information for agency and public review before this request for AB 987 certification is considered any further.

1. Core project information to allow OPR and CARB to make informed judgments under AB 987's standards.

2. Revised net GHG estimates for the project relying on a proper baseline.

3. Updated GHG mitigation proposals adopting all feasible reductions in local measures that benefit the neighboring communities.

4. Identification of local carbon offset programs that will be relied upon before non-local offsets can be considered.

5. Empirical data supporting the project's TDM program.

6. Empirical data supporting the project's LEED scorecard.

Thank you for considering our comments and supporting materials. If you have questions, you may reach me at (213) 891-7540.

Very truly yours,

Maria Pilar Noyce

COMMENTS ON MURPHY'S BOWL LLC'S APPLICATION UNDER ASSEMBLY BILL 987 FOR THE INGLEWOOD BASKETBALL AND ENTERTAINMENT CENTER PROJECT

Submitted on behalf of

MSG Forum, LLC

TABLE OF CONTENTS

I. THE PROJECT DESCRIPTION LACKS ADEQUATE DETAIL TO SUPPORT ANALYSIS OR CERTIFICATION

Critical data needed to evaluate the Inglewood Basketball and Entertainment Center Project's ("project") compliance with AB 987's requirements are missing from the application. The application lists the various land uses but only provides a partial list of their size and operations. The application does not include enough information to allow the Governor, OPR, or CARB to find that the exacting standards of AB 987 are met. AB 987 certification should be denied. At a minimum, a revised corrected application should be submitted with all the necessary information and the public must be provided an opportunity for full review.

The application for certification under AB 987 is so bereft of project information that it is impossible for OPR and CARB to determine that the project could ever meet the standards the legislature required in exchange for extraordinary judicial relief under CEQA.

For example, the application omits the following basic project information.

- The square footage of the arena itself. The application states that there will be 18,000 seats with capacity for another 500 seats more, but there is no mention of its actual size in terms of square footage. OPR and CARB do not know if the arena is 300,000 square feet or 1,000,000 square feet or more. The square footage of all project elements is needed to determine a variety of issues relevant to AB 987, including, for example, the amount of GHGs emitted during the arena's construction and the amount of GHGs emitted during operations (heating, cooling, etc.).

- The number and location of parking spaces. Is the project providing 3,000 spaces or 5,000 spaces? The application does not say. This is relevant to understanding and evaluating GHG emissions associated with construction and also the efficacy of the TDM program. The availability of parking and its pricing has an established relationship to the effectiveness of TDM. Is the parking structure open air or mechanically ventilated? This information is relevant to much of AB 987's analysis.

- The height of the parking structures, arena, and other buildings. Are the structures 100 feet tall or 200 feet tall? The application does not say. This information is relevant to the LEED analysis.

- The amount of excavation required for the project. Is the excavation 20,000 cubic yards, 500,000 cubic yards, or more? This information is needed to inform the analysis of GHG emissions during construction.

- The basic site plan (Attachment A-2) shows the arena, training facility, offices, and sports medicine clinic all as a single large structure. Will it be a single structure or a series of buildings? This information is needed to inform the LEED and GHG analysis because it goes to building efficiency, energy usage, emissions, etc.

- The project's construction schedule and the required equipment to build the project. This is critical information to be evaluated in determining GHG emissions.

- How the municipal groundwater well is currently used and to where will it be relocated. This information is needed to inform the LEED scorecard and GHG analysis. Will this local source of water continue or will additional water need to be imported to residents as a result of the City well relocation, which is part of the project?

- A description of the surrounding community of low-rise single family and multi-family homes that the project will directly impact. This information is needed to inform, among other application components, the LEED scorecard.

II. THE PROJECT'S GHG EMISSIONS AND POTENTIAL HEALTH IMPACTS ARE GROSSLY UNDERESTIMATED; NET ZERO GHG EMISSIONS ARE NOT DEMONSTRATED

A. The Application Fundamentally Miscalculates Project GHG Emissions

1. The Application Inappropriately Takes "Credit" for Illusory, Non-Local Emissions, in Contrast with Long-Standing Agency Guidance and Accepted Modeling Practice

The application grossly underestimates the project's net GHG emissions by taking credit for an artificially high "baseline" condition. CEQA is clear that the "baseline" is established by the "*physical environmental conditions in the vicinity of the project…*"[3]

As detailed below, the application artificially lowers the project's net GHG emissions by using a baseline that takes credit for eliminating offsite uses at the Staples Center, the Forum, the Honda Center, and the Clippers' team practice facility. The Clippers' GHG analysis is based on the presumption that when they leave Staples, it will remain vacant for the 40 to 50 Clipper game dates and also assumes that the new project arena will take other events away from Staples Center, the Forum, and Honda Center, and no other events will ever be booked on those dates anywhere in the market.

Staples Center is home to the NBA's Los Angeles Lakers, NHL's Los Angeles Kings and the WNBA's Los Angeles Sparks, and is the host of major, high-profile events and performances. At a minimum, Staples Center will continue to operate, and there is no proof that dates held for the Clippers will not be backfilled after the Clippers leave. To the contrary, given the success and popularity of the Staples Center, it is very likely that such event dates would be easy for Staples Center to backfill with other events. Eliminating the Clippers games would allow greater scheduling flexibility for other events, which would allow Staples Center to attract

---

[3] CEQA Guidelines, § 15125 (emphasis added).

more multi-night engagements. In addition, dates that are reserved for possible playoff games that ultimately might not occur would no longer be blocked and lost.

Further, basing its GHG analysis on the presumption that the new arena will take events from the Forum and Honda Center and such event dates will not be backfilled with some other events is without empirical support. While an additional venue would change the competitive landscape and have adverse financial consequences for existing venues, the applicant provides no information to support its claim that those venues would not be used for some other, perhaps less profitable, events that would still result in the continued generation of GHG emissions that the applicant assumes would simply disappear.

There also is no evidence that an event being held in Orange County at the Honda Center would relocate to Inglewood nor any evidence that if an event did relocate, that the Honda Center would not or could not replace it with another event. To the best of our knowledge, none of these other arenas has agreed to restrict their future capacity.

The applicant also assumes that existing Clippers Training Center will not be reused and, therefore, "existing emissions from operations of the Clippers Training Center are included in the baseline conditions." It is unreasonable to presume the Clippers Training Center will be vacant after the Clippers move out.[4]

By artificially inflating the baseline, the application incorrectly reduces the disclosed level of emissions by more than 75%. Expected net GHG emissions with the corrected baseline are shown to be ***at least 407,240 MT CO_2e***– and likely much higher due to the other errors and data gaps described in this comment letter – ***four times higher*** than the 101,623 MT CO_2e disclosed in the application.[5]

In addition, the application's baseline:

- does not employ the accepted standard methodology for evaluating GHG emissions using the CalEEMod model recommended by the South Coast Air Quality Management District;
- does not follow agency guidance for taking credit for baseline emissions;
- is not consistent with long-standing agency guidance and rules employed under the Clean Air Act for when a new facility can take credit for eliminating existing emissions; and

---

[4] The application assumes that only a portion of the Clippers Facilities will be reused. *See* IBEC Application for Certification ("Application"), Attachment G, at pp. 6-7.

[5] *See* EXHIBIT 1, Table 1; Application GHG emissions of 448,139 MT CO_2e – corrected baseline emissions of 40,902 MT CO_2e = project estimated net emissions of 407,240 MT CO_2e without correcting for other errors.

- does not apply the rigor and consistency necessary to substantiate the reductions identified in the application.

CARB cannot determine the project achieves net zero GHGs until the application is resubmitted with proper emissions calculations and supporting data. Moreover, the public must be given an opportunity to understand the project's actual impact with corrected data.

a. SCAQMD-Recommended CalEEMod Model Does Not Take Credit for Moving Operations with New Development When Existing Facilities Will Not Be Eliminated

If this application's methodology were applied to other projects in California, the majority of emissions from most new development projects would "disappear" because a project applicant could simply assume the emissions already existed within the region or state. Not surprisingly, this methodology is not consistent with the SCAQMD-recommended model used in most credible GHG analyses. Modeling tools developed by the air agencies to evaluate project-level GHG emissions do not reduce project emission inventories to take credit for offsite conditions that may exist elsewhere in the region. For example, new commercial developments include emissions from all vehicles coming to and from the new building. New development is not permitted to take a "credit" and reduce its projected emissions by claiming that some of those emissions are shifted from an existing building to the new building.

If the applicant's approach is followed, the negative precedent for the State is substantial and runs counter to the framework air agencies and accepted models have established to evaluate GHG impacts. Broadly applying the applicant's methodology will allow many projects to "zero out" most emissions since the projects will claim they are merely relocating uses otherwise within the basin, region, or state.

CalEEMod, the statewide program designed to calculate both criteria and GHG emissions from CEQA development projects in California, does not net out existing offsite emissions. CalEEMod was developed for the California Air Pollution Officers Association (CAPCOA) in collaboration with the California Air Districts, and is recommended by the SCAQMD. The application's treatment of baseline emissions and crediting of offsite emissions reductions is inconsistent with CalEEMod's standards.

b. The Application is Inconsistent With Air District Guidance on Baseline Emissions

The application conflicts with other Air District guidance, which limits baseline emissions to existing emissions sources that will be removed. The Bay Area Air Quality Management District (BAAQMD) CEQA guidance describes the methodology for determining baseline emissions and the technical basis for doing so when evaluating a project's emissions profile:

> "If a proposed project involves the **removal** of existing emission sources, BAAQMD recommends subtracting the existing emissions

> levels from the emissions levels estimated for the new proposed land use." [6] (Emphasis added)

Thus, "subtracting" emissions should occur only if existing sources will be removed by the project. For example, here, the application may appropriately take credit for eliminating any existing onsite emissions associated with the proposed site. However, the application takes credit for both removing existing land uses *and* purportedly shifting offsite activities at ongoing venues even though there is no proof that such offsite activities will not continue if the project is built. Hence, such offsite emissions will not actually be eliminated.

The applicant's assumption would effectively make over 75% of its project emissions disappear by taking credit for unsubstantiated off-site reductions. This is in complete contravention of the claims made by the applicant and legislators during the hearing process on AB 987. AB 987's author characterized the bill as "setting a new gold standard for green standards." If the applicant is allowed to shortchange neighboring communities by grossly underestimating its emissions and mitigation by using a faulty baseline, the applicant will have fallen far short of this standard to the direct detriment of the community.

c. The Application is Inconsistent With Clean Air Act's Long-Standing Rules for Obtaining Emission Reduction Credits for Eliminating Existing Stationary Sources

The application's baseline methodology also conflicts with longstanding regulatory rules and guidance under the state and federal Clean Air Act for taking credit for removing stationary source emissions. As highlighted in SCAQMD Rules and Regulations, the approach for a closing facility to obtain emission reduction credits is rigorous, requires actual data on historical emissions, and does not employ speculative assumptions as included in the application (see Rule 1306[7], Rule 1309[8], and application for Emission Reduction Credit Certificate of Title XX[9]). The regulatory approach relies upon the review of the actual operating levels of the facility in the most recent time period. The analysis also requires detailed evaluation and a calculation that

---

[7] SCAQMD, Rule 1306, Emission Calculations, *available at* http://www.aqmd.gov/docs/default-source/rule-book/outdated-sip-rules/rule-1306-emission-calculations.pdf?sfvrsn=4, accessed January 2019.

[8] SCAQMD, Rule 1309, Emission Reduction Credits and Short Term Credits, *available at* http://www.aqmd.gov/docs/default-source/rule-book/reg-xiii/rule-1309.pdf?sfvrsn=4, accessed January 2019.

[9] SCAQMD, Form 401, Application for Emission Reduction Credit (ERC) Certificate of Title, *available at* http://www.aqmd.gov/docs/default-source/aqmd-forms/Permit/401-erc-form.pdf?sfvrsn=14, accessed January 2019.

reduces the credited emissions based on a specific ratio (i.e., 1.2-to-1.0[10]). Additionally, under both the federal Clean Air Act and the state Clean Air Act, as well as SCAQMD regulations, a facility operator cannot obtain emission reduction credits (i.e., "take credit") for eliminating emissions from the facility unless the operator can prove future operations are not possible without another operator obtaining a new operating permit.

In the framework of AB 987, where the project must ensure that there is no net additional emissions of GHG, the GHG reductions claimed in the analysis must be well substantiated. *Those emissions claimed as being removed must be proven to be real, additional, permanent, verifiable and enforceable*. The application does not provide adequate information or analysis to confirm these standards are being achieved.

d. Application Recognizes Baseline Error by Not Taking Credit For Moving Office Uses But Fails to Apply the Proper Standard to Games and Events

Tellingly, the application recognizes its improper baseline by applying the *correct* methodology to the LA Clippers team offices, where it assumes the vacant offices will be backfilled by other users even though it does not know exactly who will backfill the use or when it will occur. For the remaining existing uses, the analysis assumes, without technical substantiation and in contravention of existing guidance and policy, industry realities, and common sense that (1) Staples Center will not find replacement events for the Clippers home games; (2) the Clippers Training Center will remain largely vacant; and (3) non-Clippers' events at Staples and events at the Forum and Honda Center will leave those arenas and that those other arenas would then not to fill those dates. The application should apply the same, correct logic it applied to the Clippers team offices, instead of erroneously, and in violation of established methodology, taking credit for the games and events at other venues and by assuming the potentially open dates will not be filled ever.

The application "quantifies emissions for the existing LA Clippers games at the Staples Center, existing uses at the downtown LA Clippers' Team Offices, the team's existing LA Clippers Training Center in Playa Vista, and the portion of non-NBA events anticipated to occur at the IBEC Project arena instead of other venues in the Los Angeles region (i.e. market-shifted non-NBA events) in order to calculate the net GHG emissions associated with the IBEC Project." It goes on to state that the "analysis assumes that after the LA Clippers Team Offices relocate to the IBEC Project Site, the vacated existing office space would be used by a different, unknown office tenant in the future." However, the application ignores any potential future replacement tenants or activities for the basketball game dates, the training center, in assuming other non-Clippers events shifting to the project. In doing so, the application greatly inflates its baseline emissions to reduce the amount of emissions that have to be offset.

Existing Staples Center Games and Events. The application provides no evidence that the dates for NBA games, events, and NBA and NHL playoff holds that would be freed up at

---

[10] SCAQMD, Emission Reduction Credits, *available at* http://www.aqmd.gov/home/permits/emission-reduction-credits, accessed January 2019.

Staples Center will not be filled with other events. Given the popularity and central location of the venue, it is unreasonable to assume Staples Center will sit empty during all of these dates for 30 years. Staples is the second grossing facility in the region, behind the Forum. It is not simply going to lose dates and not backfill them. Moreover, eliminating the Clippers games from the schedule would allow Staples Center to attract more multi-night engagements and to book events during dates that were previously reserved for possible playoff games that ultimately might not occur.

According to the application, LA Clippers games account for approximately 21% of the total events hosted at the Staples Center. But after acknowledging that the Clippers account for such a large percentage of Staples Center business, the application assumes that no events will replace them. Not one. Staples will not stay dark for 30 years on these dates. This allows the application to "count" 5,992 MT CO_2e each year towards its baseline emissions without *any* corresponding offset to account for new activities that would replace existing Clippers games at the Staples Center.

Market-Shifted Events. The application assumes, without evidence, that "half of the non-NBA game events (e.g., concerts, family shows, non-NBA sports games, etc.) anticipated to occur at the IBEC Project … would have otherwise occurred at other venues in the Los Angeles area, but would be relocated at the IBEC Project…,which are referred to as market-shifted events in this analysis."[11] The application assumes that the other venues in Los Angeles will not fill any of the market shifted event dates with new events.

Beyond this unsubstantiated assumption that a market shift of events would occur and there would never be any other use to fill that date, there is no modeling standard or regulatory guidance to support this approach. This is inconsistent with the standard approach for GHG analyses. For example, if a project were to build new dwelling units, that project does not discount the emissions for people who may move in from existing homes. As discussed above, CalEEMod does not approach project emissions inventory in this way and does not include any method to consider market-shifted events.

Additionally, one of the venues assumed to be losing "market-shifted" events, the Honda Center, has one of the highest GHG utility intensity values—further inflating the baseline emissions credit used in the application. No information is provided to substantiate that percentage of events assumed to leave existing venues for the project and that those venues would not fill the open dates with other events. Consistent with current accepted methodology, no offsite reductions for such events should be assumed.

Clippers Training Facility. The application notes that "given the unique design and space allocation of the existing LA Clippers Training Center, the potential future use of this facility or site after completion of the IBEC Project is unknown. It would be speculative to assume what type of use might occupy this facility in the future…. Thus, the existing emissions from operations of the LA Clippers Training Center are included in the baseline conditions without assumptions about the future use of this facility and site." The application is therefore

---

[11] Application, Attachment G, at p. 6.

cognizant that future uses *should* be taken into account in its baseline emissions, but it simply chooses not to because it would be "speculative." However, assuming *no* future use of the facility is equally speculative and certainly less likely than assuming that the entire emissions of 1,000 MT CO_2e will simply disappear. It is more likely that the facility will be occupied by a new user and that the new use would be more intensive because it would not be tied to the local training schedule for the Clippers.

e. Application Relies on Default Assumptions Instead of Site Specific Data, Which Further Inflates the Baseline

The application relies upon mostly default assumptions in CalEEMod to calculate baseline emissions, further artificially inflating the baseline. Regulatory programs, including CalEEMod, mandate that site-specific data be used to assess emissions when determining a baseline. The default assumptions of CalEEMod are designed to be conservatively *high* to ensure that project emission inventories are not under predicted when default assumptions are applied. By using default assumptions for the baseline emissions credit, the application again artificially inflates the modeling results to inaccurately minimize the project's GHG emissions inventory. In other words, by using the default assumptions, the application is likely *less conservative* than if site-specific data were used, resulting in a likely underestimation of project emissions.

The application uses default assumptions for mobile, waste, water, and area sources. Unless the applicant can demonstrate that site-specific data is not available for those emission sources, the default assumptions should not be used.

B. Project Fails to Adequately Mitigate GHG Emissions or Achieve Local Reductions Mandated by AB 987

1. AB 987 Mandates Reduction of *Local* GHG Emissions, a Much Higher Standard than AB 900 Imposes

Unlike AB 900, which has no locational reduction requirements, AB 987 imposes a higher standard for the project to "reduce the emissions of greenhouse gases in the project area and ***in the neighboring communities of the arena***" to accomplish net-zero GHGs. As shown below, the application falls far short of the local reductions AB 987 mandates.

2. The Application Grossly Underestimates Actual Mitigation Requirements

AB 987 requires that the GHG emissions reductions first be from local, direct GHG emissions reduction measures to "maximize public health, environmental, and employment benefits…" The applicant's assertion that it meets this directive is illusory.

First, as discussed in Section II.A, *supra*, the applicant's methodology to estimate its net new emissions is fundamentally flawed, resulting in a net new emissions figure that is drastically underestimated. By beginning with an incorrect goal to mitigate 101,623 MT CO_2e rather than

at least 407,240 MT CO_2e (and probably much more), the applicant sets the bar of compliance artificially low, shortchanging its local mitigation commitment (and the community).

Applying more accurately estimated net new emissions, as required by AB 987, the application's local mitigation only achieves a 14% reduction in Project GHGs, not the 57% reduction applicant's analysis presumes. This leaves a dramatic ***local mitigation shortfall*** . AB 987's mandate to **maximize** environmental and public health benefits in neighboring communities requires the applicant to pursue available local reductions first.

Table 2: GHG Mitigation Shortfall[12]

	Application Claimed Mitigation[13]		Mitigation Requirements with Corrected Baseline	
IBEC Project Condition and Reductions	Emissions Estimates (MT CO_2e)	Percent of Net New Emissions	Emissions Estimates (MT CO2e)	Percent of Net New Emissions
Total Net New Emissions IBEC Project Without GHG Reduction Measures	101,623	100%	407,240	100%
Total Amount of Reduction from Local Measures	58,195	57%	58,195	14%
Total Net New Emissions (After Reductions from Local Measures)	43,428	43%	349,045 (net zero GHGs not achieved)	86%

CARB cannot determine the project achieves net zero GHGs unless the project satisfies AB 987's mandate to "maximize public health, environmental and employment benefits" by reducing GHG emissions "in the project area and in the neighboring communities." As demonstrated by Table 2, the application is not even close to being net zero GHGs and substantially more local GHG reductions would be required. The application must be revised and resubmitted to CARB and for public review with a proper mitigation package.

The total amount of reductions from local, direct measures is closer to 14 percent rather than the reported 57 percent. Moreover, the applicant's local mitigation requirements are not

[12] This table likely underestimates the actual shortfall in mitigation due to the numerous errors and data gaps identified in this comment letter. When these data gaps and errors are addressed, the Project's actual emissions and mitigation obligation will likely be much higher.

[13] The application's estimate of emissions are incorrect and the identified mitigation does not meet the requirements of AB 987, as described in this comment letter.

local and do not meet the requirements to be real, additional, permanent, verifiable and enforceable.

The application fails to propose enough local, direct measures to mitigate the anticipated net new emissions associated with the project. Numerous available local, direct mitigation measures are identified in AB 987. The applicant must propose them to obtain certification.

C. Potential Health Risks to Neighboring Communities Are Correlated to Actual Local Emissions

There is a close correlation between ambient levels of pollutants and localized health consequences.[14] If local emissions are underestimated, local health consequences will likely be underestimated.

CARB's Scoping Plan explains that local GHG mitigation programs can provide co-benefits by reducing other pollutants:

> Greenhouse gas emissions reduction strategies…can also lead to important co-benefits, such as improved air quality, local economic benefits such as green jobs, more mobility choices, improved public health and quality of life, protection of locally, statewide, and globally important natural resources, and more equitable sharing of these benefits across communities. [15]

And:

> [S]ome climate strategies, such as GHG reduction measures that decrease diesel combustion from mobile sources, produce air quality co-benefits in the form of concurrent reductions in criteria pollutants and toxic air contaminants.[16]

As a result, "CARB recommends that lead agencies prioritize on-site design features that reduce emissions, especially from VMT, and direct investments in GHG reductions within the project's region that contribute potential air quality, health, and economic co-benefits locally."[17] The connection between local GHG mitigation and local health benefits explains why the

---

[16] *Id.* at 14.

[17] *Id.* at 102.

Legislature required GHG mitigation measures to "maximize public health, environmental and employment benefits" by reducing GHG emissions "in the project area and in the neighboring communities."

If the Project relies on a faulty baseline to underestimate GHG emissions, as described above, the Project is likely underestimating local emissions of diesel particulate matter, PM10, PM2.5, NOx and other pollutants and the related health consequences associated with such emissions in neighboring communities. This is particularly critical in the case of the project, since it is located directly in a lower income residential community. Taking credit for illusory reductions located elsewhere in the region will not mitigate localized health risks on neighboring communities. As the requirement to apply local mitigation to benefit the neighboring community is clearly part of AB 987, the applicant must mitigate its actual local GHG emissions, which will have the co-benefit of reducing local emissions of criteria pollutants and toxic air contaminants.

The application also does not account for increased VMT and traffic congestion that may increase local emissions. Traffic congestion and idling time will be exponentially compounded by the fact that when the Forum, the new NFL stadium, and project's arena operate at the same time, the surrounding roadways are forecast to cease functioning. If the Project's local emissions are underestimated, the actual emissions of toxic air contaminates, such as diesel particulate matter from heavy duty trucks, may be underestimated. The potential health consequences of diesel particulate matter is well documented.[18]

D. CARB Cannot Determine Project Achieves Net Zero GHGs Without Satisfaction of the Locational Requirements

Unlike AB 900, the Legislature specifically mandated that AB 987 projects satisfy strict locational requirements for any carbon offsets utilized to achieve net zero GHGs. Specifically, Public Resources Code Section 21168.6.8(j)(4) requires:

> The applicant may obtain offset credits for up to 50 percent of the greenhouse gas emissions reductions necessary to achieve the requirements of paragraph (3) of subdivision (b). ***The applicant shall, to the extent feasible***, place the highest priority on the purchase of ***offset credits that produce emission reductions within the City of Inglewood or the boundaries of the South Coast Air Quality Management District***.... (Emphasis added.)

The inclusion of locational requirements in AB 987 where there was previously silence on this topic establishes the Legislative's affirmative intent to hold this project to a higher standard of reducing specifically local GHG emissions. Governor Brown also made this clear in

---

[18] *See* CARB, Diesel and Health Research, *available at* www.arb.ca.gov/research/diesel/diesel-health.htm.

his signing message.[19] CARB cannot determine the project is net zero GHGs in conformance with AB 987 unless the applicant identifies and legally commits to achieving feasible reductions from carbon offset programs located within the neighborhood and the City of Inglewood.

The application lacks any information about how AB 987's locational reduction requirements could ever achieved. The application states that almost 40 percent of reductions will come from "carbon credits," even assuming all other GHG reductions identified in the application are accurate (an assumption this analysis shows is flawed). The application makes no attempt to identify which offset programs are currently available in the neighborhood or in the City of Inglewood or even within the SCAQMD boundary. Instead, the application defers the purchasing of carbon credits to the grading permit or certificate of occupancy stage, *long after* CARB has evaluated the project under AB 987 and the CEQA process has been completed, and does not seek to identify what might even be available then.

AB 987's locational requirements are consistent with CARB's 2017 Scoping Plan Update.[20] It would be inconsistent with AB 987 and the Scoping Plan for CARB to determine the project is net zero GHGs without evaluating the feasibility of local carbon offsets, and specifically what they are. The application provides no meaningful information regarding real local measures and certainly makes no commitment to such measures.

Importantly, the applicant cannot rely on any measures utilized to satisfy its *separate* Section 21168.6.8(j)(3) requirements,[21] which themselves mandate local measures to reduce the project's GHG emissions. The locational requirements in Section 21168.6.8(j)(4) apply to any additional carbon offsets the project may pursue and Section 21168.6.8(j)(4) imposes distinct obligations that are in addition to the Section 21168.6.8(j)(3) mandates. The separate requirements under Section 21168.6.8(j)(3) and Section 21168.6.8(j)(4) are necessary to improve local air quality and health co-benefits for neighboring communities.[22]

---

[19] Writing that "the project must reduce criteria pollutants, a requirement that is not included in the current Environmental Leadership Development Project standards."

[20] Final Scoping Plan Update, 2017, Appendix B ("Encourage the applicant to consider generating or purchasing local and California-only carbon credits as the preferred mechanism to implement its offsite mitigation measure for GHG emissions and that will facilitate the State's efforts in achieving the GHG emission reduction goal."

[21] Pub. Resources Code § 21168.6.8(j)(3) provides: "Not less than 50 percent of the greenhouse gas emissions reductions necessary to achieve the requirement of paragraph (3) of subdivision (b) shall be from local, direct greenhouse gas emissions reduction measures, including, but not limited to, any of the following:" Section 21168.6.8(j)(3)(A)-(B) identify onsite and offsite GHG reduction measures that should be considered.

[22] *See* CARB, Final Scoping Plan Update, 2017, p. 102 (onsite and local measures "contribute potential air quality, health, and economic co-benefits locally"), *available at* https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf.

The Governor cannot certify the project unless CARB has determined that it would result in net zero GHG emissions, and CARB cannot reach this determination unless CARB is satisfied the project will either not require carbon offsets or will meet the carbon offset locational requirements.[23]

E. The Technical GHG Analysis Contains Numerous Data Gaps and Erroneous Assumptions

1. The Application Uses Inconsistent Methodology When Calculating Baseline and Project Emissions

The application uses inconsistent internal logic to take credit for decreasing project emissions over time while holding steady baseline emissions. The application assumes that due to projected utility intensity factors and cleaner vehicles, the project's GHG emissions will decrease from 2024 into the future. However, the application does not reduce baseline emissions as would inherently also occur as fuel efficiencies improve. The application should apply similar reductions in future years to baseline emissions as it did for the project's future emissions.

The application also cherry-picks inconsistent utility intensity values without adequate explanation. When calculating the baseline emissions, the application should have matched the site-specific usage for the time period upon which the analysis is based. For instance, for each venue the application assumes will lose "market-shifted" events, the application uses a different year to calculate baseline emissions (Staples Center: 2016; the Forum: 2018; Honda Center: 2017).

2. The Application Contains Numerous Errors and Inconsistencies

The application contains numerous errors and inconsistencies, which make it difficult to verify or understand how the reported emissions are calculated.

- Mobile Source Emissions. The application contains internal inconsistencies regarding mobile source emissions. Table 7 of the TDM section reports total annual trips of 2,972,568. However, the "Mobile Source Emissions" table of the Attachment G summary reports total annual trips of 2,646,393. This diminishes the mobile component of the project's emissions by approximately 12%.

- Proximity to Downtown Transportation Services. As detailed below, the application does not account for the fact that a significant portion of the project's guests and employees will no longer benefit from the same proximity to downtown Los Angeles transportation services adjacent to the Staples Center location. Based on the applicant's own estimates, VMT is expected to increase, leading to a corresponding increase in GHG emissions.

---

[23] *See* Pub. Resources Code, § 21168.6.8(j)(4), cross-referencing the § 211168.6.8(b)(3) determination.

- Ten Percent Energy Reduction is Unsubstantiated. The application simply claims, without substantiation, that the project will be ten percent more efficient than Title 24 2019 standards. This claim is dubious. First, while the project's commitment to Tier 1 of the CALGreen Code will achieve energy consumption benefits, there is no explanation how the applicant arrived at a ten percent (10%) reduction over Title 24 2019 standards. Indeed, the Tier 1 requirements are included in the 2016 version of CALGreen and thus were established well before the 2019 standards. Without further substantiation, any estimated reduction in energy reduction is purely speculative.

- LEED Reductions are Unsubstantiated. The application takes credit for emissions reductions achieved through LEED Gold certification with no substantiation as to how LEED Gold commitments will result in any material GHG reductions. For example, the application takes LEED credit for heat island reduction, light pollution reduction, green education programs, and other measures that are unlikely to result in material GHG reductions.

- Details Regarding White Box Model are Missing. The application notes the use of what it describes as a "white box" model to calculate future energy uses, but there are no details as to how the model operates. Without detailed information as to the model, neither the public nor CARB can understand, analyze, or replicate the model results. The calculations of the model should be substantiated and illustrated to meet the standards of such for CEQA, offset protocols, and stationary source emissions reduction credits.

F. The Applicant Has Failed to Submit the Required Application to the Air Resources Board

AB 987 requires that the Air Resources Board, pursuant to Division 25.5 of the Health and Safety Code, separately determine that the project does not result in any net additional emission of greenhouse gases.[24] AB 987 encourages CARB to make its determination no later than 120 calendar days *after receiving an application* for review of the methodology and calculations of the project's greenhouse gas emissions.[25] While the applicant has described (inaccurately in our opinion) how it intends to achieve no net additional emission of greenhouse gases in its application for certification to the Governor, there is no indication that it has properly submitted any application to CARB as required by AB 987.

CARB has issued guidance on what steps an applicant should take to fulfill its obligation to submit an application for the evaluation of greenhouse gas methodologies and documentation for AB 900 projects. The language in AB 987 related to this topic is identical to that in AB 900 and OPR confirms its "Guidelines [for AB 900] apply to projects requesting certification for streamlined judicial review . . . Assembly Bill 987 (Chapter 961, Statutes of 2018) to the extent

---

[24] Pub. Resources Code § 21168.6.8(b)(3).

[25] *Id* (emphasis added).

that the Guidelines are applicable and do not conflict with the language contained within those statutes."[26]

CARB guidance prescribes eleven steps an applicant take before CARB will issue a certification:

1. Applicant meets with the lead agency to discuss the proposed project including emission quantification methodologies and potential mitigation measures.

2. Applicant makes any adjustments to the project, emission quantification methodologies, or mitigation measures per direction from the lead agency.

3. Applicant sends ARB an email indicating its intent to submit proposed GHG methodologies and documentation along with a simple description of the proposed project as well as the lead agency contact so that ARB can assign the appropriate technical staff to respond.

4. ARB contacts the lead agency for the proposed project to discuss their perspective on the emission quantification methodologies and any mitigation measures.

5. ARB holds a pre-submittal meeting with the applicant regarding the project in an effort to provide direction on the submittal and associated process.

6. Based on the applicable facts the ARB will: 1) encourage the applicant to proceed with submitting GHG methodologies and documentation; 2) recommend that the applicant follow-up with the lead agency on outstanding questions before submitting GHG methodologies and documentation; or 3) schedule a coordination meeting that includes the lead agency and applicant prior to submitting GHG methodologies and documentation.

7. Applicant submits its GHG methodologies and documentation to ARB.

8. ARB evaluates the submittal in consultation with the lead agency.

9. ARB drafts its evaluation and shares it with lead agency.

10. ARB finalizes its determination and transmits it to the Governor's Office.

11. The above steps apply provided the lead agency is available to work within the schedule established for ARB under the Act. If this is not possible, ARB may

---

[26] *See* California Jobs, AB 900, *available at* http://opr.ca.gov/ceqa/california-jobs.html.

seek additional time as provided for under the Act or proceed with finalizing its evaluation and determination under the Act.[27]

There is no indication that the applicant undertook any of these steps prior to submitting its application to the Governor. If the applicant had, we anticipate CARB would have identified the many flaws in the application's methodology for establishing its supposed net-zero emissions claim and meeting AB 987 requirements, and likely rejected the application as incomplete. CARB should do so now.

AB 987 encourages CARB to make its determination within 120 days after receiving an application for review of the methodology and calculations of the project's greenhouse gas emissions.[28] Because the applicant has not submitted its GHG analysis to CARB consistent with CARB's adopted procedures, CARB should not be restrained by the recommended time period for review.

And the public must be provided any supplemental application materials and time to review and respond to such submissions.

III. THE TRANSPORTATION DEMAND MANAGEMENT PROGRAM LACKS EVIDENTIARY SUPPORT AND DOES NOT MEET AB 987'S REQUIREMENTS

AB 987 "requires a transportation demand management program that, upon full implementation, will achieve and maintain a 15-percent reduction in the number of vehicle trips, collectively, by attendees, employees, visitors, and customers as compared to operations absent the transportation demand management program."[29] (

AB 987 requires the TDM program to include "a *specific program* of strategies, incentives, and tools…with specific annual status reporting obligations…"[30] The "15-percent reduction in vehicle trips shall be achieved and maintained ***as soon as feasible***, but not later than January 1, 2030."[31] At a minimum, not less than 7.5% reduction in vehicle trips is to be achieved and maintained by the end of the first NBA season.

Based on a review of the applicant's proposed TDM program, it is clear that the project's TDM program is likely to never achieve a 15% reduction and certainly will not achieve a 7.5% reduction by the end of the first NBA season that the arena is operational. The application fails

---

[27] Process for Greenhouse Gas Methodologies and Documentation Submittal to the California Air Resources Board, *available at* https://www.arb.ca.gov/html/ab900.htm.

[28] Pub. Resources Code § 21168.6.8(b)(3).

[29] Pub. Resources Code § 21168.6.8(a)(3)(B)(i).

[30] Pub. Resources Code § 21168.6.8(a)(6) (emphasis added).

[31] Pub. Resources Code § 21168.6.8(B)(iii).

to demonstrate that the project's TDM program will reduce vehicle trips by 15% "as soon as feasible" or that it is ever feasible to achieve a 15% reduction.

As detailed below, the TDM program relies on incorrect or unsubstantiated data, does not contain a plan detailing how results will be verified, and relies on optimistic trip reduction assumptions that have never been achieved. Without additional data and substantiation, the Governor cannot certify that the project will reduce trips as AB 987 requires. Moreover, the precedential impact of certifying a TDM program without essential detail and that is based on faulty assumptions will mean that other projects could well also similarly seek to avoid a rigorous analysis.

On a macro level, it is easy to see why the project's TDM program will not work.

First, the TDM program must work for all events and all project elements, not just Clippers basketball games. With respect to the arena alone, the applicant is projecting over 243 annual events, including concerts and other events. Clippers basketball games only account for approximately 49 of these 243 events. People who only visit the arena once or twice a year will fill approximately 200 of the project's events. However, the applicant's TDM program assumes that concert attendees as well as basketball game attendees have the same travel patterns. Transportation data suggests exactly the opposite and indicates that few one-time attendees to a concert at the arena will use transit.

Second, the Clippers are moving from high-density urban downtown Los Angeles to a suburban area typified by relatively low-density single-family homes and low-rise multifamily homes. Within the downtown area of Staples Center today, there are over 43,000 residential units, 90 million square feet of commercial space and thousands of hotel rooms. Directly adjacent to Staples Center and the Los Angeles Convention Center is a light rail transit stop with Blue and Expo Line access, numerous bus transit lines (with a dedicated bus lane), and the Red Line and Purple Line subway station is a ten-minute walk. There are dozens of restaurants, bars and other entertainment facilities within only a few blocks. Comparatively, there is virtually no significant office development today within miles of the project site nor is there high density residential development. There is no rail transit stop next to the project, as there is today at Staples Center, and there are few bus transit options adjacent to the proposed project site.

The applicant states (without supporting empirical data) that currently 80% of attendees to Clippers' basketball games at Staples Center arrive by car, with 20% arriving by walking, rail, transit buses (Metro, Foothill, Big Blue), shuttles, or "shared mobility (as discussed below). Thus, although Staples Center is located in Los Angeles' downtown residential and business core (arguably where a significant percentage of basketball and concert attendees might work and live), in an area with over 200,000 people within a one mile radius, and an area rich with rail and bus transit, only 20% of the basketball game attendees arrive by rail, bus, walking, or "shared

mobility" (i.e., Uber and Lyft, which are still cars, should not be included in the transit category and, in fact increase, overall trips, as discussed below).[32]

The applicant assumes that its poorly defined TDM program, which relies almost entirely on shuttle buses to connect to under construction light rail stations, will reduce the number of attendees to basketball games and concerts arriving by private car by 34%, with the balance using buses or "shared mobility."

There is no support in the application for the assumption that 34% of attendees to all Inglewood arena events will arrive by transit. This assumption that the Clippers will not only maintain its current 20% of attendees coming by means other than personal car, but increase it to 34% (an increase of 70%) over Staples downtown location is particularly flawed in light of the facts and perhaps more importantly the extensive testimony by the applicant and legislators that Inglewood is "transit starved." There is not the office density or residential density in the area of the project to support the notion that people will walk to the arena from adjacent areas or that there would be a system of extensive transit buses or shuttles from offices and residences in the area. The project's assertion of 34% alternative transit is wholly without support based on the applicant's own precedent at Staples Center, the reality of the project site's built environment, and published data.

A. The TDM Program Cannot Achieve a 15% Reduction by the End of the First NBA Season and Thus Cannot Meet AB 987's Net-Zero GHG Requirement

The project's application predicts a 15.151% trip reduction by 2030 and also relies on such a reduction after the first year of the arena's operation to achieve AB 987's net-zero GHG requirement.

The applicant relies on this purported 15% trip reduction to meet not only AB 987's trip reduction requirement but also to meet AB 987's net-zero GHG requirement. Under AB 987, the project must be net-zero during its first year of operation. Therefore, under the applicant's GHG reduction assumptions, the project must achieve 15% trip reduction even in its first year of operation.[33] To certify compliance with AB 987, the Governor must find that the TDM program will achieve a 15% trip reduction in the first year of operation to credit the related GHG reductions the applicant assumes as part of the application. This level of reduction is simply not achievable in the first, second, third, or tenth year of operation. Nor is the 7.5% reduction achievable in its first year of operation. As a result, the Governor cannot certify the project under AB 987.

---

[32] Shared mobility is usually just another car trip, if not two trips. Recent data suggest that Uber/Lyft increases traffic, VMT, and GHGs. (*See* EXHIBIT 2, Attachment A.)

[33] *See* Application, Table 3, at p. 21 (assuming reductions from TDM program in summarizing net-zero GHG conclusions); *see* Application, Attachment G, Greenhouse Gas Analysis, Table 8, at 21 (explaining that operational emissions with local GHG reduction measures "includes reductions association with implementation of TDM Program….").

B. The Trip Generation Assumptions Have Numerous Errors

The TDM program rests on assumptions regarding the number of trips a particular project use generates. The application's assumptions and data contain many errors. As a result, the number of trips is underestimated and it is clear that the TDM program will not achieve 15% reduction in its first year of operation as assumed in the GHG reduction program (nor will it meet 7.5% in its first year of operation as assumed in the TDM program).

- The Wrong ITE trip rate is applied to the Sports Medicine Clinic. The Institute of Transportation Engineer's ("ITE") published rate for a Sports Medicine Clinic is 38.16 trips per thousand square feet.[34] The TDM program applies the incorrect rate of 30.18 trips per thousand square feet. This is a 20% underestimation. Using the application's assumption that the Sports Medicine Clinic would not operate on weekends (which should of course be an enforceable covenant to substantiate that assumption) and based on 260 weekdays per year, this error results in an underestimation of annual trips by 51,870.

- Clippers employee trips are dramatically understated. The 275 Clippers Management and Operations employees are assumed to generate 1.13 trips per employee. This is less than 50% of the ITE's trip rate of 2.31 trips per employee for corporate headquarters office buildings, which is an appropriate classification. The rate used by the Clippers, which is not supported by any evidence, rather dubiously assumes that for every two employees, one is not driving to work, that no employees leave the site during the day, and that the office receives no deliveries. Using the correct ITE trip generation rate adds 71,377 additional annual trips.

- No trips are assigned to Clippers employees on weekends. The study assumes that Clippers Management and Operations employees and Practice and Training Facility employees never work on weekends. No trips are assigned to weekends. This is an unreasonable assumption based on the Clippers' schedule alone and must be corrected to reflect the project's total trips accurately.

- Trips generated by Uber & Lyft vehicles are understated by 100%. An attendee or employee arriving in a private vehicle who then leaves at the end of the day or event generates two trips – one arriving and one leaving. In contrast, usage of Uber or Lyft generates four trips – two drop-off trips (one arriving to drop off the passenger and one leaving after dropping off the passenger) and two pick-up trips (one arriving to pick up the passenger and one leaving with the passenger in the car). Thus, the TDM program's assumption that ten percent of employees and

---

[34] The Institute of Transportation Engineer's ("ITE") is the leader in trip generation data. ITE generates trip generation rates for specific uses based on thousands of voluntary study submissions and its data is routinely used to estimate the number of trips a development project will generate.

visitors will use Uber & Lyft type services must also account for twice the number of trips these services generate. It does not.

When these four errors are corrected, the total number of trips the project will generate significantly increase. Just using the correct ITE rate for the Sports Medicine Clinic and the Clippers Management and Operations employees drops the TDM program's efficacy below 15%. When additional corrections are made to reflect higher employee trips during weekends, to account for the correct number of Uber and Lyft trips, and to reflect reasonable transit use assumptions the program is forecast to achieve only a 7.13% reduction in the total number of project trips.[35] The problems with the applicant's TDM program go well beyond just these trip generation errors.

C. The TDM Program's Assumptions Regarding Transit Riders Are Unsupported

Rail transit is the backbone of the TDM program. The Trip Generation Memorandum admits that "without shuttle service to and from the IBEC Project Site, it is unlikely that [event attendees] would take advantage of the existing and future rail services."[36] This is because the existing and planned rail facilities are between 0.8 and 2.0 miles away and because rail riders would need to transfer to a public bus and then still walk farther to the arena site. Moreover, the application concludes that "the streets that surround the Project Site lack pedestrian friendly sidewalks that would encourage walking." Accordingly, under baseline conditions, the Trip Generation Memorandum assumes that no employees or attendees to the project would use Metro rail service.[37]

With event-day shuttle service, however, the Trip Generation Memorandum assumes that up to 10% of all attendees for basketball games and concerts would use existing and future rail services.[38] There is no support for this conclusion. Based the applicants' own data, it is clearly wrong and the Governor cannot certify the project under AB 987.

1. Rail Transit Usage At Existing Los Angeles Sports Facilities Shows the 10% Estimate is Unsupported

Staples Center is located about a block away from a Blue Line and Expo Line rail station on Flower Street and a short walk from the 7th Street/Metro Center, where the Red and Purple Lines stop. Despite this immediate proximity to multiple heavy and light rail transit lines and stations, the applicant reports (again, without supporting empirical data) that only 11% of

---

[35] EXHIBIT 2, at p. 4.

[36] Application, Attachment D, at p. 9.

[37] *Id.*

[38] *Id.*, at p. 13. Note that the applicant has not committed to providing electric shuttle or bus service.

attendees to a Clippers' basketball game take rail transit.[39] The downtown Los Angeles core also has one of the highest bus line concentrations in the region, is home to the region's largest workday population (over 74,000 people), and has over 43,000 residential units. Even with all of these factors, the application states that Clippers only achieve an 11% rail transit usage at Staples Center.

In fact, this 11% transit usage figure may be inflated. A recent data collection effort at a sold out Clippers basketball game at Staples Center found that only 2.6% of attendees arrived by way of Metro train and only 1.8% left by train. Data was collected on January 18, 2019, for two hours before and after the event and conservatively assumed that every transit rider leaving the station was going to the Staples Center event.[40]

Despite this low usage of transit, data from a recent event suggest that number is overstated by three times. The applicant then forecasts essentially the same, likely overstated, rail transit usage (10%) of the transit advantaged Staples Center location for a suburban arena that lacks the office and residential density and pedestrian amenities of the Staples Center, that is up to two miles from rail stations that will require attendees to exit the rail station and then get on a shuttle to the arena. The applicant's reliance on a 10% rail ridership assumption is completely without foundation.

The applicant also predicts that ***only*** 66% of attendees to the entire project will come by personal car. The balance coming by transit/shuttles, park and ride buses and Uber/Lyft. This is an astounding number when compared to Clippers games at Staples Center, where, per the application, 80% arrive by personal car.[41]

Compare the applicant's assumptions to the assumptions contained in the report prepared for the new Los Angeles Football Club (LAFC) soccer stadium in Exposition Park and immediately adjacent to downtown Los Angeles, USC, and the Los Angeles Memorial Coliseum. There, with the LAFC stadium adjacent to transit and the downtown core, the analysis projected that 75% of attendees would arrive by personal car – nearly 10% more than the 66% the applicant predicts for its suburban site.

The Los Angeles Dodgers' free shuttle from Union Station in downtown Los Angeles further illustrates how the Trip Generation Memorandum's and TDM program's assumptions are without foundation and completely specious. Union Station, is located in downtown Los Angeles and well connected to all parts of downtown by rail, bus, and shuttles, is approximately 1.8 miles from Dodger Stadium. Union Station is a major hub for the City's railway system, receiving Metrolink, Metro, and Amtrak trains and bus service from across the region. It is the center of Southern California's mass transit hub.

---

[39] *Id.*, at p. 10.

[40] *See* EXHIBIT 2, at pp. 5-6.

[41] Application, Attachment D, at 10.

The Dodgers' game day shuttle operates 90 minutes before game time and 45 minutes after the final out or 20 minutes after post-game events. The Dodgers shuttle uses a dedicated bus lane on Sunset Boulevard to expedite travel time.

During the 2017 season, Metro reported ridership of 278,623 attendees using the shuttle from Union Station for all regular and playoff games at Dodger Stadium.[42] The Dodgers reported attendance of 3,765,856 during the 2017 regular season.[43] Thus, even if attendance figures from playoff and World Series games are excluded from total attendance, only 7.39% of attendees arrived at Dodger Stadium using the free shuttle from Union Station. If attendees from playoff and World Series games are included in the total attendance figure, the percentage of attendees using the shuttle was even less than 7.39%.

With the Dodgers' shuttle operating from the region's transit hub, Union Station, and having dedicated bus lanes, the Dodgers achieved a season ridership of 7.39% of attendees. The applicant, on the other hand is predicting that a full 10% of attendees to basketball games *and* concerts (and 5% at other events at the arena) will arrive solely by Metro's light rail system and then use the applicant's shuttle buses to travel the final two miles to the arena, beginning on the first day of arena operations. The applicant provides no data to support the conclusion that it can achieve 35% more transit usage than the Dodgers. The applicant's numbers are inflated and unlikely to ever be achieved.

The applicant should have substantiated this critical assumption with data. The applicant likely has data regarding the home addresses of season ticketholders and many other ticket purchasers. The applicant could have used this data to calculate average distance to a Metro rail transit line serving the project area (i.e., Metro Green or Crenshaw Line). With this data, the applicant could better predict how many basketball game attendees are likely to use rail transit based on proximity to their homes (or their office if the Clippers have reliable data as to office locations for season ticket holders). The percentage of concert attendees would be even less as one time or irregular users of a venue are much less likely to use transit than attendees to athletic events who are more likely to attend multiple events per year.[44]

The Governor should request that the applicant provide data showing how many anticipated attendees live close enough to stations on the Green or Crenshaw Lines to substantiate its unsupportable assumptions regarding rail ridership.

2. Even a Rail Transit Stop At the Arena Would Not Meet the Applicant's Projected Rail Ridership

In arguing for consistency with the 2016 RTP/SCS, the application notes that a "fixed light rail system with a station adjacent to the IBEC Project Site is currently in the planning

---

[44] EXHIBIT 2, at p. 8-9.

phase...."[45] The applicant apparently is referring to a proposal that Inglewood has named the "Inglewood Transit Connector."[46] If constructed, the Inglewood Transit Connector (an elevated rail line) would travel between an Inglewood station along Metro's under construction Crenshaw Line to the intersection of Century Boulevard and Prairie Avenue with multiple stops along the way. To suggest that this rail connector is in the "planning stages" misleads, as the City has only just released the Notice of Preparation and Initial Study for the line's EIR. No agency has approved the rail interconnector, it is not part of any approved local or regional plan, and, to the best of our knowledge, it is not funded and the applicant has not agreed to fund it (estimated to be in excess of $600 million).

Metro studied such a connector and rejected an interlined option (i.e., where the line allowed a one seat trip on the Crenshaw Line) as "infeasible due to its cost and complexity." Metro forecast the costs of four independent alignment options (such as the one being studied by Inglewood) as between $614.4 million and $769.2 million.[47] Inglewood's locally preferred alternative is initially projected to cost $614.4 million for its 1.8-mile route, or $341.3 million per mile.

Inglewood's own forecasted ridership estimates for the Inglewood Transit Connector show that the applicant's ridership estimates for a rail station that is up to 2 miles away from the proposed project are unrealistic and without foundation. The City's report estimates that the locally preferred alternative for the Inglewood Transit Connector (the Market-Manchester Alignment) would have ridership for a Clippers' game of 1,209 riders for an attendance of 12,000 and 2,557 for an attendance of 18,500. This equates to between 10% and 13.8%, respectively, of attendees to a Clippers game arriving by rail transit with a train stop immediately adjacent to the project site assuming there was a transit connector (monorail or street car) costing $614 million.[48]

In contrast, the applicant forecasts that 10% of attendees will take rail transit to concert and basketball events at the project site that is up to two miles away from the rail station.[49] and use a shuttle bus taking 30 to 60 minutes to get to the arena in congested traffic. The applicant has provided no support for the assumption that roughly the same number of attendees will arrive by rail transit to a station up to two miles away that requires a shuttle connection as are projected to use a $600 million monorail or street car connector to the project's front door.

[48] *Id.*, at p. 68.

[49] Application, at p. 13.

3. Transit Ridership Is Experiencing Declines

The applicant's Trip Generation Memorandum ignores the fact that public transit usage on the whole is falling. From 2016 to 2018, Metro saw ridership drop by nearly 3.5 million boardings.[50] This was a more than three percent decline from 2016 to 2018. In 2017, ridership on Metro's trains and buses fell to 383 million trips, a 3.4% decrease from 2017 ***and a 19.7% drop over five years.***[51] The backbone of the applicant's TDM program is public transit in an era where usage of public transit is falling with people shifting to private vehicles.[52] [53]

4. Travel Time Far Exceeds What Would Be Needed For An Effective Shuttle Program

Even in the unlikely event the forecasted ridership exists, the TDM program would likely never be able to move that many people from the rail stations to project events. The City's own consultant on the project has described the streets surrounding the project site as follows:

- "The existing transportation infrastructure and circulation system is outdated…"
- "Capacity should be increased as major arterials streets and highways are highly congested…"
- "[T]here remains no direct connection from the Countywide Metro Rail System to the newly completed, under construction, and future activity centers."
- "[T]he City's Circulation Element from the City's General Plan has not been updated since 1992."[54]

In Metro's analysis of a transit connection from the Crenshaw/LAX light rail to the Inglewood NFL stadium and Hollywood Park mixed-use development, Metro only studied grade

[52] *See* EXHIBIT 2, at p. 6.

[53] Another factor not considered in the TDM program and underlying data is that ridership levels on existing Metro lines are significantly higher than ridership projections for the forthcoming Crenshaw line. Metro projects an average daily ridership of 13,148 on the Crenshaw line in 2030. The 2018 average daily ridership levels were 26,326 on the Green line, 54,904 on the Blue line, and 837,937 on the Red line.

[54] EXHIBIT 4, at p. 6, Trifiletti Consulting, Inc. proposal to City of Inglewood "project management, strategic environmental consulting and coordination services for the Inglewood Basketball and Entertainment Center."

separated options because "other alternatives, which could be considerably less costly, were not studied because of the City's concern that congestion during peak periods at the entertainment/stadium district could create conflicts with at-grade, fixed guideway transit service, degrading transit service."[55]

It is into this congested and outdated roadway system that the applicant proposes to ferry thousands of attendees by shuttle bus from Metro's rail lines to the project on a near daily basis (250 large events forecast per year). The applicant has provided no data to suggest that this is physically achievable.

Gibson Transportation Consulting, Inc. collected travel times for the proposed shuttle routes during a recent event at the Forum.[56] Gibson Transportation's empirical analysis found that shuttle travel times between a rail station and the project would be between 30 and 60 minutes, and potentially longer.[57]

The 30 to 60 minute shuttle bus time needs to be considered as part of a far longer trip for public transit riders. The standard trip for a transit rider to an arena event likely looks something like this:

1. Car ride from business/home to Green Line or Crenshaw Line station.

2. Crenshaw Line or Green Line travel to Inglewood train station.

3. Shuttle bus from Inglewood train station to arena.

This three-leg ride will need to be repeated after an event, for a total of six independent travel legs.

Another potential transit/shuttle rider scenario would be an attendee to a Clippers game or a concert who works in downtown Los Angeles. Today, that attendee could either use any one of the many transit options (trains, buses, shuttle, etc.) in downtown Los Angeles to reach Staples Center, walk, or drive a short distance. Under the applicant's proposal, attendee's trip to Inglewood would entail the following:

1. Arrive at Expo Line station by transit, car, or foot.

---

[55] Metro's August 8, 2017 Letter to Inglewood Director of Public Works, *available at* http://envisioninglewood.org/wp-content/uploads/2018/06/Envision-Inglewood-Locally-Preferred-Alternative-Report-(LPA)-Technical-Appendices.pdf, at p. 120.

[56] Note that these are existing travel times. They are not even influenced by the under construction new NFL stadium or Hollywood Park development that includes 2,995 new homes and over one million square feet of commercial development.

[57] *See* EXHIBIT 2, at pp. 6-9.

2. Travel on Expo Line and then transfer from Expo Line to Crenshaw Line at the Expo Line's Crenshaw station.

3. Crenshaw Line travel to Inglewood train station.

4. Shuttle bus from Inglewood train station to arena.

This would be a four-leg one way trip to the arena and potentially a five–leg return trip home (for a total of 9 travel legs) because the attendee would potentially need to get from the Expo Line station in downtown Los Angeles back to their car and then drive back home.

Using Metro's published schedules for the Expo Line and Green Line and projected travel times for the Crenshaw Line, travel times on rail were estimated. For example, a transit rider coming from Downtown Santa Monica would travel to the Expo Line station and park, board an Expo Line train, travel 27 minutes on the Expo Line, transfer at the Crenshaw station to the Crenshaw Line and then travel approximately 14 minutes to Inglewood station, then board the Clippers shuttle bus to get to the arena. Assuming a 10-minute travel time to get to the Expo Station, no wait for an Expo Line train, 5-minute wait for the train at the Crenshaw Line station, this is, at best, a 46-minute rail trip, which is then followed by a shuttle ride of between 30 and 60 minutes for a total trip time of between 86 minutes and 116 minutes. A transit rider from downtown Los Angeles would take 5-minute walk to a transit station downtown, experience an approximately 40-minute train ride (20 minutes from downtown Los Angeles to Crenshaw, 5-minute wait for Crenshaw line, 14-minute train on Crenshaw line) then a shuttle ride of between 30 and 60 minutes for a total trip time of 75 minutes to 110 minutes.

Either one of the above scenarios is typical of a transit rider's journey to the proposed arena. When compared to average projected drive times[58], it is not reasonable to conclude that the applicant's assumption that 12% of attendees to basketball games and concerts will arrive by rail (10%) and public bus (2%) transit. Moreover, there is no basis to assume that basketball, concert attendees, trade show attendees, or other event attendees will behave the same with respect to transit usage. To the contrary, concert attendees, unlike basketball game attendees, are generally one time or irregular users and, therefore, much less likely to use transit than attendees to athletic events who are more likely to attend multiple events per year.[59]

D. No Support for the Application's "Charter Coaches" Assumptions

The IBEC Trip Generation Memorandum predicts that a staggering 11% of total attendees to concerts and Clippers games and other arena events will use a Charter Coach to go

---

[58] Per the applicant, 18% of season ticket holders are within a 30-45 minute drive during the PM peak period and nearly 50% of season ticket holders are within a 50-75 minute drive during the PM peak hour. (Application, Attachment D, at p. 12 [IBEC Trip Generation Memorandum].) 10% of attendees are forecasted to arrive by rail transit and 2% by bus.

[59] EXHIBIT 2, at pp. 9-10.

to a project event. No attendees to a Clippers basketball game currently use "Charter Coaches."[60]

There is no information regarding this undefined program and no data to support this conclusion. Where are these park and ride facilities throughout the region linked to the Charter Coaches? How are the locations proximate to where arena attendees live or work? What is the projected travel distance and time? Data supporting the use of "Charter Coaches" to sports events at arenas in urban areas must be provided to substantiate this assumption. This program has no definition and no empirical support.

Moreover, the Charter Coach program's own figures do not withstand the least scrutiny. To move the projected 1,980 people with 45 buses would require every seat on 44 of the buses to be full. If the buses are 75% full, then 60 buses would be required to move 1,980 people. As the TDM program only calls for 45 buses, if the buses are less than 100% full this would require some buses to make two round trips to the park-and-ride location. Depending on the park-and-ride location, which is likely more than the average attendee's 21.59 miles home location from the project, two round trips is likely not feasible given the hours before events that the buses will have to run due to area traffic. In fact, a full 25% of all Clippers ticket sales occur outside of the Southern California region, making it unlikely that any of these 25% attendees would attend games via "charter coaches."[61] Adjusting for the fact that 25% of attendees are not within Southern California, the true percentage of Southern California attendees using Charter Coachers is predicted to be 15%. This figure is even more unsupportable.

E. The TDM Program Is Not Verifiable & No Implementation Plan Is Provided

AB 987 requires that the TDM program contain "specific annual status reporting obligations"[62] and that that the "applicant shall verify achievement [of the 15% reduction] to the lead agency and the Office of Planning and Research."[63]

The "IBEC Project Transportation Demand Management Program," presented in a total of only four pages (Application, Attachment C), does not explain how the reporting obligations can be met or how achievement could be verified. Without an implementation plan to verify results, the TDM plan does not meet AB 987's requirements and the Governor cannot certify the project.

F. Average Vehicle Occupancy Is Unsupported

The applicant states that average vehicle occupancy without the TDM program is 2.3 attendees per vehicle on weekdays and 2.5 attendees per vehicle on weekends. The applicant

---

[60] Application, Attachment D, at p. 10.

[61] *Id.* at 12.

[62] Pub. Resources Code, § 21168.6.8(a)(6).

[63] Pub. Resources Code, § 21168.6.8(a)(B)(iii).

cites to a report prepared for the new LAFC stadium in Exposition Park in downtown Los Angeles.[64] These figures are found nowhere in the cited report.

It is critical for the applicant to gather information from its current operations at Staples Center for average vehicle occupancy (as well as other data). Such real world data, while suboptimal given the very different location types of Staples Center and the project (urban versus suburban), would be helpful in evaluating the reasonableness of the application's average vehicle ridership prediction. This data is easily available and the applicant should be asked to provide current data as to average vehicle ridership. It is baffling why the applicant has failed to provide empirical data to OPR to support these assumptions.

The application also cites the LAFC stadium study to support its position that its TDM program's effort to encourage carpooling would increase average vehicle occupancy to 2.7 attendees on weekdays and 3.0 attendees on weekends.[65] The cited report does not explain how the 2.7 and 3.0 rates were calculated so the potential applicability to the project cannot be determined. Given the central location of the LAFC stadium, it is not clear that the rates are transferable to the project's location far from downtown Los Angeles and far from transit. Again, the applicant should provide a comprehensive survey of Clippers ridership for weekday and weekend games so that the State and the public can assess the accuracy of many of these assumptions.

G. The Application Wrongly Scopes Out Analysis of the "West Century Boulevard Pedestrian Bridge Variant"

The application includes a "West Century Boulevard Pedestrian Bridge Variant" that would provide a pedestrian bridge across West Century Boulevard, touching down north of West Century Boulevard. The application is wrong when it simply states that the number of trips generated by the "West Century Boulevard Pedestrian Bridge Variant" would essentially be the same as the project.[66] This land area which would be connected by the pedestrian bridge directly across from the proposed project, is currently vacant and can be readily graded to provide additional parking areas for the arena. If this area is to be graded to provide additional parking for the applicant's project, the information is important to the TDM program's analysis.

With the construction of the NFL project at Hollywood Park, this variant also would provide the project access to thousands of parking spaces serving the NFL stadium. Access to several thousand additional parking spaces for the project attendees is a significant issue in evaluating the effectiveness of the project's proposed TDM program.

These questions are critical to the evaluation of the TDM program. By providing access to these additional thousands of parking spaces, project attendees will be encouraged to use their private vehicles to travel to the project, reducing the TDM program's effectiveness. Improved

---

[64] Application, Attachment D, at 11, fn. 7.

[65] *Id.* at 11, fn. 8.

[66] Application, at 3.

access from parking outside of the project area is not accounted for in the project's TDM program. Nor does the applicant provide any discussion of parking pricing and its impact on the TDM program. Parking pricing or restricted parking supply can significantly increase the effectiveness of TDM programs. This additional information and analysis must be provided.

IV. THE PROJECT IS NOT CONSISTENT WITH AN RTP/SCS THAT MEETS CARB'S EMISSIONS REDUCTION TARGETS

The project is within the region covered by the Southern California Association of Governments 2016-2040 Regional Transportation Plan/Sustainable Community Strategy (RTP/SCS): A Plan for Mobility, Accessibility, Sustainability and a High Quality of Life.

AB 987 requires that the project be consistent with the an RTP/SCS that meets CARB's targets for reducing Greenhouse Gas emissions. The project is not consistent with the 2016 RTP/SCS for at least three reasons.

First, the 2016 RTP/SCS would not, if implemented, achieve CARB's greenhouse gas emission reduction target.

Second, the project will not reduce vehicle miles traveled ("VMT"). The application contains no VMT calculations. In fact, the project will likely increase VMT. The project's VMT must be calculated and provided for the application to be deemed complete and for it to be reviewed for consistency with the 2016 RTP/SCS. Once provided, we believe, as discussed below, the VMT analysis will show that the project will increase VMT and, therefore, is inconsistent with the 2016 RTP/SCS. The scant data provided by the application seems to directly support the notion that the project will increase VMT.

Third, the project is not consistent with the general use designation, density, building intensity, and applicable policies for the project's area, as set forth in the 2016 RTP/SCS.

A. The 2016 RTP/SCS Does Not Meet CARB's GHG Emission Reduction Targets

Section 21168.6.8 requires that the project be "consistent with…[a] sustainable communities strategy…for which the State Air Resources Board…has accepted a metropolitan planning organization's determination that the sustainable communities strategy…would, if implemented, achieve the greenhouse gas emission reduction targets."

The 2016 RTP/SCS does not achieve CARB's emission reduction targets for the SCAG region.

On March 22, 2018, CARB adopted Resolution 18-12 – Proposed Update to Senate Bill 375 Greenhouse Gas Emission Reduction Targets.[67] Resolution 18-12 increases the emission target for SCAG from 18% for 2035 to 19% for 2035.[68] The 2016 RTP/SCS does not achieve this 19% greenhouse gas emission reduction target. The 2016 RTP/SCS only would, if implemented, achieve the 18% greenhouse emission reduction target previously adopted by CARB. SCAG is forecasted to adopt a new RTP in April 2020.[69] Thus, while the 2016 RTP/SCS was previously determined to be consistent with CARB's prior target it is not consistent with CARB's current "greenhouse gas emission reduction targets" established in 2018 (before the adoption of AB 987) for SCAG.

It is especially important that the 2016 RTP/SCS be judged against CARB's current "greenhouse has emission reduction targets" because CARB found that "[s]tronger SB 375 GHG emissions reduction targets will enable to State to make significant progress toward the Scoping Plan Update goals, but alone will not provide of the reductions needed" since "the full reduction needed to meet our climate goals is on the order of a 25 percent reduction in statewide per capita GHG emissions by 2035."[70] In light of this, OPR has concluded that "consistency with RTP/SCSs does not necessarily lead to a less-than-significant VMT impact."[71]

Until SCAG adopts an RTP/SCS that is consistent with CARB's 19% emission reduction target, it is difficult to understand how the Governor could legally find that the project is consistent with an RTP/SCS that meets CARB's emission reduction target, as required by Section 21168.6.8. Such a finding would directly undermine CARB's Resolution 18-12 and related proceedings involving this matter.

B. The Project Is Not Consistent With the 2016 RTP/SCS's Goal of Reducing Vehicle Miles Traveled

Setting aside the issue of compliance with CARB's March 22, 2018 Resolution establishing a 19% requirement for SCAG, which is a fatal flaw in the application, a key component of the 2016 RTP/SCS as adopted by SCAG is the "focus on reducing the number of

---

[67] Proposed Update to Senate Bill 375 Greenhouse Gas Emissions Reduction Targets, *available at* https://www.arb.ca.gov/cc/sb375/finalres18-12.pdf?_ga=2.184341926.1236776461.1547160254-1005937483.1501549482.

[71] Office of Planning and Research, Technical Advisory on Evaluating Transportation Impacts in CEQA, at p. 11, *available at* http://opr.ca.gov/ceqa/updates/sb-743/.

drive-alone trips and overall vehicle miles traveled" through transportation demand management.[72] Under the 2016 RTP/SCS, the "number of VMT per capita would be reduced by more than seven percent and Vehicle Hours Traveled per capita by 17 percent…as a result of more location efficient land use patterns and improved transit service."[73]

Remarkably, the project application under AB 987 does not even calculate the project's VMT, which is a key requirement for the Governor's certification. In fact, based on the analysis discussed herein, it is very likely that the project will actually increase VMT as compared to existing conditions because it will relocate uses from downtown Los Angeles, probably the best location for an arena from a VMT perspective, to an area in Inglewood that the project's proponents repeatedly referred to as "transit starved" to obtain deviations from AB 900's standards.[74] They cannot take the opposite position now and overstate the viability of transit alternatives to try to meet the VMT requirements.

- "People have asked, 'Why can't AB 900 work for this process?' There are essentially two primary things. One is that under AB 900, it requires a 15% reduction in vehicle trips to the facility within the first year of the operation of the facility. ***As we've discussed, this is a transit starved***, disadvantaged community." (Joe Lang Testimony, June 26, 2018, Senate Judiciary Committee.)

- "Because we are a ***transit starved community*** we know that, that standard could not be met within the first year, and as a result we have asked for a longer period of time to comply with that standard. (Joe Lang Testimony, June 26, 2018, Senate Judiciary Committee.)

- "*Given the fact that we have a* ***transit starved community*** and we're still focusing on the 15% emissions reduction that would have to be met well before as we've stated, it could be in this instance given this community." (Sen. Kamlager-Dove Testimony, June 26, 2018, Senate Judiciary Committee.)

- "We're happy to have the 15% vehicle trip production standard in the bill, but ***because we are transit starved*** we need a few more years to comply with that standard." (Joe Lang Testimony, June 20, 2018, Senate Environmental Quality.)

---

[72] 2016 RTP/SCS, at p. 6, *available at* http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS.pdf.

[73] *Id.*, at p. 9.

[74] Surprisingly, while repeatedly describing the project's location as "transit starved" in pursuit of legislation providing extraordinary judicial relief, the applicant now frames the project location as "currently developed with access to high quality transit." (Application, at p. 4.) Which one is it? Is the area "transit starved," as stated before legislative committees or "currently developed with access to high quality transit"?

Staples Center on the other hand, where the Clippers currently play, is in downtown Los Angeles. Downtown Los Angeles is anything but "transit starved."

First, because downtown Los Angeles is Southern California's major employment center, many event attendees to Staples are likely already in downtown Los Angeles prior to attending a Clippers game or other event at Staples Center. Given downtown Los Angeles' well-developed transit systems, including DASH, private shuttles, multiple bus lines and rail lines, many attendees to Staples coming from the office and homes in downtown likely generate no VMT to attend an event.

Second, Staples Center is well-served by existing rail and bus lines. Staples Center is a few hundred feet from a fixed rail station that is served by two light rail lines (Metro's Blue Line and Metro's Expo Line) and within walking distance to the 7th Street/Metro Center, which is served by Metro's Red Line and Purple Line, which connect to Union Station. And numerous Metro Rapid bus lines also serve the downtown area.

Thus, while the application cherry-picks a couple of strategies that the project claims to be consistent with, it misses the forest for the trees and deprives the Governor, OPR, and CARB of critical information needed to determine whether the project is in fact consistent with the 2016 RTP/SCS – a VMT analysis.[75] Before any consistency finding can be made with the 2016 RTP/SCS, the applicant must actually calculate its VMT and show how the project in a "transit starved" area will reduce VMT consistent with the 2016 RTP/SCS's goal of doing so to reduce GHG emissions.

In fact, the application ***admits*** that the average trip length for attendees ***will increase by over two miles***. (Application, Attachment G, at pp. 11, 18 [trip length for attendees based on ZIP Code data of ticket purchasers is 19.38 miles from Staples Center and 21.59 miles from the project site].) There is no attempt to calculate the aggregate amount of VMT that either Staples Center or the project will generate. Further, the average "trip length" of 19.38 miles for attendees to Staples Center is very likely inflated because it does not account for the fact that many attendees are already in downtown Los Angeles or close to it for work. As a result, these attendees, even if they drive, are traveling a far shorter distance than whatever number was used to calculate the "average trip distance" of 19.38 miles. As a result, the average increase in trip distance is likely much larger than the over two miles the applicant assumes.

---

[75] This data is also critical to the greenhouse gas emission assessment prepared for the project. The increase in vehicle miles traveled as a result of the project's location does not appear to be accounted for in the application's "Greenhouse Gas Analysis." (See Greenhouse Gas Analysis, Attachment G, at p. 11.) There is no indication that the increased vehicle miles traveled as a result of moving events from a centralized location well-served by transit to an area outside of downtown Los Angeles that is "transit starved" has been accounted for in the GHG inventory for the project

Empirical analysis by Gibson Transportation Consultants concludes that the assertion that VMT will be reduced "is not supported by the statistics."[76] Gibson Transportation analyzed the project using a SCAG model and found that every trip to the project as compared to a trip to Staples would have a higher VMT.[77]

Requiring accurate and complete VMT data be provided is entirely consistent with what projects applying under the California Jobs Act (AB 900) have provided to establish consistency with applicable sustainable community strategies.[78] As AB 987 was modeled after AB 900 and was designed to impose even higher standards, the applicant here must provide the project's VMT data as well, and it is important to also fully assess the project's GHG inventory and to determine consistency with the 2016 RTP/SCS.

C. The Project Is Not Consistent With the General Use Designation, Density, or Building Intensity in the 2016 RTP/SCS

AB 987 requires the Governor to find the project is "consistent with the general use designation, density, building intensity, and applicable policies in a sustainable communities strategy."[79] The 2016 RTP/SCS was adopted in April 2016. The project was proposed in mid-2017 and AB 987 became law in 2019. As such, the applicant was fully aware of these land use consistency requirements and of the content of the 2016 RTP/SCS when the project was proposed and AB 987 was adopted.

The project is largely concentrated at the southwest corner of Century Boulevard and Prairie Avenue in the City of Inglewood. The project area is immediately adjacent to a residential neighborhood comprised of single family homes and one- to two-story multi-family apartment buildings. The immediately adjacent residential community is largely a lower income, minority community. Within the project area are two residential properties and a series of commercial properties.[80]

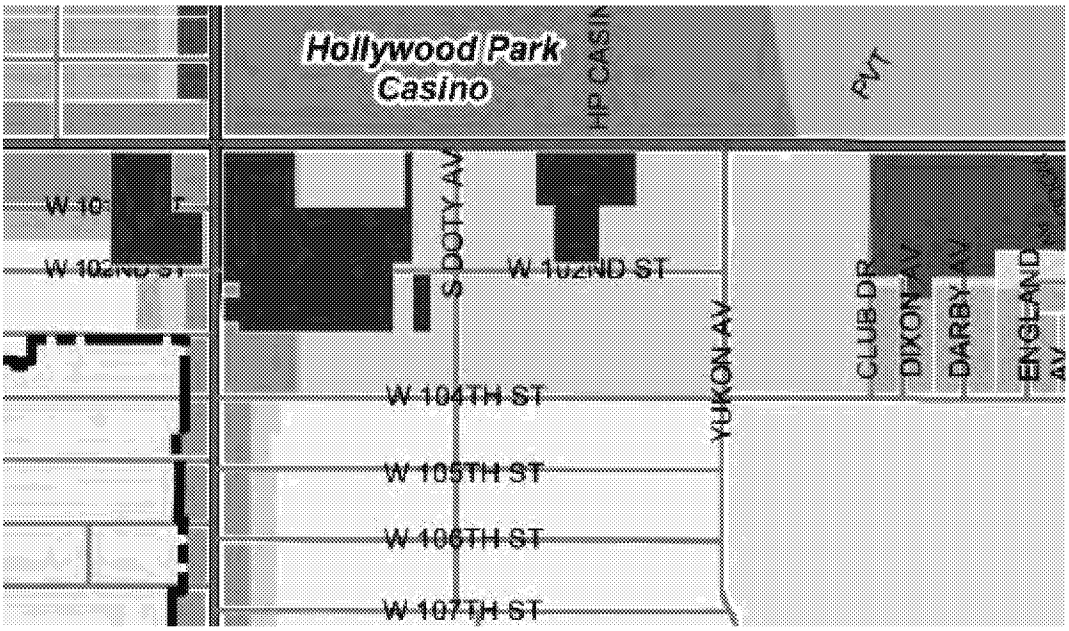
[79] Pub. Resources Code, § 21168.6.8(a)(3)(D).

[80] *See* EXHIBIT 5, photographs of properties surrounding and within the Project area and residents of the same.

SCAG developed the 2016 RTP/SCS, in part, based on Inglewood's General Plan and zoning. Inglewood's General Plan Land Use Map designates most of the project area as "Industrial" (which is shown in gray) with some small slivers of "Commercial" (which is shown in red). Here is the project area overlain in dark blue on the City's general plan land use map.

Under the Inglewood Zoning Code, the project area is zoned various categories: Residential Multiple Family (R-4) (dark brown), Residential Limited Multi Family (R-2) (light brown), Airport Commercial (C-2A) (pink), and Limited Manufacturing (M-1L) (light blue). Here is the project area overlain in dark blue on the City's zoning map.



Arenas are not permitted in any of the zones applicable to the project site. Arenas are solely permitted in the C-R zone.[81] Thus, the project is inconsistent with the site's existing zoning and General Plan land use designations.

More importantly, the project also is flatly inconsistent with SCAG's general use designation, density, and building intensity for the project site.

The City's General Plan and Zoning Map designations informed the land use maps SCAG generated as part of the 2016 RTP/SCS process. The 2016 RTP/SCS general use designation, density, and building intensity for the project area classifies the project area's land uses as including "Single Family Residential" (yellow), "Multi-Family Residential" (beige), "Industrial" (blue) and "Commercial and Services" (red).

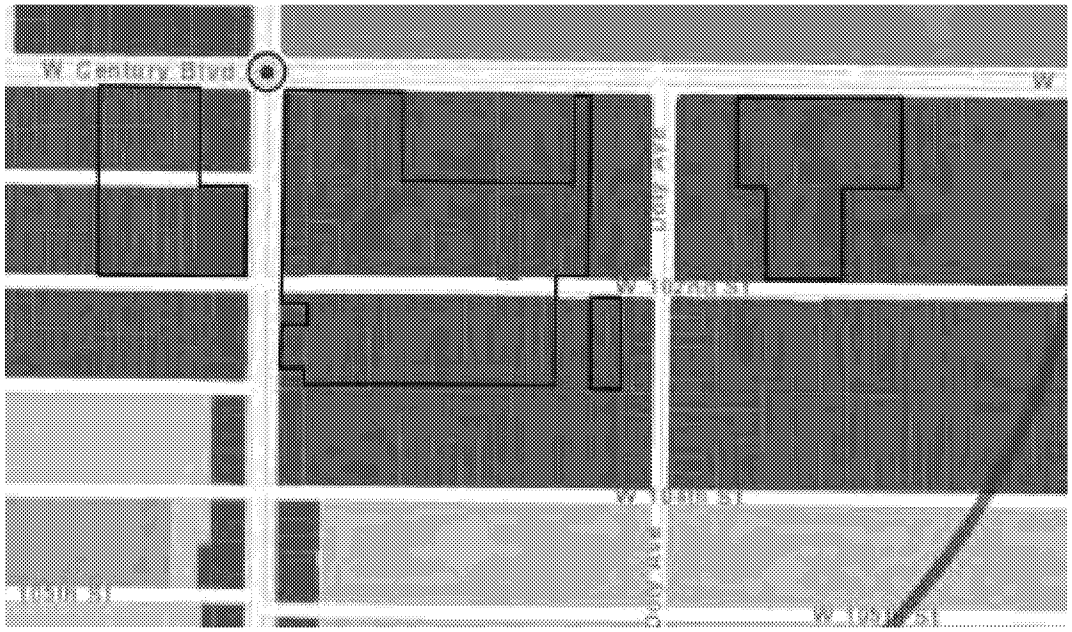
Below is a SCAG's "Existing Land Use (Year 2016)" map and map index for the project area.[82] The project site is outlined in black.

---

[81] *See* Inglewood Municipal Code Sec. 12-27(3) for zoning uses permitted in the C-R zone [permitting "Athletic events (professional and amateur) including, but not limited to, football, baseball, track, tennis, soccer, wrestling, boxing, skating (ice or roller), golf, hockey, rodeos, and basketball."].

[82] *See* EXHIBIT 6, the complete SCAG Existing Land Use (Year 2016).

Under SCAG's General Plan Land Use Codes, the project area was then designated "Industrial" (blue) and "Commercial and Services" (red). Here is the project site outlined in black on SCAG's General Plan Land Use map of the area.[83]



[83] *See* EXHIBIT 7, the complete SCAG General Plan Land Use Map.

The project is not an industrial use project. It contains an arena, ancillary office, retail, medical, and hotel uses. Therefore, it is inconsistent with the 2016 RTP/SCS's general use designation.

The information in the above maps and additional information provided to SCAG from Inglewood and other jurisdictions in SCAG's region was used to develop maps forecasting the Regional Development Types.[84] These SCAG maps illustrate the three Land Development Categories that SCAG developed for purposes of mapping future growth and predicting future growth studied and assumed within the 2016 RTP/SCS. The three Land Development Categories are Urban, Compact Walkable, and Standard Suburban.

As shown in the attached SCAG maps, the project area is designated Standard Suburban on both the Forecasted Regional Development Types (2012) and Forecasted Regional Development Types (2040) maps.[85] Both of these designations are inconsistent with the project's proposed dense arena development.

Arenas are consistent with an Urban designation, which are "[o]ften found within and directly adjacent to moderate and high density urban centers" and are "supported by high levels of regional and local transit service."[86] In contrast, Standard Suburban areas are lower density and generally not well served by regional transit service and most trips are made via automobile.[87] As the project area is low density and not well served by transit, it is characteristic of SCAG's definition of Standard Suburban areas.

Standard Suburban areas mapped "Industrial" on SCAG's General Plan Land Use map have structures that are typically one to two stories tall with a floor area ratio of 0.5 to 1.[88] In contrast, Urban Mixed Use districts have buildings that are between 10 and 40 plus stories tall.[89]

Because the project is inconsistent with Inglewood's General Plan and zoning, inconsistent with SCAG's general plan designation, and inconsistent with SCAG's proposed density, and building intensity, the project cannot be certified as consistent with the RTP/SCS as AB 987 requires.

Accordingly, the Governor cannot certify the project as "consistent with the general use designation, density, building intensity, and applicable policies in a sustainable communities strategy." If the Governor makes such a finding in this circumstance when the nature and extent

---

[84] *See* Sustainable Communities Strategy Background Documentation, Appendix, *available at* http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_SCSBackgroundDocumentation.pdf.

[85] *See* EXHIBIT 8.

[86] *See* Sustainable Communities Strategy Background Documentation, at p. 43, *available at* http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_SCSBackgroundDocumentation.pdf.

[87] *Id.*

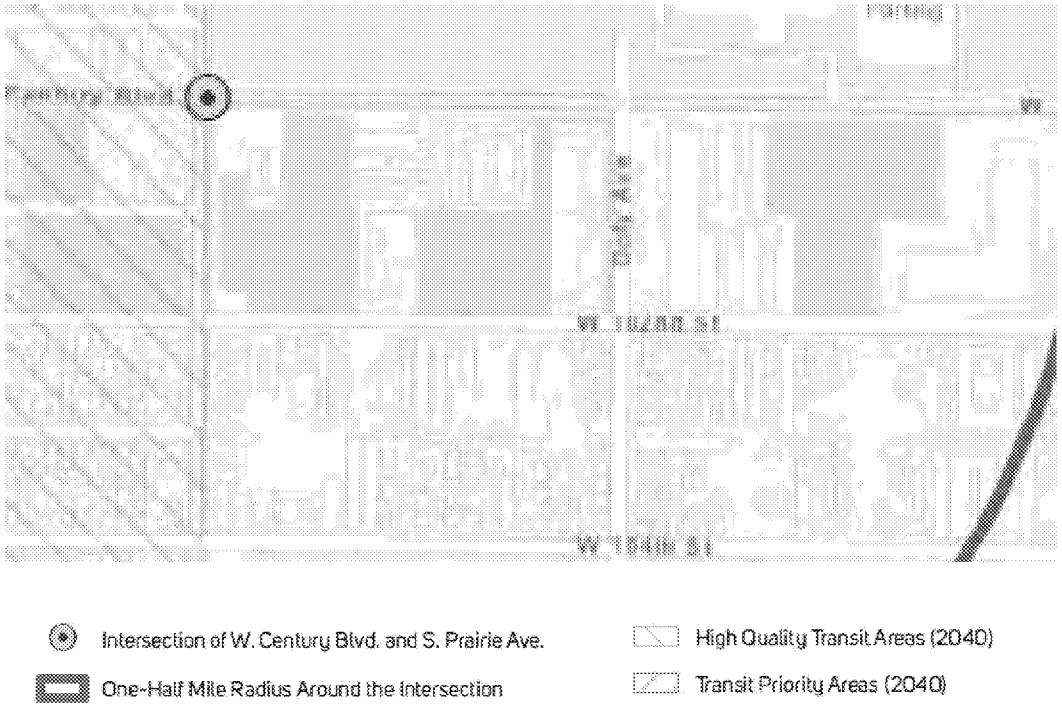
[88] EXHIBIT 9, SCAG's Urban Footprint Place Types.

[89] *Id.*, at p. 1.

of the inconsistency is clear and unambiguous, the ramifications for other required consistency determinations statewide relating to the RTP/SCS is significant.

D. The Project Area is not in a "High Quality Transit Area" or Accessible to Transit

The applicant states that the project is consistent with the 2016 RTP/SCS's strategy to "encourage development in High Quality Transit Areas (HQTAs) and along 'Livable Corridors.'"[90] The applicant also states that the project is consistent with the 2016 RTP/SCS's goal of "encouraging compact growth in areas accessible to transit."[91] Both statements are incorrect. The project is not in an HQTA.[92] Below is a section of the SCAG map attached at Exhibit 8 showing that the arena, hotel, retail, and other habitable project buildings are not in an HQTA and not forecast to be in one in 2040. The map's cross-hatching denotes HQTAs. The dot shows the intersection of Century Boulevard and Prairie Avenue. The area to the southeast is the project area and is not cross-hatched, which means it is not an HQTA.



[90] Application, at p. 13.

[91] *Id.*

[92] *See* EXHIBIT 8, SCAG HQTA maps for 2012 and 2040. Only one of the project's parking structures is located within an HQTA. The arena, sports medicine clinic, offices, and hotel are outside of the HQTA. It is wrong for the application to state that the project is in an HQTA.

The applicant admits that the project is not accessible to transit.[93] Given that the project is not in an HQTA, is not along a "livable corridor," and not accessible to transit, it is not consistent with even those limited 2016 RTP/SCS policies with which the applicant selectively claims consistency.[94]

V. NO BASIS TO FIND THAT PROJECT QUALIFIES FOR LEED GOLD CERTIFICATION

Public Resources Code Section 21168.6.8 requires that the Governor find that the project will qualify for LEED Gold certification within one year of construction.[95] Insufficient information is provided to permit the Governor to make this conclusion. Moreover, based on the information that is provided, it does not appear that the project could ever meet the LEED Gold standard.

To be LEED Gold, the project must earn between 60 and 79 points under LEED's point schedule. The two scorecards provided[96] predict that the project would receive either 62 or 61 points. The project loses one point for Variant One, which includes the demolition of two residential properties.

A mere two pages of very limited narrative is offered to support the scorecard's conclusions. This information is not adequate to find that the scorecard was properly completed and the project will qualify for LEED Gold. Based on the limited information provided, it is hard to understand how a determination can be made to certify that the project will be LEED Gold. It is more than clear, based on the information provided, that the project does not meet the LEED Gold standard. At the very least, the Governor needs additional information and analysis to evaluate the issue.

A. The Project's LEED Scorecard Inaccurately Credits the "Transit Starved" Project Area

The project's LEED scorecard credits six points for "access to quality transit." As discussed in section IV.B above, during the legislative process, the applicant and AB 987's author repeatedly characterized the area as "transit starved" in arguing for additional time to implement the required TDM program. It is beyond understanding given the number of times

---

[93] *See supra*, Section IV.B (applicant's characterization of project area as "transit starved).

[94] EcoTierra, an environmental consulting firm, evaluated the project for consistency with the 2016 RTP/SCS and found that it was inconsistent with it. *See* EXHIBIT 1, at pp. 8-13.

[95] Pub. Resources Code § 21168.6.8(a)(3)(A).

[96] Application, Attachment B.

the applicant asserted that Inglewood and the project area are transit starved, that the applicant can now claim it has access to quality transit.[97]

Now the project applicant argues that "access to high quality transit" is valued at six points on the LEED scorecard.[98] In fact, the project is nearly one mile from the closest existing fixed guideway transit stop (Hawthorne/Lennox Metro Green Line station 0.8 miles) and between 1.6 and 2.0 miles from under construction stations.[99]

Given the distance from the fixed railways and the applicant's repeated acknowledgment that the area is "transit starved," it is wrong for the scorecard to award six points for "access to high quality transit." Elimination of these points causes the project's score to fall below the threshold for LEED Gold and AB 987 certification.

B. No Information Provided Regarding the Project's So-Called "Reduced Parking Footprint"

No information is provided regarding how many parking spaces will be provided. Without this information it is impossible to understand how there could be a "reduced parking footprint." The application depicts at least two structured parking lots and one surface lot. No information is provided as to whether any subterranean parking will be provided. No information is provided as to how many stalls will be in each structure or lot. No information is provided as to how the "parking footprint" is reduced.

Moreover, there is a proposal for an aerial walkway to the Hollywood Park property to the north and its parking lots. Facilitating pedestrian travel between parking at the Hollywood Park property and the project will encourage the use of private vehicle travel and effectively expands the parking footprint.

C. No Support for "Optimized Energy Performance"

The LEED scorecard awards 18 points, *nearly a full one third of the total*, for what is termed "optimized energy performance." The narrative devotes only six lines to this important concept and only broadly references photovoltaic panels, light emitting diode lighting, high-efficiency HVAC "strategies," and the purchase of carbon offsets. There is no explanation how these activities "optimize" energy performance or how they can equate to 18 points on the scorecard. The "purchase of carbon offsets" does not "optimize energy performance." Again,

---

[97] *See* EXHIBIT 10 (KTUA Memorandum finding that only two points should be awarded for access to transit)

[98] *Id.*

[99] The statement that the project site has "access to high quality transit" is also wrong under SCAG's mapping of High Quality Transit Areas and Transit Priority Areas. Under both 2012 existing conditions and forecasted 2040 conditions, the project is outside of both High Quality Transit Areas and Transit Priority Areas. *See* EXHIBIT 8, SCAG High Quality Transit Areas and Transit Priority Areas maps.

more information and support must be provided for the any determination to be made that the project will be LEED Gold, as AB 987 requires.

D. The Project Description Is So Sparse That The LEED Findings Cannot Be Credited

The application broadly describes the project by listing the proposed uses and the square footage of some of the uses. A rudimentary site plan is also provided. (See Application, Attachment A.) No information is provided regarding project height, the amount of digital and other signage, the number of parking spaces, or the amount of open space and permeable surfaces, for example. Compare this lack of detail to the very detailed information provided for numerous projects that have applied for streamlining under AB 900. Many include detailed project drawings and renderings.[100] Only the barest of information about the project is provided here, certainly not enough to make a determination as to its LEED status.

Despite this lack of basic information, the LEED scorecard takes credits for very detailed project components. For example, a credit is taken for "light pollution reduction." What is this based on? Per the application, "[t]he majority of parcels that comprise the Project Site are currently vacant or underdeveloped." How is the introduction of well over one million square feet of development replete with lighting and presumably large illuminated signs going to reduce light pollution? How many signs are proposed? Will they be digital? Where will they be located? Will they face the neighboring residential community? Will there be any controls on the brightness of the project lighting, including signs? None of this information is provided as part of the project description and without the information it is completely unclear how the project can be awarded points for "light pollution reduction."

Similarly, the application states that electric vehicle charging stations will be provided at eight percent of the parking spaces. (Application, at p. 5.) However, without knowing how many parking spaces are proposed, one does not know how many charging stations are actually going to be provided and, in all events, providing charging stations at eight percent is hardly emblematic of green building under today's green building standards.

The LEED scorecard awards two points for the "protect[ion] and restor[ation of] habitat." What "habitat" is being protected or restored? The project site, adjacent to homes, is partially vacant. There do not appear to be any habitat areas on the vacant areas of the site. The portions of the site that are not vacant are fully developed with homes and businesses? Are there sensitive species or habitats on site? If so, what are they and how will they be protected or restored? If not, how is the project protecting or restoring habitat? No information is provided.

---

[100] *See*, e.g., 3333 California Street Project AB 900 Application (providing detailed drawings and renderings with application), *available at* http://opr.ca.gov/docs/20180824-AB900_3333_California_Street-3_Attach_A_Drawings.pdf; Hollywood Center Project AB 900 Application (same), *available at* http://opr.ca.gov/docs/20180502-Hollywood_Center_Exhibit_1-8.pdf; Potero Power Station Mixed-use Project AB 900 Application (same), *available at* http://opr.ca.gov/docs/20180718-180713_PPS_AB900_Application_Exhibits.pdf.

Without additional information, awarding points for protecting and restoring habitat appears specious at best.

VI. AB 987'S BASIC REQUIREMENTS ARE NOT MET OR ADEQUATELY SUBSTANTIATED

For certification under AB 987, the Governor must find, among other things, that: (1) the project will result in a minimum investment of $100,000,000; (2) the project will pay prevailing wages to construction and permanent employees; (3) the applicant has entered into a binding agreement regarding environmental measures; and (4) the applicant will pay court costs and the costs of preparing the record of proceedings.

The applicant has provided no information for the Governor to find compliance with any of these requirements. There must be some factual basis upon which the Governor is to make his findings. These finding are meaningful but have been treated by the applicant as a layup without any evidence.

A. The Project Fails To Meet Its Economic Investment Obligations

AB 987 requires that the project create "high-wage, highly skilled jobs that pay prevailing wages and living wages…and permanent jobs for Californians."[101] The application is bereft of information as to how this standard will be met. No information on the number of permanent jobs to be created is provided. No information as to the job types, their classifications, or their numbers is provided.

1. The Application Ignores The Project's "Living Wage" Obligations

There is no evidence provided that the project will pay living wages. The applicant does not state what wages it will pay its employees. Although the applicant does not provide any breakdown as to what jobs are provided, it is reasonable to assume that the overwhelming majority of jobs will be part time concession, maintenance service, and security jobs at the arena, hotel, and retail stores. AB 987 requires that employees of the project receive "prevailing wages and living wages."

While CEQA does not define "living wage"[102], the Massachusetts Institute of Technology defines a "living wage" as the "hourly rate that an individual must earn to support their family."[103] The Massachusetts Institute of Technology calculated the 2017 living wage for Los Angeles County was $13.54 per hour for a single adult and $29.25 per hour for one adult

---

[101] Pub. Resources Code, § 21168.6.8(b)(2)(A)(i).

[102] AB 987 defines "jobs that pay prevailing wages" (Pub. Resources Code, § 21168.6.8(b)(2)), but does not define "living wage." The two are separate concepts. "[J]obs that pay prevailing wages" applies to construction workers. "Living wages" apply to permanent employees and non-construction workers.

[103] *See* Living Wage Calculation for California, *available at* http://livingwage.mit.edu/states/06.

with one child.[104] The applicant has provided no commitment or evidence that it will provide a "living wage" to the project's permanent employees. Absent information, and any commitment to defined pay levels, it hard to understand how the finding required under section 21168.6.8(b)(2)(A)(i) that the project will pay "living wages" can be made.

2. The Project Will Not Create New "Highly Skilled Jobs"

AB 987 requires that the project create "highly skilled jobs." The applicant has not provided any information as to what permanent highly skilled jobs are being created. In fact, since the Clippers organization is a going concern, as the application admits, it is merely moving from one office to another.[105] There is no evidence that this move will create any new highly skilled jobs. The applicant must detail how moving from existing facilities will create new highly skilled jobs beyond temporary construction positions. Absent this information, it is unclear how a finding can be made that the project will create highly skilled jobs under AB 987.

B. There is no evidence the applicant has entered into a project labor agreement.

The applicant states that it has entered into a project labor agreement. Presumably this agreement covers the construction workers to be employed on the project. However, no project labor agreement is provided with the application. While the applicant has summarily stated that it "has already entered into a project labor agreement," it is unclear how that can be the case. Under Public Resources Code section 21168.6.8(b)(2(ii) a "'project labor agreement' has the same meaning as set forth in paragraph (1) of subdivision (b) of Section 2500 of the Public Contract Code." In turn, Public Contract Code section 2500 defines "project labor agreement" as "a prehire collective bargaining agreement that establishes terms and conditions of employment for a specific construction project or projects and is an agreement described in Section 158(f) of Title 29 of the United States Code."

Section 158(f) of Title 29 of the United States Code defines "project labor agreement" as between "an employer engaged primarily in the building and construction industry" and a "labor organization of which building and construction employees are members."

The applicant here is Murphy's Bowl LLC, a Delaware corporation. Murphy's Bowl is not an "employer engaged primarily in the building and construction industry." To the best of

---

[104] *Id.*

[105] The applicants' GHG analysis credits its existing operations against the emissions that the project will generate. While we disagree with this approach and believe it is fundamentally incorrect under CEQA and inconsistent with CARB's goals of reducing GHGs and AB 987's intent, if the applicant treats existing operations as a "baseline" for purposes of GHG, then those existing operations are the "baseline" for purposes of job creation. Thus, beyond construction labor, there is no indication that any new "highly skilled jobs" will be created. Per the applicant and consistent with its position in calculating GHG emissions, existing jobs are merely going to move from Los Angeles to Inglewood. Therefore, these jobs should not be credited as "new."

our knowledge, Murphy's Bowl LLC does not have a general contractor's license issued by the State of California. Murphy's Bowl LLC's Form LLC-12 dated August 7, 2017, states its business is "real estate development."[106] As Murphy's Bowl LLC is not "engaged primarily in the building and construction industry," then it is precluded from entering into a project labor agreement under section 158(f) of Title 29 of the United States Code.

Since Murphy's Bowl cannot legally enter into a project labor agreement, we are unclear how the assertion that it already has can be true.

C. No evidence of a $100,000,000 investment

The applicant summarily states that "Project costs would far exceed the $100 million minimum investment requirement of AB 987."[107] While this may be so, no evidence, in the form of a pro forma or otherwise, is provided to support this conclusion. The applicant merely reiterates the project's scope and then states the applicant's conclusion. This is inadequate when compared to what applicants under AB 900 have provided to prove the minimum investment is met.[108]

VII. NO EVIDENCE THE PROJECT WILL MEET RIGOROUS SOLID WASTE RECYCLING MANDATES

AB 987 requires the project to meet California's strict waste reduction and recycling standards.[109] (.) However, the applicant does not include sufficient information to establish that the project's construction and demolition waste recycling will meet City and State diversion targets.

The applicant claims, without evidence, that the project would achieve 75 percent recycling of demolition materials. In its Construction and Demolition Permit Application,[110] the City of Inglewood notes that "The State of California requires that 50% of construction and demolition debris from covered projects, and 100% of land-clearing debris (from nonresidential, newly constructed buildings), be diverted from land filling. "Covered projects" are defined to include, among others, "all new construction (residential, commercial and industrial)." There appears to be no mechanism for the City to require or enforce a diversion rate for construction or demolition debris that exceeds 50 percent. Moreover, the applicant provides no information to

---

[106] *See* Murphy's Bowl LLC Form LLC-12, *available at* https://businesssearch.sos.ca.gov/Document/RetrievePDF?Id=201716710170-22721105.

[107] Application, at 16.

[108] *See* Economic and Fiscal Impact Report for the Hollywood Center Project, Exhibit 5, *available at* http://opr.ca.gov/docs/20180502-Hollywood_Center_Exhibit_1-8.pdf.

[109] Pub. Resources Code § 21168.6.8(b)(4).

[110] Inglewood Construction and Demolition Permit, *available at* https://www.cityofinglewood.org/DocumentCenter/View/187/Construction-and-Demolition-Permit-Application-PDF?bidId=.

indicate how the suggested 75 percent diversion rate nor the 100 percent diversion of land-clearing debris would be achieved. Accordingly, insufficient information has been provided in the Application to demonstrate that the project would comply with Division 30, Chapter 12.8 (commencing with Section 42649) of the Public Resources Code.

The applicant does not include sufficient information to establish that the project will comply with Division 30, Chapter 12.9 (commencing with Section 42649.8) of the Public Resources Code regarding organic waste recycling.

The City of Inglewood does not appear to have established an "organic waste recycling program" as required by Public Resources Code section 42649.82. A review of the City Department of Public Works, Environmental Services Division website[111] identifies the following Recycling Programs of the City:

- Bottle & Can Recycling Centers
- Business & Recycling
- Green Waste
- Household Hazardous Waste
- Recycling Household Batteries
- Sharps Recycling Program
- Thrift Shops
- Weekly Hazardous Waste Roundups

Under "Business & Recycling," the City provides information and advice to City businesses regarding recycling. In addition, the City provides a flyer dated February 27, 2017 that sets forth recycling requirements for commercial businesses and multi-family complexes operating in the City of Inglewood that meet the requirements of Public Resource Code sections 42649 et seq.[112]

Under "Green Waste," the City addresses "yard trimmings, such as leaves, grass, thatch, chipped brush and plant cuttings."

None of the recycling topics specifically addresses the area of organics recycling, which includes "food waste" and "food-soiled paper waste that is mixed in with food waste" per Public Resource Code Section 42649.8(c). The proposed arena component of the project would be expected to generate substantial quantities of such waste.

---

[111] City of Inglewood Recycling Programs, *available at* https://www.cityofinglewood.org/279/Recycling-Programs.

[112] City of Inglewood Recycling Requirements Flyer for Commercial Businesses and Multi-Family Complexes, *available at* https://www.cityofinglewood.org/DocumentCenter/View/11479/Commercial-And-Multi-Family-Recycling-Requirements?bidId=

The applicant claims that the project will comply with Sections 42649.8 et seq. by "subscribing to a municipal solid waste collection service that is approved by the City." The current solid waste franchise holder in the City of Inglewood is Consolidated Disposal Service (CDS), a Republic Services Company.[113] According to Republic Services' website,[114] the services provided to assist customers in complying with AB 1826 (which enacted Public Resource Code 42649.8 et seq.) include "waste audits" and "educational programs and materials." Neither of these services provides any assurances that the project would be able to meet organic waste diversion requirements as set forth in Public Resource Code section 42649.81(a)(3) ("On and after January 1, 2019, a business that generates four cubic yards or more of commercial solid waste,..., per week, shall arrange for recycling services specifically for organic waste.") Moreover, the cited website[115] specifically identifies food waste as an "Unacceptable" material for placement in CDS' recycling containers. Although the site also references "organic containers for a fee, posters and additional tools," no evidence of the availability of disposal services is provided.

Accordingly, insufficient information has been provided in the Application to demonstrate that the project would comply with Public Resource Code Division 30, Chapter 12.9 (commencing with Section 42649.8).

TECHNICAL MEMORANDUM

From: Craig Fajnor, Principal

RE: Comments on AB 987 Application for the Inglewood Basketball and Event Center (IBEC)

The following provides comments on the AB987 Application (Application) for the Inglewood Basketball and Event Center (IBEC or Project) dated November, 2018, prepared by AECOM. Comments are presented for the following sections of the Application:

- Greenhouse Gases
- Regional Land Use Plans and Policies
- Solid Waste and Recycling Policies

GREENHOUSE GASES

Comments regarding the section of the Application that presents information establishing that the project does not result in any net additional emission of greenhouse gases, including greenhouse gas emissions from employee transportation, as determined by the State Air Resources Board pursuant to Division 25.5 (commencing with Section 38500) of the Health and Safety Code.

A. The Application Establishes an Artificially High Baseline.

1) The Application underestimates the Project's emissions by incorporating aggressive assumptions regarding the "baseline" condition that are not consistent with standard modeling practice, agency guidance for evaluating GHG emissions from development projects, and long-standing regulations governing emissions from stationary sources under the state and Federal Clean Air Act. As described on page 5, the Application incorporates numerous assumptions to reduce the Project's GHG emissions inventory by taking credit for "baseline" emissions in a manner that is not consistent with common standards and agency guidance for determining baseline conditions, as highlighted below. Moreover, the Application is inconsistent with long-standing agency guidance and rules employed under the Clean Air Act for verifyinh when a new facility can take credit for the elimination of an existing emissions source. Lastly, the analysis fails to employ the rigor and consistency necessary to substantiate the numbers reported in the Application.

    a) First, modeling tools developed by the air agencies to evaluate project-level GHG emissions do not reduce project emission inventories by taking credit for emissions that might exist in the region, but will not be affirmatively eliminated by the Project. For example, new commercial developments include emissions from all vehicles coming to and from the new building, when, in reality, many of those emissions are likely existing trips that may result from an existing business moving into that new building. CalEEMod, which is a statewide program designed to calculate both criteria and GHG emissions from CEQA development projects in California, does not count

these emissions as part of the baseline and does not "net out" these emissions for evaluating projects. CalEEMode was developed for the California Air Pollution Officers Association (CAPCOA) in collaboration with the California Air Districts, and is recommended by the South Coast Air Quality Management District SCAQMD). The Application's treatment of baseline emissions and taking credit for offsite emissions reductions is not consistent with industry standard approach for using CalEEMod.

b) Second, the Application is inconsistent with agency guidance for baseline emissions. The industry standard approach is consistent with the Bay Area AQMD CEQA guidance, which describes the standard methodology for determining baseline emissions and the technical basis for doing so when evaluating a project's emissions profile:

"If a proposed project involves the removal of existing emission sources, BAAQMD recommends subtracting the existing emissions levels from the emissions levels estimated for the new proposed land use. This net calculation is permissible only if the existing emission sources were operational at the time that the Notice of Preparation (NOP) for the CEQA project was circulated or in the absence of an NOP when environmental analysis begins, and would continue if the proposed redevelopment project is not approved. This net calculation is not permitted for emission sources that ceased to operate, or the land uses were vacated and/or demolished, prior to circulation of the NOP or the commencement of environmental analysis. This approach is consistent with the definition of baseline conditions pursuant to CEQA." The guidance defines direct emissions as occurring on-site; indirect emissions offsite are limited to "emissions produced offsite from energy production and water conveyance".[1]

c) Third, stationary source permitting under the Clean Air Act provides further evidence that the Application is not consistent with long-standing regulations governing taking credit for verified emissions reductions. As highlighted in SCAQMD Rules and Regulations, the approach for a closing facility to obtain emission reduction credits is rigorous, and requires actual data on historical emissions, and cannot employ speculative reductions that are not real, additional, permanent, verifiable and enforceable verifiable (see Rule 1306[2], Rule 1309[3], and Application for Emission Reduction Credit Certificate of Title[4]). The regulatory approach relies upon the actual operating levels of the facility in the most recent time period. Similarly, the New Source Review Permitting

[3] SCAQMD. Rule 1309. Emission Reduction Credits and Short Term Credits. Available at: http://www.aqmd.gov/docs/default-source/rule-book/reg-xiii/rule-1309.pdf?sfvrsn=4. Accessed January 2019.

[4] SCAQMD. Form 401. Application for Emission Reduction Credit (ERC) Certificate of Title. Available at: http://www.aqmd.gov/docs/default-source/aqmd-forms/Permit/401-erc-form.pdf?sfvrsn=14. Accessed January 2019.

Program, which was developed as part of the Federal Clean Air Act, uses "baseline actual emissions" to calculate emissions increases and decreases.[5]

i) The SCAQMD's regulations also require detailed evaluation and a calculation that reduces the credited emissions based on a specific ratio (i.e., 1.2-to-1.0[6]). The Application should apply a greater standard of rigor in its analysis.

ii) Importantly, SCAQMD enforces the Federal Clean Air Act and the state Clean Air Act by requiring that emission reductions be permanent and verifiable for a facility operator to obtain emission reduction credits (i.e., "take credit"). The SCAQMD requires that the source cannot be restarted without a new operating permit and physical limitations are in place. For example, an operator cannot just disconnect a fuel line, there must be physical limitations where the device cannot operate, such as a hole in a crankcase.

d) Fourth, in the framework of AB987, where the project must ensure that there are no net additional emissions of GHGs, the GHG reductions claimed in the analysis should be well substantiated. Notably in the context of baseline emissions, they should be held to a standard where those emissions claimed as being removed are real, additional, permanent, verifiable and enforceable. The Application does not provide adequate information or analysis to confirm these standards are being achieved. As a result, there is no certainty that existing operations at the Staples Center or other facilities will not simply be "backfilled" and there will be no actual decrease in emissions from those locations. This error is highlighted by the Application taking credit for the unsubstantiated elimination of "market shifted" events, even though the Application provides no proof of any kind that the events will actually be eliminated due to the Project.

2) The Application appears to rely mostly upon default assumptions regarding the baseline. The default assumptions of CalEEMod are generally designed to be conservatively high to ensure that Project emission inventories are not underpredicted. By using this approach, the Application likely artificially inflates the results to minimize the Project's GHG emissions inventory. In other words, by using default assumptions in the baseline, the Application is *less conservative* than if site-specific data is used, resulting in a likely underestimation of Project emissions. Unless the applicant can demonstrate that site-specific data is not available, the default assumptions should not be used when calculating baseline emissions to avoid inflating the baseline.

a) Regulatory programs generally use site-specific data to assess emissions such as it relates to baseline.

[6] SCAQMD. Emission Reduction Credits. Available at: http://www.aqmd.gov/home/permits/emission-reduction-credits. Accessed January 2019.

i) See above comment A.1.c.
ii) California's Mandatory Report Rule (MRR) describes "facility fuel use and other facility process data" as the "best available data and methods".[7]
iii) CalEEMod notes that "for any project that substantially deviates from the types and features included in the surveys, site-specific data that are supported by substantial evidence should be used".

b) The Application uses a mix of default and site-specific assumptions for the mobile calculations for the baseline sources as shown on page 10. As stated above, these calculations should be based on actual data consistent with common regulatory approaches.

c) The Application appears to use default information for waste, water, and area sources. As discussed above, the analysis should use site specific data.

3) As discussed on page 6, the Application assumes, without technical substantiation, that events from other arenas will leave those arenas and that those arenas would then not find other events to backfill such events. Beyond the unsubstantiated assumption that this market-shift of events would even occur, there is no standard or guidance to support such an approach. In fact, as discussed above, CalEEMod does not employ this approach to develop project inventories and it is not consistent with agency guidance. From a technical standpoint, this approach is highly speculative because there is no evidence that the market-shift of events would occur and there is no reason to assume the vacated capacity would not be backfilled. As noted below, the Application recognizes the error with this approach with respect to the office uses, where it recognizes the offices will be backfilled.

a) This is inconsistent with the standard of approach for GHG analyses. For example, if a project were to build new dwelling units, that project does not discount the emissions for people who may move in from existing homes. As discussed above, CalEEMod does not approach project emissions inventory in this way and does not contain a methodology to consider market-shifted events.

b) The MRR defines baseline to be the "offset projects GHG emission sources, GHG sinks, or GHG reservoirs within the offset project boundary."[8] Netting out emissions outside of the Project site is inconsistent with this definition of baseline.

c) The Application has incorporated the shifting of non-NBA events from various venues without substantial evidence. On page 9, the Application notes that it would be "speculative to include the emissions associated with any specific market-shifted event or venue;" however, the Application then continues to calculate emissions associated with market-shifted events by assuming specific venues: the Staples Center, the Honda Center, and the Forum. Notably, one of the venues chosen, the Honda Center, has one of the highest GHG utility intensity values.

Additional information is necessary to substantiate that any events would leave the Honda Center for the project and that the Honda Center would not backfill events.

4) As discussed previously, the standard approach for CEQA is to include existing on-site structures at the Project site in the baseline. The attached Table 1 illustrates what this baseline would look like. A modified version of Table 12 is provided in the attached Table 2 showing the net new emissions from the Project with this more appropriate baseline assumption. This analysis shows that the actual net change in the Project may be more than 400,000 MT CO_2e (see Table 1), and that the Project would be more than 300,000 MT CO_2e short in necessary reductions.

   However, it is noteworthy that the existing emissions would similarly decrease into the future as the state's efforts lead to reductions in GHG emissions associated with electricity usage and mobile sources. If similar reduction factors are applied, the Project is short 422,952 MT CO_2e.

B. The Application Uses Inconsistent Methodology When Calculating the Baseline and Project Emissions.

1) The Application includes a non-conservative assumption by holding the baseline emissions constant going into the future, while the Application assumes that Project emissions reduce from 2024 into the future due to projected utility intensity factors and vehicles getting cleaner. This approach is internally inconsistent, inflates the reductions of the analysis, and minimizes the Project emissions inventory. The emissions identified as "baseline" emissions would also decrease in the future just as the Project's emissions are shown to decrease. To be more accurate, the Application should similarly apply reductions in future years to baseline as it did for the Project's future emissions. If similar reductions were applied, the Project would be short 422,952 MT CO_2e. However, as explained above, any use of offsite reductions associated with the Staples Center and market-shifted events is not supported by agency guidance or industry standards.

2) The Application appears to mix and match utility intensity values without a clear logic. For example, the Application lists a mix of years in terms of the basis of the utility information. The calculations should rely upon the utility emission factor that matches the site-specific usage data time period that the analysis is based on. For example, the baseline inventory includes GHG utility intensity values for different years (i.e., 2018 data for SCE, 2017 data for Anaheim Public Utilities, and 2016 data for LADWP).

C. The Application Does Not Account for Increases in Regional VMT Caused by Moving Games and Events to Less-Centrally Located Facility

1) The Application should account for the change in VMT due to the moving of arena events from a better transit-oriented location to a lesser location. The traffic analysis included in this comment letter shows that a portion of the guests/employees will no longer benefit from the same proximity to downtown transportation services and alternative travel modes. Based on the traffic consultant's estimates, VMT is expected to increase in all peak periods, leading to a corresponding increase in GHG emissions. If the total annual VMT increases, the mobile GHG emissions will proportionally increase.

2) The Application contains internal inconsistencies. Table 7 of the TDM section (Attachment D) reports total annual trips (with TDM) of 2,972,568. The "Mobile Source Emissions" table of Attachment G reports total annual trips of 2,646,393 (sum of attendees – light duty vehicles, attendees – other vehicles, and delivery trips). If the trips were corrected, the mobile component of the Project GHG emissions would increase by approximately 12% as shown in attached Table 3.

3) As discussed by the review of the traffic analysis, the TDM is not likely to be as effective as currently claimed by the Applicant. If the TDM program is not as effective as shown, the GHG emissions reduction would be less than what is shown. For illustrative purposes, if the TDM Program's VMT reductions are half of what the application currently estimates, the emissions would be more than 27,000 MT CO2e higher to represent a more achievable TDM Program in a less centrally located facility.

D. The Analysis in the Application Lacks Sufficient Technical Details

1) There is not enough documentation to understand how the reported emissions are compiled. There should be additional tables and text explaining how these numbers were compiled.

2) The Application indicates that the Project will be 10% better than Title 24 2019 (T24 2019) because of the commitment to Tier 1 of the CALGreen Code (Application, page 19, Attachment G page 18). The calculations and Application do not adequately substantiate how this will be achieved.

   a) First, while there are meaningful requirements as part of Tier 1, it is not clear that they will achieve a 10% reduction from T24 2019 building code requirements. The analysis should provide substantiation on how the Tier 1 commitments are going to achieve energy reductions 10% beyond T24 2019. The Tier 1 requirements are included in the 2016 version of CALGreen, and thus were established well before the T24 2019 code.

   b) Second, it is also not clear what, if anything, the analysis incorporated to have CalEEMod estimate what T24 2019 energy usage is. Without greater explanation and substantiation, the calculation is speculative.

3) The Application claims to take a reduction for the LEED commitments (Application, Table 3, page 21). The LEED commitments often do not result in any material GHG reductions. Thus, any such reduction from LEED should be further substantiated and explained. For example, the Application refers to heat island reduction, light pollution reduction, green education program and other measures that are unlikely to result in material GHG reductions. Furthermore, since LEED is a point checklist approach, if the analysis will take reductions from certain LEED point commitments, then those commitments should be enforced (i.e., the Project should not be allowed to get their points using a different approach that does not result in the same GHG reduction).

4) The Application appears to rely upon EMFAC2014 rather than EMFAC2017. It is not clear why they are relying upon an older model when the newer version has been available since March 2018.

5) The Application identifies on page 17 the use of a "white box model" related to energy usage, but provides no details on what this model includes or assumes. The calculations should be substantiated and illustrated to meet the standards of such as for CEQA, offset protocols, and stationary source emission reduction credits

E. The Application Does Not Provide Adequate Information to Evaluate NO_X and PM Emissions or Related Health Impacts

1) The Application does not provide enough information to assess if the Project will be able to meet the requirements on NO_X and PM reductions. Of the information that is provided, it does not appear that the Project can meet the requirements. Specifically, the CalEEMod output files show unmitigated NO_x emissions of 1.70 tpy and mitigated NO_x emissions of 1.62 tpy. This suggests that the Project reduces only 0.08 tpy NO_X, or 0.8 tpy NO_X over 10 years. Without additional information, the Application does not provide substantial evidence that it will be able to comply with the NO_X reductions required under AB 987. Similarly, the CalEEMod output files show unmitigated $PM_{2.5}$ emissions are 0.10 tpy and mitigated $PM_{2.5}$ emissions are 0.10 tpy (rounding); this suggests that minimal $PM_{2.5}$ reductions are occurring on an annual basis, or over the 10 years required by AB 987.

   a) The analysis for the NO_X and $PM_{2.5}$ reductions should meet the same standards as highlighted for the GHG reductions. Notably, the SCAQMD standards on evaluating NO_X and $PM_{2.5}$ emissions should be applied. The standards could pertain to the Rules and Regulations as previously cited (e.g., Rule 1306, 1309), or they should achieve the standards that SCAQMD requires to ensure that they are SIP creditable.[9]

   b) It is also noteworthy that the criteria pollutants are a local issue and local criteria pollutant emissions have the potential to cause localized health impacts. National Ambient Air Quality Standards (NAAQS) are established by the EPA for criteria pollutants, which include NO_2 and $PM_{2.5}$. These standards are designed to protect the most sensitive people from illness or discomfort. Increased emissions of NO_X and $PM_{2.5}$ are correlated to local ambient air quality impacts. The emissions at the new stadium should all be considered project emissions, and even greater consideration should be incorporated in terms of how the Application nets out "baseline/existing" emissions. Furthermore, the reductions the Application will try to achieve should come from local sources directly from the Project, or if through offsets, they should be local offsets generated in and around the arena.

[9] SCAQMD. State Implementation Plan (SIP) Credit Guidance. Available at: http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/facility-based-mobile-source-measures/sip-credit-guidance. Accessed January 2019.

c) There are a number of studies that highlight how criteria pollutant emissions correlate to health impacts.[10,11] Therefore, if the Application underestimates the level of local PM and NOx emissions, it will underestimate the potential health impacts associated with neighboring communities being exposed to criteria pollutants. Known health impacts associated with localized exposure to PM and NOx include respiratory effects (e.g., decreased lung function, increases in pulmonary inflammation, asthma development) and cardiovascular effects (e.g., congestive heart failure).[10,11,12]

d) In addition, by underestimating the Project's emissions, the Application may be underestimating actual emissions of toxic air contaminants, such as diesel particulate matter. Diesel particulate matter is identified by the State of California as a known carcinogen. Exposure to DPM also may be a health hazard, particularly to children whose lungs are still developing and the elderly who may have other serious health problems. According to CARB, DPM exposure may lead to the following adverse health effects: (1) aggravated asthma; (2) chronic bronchitis; (3) increased respiratory and cardiovascular hospitalizations; (4) decreased lung function in children; (5) lung cancer; and (6) premature deaths for people with heart or lung disease. [11,13,14,15]

e) Also, the expected VMT increase will result in increased emissions of criteria pollutants locally. DPM levels and resultant potential health effects may be higher in close proximity to heavily traveled roadways with substantial truck traffic or near industrial facilities.

REGIONAL LAND USE PLANS AND POLICIES

Comments regarding the section of the Application that presents information to show the project is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy for which the State Air Resources Board, pursuant to subparagraph (H) of paragraph (2) of subdivision (b) of Section 65080 of the Government Code, has accepted a metropolitan planning organization's

determination that the sustainable communities strategy or the alternative planning strategy would, if implemented, achieve the greenhouse gas emission reduction targets.

The Application's analysis of consistency with applicable regional land use policies of the Southern California SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) is flawed because: (1) it fails to take into account that the centerpiece of the Project, the arena, would be relocating from a regionally more desirable location under policies of the RTP/SCS to a considerably less desirable location; (2) the Project does not contribute to the development of a "Complete Community" in Inglewood; (3) the Project does not represent "compact growth" as called for in regional land use plans; (4) the Project does not implement regional growth policies related to "Livable Corridors"; and (5) the Project is inconsistent with the intent of regional land use policies related to Transportation Demand Management (TDM), and pedestrian and bicycle movement. Accordingly, the Project has not been shown to be consistent with the applicable sustainable communities strategy, and should therefore not receive preferential treatment under AB 987.

1) The Application includes an analysis of Project consistency with several land use policies of the 2012 and 2016 versions of the RTP/SCS (Application, pages 12-15). These include:

    1. Support projects, programs, policies and regulations that encourage the development of complete communities, which includes a diversity of housing choices and educational opportunities, jobs for a variety of skills and education, recreation and culture, and a full range of shopping, entertainment and services all within a relatively short distance;
    2. Encourage compact growth in areas accessible to transit;
    3. Identify regional strategic areas for infill and investment;
    4. Plan for jobs closer to transit and housing, in sustainable transit-ready infill areas that can be reached by planned transit service and can readily access existing infrastructure;
    5. Develop strategies focused on high-quality places, compact infill development, and more housing and transportation choices;
    6. Encourage development in High Quality Transit Areas (HQTAs) and along "Livable Corridors";
    7. Develop nodes on a corridor - intensify nodes along corridors with people-scaled, mixed use developments;
    8. Promote the use of TDM programs; and
    9. Invest in biking and walking infrastructure to improve active transportation options and transit access.

2) As shown below, the Project demonstrates notable inconsistencies with all of the listed policies.

    a) The Project would relocate the operations of a major professional sports team and other events from downtown Los Angeles, the regional center of transportation and transit service, to a location which is characterized by considerably poorer transportation and transit access, which is inconsistent with regional growth policies set forth in the RTP/SCS.

        i) This analysis makes no mention of either the arena use, which would draw patrons from throughout the region, or the hotel use, which is designed to serve patrons from outside the community. The proposed arena use would involve the relocation of the Los Angeles Clippers

NBA franchise from downtown Los Angeles, a regional transportation hub. A Blue Line/Expo Line Metro Rail station is located within 0.2 miles of the current home court of the Clippers, Staples Center, that also hosts other entertainment and family events, some of which could take place at the new arena in the future. The existing station provides nearby convenient access to multiple transit options, including the Metro Red and Purple Lines, the Metro Gold Line (upon completion of the Regional Connector, presently under construction, in 2021), and regional commuter rail lines (via Union Station). In addition, the 100,000 permanent residents and 70,000 employees located downtown can access the existing arena via walking, bicycle, taxi and rideshare services.

ii) The proposed location for the arena use under the Project is 1.3 miles from the nearest rail transit station via roadway. As noted in the analysis provided in the Application, the only transit service that directly serves the proposed arena site consists of two bus lines adjacent to the site and one line within 0.5 miles (Application, page 14). Future rail service would include a station in downtown Inglewood that is located at a distance of 1.6 miles from the proposed arena (Application, p.14). The fact that the Project's TDM program is required to include extensive additional multi-passenger services to connect with the far away transit facilities is an admission that the Project would not be located in an area that is easily accessed by transit. As indicated in the Application, 1,947,990 annual trips associated with the arena use and Clippers operations would be relocated from downtown, 56% of the total of 3,503,351 annual trips (Application, Attachment D, page 16).

iii) Given its centralized location and access to regional transit and transportation, there is no more regionally strategically significant area for infill and investment than downtown Los Angeles. The relocation of a major professional team and other events from downtown to an area more poorly served by transit would be inconsistent with regional growth goals and policies.

iv) Specifically, of the policies listed in the Application, the arena and hotel components of the Project would be inconsistent with the following:

- Encourage compact growth in areas accessible to transit (#2).
- Identify regional strategic areas for infill and investment (#3);
- Plan for jobs closer to transit and housing, in sustainable transit-ready infill areas that can be reached by planned transit service and can readily access existing infrastructure (#4);
- Develop strategies focused on high-quality places, compact infill development, and more housing and transportation choices (#5).

b) The Project does not contribute to the development of a Complete Community in this area of the City of Inglewood.

i) The proposed mix of uses in the Project, primarily the proposed arena, contributes nothing to development of a complete community in Inglewood. According to the RTP/SCS, Complete Communities is a conceptual land use pattern that is designed to:

"provide households with a range of mobility options to complete short trips. The 2016 RTP/SCS supports the creation of these mixed-use districts through a concentration of activities with housing, employment, and a mix of retail and services, located in close proximity to each other. Focusing a mix of land uses in strategic growth areas creates complete communities wherein most daily needs can be met within a short distance of home, providing residents with the opportunity to patronize their local area and run daily errands by walking or cycling rather than traveling by automobile (2016 RTP/SCS, p. 79)."

ii) Not only would an arena and hotel be inconsistent with this concept, the Project would remove a potential site for housing and community serving uses that could contribute to development of a Complete Community at this location. The Project does not include any housing or educational uses, recreation or cultural uses, and only a minimal amount of retail, restaurant and medical office uses.

iii) Specifically, of the policies listed in the Application, the arena and hotel components of the Project would be inconsistent with the following:

- Support projects, programs, policies and regulations that encourage the development of complete communities, which include a diversity of housing choices and educational opportunities, jobs for a variety of skills and education, recreation and culture, and a full range of shopping, entertainment and services all within a relatively short distance (#1).

c) The Project does not represent "compact growth" as called for in regional land use plans.

i) "Compact growth" refers to the concentration of uses in walkable urban centers that is designed to conserve land and avoid urban sprawl. The Project does not constitute compact infill development as the arena and parking uses occupy approximately 80% of the site and the hotel is separated from the primary use by a parking lot and intervening development. Only a small portion of the site would be developed with retail and restaurant uses that would potentially serve the community.

ii) Specifically, of the policies listed in the Application, the arena and hotel components of the Project would be inconsistent with the following:

- Encourage compact growth in areas accessible to transit (#2);
- Develop strategies focused on high-quality places, compact infill development, and more housing and transportation choices (#5).

d) The Project does not implement regional growth policies related to "Livable Corridors".

i) The Livable Corridor Strategy specifically advises local jurisdictions to plan and zone for increased density at key nodes along the corridor and replacement of single-story under-performing strip retail with well-designed higher density housing and employment centers. Livable Corridor strategies include the development of mixed-use retail centers at key nodes along the corridors, increasing neighborhood-oriented retail at more intersections and zoning

that allows for the replacement of under-performing auto oriented strip retail between nodes with higher density residential and employment (2016 RTP/SCS, p. 78). The Project would not implement any of these concepts, as it includes only a small amount of retail and restaurant use that would potentially serve the community, with the predominant use being the arena. This imbalance in uses within the Project would not serve to implement the Livable Corridors Strategy.

ii) Specifically, of the policies listed in the Application, the Project would be inconsistent with the following:

- Encourage development in High Quality Transit Areas (HQTAs) and along "Livable Corridors" (#6);
- Develop nodes on a corridor - intensify nodes along corridors with people-scaled, mixed use developments (#7).

e) The Project is inconsistent with the intent of regional policies related to TDM, and pedestrian and bicycle movements.

i) Transportation Demand Management (TDM) strategies contained in the 2016 RTP/SCS focus on reducing the number of drive-alone trips and overall vehicle miles traveled (VMT) through ridesharing, which includes carpooling, vanpooling and supportive policies for ridesourcing services such as Uber and Lyft; redistributing or eliminating vehicle trips from peak demand periods through incentives for telecommuting and alternative work schedules; and reducing the number of drive-alone trips through increased use of transit, rail, bicycling, walking and other alternative modes of transportation (2016 RTP/SCS, p.7). From a regional perspective, these strategies refer to and are intended to promote permanent changes in travel behavior associated with residents and employees, not to provide mitigation for periodic or infrequent trips. The Project's TDM program primarily addresses trips to and from the arena, and is comprised of components mainly designed to compensate for the fact that the Project Site is not well served by transit. Far fewer TDM measures are required in downtown Los Angeles because of the more extensive transportation infrastructure available. Accordingly, the Project does not promote the changes in travel patterns promoted under the RTP/SCS.

ii) Moreover, the Project includes no provisions for pedestrian or bicycle facilities on the Project Site other than a pedestrian bridge between its own parking garage and the arena, a possible pedestrian bridge across Century Boulevard to serve arena patrons, and some bicycle parking spaces, all of which are designed specifically to serve its own needs. The Project provides nothing to enhance pedestrian or bicycle circulation in the community and therefore does not implement regional policies designed to promote alternative modes of transportation.

iii) Specifically, of the policies listed in the Application, the Project would be inconsistent with the following:

- Promote the use of TDM programs (#8);
- Invest in biking and walking infrastructure to improve active transportation options and transit access (#9).

f) Overall, contrary to the analysis presented in the Application, the Project would not be consistent with the applicable policies specified for the project area in a sustainable communities strategy for which the State Air Resources Board has accepted a metropolitan planning organization's determination that the sustainable communities strategy would, if implemented, achieve greenhouse gas emission reduction targets and therefore should not receive preferential treatment under AB987.

SOLID WASTE AND RECYCLING POLICIES

Comments regarding the section of the Application that presents information establishing that the project will comply with the requirements for commercial and organic waste recycling in Chapters 12.8 (commencing with Public Resources Code section 42649) and 12.9 (commencing with Public Resources Code Section 42649.8), as applicable.

A. The Applicant does not include sufficient information to establish that the Project's construction and demolition waste recycling will meet City and State diversion targets.

The Applicant claims, without evidence, that the IBEC Project would achieve 75 percent recycling of demolition materials. In its Construction and Demolition Permit Application (https://www.cityofinglewood.org/DocumentCenter/View/187/Construction-and-Demolition-Permit-Application-PDF?bidId=, the City of Inglewood notes "The State of California requires that 50% of construction and demolition debris from covered projects, and 100% of land-clearing debris (from nonresidential, newly constructed buildings), be diverted from land filling. "Covered projects" are defined to include, among others, "all new construction (residential, commercial and industrial)". There appears to be no mechanism for the City to require or enforce a diversion rate for construction or demolition debris that exceeds 50 percent. Moreover, the Applicant provides no information to indicate how the suggested 75 percent diversion rate nor the 100 percent diversion of land-clearing debris would be achieved. Accordingly, insufficient information has been provided in the Application to demonstrate that the IBEC Project would comply with Division 30, Chapter 12.8 (commencing with Section 42649) of the Public Resources Code (PRC).

B. The Applicant does not include sufficient information to establish that the Project will comply with Division 30, Chapter 12.9 (commencing with Section 42649.8) of the Public Resources Code regarding organic waste recycling.

1) The City of Inglewood does not appear to have established an "organic waste recycling program" as required by PRC Section 42649.82. A review of the City Department of Public Works, Environmental Services Division website (https://www.cityofinglewood.org/279/Recycling-Programs) identifies the following Recycling Programs of the City:

- Bottle & Can Recycling Centers
- Business & Recycling
- Green Waste
- Household Hazardous Waste
- Recycling Household Batteries
- Sharps Recycling Program
- Thrift Shops
- Weekly Hazardous Waste Roundups

2) Under "Business & Recycling", the City provides information and advice to City businesses regarding recycling. In addition, the City provides a flyer dated February 27, 2017 that sets forth recycling requirements for commercial businesses and multi-family complexes operating in the City of Inglewood that meet the requirements of PRC Sections 42649 et seq.: https://www.cityofinglewood.org/DocumentCenter/View/11479/Commercial-And-Multi-Family-Recycling-Requirements?bidId=. Under "Green Waste", the City addresses "yard trimmings, such as leaves, grass, thatch, chipped brush and plant cuttings." None of the recycling topics specifically addresses the area of organics recycling, which includes "food waste" and "food-soiled paper waste that is mixed in with food waste" per PRC Section 42649.8(c). The proposed arena component of the IBEC Project would be expected to generate substantial quantities of such waste.

3) The Applicant claims that the Project will comply with Sections 42649.8 et seq. by "subscribing to a municipal solid waste collection service that is approved by the City". The current solid waste franchise holder in the City of Inglewood is Consolidated Disposal Service (CDS), a Republic Services Company (https://www.cityofinglewood.org/353/Waste-Collection). According to Republic Services' website (http://local.republicservices.com/site/los-angeles-ca/resources#organics), the services provided to assist customers in complying with AB1826 (which enacted PRC 42649.8 et seq.) include "waste audits" and "educational programs and materials". Neither of these services provides any assurances that the Project would be able to meet organic waste diversion requirements as set forth in PRC Section 42649.81(a)(3) ("On and after January 1, 2019, a business that generates four cubic yards or more of commercial solid waste, … , per week, shall arrange for recycling services specifically for organic waste.") Moreover, the cited website (http://local.republicservices.com/site/los-angeles-ca/inglewood) specifically identifies food waste as an "Unacceptable" material for placement in CDS' recycling containers. Although the site also references "organic containers for a fee, posters and additional tools", no evidence of the availability of disposal services is provided. Accordingly, insufficient information has been provided in the Application to demonstrate that the IBEC Project would comply with PRC Division 30, Chapter 12.9 (commencing with Section 42649.8).

MEMORANDUM

TO: MSG Forum, LLC

FROM: Patrick A. Gibson, P.E., T.E., PTOE, and Brian Hartshorn

DATE: January 31, 2019

RE: Technical Review of Transportation Components
for IBEC Arena AB-987 Application
Inglewood, California **Ref:** J1691

Gibson Transportation Consulting, Inc. (GTC) has prepared this technical memorandum summarizing our detailed review of the transportation components for *AB 987 Application for the Inglewood Basketball and Event Center*, prepared by Murphy's Bowl LLC, November 2018 (IBEC Report).

EXECUTIVE SUMMARY

Based on our review of the IBEC Report, there is no evidence that the proposed Transportation Demand Management (TDM) plan will achieve a 7.5% reduction in vehicle trips to the IBEC by the end of the first National Basketball Association (NBA) season, or a 15.151% reduction by 2030.

To achieve the predicted 7.5% and 15.151% reductions in trips, the IBEC Report relies almost entirely on a reduction in trips of attendees and employees to events at the arena. The IBEC Report forecasts a total of 3,503,351 trips to the IBEC without the TDM plan. Of these approximately 3.5 million trips, more than one-half, 1,867,072, are attributed to the arena component.

The TDM plan assumes that these arena trips will be reduced by just over 27% to achieve the 15.151% reduction. The other components of the IBEC's trips are projected not to be reduced at all or to be minimally reduced between 0.5% and 4.5%.

Table 1 summarizes the target reductions assumed by the IBEC Report's TDM plan.

TABLE 1 - SUMMARY OF REDUCTIONS BY LAND USE

LAND USE TYPE	WITHOUT TDM*	WITH TDM*	TARGET REDUCTION
Arena (Employees)	148,624	107,426	27.72%
Arena (Attendees)	1,718,448	1,247,532	27.40%
Clippers Office	80,918	76,872	5.00%
Practice & Training	14,108	13,403	5.00%
Sports Medicine	173,445	169,819	2.09%
Community Space	67,439	66,038	2.08%
Restaurant/Bar	133,389	132,359	0.77%
Restaurant/Lounge	152,444	151,267	0.77%
Coffee	375,638	371,998	0.97%
Quit Restaurant	286,532	284,320	0.77%
Team Store	38,755	38,512	0.63%
Other Retail	94,119	93,530	0.63%
Hotel	219,492	219,492	0.00%
Annual Total Trips	**3,503,351**	**2,972,568**	**15.15%**

*Source: IBEC Report, p. D-17

The IBEC Report's conclusion that arena attendee and employee trips will be reduced by 27% is unsupportable.

Based on our analysis, given the arena's distance from existing and proposed rail transit and the exclusive reliance on shuttle buses to carry attendees and employees from rail transit stations from the station to the arena, it is not reasonable to assume that between 5% and 10% of all arena attendees and employees will arrive by rail transit.

The IBEC Report states that at STAPLES Center today, 11% percent of attendees arrive by rail transit to a station that is a few hundred feet from the arena. This number may be inflated. A survey conducted at a recent sold out NBA game at STAPLES Center found that the 2.6% of the attendance (495 people) arrived by train and 1.8% (351 people) left on the train.

If accurate rail transit ridership assumptions are applied to arena employees and attendees (i.e., recalculating the difference of 10% credit down to 4% credit), the TDM plan can only achieve a trip reduction of 11.95%, as shown in Table 2.

TABLE 2 - SUMMARY OF ADJUSTED RAIL TRANSIT (ARENA ONLY)

LAND USE	Reported Trips		RAIL ADJUSTED TARGET	ADJUSTED TRIP RESULT
	WITHOUT TDM*	WITH TDM*		
Arena (Employees)	148,624	107,426	21.72%	116,343
Arena (Attendees)	1,718,448	1,247,532	21.40%	1,350,700
Clippers Office	80,918	76,872	5.00%	76,872
Practice & Training	14,108	13,403	5.00%	13,403
Sports Medicine	173,445	169,819	2.09%	169,820
Community Space	67,439	66,038	2.08%	66,036
Restaurant/Bar	133,389	132,359	0.77%	132,362
Restaurant/Lounge	152,444	151,267	0.77%	151,270
Coffee	375,638	371,998	0.97%	371,994
Quit Restaurant	286,532	284,320	0.77%	284,326
Team Store	38,755	38,512	0.63%	38,511
Other Retail	94,119	93,530	0.63%	93,526
Hotel	219,492	219,492	0.00%	219,492
Annual Total Trips	**3,503,351**	**2,972,568**	**11.95%**	**3,084,655**

*Source: IBEC Report, p. D-17

This is a best-case scenario since it assumes the IBEC Report's mode split assumptions for all other IBEC uses are held constant, even though they also overstate transit usage. More accurate rail transit assumptions for all uses would degrade the trip reduction percentage even further.

Beyond this foundational error in the TDM plan, the IBEC Report contains additional errors and unsupported assumptions and conclusions. These include the following:

- Traffic generation calculation equations/rates that are missing or incorrect
- An underestimation of certain traffic generating components
- Errors in transcribing project use trip rates that, when corrected, reduce the TDM plan's efficacy and cause it to miss the 15% reduction target
- Does not acknowledge travel time and speeds during congested hours before events will affect shuttle services and reduce rail transit use

- No mechanism nor implementation plan provided in the study that can demonstrate the reality of pre-TDM vs post-TDM goals

- Full credit assumptions taken for all TDM strategies without a plan to enforce or mandate the plan

- Traffic generation results cannot be replicated

When these issues are accounted for, applying the empirical data gathered in the field, and based on our research and expertise detailed in this review, a reassessment of the IBEC Report summaries (Table 7, page D-17) shows that the TDM plan may only achieve a 7.13% reduction in the overall trips.

Lastly, the IBEC Report does not attempt to quantity the IBEC's overall vehicle miles traveled (VMT) as compared to VMT generated at STAPLES Center. The IBEC's location far from transit and outside of the downtown Los Angeles urban core will likely result in an increase in VMT as compared to existing conditions at STAPLES Center.

TRANSPORTATION TECHNICAL REVIEW

Transit Ridership

The IBEC Report states that zero employees and zero attendees would use rail transit to arrive at the arena prior to implementing a TDM plan. Based on the planned arena's proximity to existing and future rail stations, this assumption is reasonable.

However, with the TDM plan, that base number increases to 10% on rail. The 10% rail assumption is premised on the use of shuttles operating at the future rail stations. The 10% rail usage assumption is unsupported and will not be achieved for the following reasons and based on the following facts.

Travel Difficulty & Travel Time Will Discourage Rail Use

A shuttle system must assume the following basic travel mechanics (at minimum):

- Transport to a remote transit portal, park vehicle or transfer
- Use of transit to get near the destination, not including transfers, making all stops
- Boarding of a shuttle to get to the destination using the congested street network
- Return trip requires the reverse of these steps

In all, a shuttle user must engage in three modes of transportation to get to the destination and three more to return to the origin, thereby increasing overall travel time and degrading the experience, when the alternative is to use one mode of transportation and drive a car to the event.

A few indicators of why such convoluted travel is not appealing to commuters can be found when testing operations at a current venue and in recent historical transit trends.

STAPLES Center Data Capture. Rail-transit ridership data was collected at a sold-out STAPLES Center event on January 18, 2019. All pedestrians arriving at and leaving the Los Angeles County Metropolitan Transportation Authority (Metro) fixed rail stop (Blue Line and Expo Line) immediately east of the venue were counted. Data was collected for two hours before and for two hours after the event (with a 30-minute overlap to the start and end of the event to capture late arrivals and early departures). Table 3 summarizes the pedestrian demand (captured at both platform ends to account for all pedestrians exiting the train regardless of the ultimate destination).

TABLE 3 - FIXED RAIL TRANSIT RIDERSHIP

PRE-GAME IN		POST-GAME OUT	
Location	**# of Peds**	**Location**	**# of Peds**
OVERALL TOTAL (2 HOURS)			
Pico Blvd.	178	Pico Blvd.	108
12th Street	317	12th Street	243
2 Hour Peak	495	2 Hour Peak	351
% of Attend	2.6%	% of Attend	1.8%
PEAK SUMMARY (60 MIN)			
Pico Blvd.	104	Pico Blvd.	65
12th Street	177	12th Street	189
60 Min Peak	281	60 Min Peak	254
% of Peds	56.8%	% of Peds	72.4%
PEAK SUMMARY (30 MIN)			
Pico Blvd.	65	Pico Blvd.	51
12th Street	102	12th Street	142
30 Min Peak	167	30 Min Peak	193
% of Peds	33.7%	% of Peds	55.0%
Attendance 1/18/19 =		**19,068**	

With this conservative approach that assumes all riders entering/leaving the platform are destined for the STAPLES Center event, the data shows that 2.6% of the attendance (495 people) arrived by train and 1.8% (351 people) left on the train during the data collection window.

Further analysis of the arrival/departure pattern shows that approximately 33% of the attendees arrived in the peak 30 minutes before the event and 55% left during the peak 30 minutes after the event. Notably, more than 56% arrived in the peak one hour before the event and 72% departed during the peak one hour after the event.

This data suggests that with a venue located in a high-density urban environment with a rail station within one block of a sold-out venue, less than 3% are utilizing the service. In real numbers, fewer than 500 people used rail transit at an event totaling more than 19,000 attendees.

Consider also that the rail service that directly serves over 100,000 downtown employees and drops them within one block of the STAPLES Center only attracts 500 patrons for an event at the venue. The IBEC has no such density of patrons served nor does it have comparable direct

service to the venue and yet the IBEC Report assumes that more than twice as many patrons will use rail service even with a required shuttle bus trip.

Without evidence, the IBEC Report suggests that the shuttle service alone (from three potential fixed rail transit stops in the area) will transport more than 1,200 attendees for a similar-sized event.

Declining Transit Ridership. Metro ridership trends (published at www.metro.net) show a consistent reduction in transit riders over the last five years of reported data. Table 4 summarizes the data available from the Metro website from 2014-2018, each year declining by at least 3% over the previous year.

TABLE 4 - METRO RIDERSHIP TRENDING DATA

	2014	2015	2016	2017	2018
Ridership	36,989,999	34,755,021	32,441,599	31,350,137	30,307,505
Yearly Decline %	0%	-6.0%	-6.7%	-3.4%	-3.3%

The IBEC Report does not provide data that demonstrates how ridership will increase on bus/rail from 1% (Table 3, page D-9) to 12% (Table 5, page D-13) while Metro's own empirical data points to a downward trend in transit ridership.

Shuttle Bus/Rail Transit Travel Time

The TDM plan relies on shuttle buses to move the IBEC rail transit riders from the rail stations between 0.8 miles and 2.0 miles from the Project site. Our analysis indicates that it will not be feasible to move the projected number of rail transit riders from the rail stations to the IBEC as projected.

Given arrival patterns and existing and projected roadway congestion, attendees will arrive to their event after it has started. Negative experiences on transit are highly influential. If transit causes an attendee to be late to an IBEC event, that attendee is unlikely to use transit a second time. This will further degrade the number of attendees arriving by transit.

Page C-2 of the IBEC Report states that dedicated shuttles will be provided for "convenient connectivity with short wait times," but does not provide data to reflect travel times to/from venues.

Real time travel studies were conducted in the field during a Forum concert event that drew approximately 50% of its maximum capacity on Friday, January 11, 2019. Three primary routes were included for travel time testing along Manchester Boulevard, Century Boulevard, and Prairie Avenue, with each origin occurring at the planned rail stop assumed to require shuttle services to/from the IBEC. The travel time across each network path was tracked by direction through the system for 90 minutes before and 90 minutes after the event (including a 30-minute overlap at the start/end of event). The results of the base travel times for the partial attendance event are shown in Table 5.

TABLE 5 - TRAVEL TIME DATA

				RAW RESULTS		DWELL TIME ADDITION				SOLD OUT FORUM		SOLD OUT IBEC	
PRE-EVENT	To Arena	From Arena	Distance (Miles)	Time AVG	MPH	Dwell (secs)	Avg Run+ Dwell (secs)	Adj Speed MPH	# Runs in 2 hrs	50% Adj Speed MPH	# Runs in 2 hrs	50% Adj Speed MPH	# Runs in 2 hrs
Via Manchester	A	B	2.54	11:33	13.2	300	993	9.2	7	4.6	3	2.3	1

Via Prairie	E	F	1.01	2:55	20.8	300	475	7.7	15	3.8	7	1.9	3
	F	E	1.01	3:13	18.8	300	493	7.4	14	3.7	7	1.8	3

The raw travel time does not include any dwell time or turnaround time required by the shuttle services. To account for the behavior of shuttles to load/unload and reenter the roadway network, a five-minute standing time was added to the travel time. Using this data, estimated travel time and miles per hour (mph) were calculated.

The next step was to adjust the data to account for a Forum event that would generate full attendance, or approximately 3,200 more vehicles (using a 2.5 average vehicle ridership [AVR] per the IBEC Report). This magnitude of additional vehicles is expected to decrease travel speeds by half.

With inclusion of an IBEC event and a sold-out Forum event, travel speeds would be expected to again drop by half to simulate the effect of concurrent sold-out events.

As shown above in Table 5, travel speeds on all three corridors are expected to be less than four mph. During the two-hour window (either before or after events) of shuttling operations, a shuttle would be able to make one to two round trips via Manchester Boulevard, two to three round trips via Century Boulevard, and three round trips via Prairie Avenue.

The IBEC Report states that 27 shuttles will deliver 1,215 passengers (excluding claims of employee transport). The IBEC Report also assumes that each shuttle will be filled to capacity for each run (which would likely affect the dwell times while waiting for a full shuttle before departure) and that these shuttles are evenly distributed throughout the two-hour shuttle window.

Using the data for the rail ridership demand, 33% of rail transit patrons arrive at an event within 30 minutes of the start time. This represents 400 persons and nine shuttles. Based on the travel time data, and depending on which station is being served, it will take between 30-60 minutes to make the shuttle trip to deliver those passengers to the venue. These 400 patrons will likely be late to the event and must subsequently alter their travel choices to arrive at the rail station at least 45 minutes before an event or seek alternative modes of travel.

This creates a domino effect for the remaining patrons who normally arrive 45-60 minutes before an event, who now must compete with those who are forced to arrive earlier for a shuttle seat. They too must change their behavior or more shuttles must be queued up at the rail stations to handle a larger percentage during the heavy demand windows.

These results do not factor in any new traffic expected from the new National Football League stadium or the Hollywood Park development expansion, which would continue to degrade the travel speeds in this network during multiple events.

Thus, even if the projected number of attendees arrived via rail transit, the area's existing infrastructure and projected number of shuttle buses is inadequate to accommodate them and to ensure that they arrive at the event in a timely manner.

Mode-Split Based on Event Type

A further faulty assumption is that that sporting events and concerts have the same mode splits and ridership. A sporting event is a repeat event and typically has a high draw of return users who

understand local congestion, transit schedules, and other modes available in order to decide on a particular travel mode.

A concert event is an infrequent use that attracts a high draw of new users. New users, and particularly parents who take their children to such events, are generally less familiar with public transit, routes/transfers, and event operations, preferring to utilize personal vehicles.

As such, the IBEC Report should include a discussion and analysis of mode-split by event type to refine those metrics and provide a more realistic assessment of travel modes.

Shared Mobility

Shared mobility (i.e., taxi, Uber, Lyft) is used as a mode-share split in the IBEC Report, which states on Page D-10 that, based on surveys of existing guests at STAPLES Center, approximately 4% utilize shared mobility, but this rate was increased to 10% claiming that the IBEC will have dedicated space for shared mobility.

Increasing dependence on shared mobility equals an increase in trips, not a reduction.

For instance, a typical guest will drive to an event, park, then leave after the event (two trips). Using shared mobility, the shared ride vehicle will enter and leave prior to the event, then enter/leave after the event (four trips).

A recent study[1] conducted on the effects of Transportation Network Companies (TNC) on traffic concluded that in densely populated cities, such services add 2.8 new vehicle miles on the road for each mile of personal driving removed (an overall 180% increase in driving on city streets).

As such, an added trip value must be applied to the shared mobility influence, not used as a mode-split reducer. The 10% value represents nearly one-third of the overall TDM traffic reduction used in the IBEC Report.

TDM Goal Vulnerability

The IBEC TDM strategies rely on estimated traffic reductions to reach the target goal of 15%. Overestimating assumptions by fractional degrees would result in an overall reduction less than the stated goal.

Using the data gathered in the field and research detailed in this review, a reassessment of the IBEC Report summaries (Table 5, page D-13 and Table 7, page D-17), shows that missed targets with reasonable assumptions for arena events significantly impacts the reduction goals.

In order to demonstrate the effect on the TDM strategies, Table 6 compares the mode-share split assumed in the IBEC Report and then applies realistic splits using the results of research and empirical field data, which includes the fallacy of shared mobility as a traffic reducer, as well as adjustments to rail and bus transit participation.

Annual Total Trips	**3,503,351**	**2,972,568**	**7.13%**	**3,253,669**

*Source: IBEC Report, p. D-17

Page C-1 of the IBEC Report states that TDM is to "encourage" alternative modes rather than mandate. That makes this plan voluntary.

None of the proposed TDM strategies are enforceable nor mandated, yet the full credit for buses/shuttles at capacity are assumed.

TDM Plan Monitoring Is Not Feasible

Page D-11/12 of the IBEC Report states that the 15% TDM reduction will be verified but provides no plan on how the baseline and TDM plan effectiveness will be monitored.

Based purely on a logistical approach, tracking vehicles, pedestrians, and other modes of travel over 365 days with varying points of entry and influenced by adjacent land uses would be an impossible task.

The applicant should provide a detailed monitoring plan that explains and establishes how the TDM plan's efficacy will be monitored.

TDM Plan's Additional Features are Undefined and Unlikely to Achieve Projected Usage

While the TDM plan relies almost entirely on attendees and employees using a rail/shuttle bus system, it contains additional components that are equally undefined and unlikely to achieve the projected usage. These include the charter coach program (park-and-ride), vanpool, and microtransit. Each is discussed below.

Park-and-Ride

Page C-2 of the IBEC Report describes the TDM-6 Park-and-Ride strategy and suggests that 1,980 persons would be delivered for every event in 45-person capacity buses, from locations not identified in the report. This value equates to 44 bus loops required at these unknown park-and-ride locations.

No data is provided to establish that 1,980 persons (10% of attendees) would ride a bus and that each bus would be filled to capacity in order to meet the goals. Based on our knowledge of park-and-ride programs in the Southern California region, it is unlikely that the TDM plan will achieve the target 10% the TDM plan predicts.

As outlined previously, factors that affect the ability and attraction to park-and-ride usage include the user-mechanics of driving to a remote location and catching a shuttle for a second leg of the journey and the ability of that shuttle to navigate to the venue on schedule using heavily congested streets.

The trip generation section of the IBEC Report does not indicate if these shuttles were analyzed as added trips.

Vanpool

The mechanics of using a vanpool system are undefined, including the area of influence and any suggestion that the employees are incentivized to participate. It would be reasonable to mandate employees use the program since operations can control employee behavior, yet without such a mandate, it cannot be assumed that all shuttles are utilized/maximized and, therefore, these targets cannot be assured.

The trip generation section of the IBEC Report does not indicate if these shuttles were analyzed as added trips.

Microtransit

Page C-2 of the IBEC Report states that the TDM-9 strategy will deliver 66 employees and 180 attendees on event days using microtransit. It is unclear if these are the same 66 employees for TDM-5 or TDM-6, both of which include the same number of employees.

In order to evaluate the effectiveness of microtransit, more detail needs to be included in the IBEC Report, including how the service will attract ridership, how the routes are defined, and how the service can meet schedules during peak commute hours with concurrent events at adjacent venues.

The trip generation section of the IBEC Report does not indicate if these shuttles were analyzed as added trips.

VMT

The IBEC Report states that VMT will be reduced by moving locations from a dense urban, transit-rich environment to a remote location lacking employee centers, accessible transit, and transit-oriented developments.

On the surface, the statement that this relocation will reduce VMT is not supported by the statistics.

For instance, the demographics for STAPLES Center ticket purchases provided in the IBEC Report (page D-12) are derived from zip-code tracking, which typically captures the home address of the purchaser (not the location from which the purchaser will travel to the event).

The IBEC Report ignores the fact that, with millions of square feet of adjacent office space and thousands of nearby hotel rooms within walking distance of the STAPLES Center, those patrons who work/visit within that sphere have significantly more options to travel to that venue than they would in Inglewood. Ticket holders who work/stay in nearby locations can walk or take transit to the front door of STAPLES Center without getting into a personal vehicle and driving to an event.

To test this, a Southern California Association of Governments (SCAG) model was prepared for estimating the VMT at the STAPLES Center. The base results are provided in Table 8.

TABLE 8 - VEHICLE MILES TRAVELED

Location	Average VMT*				
	AM	MID	PM	EVE	NIGHT
STAPLES Center	10.66	11.56	12.18	8.16	8.25
IBEC Arena	11.39	12.10	12.72	9.99	9.78
Increase in VMT	**0.73**	**0.53**	**0.54**	**1.83**	**1.52**
*source: SCAG Model for STAPLES Center, manually adjusted for IBEC Arena					

A manual adjustment of the STAPLES Center VMT output discounted those data points within 2.0 miles of the venue to reflect the dynamic loss from relocating outside the dense urban sphere. The results show that VMT will increase in all peak periods. In other words, by moving to Inglewood, the round trip VMT will almost certainly increase over the existing VMT at STAPLES Center.

Trip Generation Rates

The IBEC Report does not provide trip generation rates for all on-site components, particularly those generating the highest volume of traffic. In order to reveal the rates used for these components, the undisclosed rates were reverse-calculated using the IBEC Report's resulting trip generation and the estimated volume of employees/guests.

The trips applied to the Management & Operations component revealed a rate of 1.13 trips per employee (275 employees). Compared to the Institute of Transportation Engineers (ITE) rates for a "corporate headquarters office building" at 2.31 per employee, the IBEC Report assumes 50% fewer trips than a similar use but does not defend that reduced base rate.

This 1.13 per employee rate means that for every two employees, one of them is not driving (or a 2.0 AVR), which is not supported by the IBEC Report's own estimate (Table 3, page D-9) that 95% of employees drive to work. The rate ignores the potential for employees to leave the site for lunch or meetings and that neither visitors nor deliveries are generated by this use.

Similarly, the Team Practice & Training Facility assumes 1.0 trip per employee (for 54 employees), which would also mean that 50% are either carpooling or taking alternative modes of transportation, contradicting the 95% solo-driver attribute within the IBEC Report. On top of this rate, with TDM factored in, the study takes an additional 5% reduction.

Using the IBEC Report's own statistics, the rate for both the Management & Operations and the Team & Training Facility should be set closer to the corporate office rate, even if 5% use "other transport," and that rate would then account for visitors, deliveries, lunchtime and meeting travel.

Application of a more realistic rate for these uses would nearly double those components' base traffic totals in the IBEC Report.

Where the IBEC Report does publish the ITE rates, these were compared to the source and found that the IBEC Report underestimates the trip generation for the Sports Medicine Clinic (Table D-2, page D-6 for Land Use Code 630). The rate used in the study is 30.18/per 1000 square feet (ksf); however, the published ITE rate is 38.16/ksf.

Recalculating this rate on 25,000 sf results in 199.5 trips per day. Based on 260 weekdays in a year, this underestimates base trips by 51,870 trips/year for this use. By making this single change to the trip generation, the overall TDM reduction calculates to 14.96% -- thus, missing the required 15% legislation target.

No documentation is provided to support the values for pass-by and internal capture rates that reduce gross traffic volumes, which makes replicating the data impossible. Full disclosure of all rates and calculations are needed to provide an accurate analysis of assumptions.

Table 9 uses the base assumptions from the IBEC Report, and adjusts the rates based on the discussion above. The resulting base trip generation calculates to 3,605,922.

In comparison to the base traffic generation in the IBEC Report (Table 2, page D-6; and Table 7, page D-16), which reports 3,503,351, the report is underestimating the initial traffic by 102,571 yearly trips.

TABLE 9 - PROJECT TRIP GENERATION ESTIMATES (REVISED)

Land Use	ITE Rate	Unit	Weekday	Weekend	NOTES:
Event Uses					
Arena Employees	N/A	per employee	1.32	1.32	Reverse calculated (not shown)

bruceschaller2@gmail.com
www.schallerconsult.com

This report was prepared by Bruce Schaller, Principal of Schaller Consulting. An expert on issues surrounding the rise of new mobility services in major U.S. cities, Mr. Schaller served as Deputy Commissioner for Traffic and Planning at the New York City Department of Transportation and Policy Director at the NYC Taxi and Limousine Commission, and has consulted on transportation policy across the United States. He is the author of the February 2017 report, "Unsustainable? The Growth of App-Based Ride Services and Traffic, Travel and the Future of New York City," and co-author of a 2015 National Academy of Sciences report on emerging mobility providers. He also served as an Advisor for the City of New York's study of for-hire vehicle issues. He has been called "a prominent transportation expert" (*New York Times),* "a widely acknowledged expert" on issues related to taxis, Uber and Lyft *(Politico)* and a "nationally recognized expert" on for-hire transportation issues (*Washington Post).* Mr. Schaller has published extensively in peer-reviewed academic journals including *Transport Policy*, *Transportation* and the *Journal of Public Transportation*.

This report was researched and written by Mr. Schaller to further public understanding and discussion of the role that app-based ride services and other vehicle-for-hire services can and should play in furthering urban mobility, safety and environmental goals.

Contents

WHO'S WHO – FOR-HIRE GROUND TRANSPORTATION SERVICES

Taxicabs

- Until TNCs arrived, predominant provider of for-hire services in the United States.
- Door-to-door service (not shared between strangers)
- Fare based on initial charge, mileage and time
- Trips arranged via street hail, taxi stands, telephone orders and sometimes on-line or using smartphone app.
- Drivers treated as independent contractors, not employees
- Vehicle may be responsibility of driver or provided by company
- Drivers pay a daily, weekly or monthly lease fee.

Microtransit

- Shared-ride service in which passengers walk to a pick-up location.
- Via and Chariot are the largest companies in the U.S.
- Flat fares, typically around $5.
- Drivers usually paid an hourly wage
- Drivers are treated as independent contractors (Via) or employees (Chariot)
- Vehicle may be responsibility of driver or provided by company

Transportation Network Companies (TNCs)

- Sometimes called ride-hail or rideshare
- Uber and Lyft are largest companies; other companies are in specific markets
- Fare based on time and distance
- Primarily provide door-to-door private ride service (not shared between strangers), e.g., UberX and Lyft.
- Also provide shared trips which pick up additional passenger(s) after the first passenger(s) board, (e.g., UberPOOL and Lyft Line)
- Recently introduced variations on shared rides that involve passengers walking to a pick-up location (e.g., Uber Express POOL and Lyft Shared Rides)
- Trips arranged using smartphone app
- Drivers treated as independent contractors, not employees
- Companies charge a commission on fares
- Drivers responsible for providing their vehicle

OTHER DEFINITIONS

Trips, riders and ridership

- For bus, rail, walk and bike trips, these terms refer to one person traveling between two points except that, for bus and rail each boarding is counted separately. A trip involving a transfer from bus to Metro is thus counted as two riders and two trips.
- For personal auto, TNC and taxi, "riders" and "ridership" means one person making one trip between two points. "Trips" refers to vehicle trips. Two people traveling together in an auto, TNC or taxi count as two riders but as one trip.

Personal vehicle (or personal auto)

- Motor vehicle owned or leased by individuals or households, e.g., "the family car." Does not include taxis or TNCs.

ADA Paratransit

- Transportation for people with disabilities who are unable to use the regular, fixed route rail and bus service.
- Usually a door-to-door service using vans and/or sedans.
- Trips are generally arranged in advance.
- Transit agencies are mandated to provide ADA paratransit service by the federal Americans With Disabilities Act (ADA).
- The service is typically provided by private companies under contract with the local transit agency.

Executive Summary

Municipal and civic officials in cities across the country are grappling with how to respond to the unexpected arrival and rapid growth of new mobility services. These include ride services such as Uber and Lyft (also called Transportation Network Companies, or TNCs), "microtransit" companies such as Via and Chariot and more recently dockless bikeshare and electric scooter offerings.

Are these new mobility options friendly to city goals for mobility, safety, equity and environmental sustainability? What risks do they pose for clogging traffic or poaching riders from transit? What will happen when self-driving vehicles are added to ride-hail fleets?

While these questions are widely discussed, the information available to inform policy making is limited and often fragmentary. This report is designed to fill the gap, focusing on ride services (TNC and microtransit), which currently produce the most far-reaching issues among new mobility offerings.

This report combines recently published research and newly available data from a national travel survey and other sources to create the first detailed profile of TNC ridership, users and usage. The report then discusses how TNC and microtransit services can benefit urban transportation, how policy makers can respond to traffic and transit impacts, and the implications of current experience for planning and implementation of shared autonomous vehicles in major American cities.

Key results, conclusions, methodology and sources are summarized below. (Additional details on methods and sources are provided in section 2 of this report.)

TRIPS, USERS AND USAGE

1) TNCs have more than doubled the overall size of the for-hire ride services sector since 2012, making the for-hire sector a major provider of urban transportation services that is projected to surpass local bus ridership by the end of 2018.

- TNCs transported 2.61 billion passengers in 2017, a 37 percent increase from 1.90 billion in 2016.
- Together with taxicabs, the for-hire sector is projected to grow to 4.74 billion trips (annual rate) by the end of 2018, a 241 percent increase over the last six years, surpassing projected ridership on local bus services in the United States (4.66 billion).

Sources/methodology: TNC trips and ridership based on published data on Lyft ridership and market share for 2017. Taxi ridership based on published data for 2012 and city-specific reports of declines since 2012. Bus ridership based on American Public Transportation Association data.

2) TNC ridership is highly concentrated in large, densely-populated metro areas. Riders are relatively young and mostly affluent and well-educated.

- 70 percent of Uber and Lyft trips are in nine large, densely-populated metropolitan areas (Boston, Chicago, Los Angeles, Miami, New York, Philadelphia, San Francisco, Seattle and Washington DC.)
- People with a bachelor's degree, over $50,000 in household income, and age 25 to 34 use TNCs at least twice or even three times as often as less affluent, less educated and older persons.

Sources/methodology: National Household Travel Survey; published TNC trip totals in Massachusetts municipalities; industry sources.

3) TNCs dominate for-hire operations in large urban areas. But residents of suburban and rural areas, people with disabilities and those without smartphones continue to be reliant on traditional taxi services.

- TNCs account for 90 percent of TNC/taxi trips in eight of the nine large, densely-populated metro areas (New York is the exception) and in other census tracts with urban population densities.
- In suburban and rural areas, however, taxis serve slightly more riders than TNCs. The same is true in New York City (counting car services in the taxi category).
- People with disabilities make twice as many TNC/taxi trips as non-disabled persons, but taxis account for two-thirds of their TNC/taxi trips.
- TNCs account for only 13 percent of TNC/taxi trips taken by those without a smartphone.

Sources/methodology: National Household Travel Survey.

ROLE IN URBAN MOBILITY

1) TNCs added billions of miles of driving in the nation's largest metro areas at the same time that car ownership grew more rapidly than the population.

- TNCs have added 5.7 billion miles of driving annually in the Boston, Chicago, Los Angeles, Miami, New York, Philadelphia, San Francisco, Seattle and Washington DC metro areas.
- Household car ownership increased across all large U.S. cities from 2012 to 2016, in all but a few cities exceeding the rate of population growth.

Sources/methodology: Mileage based on trip volumes (see above) and analysis of mileage increases from TNC growth from later in the report. "Additional mileage" includes both miles with passengers and mileage between trips and nets out reductions due to TNC passengers switching from their personal vehicle. Household car ownership is from American Community Survey.

2) TNCs compete mainly with public transportation, walking and biking, drawing customers from these non-auto modes based on speed of travel, convenience and comfort.

- About 60 percent of TNC users in large, dense cities would have taken public transportation, walked, biked or not made the trip if TNCs had not been available for the trip.
- About 40 percent would have used a personal vehicle or a taxicab had TNCs not been available for the trip.

Sources/methodology: Published data based on surveys of TNC users in the cities of Boston, Chicago, Denver, Los Angeles, New York, San Francisco, Seattle and Washington DC and a statewide survey in California.

3) TNCs are not generally competitive with personal autos on the core mode-choice drivers of speed, convenience or comfort. TNCs are used instead of personal autos mainly when parking is expensive or difficult to find and to avoid drinking and driving.

- The most-often cited reasons to use TNCs instead of personal autos involve expense or hassle with parking and to avoid drinking and driving. Speed, comfort and convenience are cited rarely or never.

Sources/methodology: Published results of surveys of TNC users in the cities of Boston, Chicago, Denver, Los Angeles, New York, San Francisco, Seattle and Washington DC.

SHARED RIDES AND TRAFFIC

1) Shared ride services such as UberPOOL, Uber Express POOL and Lyft Shared Rides, while touted as reducing traffic, in fact add mileage to city streets. They do not offset the traffic-clogging impacts of private ride TNC services like UberX and Lyft.

- Private ride TNC services (UberX, Lyft) put 2.8 new TNC vehicle miles on the road for each mile of personal driving removed, for an overall 180 percent increase in driving on city streets.
- Inclusion of shared services (UberPOOL, Lyft Line) results in marginally lower mileage increases – 2.6 new TNC miles for each mile in personal autos taken off the road. (This is based on the current rate of about 20 percent of TNC trips being shared.)
- Lyft's recently announced goal of 50 percent of rides being shared by 2022 would produce 2.2 TNC miles being added to city streets for each personal auto mile taken off the road.
- Shared rides add to traffic because most users switch from non-auto modes. In addition, there is added mileage between trips as drivers wait for the next dispatch and then drive to a pick-up location. Finally, in even a shared ride, some of the trip involves just one passenger (e.g., between the first and second pick-up).

Sources/methodology: Analysis based on published mileage for passenger trips and mileage between passenger trips and published data on rates of pooled rides.

PUBLIC POLICY

1) TNCs and microtransit can be valuable extensions of – but not replacements for – fixed route public transit.

- Pilot programs around the country demonstrate that TNCs and other private transportation companies can help provide subsidized services to seniors, low-income persons and some people with disabilities.
- TNCs and other private transportation companies also show promise in providing subsidized connections to public transit services, e.g., taking commuters to rail and bus stations and park-and-ride lots.
- TNCs and microtransit companies like Via can also be helpful in providing subsidized transportation for trips that are geographically dispersed. Trip volumes tend to be quite low, however, and unless there are common origins or

destinations like a transit hub, relatively few trips are shared between passengers.

Sources/ methodology: Published reports, news articles and personal interviews.

2) Trip fees, congestion pricing, bus lanes and traffic signal timing can help cities manage current congestion generated by increasing TNC trip volumes combined with other demands on limited street space.

- States and cities are generating valuable revenues for public transportation and other purposes from fees and taxes on TNC trips.
- Other measures to alleviate congestion can be valuable where there is public support and where competing needs for street space can also be accommodated.

Sources/ methodology: Analysis of recent policies implemented by city and state governments based on published reports and news articles and personal interviews.

3) If additional steps are needed to reduce traffic congestion, policy makers should look toward a more far-reaching goal: less traffic. Key steps involve limiting low-occupancy vehicles, increasing passenger occupancy of TNCs and taxis, changing commercial vehicle operations, and ensuring frequent and reliable bus and rail service.

- Working toward a goal of less traffic means making space-efficient modes such as buses and bikes more attractive than personal autos and TNCs on key attributes of speed, reliability, comfort and cost.
- Policies can include limiting parking supply and limiting or banning low-occupancy vehicles from certain streets (possibly based on time of day). These serve to discourage personal vehicle use in congested areas.
- Policies can also increase utilization rates of TNCs and taxis so they spend less time without passengers and carry more passengers per mile of overall operation.
- An essential additional element is providing frequent and reliable bus and rail service. Less traffic will make bus service more attractive and build ridership, creating a virtuous cycle of faster trips, shorter waits, easier transfers and thus broader accessibility.

Sources/ methodology: Analysis of recent policies being discussed or implemented by city governments based on published reports, news articles and personal interviews.

AUTONOMOUS VEHICLES

1) Without public policy intervention, the likelihood is that the autonomous future mirrors today's reality: more automobility, more traffic, less transit, and less equity and environmental sustainability.

- Tech companies, automakers and others are currently racing toward an autonomous future that envisions shared, door-to-door ride services weaning people from personal autos and combining the convenience of TNCs with the space-efficiency of shared trips.
- Today's TNC experience, however, calls into question the viability of the door-to-door shared service model. Most Uber and Lyft rides are still private rides (each traveling party riding by themselves) and the addition of pooled options fails to offset TNC traffic-clogging effects.
- Uber and Lyft are investing heavily in options like Uber Express POOL and Lyft Shared Rides that minimize turns to straighten out the zig-zag routing that limits the popularity of door-to-door pooled rides. Even if successful, these services are unlikely to draw people from their personal autos and will thus serve to add to traffic congestion.

Sources/ methodology: Analysis of TNC service models and traffic impacts.

2) Policy-makers should steer AV development away from this future starting today with steps to manage TNCs and personal autos and emphasize frequent, reliable and comfortable high-capacity transit service.

- Key steps are limiting personal auto use in congested city centers; requiring that TNCs and other fleet-operated vehicles use street space efficiently; and providing high-frequency transit service.

CONCLUSION

New mobility has much to offer cities: convenience, flexibility, on-demand technology and a nimbleness to search for the fit between new services and inadequately served markets. But development of ride services must take place within a public policy framework that harnesses their potential to serve the goals of mobility, safety, equity and environmental sustainability. Without public policy intervention, big American cities are likely to be overwhelmed with more automobility, more traffic and less transit and drained of the density and diversity which are indispensable to their economic and social well-being.

1. Introduction

Uber and Lyft have become household names, ever-present in the news and on millions of smartphones and credit card bills. Yet accompanying their familiarity are many gaps. The business pages report the multi-billion-dollar valuations of Uber and Lyft, but not how many passengers they transport. Patrons experience them as providing a welcome new mobility option, but to whom exactly? Everyone knows they are growing rapidly, but what is their role in urban transport systems? News articles point to connections between TNC growth, traffic congestion and falling public transportation ridership, but what do these trends mean for public policy?

This report seeks to add facts and analysis to the increasingly important public discussion of these "new mobility" services. The report focuses mainly on "Transportation Network Companies," or TNCs, also called ride-hail or sometimes rideshare companies. Uber and Lyft are the main two companies in the United States, available to almost the entire American population, and the focus of this discussion. This report also looks at "microtransit" companies that pick up passengers along a route that may be predetermined or assembled on the fly by sophisticated computer algorithms. Chariot, which started in San Francisco, and Via, which first operated in New York City, are the main two microtransit companies and now operate in about a dozen U.S. cities.

After a review of sources and methodology in section 2, the report provides an overview of TNC ridership – how many trips, who uses, for what types of trips and where in sections 3 and 4. This profile uses a combination of data sources to provide the most detailed and comprehensive profile of TNC usage and users yet available. Its main conclusion – that TNC trips are concentrated in a relatively small number of large metro areas, and that users are predominantly affluent, educated and skew younger – will likely surprise few readers. However, putting numbers on intuition does provide a few twists in the storyline and creates an important factual basis for the more policy-focused discussion that follows.

TNCs have recently begun to push back against the narrative that developed in 2017 that they are contributing to big-city traffic congestion and falling transit ridership. They say they are a complement to public transit, not its competitor, and point to their heavily-promoted shared-trip options. The fifth section of the report assesses these claims.

There has been much interest across the country in "partnerships" between TNCs and microtransit companies on the one hand and cities and transit agencies on the other hand. Perhaps these private companies can truly complement transit services, or replace very inefficient bus routes, or reduce costs for services to seniors and people with disabilities. Pilot projects are beginning to show the potential for creating public benefits that merit public subsidy – and the limits as well. Section 6 looks at the experience with these pilots and what approaches have the most promise for public benefit.

The final two sections of the report examine some of the most-discussed aspects of TNCs and microtransit: what to do about traffic and transit impacts in big cities, and what they mean for a future in which self-driving vehicles are integrated into TNC operations.

The ride services and public policy issues discussed in this report are evolving rapidly and leave many uncertainties. But after six years of TNC growth, the picture is becoming more and more clear. In the process, policy implications and policy options are coming into focus. Thus, it is timely to be asking and putting forth at least preliminary answers to the three questions that are the focus of this report. What's happening? What does it mean? What should cities be doing?

2. Methodology

Findings in this report draw on published reports and news articles and newly available national travel survey and TNC trip data that have become available over the last 18 months. Information from this range of sources is brought together to form a detailed picture of TNC operations and discuss policy issues arising from their rapid growth. Results are presented nationally, with detail for cities and metro areas where available.

This section presents information on key data sources and methodology. Additional data sources used for specific tables and figures are referenced where results are presented.

TRIP AND RIDERSHIP VOLUMES

The report presents total TNC trips for the United States and for groups of metropolitan areas. Estimates of total trips are based on 2017 ridership reported by Lyft (365 million trips) and Lyft's market share based on credit card transactions compiled by the research firm Second Measure.[1]

Geographic breakdowns of trip volumes are estimated using a combination of sources. These include TNC trip counts in New York and several other major cities that TNCs provided to city or state agencies; results from the 2016-17 National Household Travel Survey (NHTS); and data from industry sources showing relative trip volumes for different size metro areas and urban and suburban/rural population densities. In addition, data released by the Massachusetts Department of Public Utilities showing TNC trip volumes for Massachusetts municipalities was used as a check against results from national estimates.

TNC ridership figures assumes 1.5 passengers per trip, based on a customer survey conducted in the Boston area and NHTS data showing average personal auto occupancy for urban trips of 1.5 passengers (including the driver).[2]

Taxicab ridership was based on a Transportation Research Board report for 2012,[3] combined with estimated declines in taxi ridership based on city-specific data where available, and news reports.

USER AND TRIP CHARACTERISTICS

The main data source for TNC user and trip characteristics is the 2016-17 National Household Travel Survey (NHTS). The 2016-17 NHTS was the first national travel survey conducted since 2009, and thus is quite timely for documenting information about TNC users.

The NHTS consists of an interview portion, in which each respondent answers a series of questions, and a travel diary, which captured details of each trip on a designated day. These include mode, start and end times of each trip, trip distance and trip duration. A total of 264,000 people completed the 2016-17 NHTS survey, reporting 924,000 trips (all modes) on the travel day. Data are weighted to reflect U.S. population characteristics.

There were 3,463 "Taxi/Limo (including Uber/Lyft)" trips in the sample. TNC trips within this group were identified based on responses to a question from the interview portion. This question asked how many TNC trips the respondent took in the past 30 days. For respondents who took one or more TNCs trips in the past 30 days, taxi/limo trips recorded in the travel diary were classified as TNC trips. All others were assumed to be taxi trips. (Limos account for only a tiny percentage of all taxi/limo trips.)

This methodology likely categorized some taxi trips as TNC trips, in the case of respondents who used both taxis and TNCs in the past month. However, the effect appears to be small, for two reasons. First, trip volumes estimated using the interview question (TNC trips in the past 30 days) align closely with results from the travel diary. Second, the market shares for TNC and taxi trips nationally, based on the survey results, aligns closely with national market shares from the estimates described earlier.

GEOGRAPHIC CATEGORIES

This report shows trip volumes and user and trip characteristics for the United States, groups of metro areas and a typology based on population density at the census tract level. The latter categorization is described here.

Generally speaking, TNC usage is strongly related to metro area size and density. On a per capita basis, big, densely-populated cities have higher trip volumes than more sprawling cities, which in turn have higher rates of TNC use than suburban or rural areas. These differences are generally due to differences in the number of households without a personal vehicle and the

cost and convenience of parking, both of which reduce rates of auto travel.

The NHTS data files include the population density of each respondent's home address. To highlight the higher usage of TNCs in more urban, higher-density areas, results are reported separately for persons living in more urban census tracts (defined as at least 4,000 persons per square mile) and for those living in suburban or rural census tracts (fewer than 4,000 persons per square mile). This cutoff for urban versus suburban/rural is consistent with research showing that people living in neighborhoods with more than 4,000 persons per square mile tend to see themselves as living in urban neighborhoods; conversely, those living in areas with fewer than 4,000 persons per square mile tend to see their neighborhoods as suburban or rural.[4]

The urban category includes virtually the entire populations of large, dense cities such as New York, Chicago and Philadelphia, as well as the relatively dense portions of their suburbs. "Urban" census tracts also cover most of the population of large but less dense cities such as Baltimore, Detroit, Minneapolis and Milwaukee. In addition, there are numerous urban-density census tracts in smaller cities and towns, primarily in older, walkable residential neighborhoods. Maps of selected metro areas showing census tracts classified as urban is available at www.schallerconsult.com/rideservices/maps.

To show differences in TNC usage rates in section 3, a three-part typology was developed based on population density and size of metro area:

- Large, densely-populated metro areas (a group of 9 metros, listed below).
- Large but less-densely populated metro areas (a group of 11 metros)
- All other metro areas combined with non-metropolitan and rural areas.

The first group is composed of Boston, Chicago, Los Angeles, Miami, New York, Philadelphia, San Francisco, Seattle and Washington DC. These metro areas and their central cities have high population densities and large numbers of no-car households and public transportation commuters. This group is intuitive as encompassing the country's distinctively large, dense, urban centers with a host of leisure and entertainment activities and multi-modal transportation system.

The second group consists of eleven large metro areas that have at least 300,000 people living in urban census tracts but fewer no-car households and public transit commuters and a generally less multi-modal transportation system than the first group. These are Baltimore, Dallas, Detroit, Denver, Houston, Milwaukee, Minneapolis, Phoenix, San Antonio, San Diego and San Jose.

It should be noted that any list of metro areas aimed at capturing size, density and urban character is necessarily arbitrary. A larger list could easily include Portland (Oregon), Las Vegas, Riverside (California), Sacramento, Cleveland and Austin. However, the typology of these 20 metro areas works well in practice to portray patterns of TNC use across different types of urban and suburban land uses.

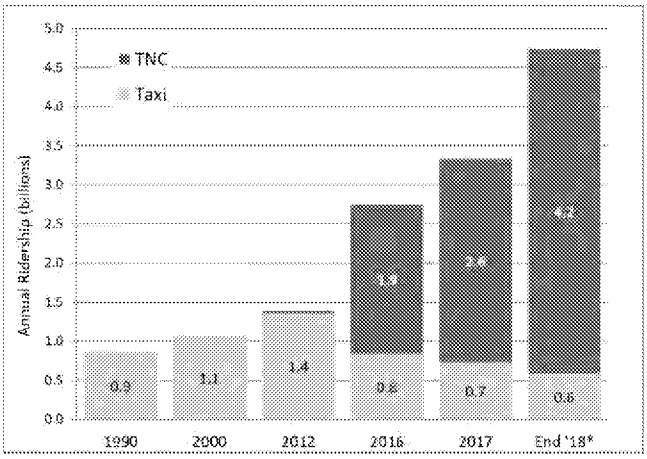
The Appendix contains detailed data on each of the 20 metro areas and their central cities.

3. How Big

Taxicabs for many decades served niche markets ranging from business travelers to low-income households without a personal auto. Cabs were usually readily available at airport taxi stands and downtown hotels and entertainment venues. But otherwise, service availability could be unreliable and wait times unpredictable, with wait times commonly running 10 to 15 minutes or longer. Using a cab was often further complicated by the small-scale and fragmented nature of the industry, with different companies in each local market, each with their own branding and business practices.

TNCs changed all that. Lyft and Uber are now available to nearly all Americans. The same smartphone app can be used throughout the country and internationally. Pick-up times are prominently shown counting down the minutes until the driver arrives. Uber and Lyft are well-known brands and deliver a much more consistent user experience than was possible for taxicabs.

Figure 1. TNC and taxi ridership in the U.S., 1990-2017
(annual ridership, in billions)



Sources: See Methodology section

RIDERSHIP GROWTH

TNCs' popularity has transformed the for-hire sector into a major provider of urban transportation service, rivaling other non-auto modes of travel. Figure 1 shows estimated TNC and taxi ridership over the past quarter century.

TNCs are popularly assumed to have revived a moribund taxi sector. In fact, taxi ridership had been increasing prior to 2012. As shown in Figure 1, taxi ridership grew substantially in the 1990s and 2000s, showing about a 30 percent increase from 2000 to 2012, reflecting growth in population, jobs and tourism in cities across the country.[5]

Not surprisingly, as TNCs started to spread across U.S. cities in 2012, growth in for-hire ridership accelerated, reaching 3.3 billion passengers (2.61 billon TNC and 730 million taxi) in 2017, an increase of 140 percent from 2012.

Uber and Lyft's growth came in part from traditional taxis. About 20 percent of the 2.61 billion TNC ridership in 2017 represents a loss of taxi ridership, which declined by about 50 percent from 2012 to 2017.

TNCs also attracted people from rental cars, buses, subways and personal motor vehicles, with the result that about 80 percent of TNC ridership represents net growth in the for-hire sector.

TNCs continue to grow very rapidly. By the end of 2018, ridership is projected to reach an annual rate of 4.2 billion passengers. At this rate of growth, for-hire ridership (combining TNCs and taxis) will surpass ridership on local buses in the United States by the end of 2018. If current trends continue, the gap will widen over time, given that bus ridership fell from 5.5 billion in 2012 to 4.8 billion in 2017.

GEOGRAPHIC CONCENTRATION OF TNC TRIPS

As shown in Figures 2 and 3, TNC usage is concentrated in the nation's largest and most densely populated urban centers.

- The nine largest and most densely-populated metropolitan areas in the United States accounted for 1.2 billion trips, or 70 percent of TNC trips nationally. This includes 215 million trips in the New York area and a total of 1.0 billion trips in the Boston, Chicago, Los Angeles, Miami, Philadelphia, San Francisco, Seattle and Washington DC metro areas.
- 11 large but less densely-populated metro areas accounted for 171 million trips in 2017. (These 11 metros are Baltimore, Dallas, Denver, Detroit, Houston, Milwaukee, Minneapolis, Phoenix, San Antonio, San Diego, and San Jose.)
- The remainder of the U.S. accounted for 344 million TNC trips.

Figure 2. TNC trips by metro area group, 2017
(annual trips, in millions)

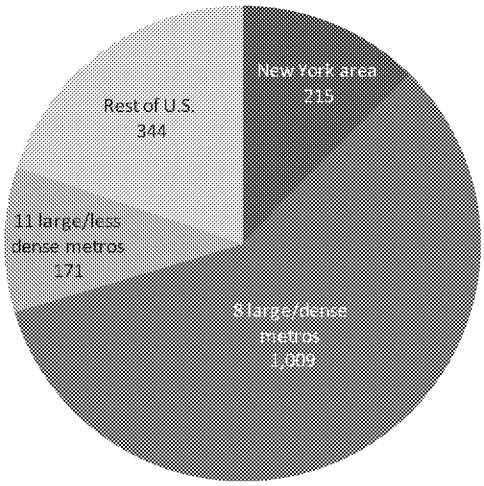


Figure 3. Population by metro area group
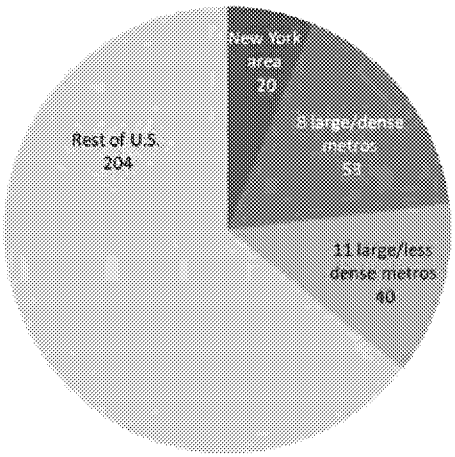
(population in millions)



The 8 large metro areas are Boston, Chicago, Los Angeles, Miami, Philadelphia, San Francisco, Seattle and Washington DC metro areas.
The 11 metro areas are Baltimore, Dallas, Denver, Detroit, Houston, Milwaukee, Minneapolis, Phoenix, San Antonio, San Diego, and San Jose.

Sources: See Methodology section.

The 9 large metro areas accounted for 70 percent of all TNC trips while having 23 percent of total U.S. population, indicating much higher usage rates than in the rest of the U.S. (See Figure 3.)

Furthermore, TNC trips are concentrated within the central cities and other census tracts with relatively urban population densities:

- 38 percent of all TNC trips were in the center city of the 9 large metro areas listed above.
- 26 percent were in urban-density census tracts (population densities over 4,000 persons per square mile) outside the central city in these 9 metro areas. Included in this group are cities that are separate from the central city such as Newark, Oakland and Long Beach, and higher-density suburban areas such as Orange County, California.
- 7 percent were in suburban or rural areas in these 9 large metro areas (census tracts with less than 4,000 persons per square mile).

The nine large metro areas have high densities of population and employment, large transit systems and a substantial number of households that do not have a motor vehicle. They also have very substantial levels of entertainment and social activity and draw large numbers of business and leisure travelers. The combination of density, transit usage, relatively low rates of car ownership, and social and entertainment activity contribute to much more frequent use of TNCs among their residents.

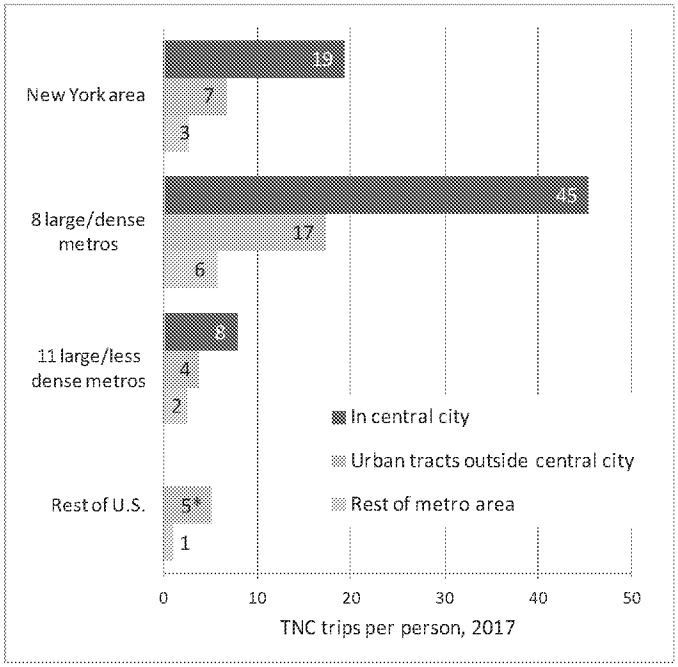
The group of 11 large but less dense metro areas accounted for 10 percent of all TNC trips. Trips were divided about evenly between the central city and the rest of these metro areas.

Outside these 20 large metro areas, TNC trips were split about evenly between urban-density census tracts and areas with suburban and rural population densities.

TRIP RATES

Figure 4 shows trip rates for central cities, urban census tracts outside the central city, and suburban/rural tracts. Annual TNC trips per resident are far higher in the central city and urban portions of large metros than elsewhere in the country. In the central cities of the eight largest, most densely-populated metros (excluding New York), there were 45 TNC trips per person in 2017. Trip rates were lower but still substantial in urban tracts outside the center city (17 trips annually per person) and much lower in suburban and rural tracts (6 per person).

Figure 4. TNC trips per person by metro area size and density, 2017 (TNC trips per person, annually)



* In Rest of U.S., the 5 trips per person is for all urban-density census tracts (over 4,000 persons per square mile) and the 1 trip per person figure is for all suburban/rural tracts.

Sources: See Methodology section.

Perhaps counter-intuitively, TNC trip rates in the New York metro area are lower than for the other 8 large metros. This is primarily because taxicabs account for an approximately equal number of trips as TNCs in the New York area. By contrast, taxi ridership in the other 8 large metros is approximately 15-20 percent of combined TNC/taxi ridership. Using combined New York taxi, TNC and other for-hire services' trip volumes, trip rates for all for-hire services are similar in the New York metro area as in the other 8 large metros.

In the next group of 11 large but less densely-populated metro areas, TNC trip rates are one-third to one-fifth those found in the 8 large metros.

The concentration of TNC trips in the core of just nine major metropolitan areas is quite striking. It underscores concerns discussed in section 7 about potential traffic and transit impacts of TNC growth. At the same time, it should be recognized that a substantial number of TNC trips in these large metro areas are outside the most congested downtown core neighborhoods. News reports have documented the value of Uber and Lyft service in some of these neighborhoods,[6] although studies have also shown mixed results about TNC service in minority areas with relatively less transit service.[7] Equity issues are particularly important where TNCs growth comes at the expense of traditional taxi operations.

Table 1. TNC and taxi trips in selected cities, 2017
(annual trips in millions)

City	2017 trips (millions)		
	TNC	Taxi	Total
San Francisco	75	6	81
Washington DC	45	12	57
Boston	35	6	41
Seattle	20	3	23
New York City*	159	167	326
Manhattan	66	106	172

Table 2. TNC and taxi trips per person in selected cities, 2017

City	Trips per person, annually	
	TNCs	TNC+taxi
San Francisco	86	93
Washington DC	66	84
Boston	54	64
Seattle	33	37
New York City*	19	39
Manhattan	42	108

Data are for central cities (not metro areas).
*New York City includes both Manhattan and the other 4 boroughs.

DATA FOR SELECTED CITIES

TNC and taxi trip volumes are available at the city level for a few large cities. In addition, the State of Massachusetts recently released TNC trip totals for all cities in Massachusetts.

Table 1 summarizes the TNC and taxi trip volumes data for San Francisco, Boston, Washington DC, Seattle and New York City overall, and for Manhattan only. (Like San Francisco, Boston and Washington DC, Manhattan comprises the relatively small core of a large metro area and is more comparable in population to the other three cities than is New York City as a whole.)

Table 3. Trip volumes and trip rates in Massachusetts

Municipality	TNC trips, 2017	TNC trips per person
Boston MA	34,911,476	54.1
Cambridge MA	6,782,366	62.8
Somerville MA	2,727,951	35.7
Brookline MA	2,074,425	28.3
Newton MA	1,051,030	13.3
Medford MA	966,710	16.3
Quincy MA	957,311	10.3
Malden MA	906,043	14.9
Worcester MA	848,943	4.6
Everett MA	775,773	17.7
Revere MA	722,136	13.6

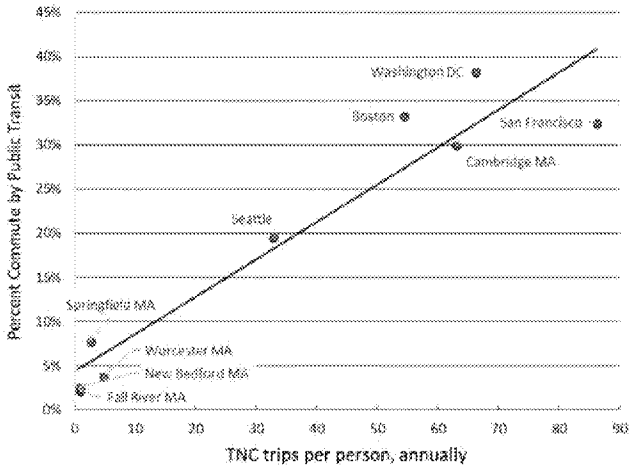
Marblehead MA	43,184	2.1

Sources: Massachusetts Department of Public Utilities, "Rideshare in Massachusetts," available at https://tnc.sites.digital.mass.gov, and U.S. Census Bureau, American Community Survey for city population.

The number of TNC trips varied from 20 million in Seattle to 75 million in San Francisco and 159 million in New York City in 2017. (See Table 2.) On a per capita basis, San Francisco, Boston, Washington DC and Manhattan have between 42 and 86 TNC trips per person per year. (See Table 3.) Manhattan is at the bottom end of this range, but that is largely because of much higher taxi usage in Manhattan. Combining TNC and taxi trips, Manhattan moves to the top of the list. (See Table 2.)

Among cities in Massachusetts, Cambridge, Somerville and Brookline (in addition to Boston) had at least 28 TNC trips per person in 2017. (See Table 3.) Seattle is also in this range, with 33 TNC trips per person.

Figure 5. TNC trips per person and percent commuting by public transit, selected cities



Sources: TNC trips per person from Tables 2 and 3. Public transit commuters from American Community Survey, average 2011-15. Data are for central cities (not metro areas).

TNC usage closely parallels public transportation ridership. Figure 5 shows TNC trips per person in selected cities where data is available together with the percentage of residents in these cities who commute by public transportation (based on Census data).

As can be seen, cities with higher transit commute shares also have relatively high rates of TNC use. This is further indication of an overlapping TNC and transit customer base. This relationship is not surprisingly since TNCs and transit draw from the same well of people who do not exclusively use their own vehicle to get around. (Note that the graph shows correlation between TNC and transit use. Whether this correlation translates into TNCs being competitive with or complementary to transit is addressed in section 5.)

.

4. Who Uses

From their early days in San Francisco, Lyft and Uber have rapidly gained ridership by offering quick, convenient ride service in major U.S. cities. Closely associated with the popularity of urban lifestyles, their ridership skews urban, young, educated and affluent. Newly released data from the National Household Travel Survey (NHTS) paint a detailed picture of the demographic and trip characteristics of TNC users.

The data presented here are for adults age 18 and over, for TNC and taxi trips in their home area. The relatively small number (about 10 percent) of TNC trips undertaken while out of town all day are not included in these data.

Trip rates shown here are somewhat lower than in the previous section. This reflects in part differences in timing; most of the NHTS data was collected in 2016 whereas trip volumes in the previous section are for 2017. It also reflects underreporting of trips that is common for travel surveys that do not use GPS to track respondents on their travel day.

AGE, EDUCATION, INCOME AND OTHER CHARACTERISTICS

Figures 6 to 8 show rates of TNC use by age, education and income. This section shows results for the following three geographic areas:

- "Urban - 9 metros" is for urban census tracts (over 4,000 persons per square mile) in the nine large, densely-populated and multi-modal U.S. metro areas identified earlier. (Urban census tracts are both in and outside the central city of each metro area.)
- "Other urban" are census tracts with over 4,000 persons per square mile outside the nine large metros. This group combines the 11 large, less-dense metro areas discussed in section 3 with all other urban-density census tracts as the two groups show similar characteristics in the NTHS data.
- "Suburban and rural" are all census tracts with fewer than 4,000 persons per square mile. These include suburban and rural areas within metro areas and in non-metropolitan areas.

These three categories illustrate differences across key variables of city size and density, and urban versus suburban/rural.

Figures 6 to 8 show that TNC usage is generally higher among younger, more educated and higher income residents. In the "urban - 9 metros" census tracts, TNC usage is highest among:

- 25 to 34 year-olds, followed by those age 18-24 and 35-54;
- Residents with a college degree
- Residents living in households with incomes of $50,000 or more.

Older persons, those with less than a college degree and households with incomes under $50,000 show the lowest rates of TNC use in the nine large metros.

Overall trip rates are lower in other urban census tracts and suburban/rural areas as compared with urban residents in the 9 large/dense metros. However, the same patterns hold for age, education and income groups. TNC trip rates are highest among younger, more educated and more affluent residents.

In addition, residents of very low-income households (income under $15,000) use TNCs somewhat more frequently than middle-income residents in these areas. This reflects lower rates of car ownership in this group.

Figure 9 to 11 show TNC usage rates by gender, car ownership and access to smartphones:

- Across geographic groups, men are somewhat heavier users of TNCs than women, but the differences are modest.
- Not owning a car is highly related to TNC use in all geographic areas. Those without a car in their household use TNCs 2.5 times more often than car owners in the "urban - 9 metros" group; 3.6 times more often in the "other urban" census tracts; and 6.6 times more often in suburban and rural areas.
- Another major factor, not surprisingly, is access to a smartphone, which is generally necessary to use TNC services. Figure 11 shows that very few TNC trips are reported by households without a smartphone. (The small number shown may be situations in which a person rode with someone who has a smartphone.) People without a smartphone do, however, use taxicabs at a somewhat higher

Figure 6. TNC trip rates by age

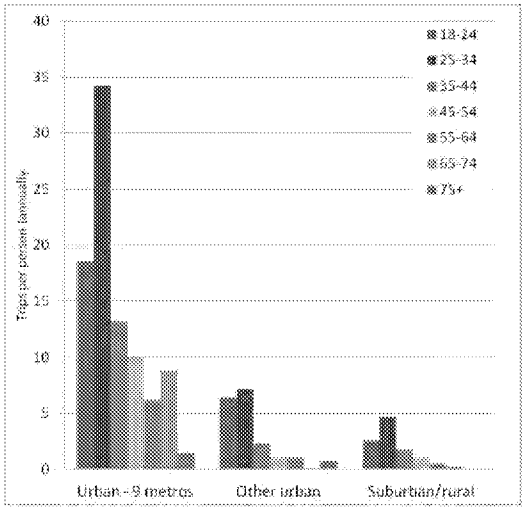


Figure 7. TNC trip rates by educational level

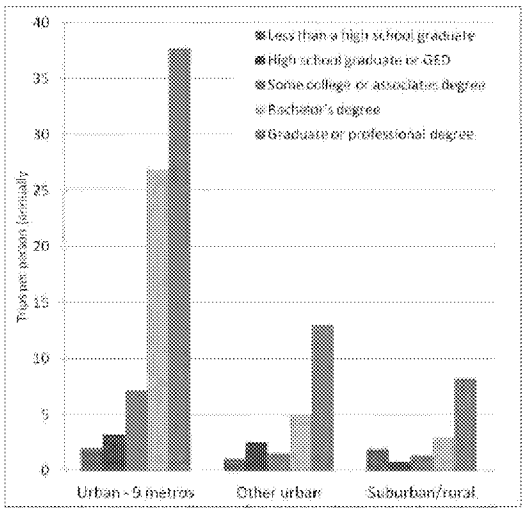

Figure 8. TNC trip rates by household income

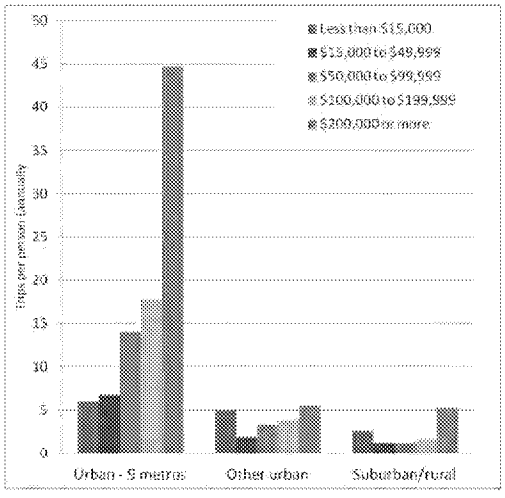

Figure 9. TNC trip rates by gender

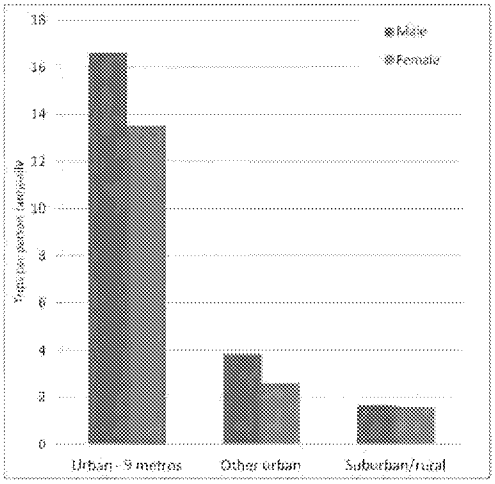

Figure 10. TNC trip rates by whether vehicle is available to the household

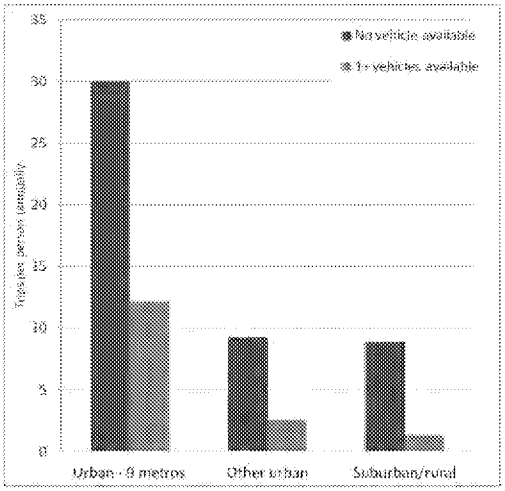

Figure 11. TNC and taxi trip rates by whether traveler has a smartphone available to household

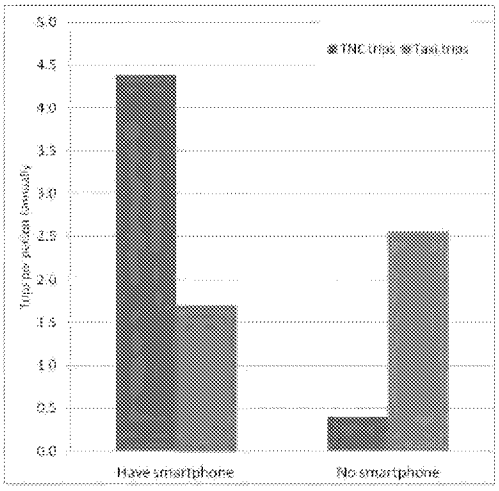

Figures 6 to 12 show annual TNC trips per person, adults age 18 and over, for local travel (not out of town all day)

rate than smartphone owners. The lack of a smartphone likely accounts for higher reliance on taxicabs among non-smartphone owners.

TNC AND TAXI RIDERSHIP

Although TNCs have largely displaced taxis as the main provider of for-hire service in the United States, some areas see more of an even split in ridership between TNCs and cabs.

Figure 12 shows that:

- TNCs account for 90 percent of for-hire (TNC and taxi) trips in the eight large metros outside the New York area;
- In other urban census tracts TNCs account for 80 percent of for-hire trips.
- In suburban and rural areas, trip volumes are about the same for taxicabs as for TNCs.
- There is also a nearly even split in urban census tracts in the New York area (most of which are in New York City).

PEOPLE WITH DISABILITIES

People with disabilities are more reliant on for-hire services, in particular taxicabs, than non-disabled persons. While non-disabled people make 4.1 for-hire trips annually, people with disabilities make twice as many trips (8.2 per year). (National data only; sample size too small for geographic detail.)

People with disabilities are also more reliant on taxicabs than the general population. People with disabilities take 5.9 taxi trips annually, twice their use of TNCs (2.3 trips per year).

TRIP CHARACTERISTICS

TNC trips include a mix of trip purposes that typify travel by other modes. Work trips are about 20 percent of all trips, typical of personal auto use. The other major trip purposes are social and recreational trips and going home. Social and recreational trips are somewhat more frequent in urban areas while work trips are somewhat more frequent in suburban/rural areas. See Table 4.

TNC trips typically travel 6.1 miles with a duration of 23 minutes, implying an average speed of 16 mph. Trips in large, densely-populated metro areas tend to be somewhat shorter (4.9 miles) and slower (13 mph). Trips in suburban and rural areas tend to be somewhat longer in distance (8.7 miles) and faster in speed (20 mph). Table 5 show average TNC trip distance, duration and speed.

Figure 12. TNC and taxi trip rates

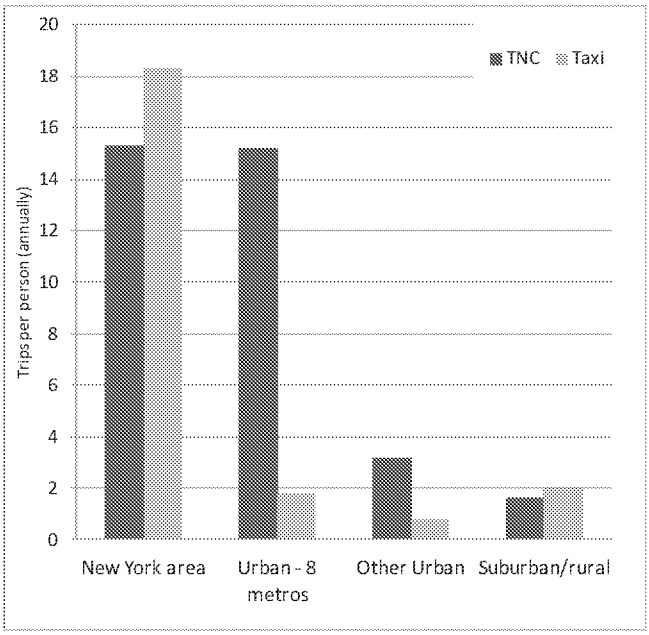

Table 4. Trip purpose for TNC trips

	Urban census tracts			
	Boston, Chicago, DC, LA, Miami, NY, Phil., SF, Seattle metros	Other urban tracts	Suburban and rural	Total
Home	41%	41%	37%	40%
Work	15%	20%	23%	18%
Social/recreational	20%	20%	12%	18%
Meals	7%	5%	6%	6%
Shopping/errands	4%	5%	4%	4%
School/daycare/ religious activity	3%	1%	2%	2%
Medical	2%	3%	4%	2%
Transport someone	1%	0%	3%	1%
Something else	8%	6%	9%	8%
Total	100%	100%	100%	100%

Table 5. Trip characteristics for TNC trips

	Distance (miles)	Duration (min.)	Speed (mph)
Urban - 9 metros	4.9	23	13
Other urban	6.1	20	18
Suburban/rural	8.7	26	20
Total	6.1	23	16

These results are consistent with trip data from several other cities and states. Statewide data for Massachusetts shows trips averaging 4.5 miles and lasting 15.4 minutes, for an average speed of 18 miles per hour. In New York City, the average TNC trip is about 5.5 miles in distance and 24 minutes in duration, reflecting relatively lower traffic speeds.

FOR-HIRE RIDERSHIP AMONG ALL MODES

Although at the national level the vast majority of trips are by personal motor vehicle, TNCs and taxis have an important role, particularly for non-car owning households.

Table 6 shows modal shares broken out for households with no car available, and with one or more cars available. In urban census tracts in the nine large, densely-populated metros, 5 percent of all trips are taken by for-hire modes (TNC and taxi). Notably, the percentage is the same in New York as the other 8 metro areas in this group. A similar mode share is also seen in other urban census tracts across the country.

These figures show that persons living in no-car households rely on a mix of travel modes. Although they do not own a car, about one-quarter of their travel involves an automobile, whether getting a ride from a friend, TNCs or taxis. Among no-car households, TNCs and taxis account for about one-half of auto travel in the urban New York area; one-third in urban census tracts in the other eight large, densely-populated metros, and one in eight auto trips elsewhere in the country.

As would be expected, the picture is quite different among people living in households with one or more motor vehicles available to them. In the urban New York area census tracts, the for-hire share is just 3 percent, dropping to 2 percent in other large metro areas (urban census tracts) and less than one percent in the rest of the United States. Walk and transit use also drop among these households, particularly in suburban and rural areas, where autos account for 88 percent of all trips.

Table 6. Modal shares by whether household has motor vehicle available

	Urban census tracts				
Mode	NY metro area	Boston, Chicago, DC, LA, Miami, Phil., SF, Seattle metros	Other urban tracts	Suburban and rural	Total
HOUSEHOLDS WITH NO VEHICLE AVAILABLE					
Auto	4.6%	12.0%	26.9%	35.5%	21.6%
Bus	7.7%	16.3%	18.2%	10.1%	11.8%
Rail	22.7%	9.4%	2.5%	0.3%	8.3%
Taxi/TNC	5.1%	5.2%	3.7%	5.4%	5.0%
Walk	54.4%	50.8%	38.0%	33.1%	42.8%
Other	5.5%	6.4%	10.6%	15.7%	10.5%
Total	100.0%	100.0%	100.0%	100.0%	100.0%
HOUSEHOLDS WITH 1+ VEHICLES AVAILABLE					
Auto	62.1%	74.4%	83.6%	88.1%	85.3%
Bus	2.0%	1.5%	0.9%	0.3%	0.6%
Rail	7.4%	2.8%	0.4%	0.2%	0.8%
Taxi/TNC	3.3%	1.7%	0.6%	0.3%	0.6%
Walk	22.2%	15.8%	10.6%	6.9%	8.8%
Other	3.0%	3.9%	3.9%	4.2%	4.1%
Total	100.0%	100.0%	100.0%	100.0%	100.0%

Sources: National Household Transportation Survey, 2016-17. Ridership for bus, rail and taxi/TNC are adjusted to match administratively-derived ridership for each mode. Auto, rental car, walk and other are adjusted by factor of 1.16 from NHTS based on average adjustment for bus, rail and taxi/TNC.

Notes: "Urban" defined as census tracts with 4,000 persons/sq. mile or more.

Rail includes subway, light rail, streetcar, commuter rail and Amtrak.

Transit trips are unlinked trips (e.g., bus-to-Metro counts as two trips).

5. Better for Cities?

The previous two sections of this report profiled trip volumes and user and trip characteristics. This section and the next two sections address three questions about the role of TNCs in American cities. First, are TNCs good for cities in the ways that TNCs currently assert? Second, what benefits do they bring to cities that public policy should consider supporting financially or otherwise? Third, what public policies should be considered to address traffic and transit trends related to TNC growth?

The last section of this report then discusses implications for a future world of self-driving vehicles.

TNCS' GOOD-NEWS STORY

TNCs tell a good-news story about how TNCs benefit urban America. They declare that their competition is the personal auto, not public transit. They say their services will strengthen urban transportation systems and their mission is to make car ownership obsolete. They hope to help usher in a new era of multi-modality where most trips are taken in shared and environmentally sustainable modes including shared TNC trips, buses and subways.

However, prominent reports and news articles published over the last 18 months have led to concerns about the relationship between TNC growth, worsening traffic congestion (see box at right) and nearly across-the-board drops in transit ridership in major American cities.

TNCs have pushed back against the narrative that they promote automobility and unsustainably increase traffic congestion while also weakening public transportation. Each of the good-news claims thus deserve careful consideration.

COMPETING WITH THE PERSONAL AUTO?

TNC impacts on auto usage can be assessed through recent research that has focused on large, densely-populated metro areas where traffic and transit issues are most often raised.

First, as has been widely publicized, surveys of TNC users have consistently found greater impacts on public transit than personal vehicle use. The research summary on the next page shows results from studies conducted by academic and governmental researchers. Although the results vary somewhat by locality, the overall picture is clearly that most TNC users

RESEARCH SUMMARY

TRAFFIC IMPACTS

TNCs added 976 million miles of driving to New York City streets from 2013 to 2017. [Schaller Consulting 2018]

"Ride-hailing is likely adding vehicle miles traveled in [seven] major cities." [Clewlow 2018]

TNC usage increased vehicle miles traveled by 85% in the Denver area. [Henao 2017]

TNCs account for 20-26% of trips in the [S.F.] downtown and South of Market areas at peak, "likely exacerbating existing peak period congestion." [SFCTA 2017]

"Ride-hailing is adding new auto trips ... [and] exacerbating congestion on the [Boston] region's roadways." [MAPC 2017]

Sources: see page 17.

would have taken public transportation (15-50 percent), walked or biked (12-24 percent), or not made the trip (2-22 percent) had TNCs not been an option. Consistently across surveys, about 40 percent would have used a personal vehicle or taxi, with surveys generally showing about an even split between the two.

Thus, the overall results show about 60 percent would go by transit, walking, biking (or not make the trip) while about 20 percent would have used their own car and 20 percent a taxi.

These results clearly show that instead of "replacing the personal auto," TNCs in large cities are primarily supplanting more space-efficient modes such as bus, subway, biking and walking.

Survey results also detailed on the next page show the limited appeal of TNCs as compared with personal auto travel. The main reasons to choose TNCs over personal auto are to avoid the cost or hassle of parking and to avoid drinking and driving. These motivations are consistent with trip data showing that

RESEARCH SUMMARY

MODE TO USE IF NOT TNC

Results from asking what mode survey respondents would have used had ride-hailing service not been available.

UC Davis study of 7 large metros (4,094 residents of Boston, Chicago, Los Angeles, New York, San Francisco, Seattle and Washington DC areas)

- 39% drive alone, carpool, taxi
- 15% rail
- 17% walk
- 7% bike
- 22% not made the trip

[Clewlow 2017]

Boston area (survey of 919 Boston area residents)

- 18% personal vehicle
- 23% taxi
- 42% public transportation
- 12% walk or bike
- 5% would not have made the trip

[MAPC 2018]

New York City (616 NYC residents; multiple responses)

- 12% personal vehicle
- 43% taxi or car service
- 50% public transportation
- 13% walk
- 3% bike
- 2% would not make trip

[NYCDOT 2018]

Denver area (300 Denver-area Uber and Lyft users)

- 26% personal vehicle
- 10% taxi
- 5% other TNC
- 11% ride with someone else
- 22% public transportation
- 12% walk or bike
- 12% would not have made the trip

[Henao 2017]

California: (208 California residents age 18-50 who use Uber or Lyft at least once a month; multiple responses):

- 35% personal vehicle
- 22% ride with someone else
- 51% taxi
- 33% public transportation
- 19% walk or bike
- 4% van or shuttle
- 9% not made trip

[Circella 2018]

RESEARCH SUMMARY

REASONS TO USE

Results from asking why TNC patrons use ride-hailing services instead of other modes (personal vehicle or transit).

UC Davis study of 7 large metros (4,094 residents of Boston, Chicago, Los Angeles, New York, San Francisco, Seattle and Washington DC areas)

Use TNC instead of **personal auto**:

- Avoid DUI
- Parking is difficult to find
- Parking is expensive
- Often going to airport

Use TNC instead of **transit**:

- Transit too slow
- Not available/too few stops or stations
- Transit unreliable

[Clewlow 2016]

Boston area (919 Boston area residents; multiple responses)
Use TNC instead of other options:

- 61% quicker than transit
- 35% no car available
- 23% parking difficult/expensive
- 19% weather
- 18% no available transit
- 12% cannot drive
- 9% multitasking options

[MAPC 2018]

Denver area (survey of 300 Uber and Lyft users)
Use TNC instead of other options:

- 37% going out/drinking
- 20% parking is difficult/expensive
- 17% do not have car available
- 9% cost
- 4% do something while I am riding
- 2% time (e.g. in a rush)
- 2% weather

[Henao 2017]

Sources: see next page.

TNC trips are concentrated in dense urban centers where parking is most likely to be scarce and expensive, and show heavy trip volumes in the late evening when the bars let out.

Notably, only a few percentage of auto users choose TNCs due to convenience or speed of travel. TNCs are thus not attracting drivers on the core mode choice attributes of speed, reliability or comfort. By contrast, the main reasons that people switch from transit to TNCs involve these core attributes: transit too slow, unavailable or unreliable.

In sum, TNCs mainly draw from sustainable and space-efficient modes. They show little appeal for the vast majority of auto trips which do not involve significant parking cost or the desire to avoid driving while under the influence.

SUPPORTING MULTI-MODAL TRAVEL?

There are clearly instances in which the availability of TNC service results in additional public transportation, walking or biking trips. One might take the train or bus to work in the morning, for example, then use a TNC for the late-evening trip home. TNCs can help people use a combination of public transportation and TNCs rather than renting a car when traveling out of town. They also provide valuable access to transit service, as when people take a TNC to a major rail station. People can also combine TNCs, transit, walking and bike share for different portions of a day's itinerary, as they are not tethered to where their car is parked.

These examples show that TNCs support a multi-modal network for some trips, enabling travelers to leave their car at home for the day.

But one needs to look beyond individual examples to assess whether on TNCs' overall effect is to support the goal of a multi-modal system by helping shift people from personal auto to more space-efficient and environmentally sustainable modes, or the opposite. The answer from survey data is quite clear. Overall, TNCs contribute much more to automobility than to transit or other non-auto modes:

- As cited above, most TNC trips involve shifting from sustainable modes (transit, walking, biking) than from the personal auto. The net result is more driving mileage and less use of public transit.

- Remarkably few TNC trips are for the purpose of connecting to public transit. TNCs try to suggest the opposite by pointing to a substantial number of trips that start or end near a transit station. Yet those trips do not necessarily involve transferring to transit at that station; passengers could simply be going to local destinations near the transit stop. Research in the Boston area found that 9 percent of home-based TNC trips were used to reach a transit connection and 4 percent of trips returning home were from a transit connection.[8] A New York City survey found that 0.4 percent of transit trips used a for-hire vehicle to connect to transit and 0.9 percent used a for-hire service to connect from transit.[9] A national survey found that only 7 percent of TNC users combine TNC trips with public transit on at least a weekly basis, while 35 percent do so at least occasionally.[10]

Overall, then, while TNCs can be a useful part of a multimodal system, just as taxis have been for many years, their growth has clearly subtracted rather than added to the use of transit, walking and biking which are the cornerstones of a healthy multi-modal system.

REDUCING TRAFFIC WITH SHARED RIDES?

A now-defunct company named Sidecar was the first to offer door-to-door service using nonprofessional drivers. Sidecar called its service "rideshare" because its goal was to enable smartphone users to "hitch a ride" with people already driving for their own purposes between two locations.[11]

When this new form of carpooling did not catch on, Sidecar – quickly followed by Lyft and Uber – switched to a service model in which drivers go where the customer wants to go, not vice versa.

This taxi-like service continues to be the bedrock of Lyft and Uber's business. Their remarkable growth has been built on offering what customers view as a better version of conventional taxicabs. But while most TNC trips continue to be private rides, Uber and Lyft are now heavily investing in improving and promoting their shared services.

Their efforts have lifted UberPOOL to 20 percent of Uber trips in the major cities where it is offered, according to the company. Lyft says that 37 percent of users in cities with a Lyft Line option request a Lyft Line trip. But the number of matched trips which results in the ride being shared is substantially lower (22 percent in New York City compared with 23 percent for Uber in February 2018, the latest month available).[12]

Uber, Lyft and others believe that increasing the number of shared rides will serve to reduce overall miles of driving. This assertion has rarely been questioned, perhaps understandably given the intuitive appeal of the idea that putting several people in a car together will economize on the overall vehicle miles.

This assertion should be examined closely. If shared rides reduce overall driving, then shared rides could be effective in reducing congestion and deserving of supporting public policy actions. Conversely, if shared rides are like private rides (e.g., UberX and Lyft), and add to congestion, then pushing more people into shared vehicles will be ineffective in offsetting the substantial increases in driving that occur with UberX and Lyft private rides.

Fortunately, there is now enough publicly available data to determine effects on overall mileage.

The starting point is to compare mileage impacts from private ride TNC service with using one's own vehicle, and then add shared rides to the equation. Table 7 shows trip characteristics for cities where data is available. The average TNC trip among these cities is 5.2 miles (similar to results from NHTS) with 3.0 miles between trips. The latter figure includes 2.1 miles while drivers wait for their next trip and 0.9 miles to drive to the pick-up location. These averages are used to reflect typical TNC operations in major U.S. cities.

The baseline case is a personal auto trip in which both the traveler and vehicle travel 5.2 miles. (See Column A in Table 8 on the next page.)

Private ride TNC trips also involve 3 additional miles between passenger trips for a total of 8.2 miles from a private ride TNC trip. Assuming that the passenger is replacing a personal auto trip with the TNC trip, the switch increases total

WHAT'S BEING SAID

RIDE SHARING

"We think carpooling is very much the way of the future. Not only for our service, but we think the transformation of car ownership towards carpooling is going to be tremendously beneficial for cities, for the environment, for congestion, pollution, etc."
– Ethan Stock, Uber director of product for shared rides

"You share a car with someone else, and it kind of feels a little weird. ... and then the question of, 'when exactly am I going to get there?' are real friction points that we have had to fight, and that's why we are investing very heavily in this mode of transport."
– Uber CEO Dara Khosrowshahi

"We're making a really strong commitment about shared rides. We're making a commitment that by 2020, 50 percent of all Lyft rides will be shared.... We believe Lyft and shared rides are extremely complementary to public transit."
– Joseph Okpaku, Lyft V.P. of government relations

* * *

This report: "***Even with highly optimistic assumptions about shared ride adoption, TNC growth adds substantially to traffic in major U.S. cities.***"

Table 7. Passenger miles and total miles for TNC trips

	Miles between trips					
	Waiting	Drive to pick-up	Total	Passen-ger trip	Total miles per trip	Pct miles with pax
New York City	2.8	0.7	3.5	5.1	8.6	59%
Chicago	2.5	0.7	3.2	4.7	7.9	59%
San Francisco	1.4	0.6	2.0	4.1	6.1	67%
Denver area	1.5	1.4	2.9	7.0	9.9	71%
Average	**2.1**	**0.9**	**3.0**	**5.2**	**8.2**	**63%**

Mileage with passenger of 63% is consistent with statewide California average of 61%; see Simi Rose George and Marzia Zafar, "Electrifying the Ride-Sourcing Sector in California," California Public Utilities Commission, April 2018.

miles by 58 percent. (See Column B.) Even if one allows for somewhat higher mileage for personal trips from searching for parking, TNC trips clearly result in higher overall miles driven.

The next column takes account of the fact that most TNC trips do not replace personal auto trips. As shown in Table 8, TNC trips mostly replace transit, walking and biking trips; this switch creates entirely new miles on city streets. About 20 percent of TNC users in major U.S. cities would have used a personal vehicle if the TNC were not available, and 20 percent would have taken a taxicab. (This distinction is important because taxis have cruising miles between trips, which is accounted for in this analysis.)

Table 8. Change in overall mileage from TNC private ride and shared ride trips

Column:	A	B	C	D	E	F	G
	Personal vehicle	Private ride (all switch from personal auto)	Private ride (switch from auto and other modes)	20% shared ride (switch from auto and other modes)	50% shared (Lyft goal)	Highly optimistic scenario	Suburban scenario (90% from auto)

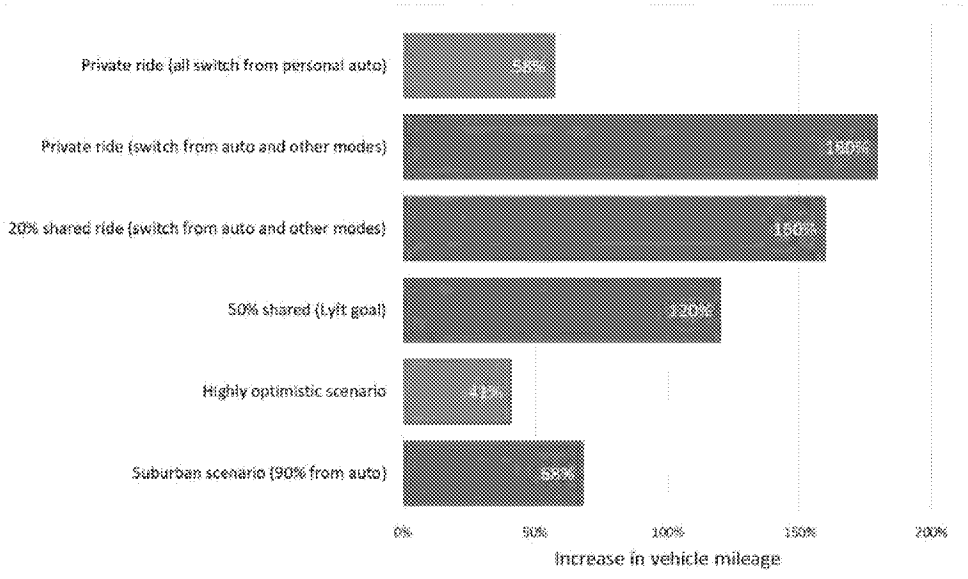
Figure 13. Summary of change in overall mileage from TNC private ride and shared ride trips



SCHALLER CONSULTING

Column C shows the effect of taking account of this distribution of previous modes: a 180 percent increase in overall mileage. Put another way, before taking account of shared trips, TNC usage replaces each mile of personal motor vehicle use taken off the road with 2.8 TNC miles.

Taking account of shared trips modestly mitigates this large increase. Using typical 2017 levels of sharing (20 percent), produces a 160 percent increase in overall mileage. (Column D.) With sharing, each mile taken off the road is replaced with 2.6 TNC miles.

Applying these results to the trip volumes for large, densely-populated metro areas and specific cities where trip counts are available yields the following estimates for additional mileage due to 2017 TNC operations. These estimates assume that 40 percent of TNC trips "replace" auto trips (split evenly between personal auto and taxi), and the mileage figures in Column D of Table 8.

Overall, TNCs are estimated to add 5.7 billion miles of driving in the 9 large metro areas. City-specific estimates range from 94 million additional miles in Seattle to 352 million miles in San Francisco and nearly 1 billion miles in New York City.

These estimates underscore the results of other recent studies finding that TNCs lead to increased miles of driving in large, dense, multi-modal cities that account for most TNC trips.

Table 9. Estimated additional mileage from TNC growth

	TNC trips (M)	Add'l mileage (M)
9 large/dense metros	1,224	5,742
City		
San Francisco	75	352
Washington DC	45	211
Boston	35	164
Seattle	20	94
New York City	159	976

Additional mileage includes miles with passengers and mileage between trips and takes account of mileage reductions from patrons switching from personal vehicle and taxi. Does not include driving at the start and end of the day between drivers' home and positioning for the first trip.

Individual cities are central cities (not metro areas).

Sources: TNC trips are from Table 1. Additional mileage is based on 4.69 additional miles per TNC trip from Column D of Table 8, except for New York City. Source for NYC is more detailed analysis and results presented in Schaller Consulting, "Making Congestion Pricing Work for Traffic and Transit in NYC," March 2018.

These large increases in miles driven come about because of the combination of several factors:

- Fewer than one-half of TNC trips take a car trip off the road, meaning that most TNC trips represent entirely new miles of driving on city streets;
- TNC drivers must drive to the pick-up location, and drive between trips, also adding to overall mileage; and
- Only part of every shared trip involves multiple passengers, since there is generally some mileage between the first and second passenger pick-ups, and between the last and second-to-last drop-offs.[13]

TNCs have said that their operations will reduce overall traffic as the use of pooling grows. Lyft recently announced a goal of 50 percent of trips being pooled by 2022. Results in Column E are based on 50 percent of trips being shared (more than double the current rate) and assume that a quarter of shared trips involve sharing among three passengers rather than just two. As shown in Column E, achieving Lyft's goals would still create a 120 percent increase in overall mileage.

It is notable that even in extremely optimistic scenarios, TNC growth produces more miles of driving. Column F shows a case that assumes a very high rate of pooling (75 percent), many fewer vacant miles between trips and much more time is spent with multiple passengers in the vehicle. The result is still a 41 percent increase in overall mileage on city streets. (Column F.)

These results make clear that even with highly optimistic assumptions about shared ride adoption, TNC growth adds to traffic in major U.S. cities, with potentially quite large implications for both traffic congestion and transit ridership.

These results do not significantly change in suburban settings, even though far more people would have taken their own vehicle for the trip instead of a TNC. The one study that looked systematically at mode shifts outside large, dense cities was conducted in California. It showed that about 90 percent of TNC users would have driven their own motor vehicle instead of taking a TNC. Shared options generally are not offered in suburban settings, but assuming that 10 percent of trips are shared, the increase in mileage would be 68 percent. (Column G.)

Figure 13 summarizes the results of this analysis. In every conceivable case, TNCs increase miles of driving on city streets as well as on suburban streets. Even with extremely optimistic assumptions about how far TNCs can take shared trips, there is more mileage.

In areas where TNCs comprise a tiny fraction of traffic volumes, these increases amount to small additional traffic. It may well be worth the trade-off for greater mobility, particularly for people who do not currently have access to a motor vehicle. For most places that TNCs operate, the added mileage may not merit attention from public policy-makers.[14]

Where TNC trip volumes are large, however, the increased traffic can be considerable and likely merits attention. Public policy options suitable to these areas are discussed in section 6 of this report.

MAKING THE PERSONAL AUTO OBSOLETE?

TNCs have recently begun to boldly say that their goal is to make the personal auto obsolete. Their vision for transforming the transportation system involves shared trips replacing most if not all personal auto travel. They believe this will make for a far more efficient (and with self-driving cars, safe) transportation system.

For this to occur, people who now drive themselves around town would obviously need to decide to switch over to TNCs. But while TNCs see this is producing benefits, the above analysis shows that the result would be catastrophic for cities, adding about 68 percent more mileage to suburban streets and nearly tripling mileage in large central cities.

Even if, as TNCs envision, most people used shared trips, central city traffic would still increase very substantially even under the most optimistic scenarios. The transformation assumes that people would voluntarily give up the convenience of jumping into their own cars in favor of shared trips that involve walking to a pick-up location and waiting for the vehicle to arrive. The evidence supports this assumption when they save on parking costs or avoid drinking and driving. Otherwise, few auto users make the switch to today's TNCs and are unlikely to do so in the future.

NEW AUTOMOBILITY – PERSONALLY OWNED VEHICLES

While this report focuses on increased auto usage from the rise of TNCs, there is larger and equally important picture of trends in auto use in American cities.

After leveling off or even declining earlier in this century, vehicle miles of travel (VMT) has increased nationally since 2011.[15] Unfortunately, city-level VMT data are not generally available. Vehicle ownership can be used as a proxy for vehicle mileage, however, as changes in auto ownership tend to be reflected in changes to auto use.

Census data show that auto ownership has increased in nearly all large U.S. cities since 2012 and in nearly all cases exceeded population growth. Table 10 shows that the aggregate number of household vehicles increased in each of the 9 large, densely-populated cities as well as the 11 large, less-densely populated cities discussed in earlier sections. The average increases were similar – 8 percent for the first group and 11 percent for the second group. In all but three cities (Washington DC, Seattle and San Antonio), the rate of vehicle growth exceeded the rate of population growth.

These findings are consistent with studies showing increases in vehicle registration in the Los Angeles area and in Washington DC and New York City.[16]

Table 10. Aggregate Household Vehicles by City, 2012-16

	Aggregate HH vehicles				
City	2012	2016	Change	Pct change	Popn. change
9 large/dense cities					
Miami	183,041	214,068	31,027	17%	10%

6. Opportunities for Public Benefits

TNCs' benefits to individual users – fast, reliable and affordable taxi-like service -- have fueled their popularity and rapid growth. Their mostly affluent customers feel that the service is a good value for the money and are willing to pay the full fare.

For some types of trips, however, the full fare is unaffordable but there is a public interest that supports public subsidies. This section reviews the experience with various pilot programs across the country in cities of widely varying size, where officials saw public benefits and contracted with TNCs or other private providers.

Experience with these pilots is valuable in pointing to which approaches hold the most promise for larger-scale implementation, and how they can best fit with more conventional transit services.[17] As will be seen, a central takeaway is that TNCs and microtransit tend to best fit where trips are thinly dispersed over a geographic area and in cases where users need to be picked up at their doorstep.

LIFELINE TRANSPORTATION

There is a long history of taxicabs participating in Dial-A-Ride programs for seniors and persons with disabilities who lack access to a personal car or the financial means to pay for a taxi. Public subsidies are needed for patrons to obtain medical care, go shopping, socialize at senior centers, attend religious services and so forth. The policy rationale for these subsidies is the public interest in the health and well-being of seniors, persons with disabilities and other eligible participants such as non-senior low-income persons.

TNCs have recently started to participate in these programs, sometimes alongside taxis and other companies that provide contracted transportation service, and in some cases substituting for discontinued bus services. Laguna Beach, for example, contracted with Uber to supplement transportation for senior and disabled passengers following curtailments of local bus service.

The Pinellas Suncoast Transit Authority in the Tampa and St. Petersburg, Florida area, conducted a two-year pilot with Uber, a cab company and a wheelchair van provider for on-demand trips at night to or from work to participants in an agency program for transportation-disadvantaged persons.

After an initial microtransit pilot involving the now-defunct company Bridj, the Kansas City Area Transportation Authority is using taxis in its RideKC Freedom program, serving older adults and persons with disabilities with same-day service scheduled through a mobile app or by telephoning a call center. Via is developing with the city of Berlin, Germany a van service that complements existing transit service, focusing on late night and weekend travel.[18]

SUPPLEMENTING ADA PARATRANSIT

Somewhat similar to this historically has been taxi participation in transit agency paratransit programs that are mandated under the federal Americans With Disabilities Act (ADA). Cost savings have been the main impetus for transit agencies to contract with taxi companies to provide ADA paratransit trips. In some cases, taxis simply substitute for paratransit vans, usually at a lower per-trip cost. In other cases, taxis are used as a back-up to handle trips for which there are no paratransit vans readily available. Taxis can also be provided as an option to the regular paratransit vans and may be available for same-day trip requests rather than having to request a day or more in advance.[19]

TNCs have recently started to participate in these programs as well. A prime example is the pilot by the Boston area transit agency (MBTA) that involves Uber, Lyft and other companies. ADA paratransit users are offered the option of using one of these three companies instead of the regular ADA service. They can make same-day reservations instead of having to call a day or more in advance. Riders pay the same $2 fare and any amount over $15 (making for a subsidy of up to $13 per trip). Lyft provides a call center under its Lyft Concierge program, while Uber addressed smartphone issues by giving away smartphones to some users.

Another example is the transit agency in Las Vegas, Nevada, which began a pilot earlier this year with Lyft to provide on-demand paratransit service.

CONNECTING TO PUBLIC TRANSIT

There has been a great deal of interest across the country in using new mobility services to complement available public transportation services. Among the most discussed are "first mile" and "last mile" services that connect the customer's

starting point or final destination to transit and offering publicly subsidized transportation in areas without any conventional public transit.

The earliest pilots in this area were generally in smaller towns where a mayor or transit agency head championed the idea of piloting the use of TNCs or microtransit. Pilots included "first mile/last mile" services sponsored by city governments in Almonte Springs, Florida; Centennial, Colorado; and Summit, New Jersey; and by transit agencies in Pinellas County, Florida; Sacramento, California and Dayton, Ohio. Pilots provided subsidies that covered part of the Uber or Lyft fare for residents traveling to or from transit hubs and in some cases other local destinations.

Several larger transit agencies are exploring the feasibility and value of various microtransit service models. For example, King County Metro in the Seattle, Washington area recently began serving first mile/last mile trips between commuters' homes and transit hubs. The service was needed due to limited parking at Park & Ride facilities. Via currently operates a service in Kent, U.K., outside London, that serves mainly reverse-commuters.[20]

PROVIDING SERVICE IN HIGHLY DISPERSED TRAVEL MARKETS

Another approach explicitly seeks to use TNCs and sometimes taxis and other contract transportation providers where trips are too geographically dispersed to be served by conventional fixed-route buses. The idea is to design the service to go only where customers want to go, in contrast to fixed-route buses that serve stops where there are often no passengers.

One of the most widely-publicized pilots is in Innisfil, Ontario, a town of 36,000 about an hour north of Toronto. The city contracted with Uber to provide subsidized rides to key destinations such as a town hall/recreational complex, employment center, and regional bus stops and train stations. Passengers pay $3 to $5 and the city subsidizes the remainder of the Uber fare. Subsidies average $5.62 per trip, significantly lower than what the city estimated fixed route buses would cost.

Similarly, the City of Arlington, Texas contracted with Via to provide on-demand trips in a zone within the city. Riders pay $3 per person. Typical trips connect a regional rail station to employment centers and a University of Texas campus.

In the San Francisco East Bay communities of Fremont and Newark, AC Transit tested a "Flex" service using its own 16 passenger vans and its contracted paratransit provider. AC Transit's overall objective was to address declining ridership, improve service quality and redesign its route structure, particularly in low-density areas that had seen a 20 percent decline in bus ridership. The Flex service picked up and dropped off passengers at select bus stops where bus service had been discontinued. Two-thirds of trips started or ended at a BART station, so the program in large part functioned as a first mile/last mile service.

The Orange County (Calif.) Transportation Authority (OCTA) planned to begin this month (July) a one-year pilot on-demand, microtransit service. The pilot is being offered in two zones, each about six square miles. Service is being provided by Keolis under contract to OCTA.[21]

Los Angeles Metro is currently conducting studies with three potential private sector partners, Transdev, RideCo and Via, to develop door-to-door microtransit service.[22]

* * *

While much of the media attention has been focused on Uber, Lyft and Via providing subsidized services, there are a range of companies and service models available. Taxicabs and private transportation providers such as Transdev, Keolis, MV Transportation and First Transit can play an equally or even more useful role. TNCs may not be able to provide contracted service where federal funds are involved due to requirements for drug and alcohol testing. Taxis and private providers may have accessible vehicles where TNCs generally do not. Government agencies may want to insist on being provided detailed trip data that Uber and Lyft have often refused to provide (although, notably, Uber is providing detailed trip data to Innisfil).

Some of these arrangements also creatively split various aspects of the operation. Transloc and Via provide their software for others to operate a service. A Capital Metro pilot in Austin, Texas used Via's technology to dispatch contracted vans. Via is also working with the transit agency in Singapore to incorporate on-demand technology to enable buses to be deployed and dynamically routed on-the-fly in response to commuter demand.[23] The Contra Costa County (Calif.) Transit Authority is using a Transloc technology platform to provide connections to a BART station.

It should be noted that ridership on these services is low compared with typical fixed route bus operations. Pilots in Livermore, California and Pinellas County, Florida and the initial AC Transit pilot averaged 40 to 60 riders per day. Somewhat higher, Uber provided 200 trips per day in March 2018 in Innisfil, Ontario, and Via served 350 trips per weekday Arlington, Texas this spring (ridership is now lower while the university is in summer session).

Where a new service replaced discontinued bus routes, ridership dropped. In San Clemente, California, for example,

where the city contracted with Lyft to provide rides along two corridors previously served by buses, Lyft averaged 70 passengers per day versus 650 passengers on the bus routes. The same was true for the AC Transit Flex service. An AC Transit manager concluded that "on-demand transit carries fewer passengers per hour than even a low ridership fixed route."

In sum, TNCs and microtransit and other services like Flex in the East Bay are most clearly valuable where conventional bus service would not be operated because of some combination of low ridership levels and geographically dispersed trips. They can be valuable extensions – not replacements -- for fixed route transit. This is the conclusion of AC Transit staff, which plans to use Flex to provide coverage in low-density areas and hopes to achieve savings that can be invested in high-frequency bus service elsewhere. This strategy helps reconcile sometimes competing transit agency goals for ridership growth on the one hand and providing wide geographic coverage on the other hand.

Continued testing of varied approaches will help create a better understanding of where there can be a public benefit to TNC and microtransit services.[24] Among the most promising are those that mirror time-honored senior and disabled services, and that reduce costs of ADA paratransit service. The use of TNCs and microtransit to provide coverage outside the bus network is also promising, particularly if it helps transit agencies focus resources on higher frequency where they can build ridership.

Many of the pilots thus far have shown modest levels of shared trips, although some have increased over time. For example, shared trips increased in Innisfil from 10 percent to 25 percent of trips between July and December 2017. The highest figure available is from Arlington, Texas, where many passengers are going between a regional TRE train station and a university or employment centers. The percentage of shared trips leveled off at about 60 percent a few months into the program – similar to Via's shared trip percentage in New York City.

As the Arlington experience suggests, there is likely the greatest opportunity for shared trips and resultant cost-efficiencies if passengers have a common origin or destination such as a transit station or park & ride stop. To the extent that shared trips lead to reasonably straight-line routes and attract growing ridership, these services may also build toward fixed route bus service.

While there are clear opportunities for public benefit, there are also caveats that should be noted.

First, making TNCs or microtransit full-fledged parts of a government-subsidized transit system will require that the service be available to all members of the public, including those without smartphones and people who use wheelchairs. Pilots have shown how this can be done. Via and Lyft have the capability to provide telephone reservations for their services; Uber plans to roll out its first telephone reservation option in Innisfil later this year.

For accessibility, several pilots use taxi companies that have accessible vehicles; the 16-passenger vans used for AC Transit's Flex service are accessible, and the City of Arlington made two vans (used in its paratransit program) available for wheelchair trips.

Second, while on-demand TNC and microtransit service has benefits in that drivers go only where the customer wants to go, the service is not necessarily more convenient or reliable than conventional bus service.

AC Transit found that Flex service ridership is 40 percent higher for trips originating at a BART station, where passengers can walk on without requesting a trip, than for trips going to the BART station.

> TNC and microtransit services can be valuable extensions of – but not replacements for – fixed route transit.

In Innisfil, the trip completion rate was only 75 percent in November and December 2018, meaning that one-quarter of prospective customers did not receive service. Innisfil city staff note that the service "may not have the same predictability as a fixed route system." Residents are advised to leave extra time if they are on a tight schedule. If no driver is available, the city suggests that they request their trip again in a few minutes.

Waiting times average 8-9 minutes in Inisfil and 11 minutes in Arlington, Texas, possibly greater than bus wait times for routes that run on a reasonably frequent schedule.

As new mobility evolves, there are also other considerations. These companies continue to show financial losses. Although Uber has claimed that it is profitable in major U.S. cities, it is anyone's guess how fares will be affected when their investors insist on a return on capital invested.

MOVING TOWARD SHARED, SUBSIDIZED, STRAIGHT-LINE SERVICES

Two key developments in recent months suggest that TNC and microtransit services are rapidly evolving into two distinct service models. One is the traditional door-to-door private ride service long provided by taxicabs. The other is straight-line routes in which passengers are picked up and dropped off along the way, often subsidized by government, much like traditional buses and jitneys.

1. Straight-line routing. "Rideshare" was supposed fill TNC cars with passengers; TNC advertisements conveyed this vision with pictures of strangers happily traveling together. The service model sought to combine the convenience of door-to-door service (like taxis) with lower fares. Over time, however, Uber and Lyft found that the zig-zag routing of shared, door-to-door rides limited the appeal of UberPOOL and Lyft Line. To address this, the companies recently introduced services (Uber Express POOL and Lyft Shared Rides) meant to minimize turns and thus minimize in-vehicle time and the uncertainties experienced with pooled options. Users are instructed to walk a block or two to a designated pick up location but benefit by traveling a more direct route once in the vehicle.

Via and Chariot used this model from the beginning of their microtransit services, picking up and dropping off passengers along a route. Via assembles the routes on the fly while Chariot uses designated stops that do not change from day to day, although vehicle routing may vary depending on where customers are waiting.

This evolution toward straight-line routes that minimize turns shows the close link between sharing and routing. As the number of passengers sharing a trip moves beyond two strangers sharing part of a trip, it seems imperative to straighten out the routing.

2. Subsidized shared services. Government subsidies of TNC services began with relatively small local governments "partnering" with TNCs to provide trips to transit stops, downtown areas and so forth. Microtransit companies are also prominently involved with government contracting, as discussed earlier with Via's pilot in Arlington, Texas.

Private companies are also using these companies to subsidize commutes to office or university campuses (examples include JP Morgan Chase in Columbus, Ohio and UCLA).

In each of these cases, there are perceived to be benefits that extend beyond the person using them and thus likely beyond what users are willing to pay themselves. The external benefits can be employers' avoidance of the cost of new parking garages, or access to a downtown labor force that does not want to drive to work. Downtown businesses may subsidize circulator bus service to increase accessibility to their stores, restaurants and entertainment offerings.

The external benefits in these examples are specific to businesses who arrange and subsidize the service. But external benefits can also be quite diffuse, spread across multiple employers and other businesses. They also extend to the overall appeal of a city, helping to deliver people efficiently to walkable neighborhoods with a high density of employment, shopping, entertainment and dining opportunities.

The diffuse nature of the benefits means that fully realizing the benefits of high-efficiency modes like buses and trains requires subsidies. Users by themselves would only pay part of the cost of a transit system geared to fully exploit the benefits that come with dense urban development. The rest needs to be underwritten by public funds.

(There is also a converse side to this; external costs such as traffic congestion create the need for public policy intervention, as discussed in Section 7.)

The overall point is that on the spectrum of private to public benefits, some TNC and microtransit service is moving further toward providing clear public benefits that merit subsidies, due to the external and diffuse benefits they provide.

What all this means for the new mobility is that it fast becomes part of a "public transportation" system involving shared, subsidized, straight-line transportation. The challenge for policy-makers is to guide this evolution in ways that contribute toward building high-capacity networks that can provide maximal societal benefit.

7. Solving Big City Traffic Problems

In the six years since TNCs first set up shop in San Francisco, their rapid growth has resulted in billions of additional miles on crowded city streets. This growth is not offset by reduced car ownership; in fact, car ownership is growing across all large U.S. cities. (See page 21.) Thus, as travelers substitute TNCs for the bus or metro, travel by shared modes including transit has declined while automobility – using cars to get around – has grown.

While good for individual travelers, the result is unsustainable for big cities. Big cities thrive because of their dense concentrations of business, leisure and creative activity. Growing auto use works against the key ingredient of density to build economically and socially vital cities. The resulting tensions between the attractive benefits to individuals and the worrying overall effects on cities needs to be addressed.

This tension is most evident in cities like New York and San Francisco where both increased traffic congestion and falling transit ridership are most evident. Some combination of traffic and transit impacts are also evident, or seem to be evident, in Boston, Chicago, Washington DC and other big cities. Concerns are likely to intensify as TNCs continue their rapid growth. (TNC trips increased by 47 percent from 2016 to 2017 in Seattle and by 72 percent in New York; in Chicago, the number of active TNC drivers in Chicago tripled from March 2015 to December 2017.[25])

City officials grappling with this dilemma have taken or are considering a range of actions. These include incentives for shared rides, TNC trip fees, congestion pricing, dedicated lanes for buses and bikes, and traffic signal and street designs aimed at improving traffic flow.

This section discusses the potential of each of these approaches to manage the proliferation of TNCs. In addition, this section discusses a framework for reducing the overall amount of traffic on city streets with the goals of improved mobility for everyone across different modes and supporting growth in population, jobs and tourism.

STRATEGIES TO MANAGE CONGESTION

Shared trips

Uber, Lyft and some independent analysts assert that increased adoption of shared trip options will reverse the documented congestion impacts from TNC growth.

Yet in the last six years, TNC growth has added 5.7 billion miles of driving in the nine large metro areas that account for 70 percent of all TNC trips. Growth in shared trips only somewhat modifies the trendline. Overall mileage continues to increase because most riders are shifting from non-auto modes (so there is no reduction in personal vehicle mileage); the added "deadhead" miles between passenger trips adds driving even if the trip itself replaces a personal auto trip; and even then, only part of the ride is shared.

Shifting some private rides to shared rides will not change the overall picture. Even with high levels of shared trips, funneling travelers from space-efficient modes such as public transit, biking and walking, to space-hogging sedans, SUVs and minivans is not a productive strategy to speed traffic.

Some have suggested that while perhaps TNCs currently add to traffic, as they build their volume of shared trips they will attract predominantly auto users rather than predominantly people shifting from transit, walking and biking. This expectation runs counter to how shared services are developing, however. To attract customers to Uber Express POOL and Lyft Shuttle (or now Lyft's Shared Rides), TNCs are now moving toward straight-line routing to minimize travel time. This shift means that users need to walk short distances to the pick-up location. They may have to wait a few minutes to be matched to a driver, and they may also wait a few minutes for the driver to arrive at the pick-up location.

This obviously makes shared trips more and more like conventional fixed route transit service. There are valuable enhancements to TNCs like greater transparency and automatic fare payment. But it strains logic to expect that as TNC shared trips become more like conventional transit trips, this service will attract more people from their personal auto than has been the case up until now. It seems far more credible that TNCs will continue to attract predominantly non-auto users.

Another argument for why the future will be different than experience thus far involves fares. The argument is that lower fares will draw motorists to TNCs, first because shared trips are cheaper than private ride trips, and eventually because of autonomous vehicle technology.

This might be the case where travelers are comparing TNC fares with the cost of parking – already a prime reason for drivers to use TNCs. Lower TNC fares might change the "breakeven point" for switching to TNCs. However, relatively few auto trips involve a parking charge (surprisingly, even in Manhattan).[26] Parking cost is thus unlikely to drive many more motorists into shared TNCs.

Moreover, the impact of lower fares will be mitigated by the fact that cost is only one factor in mode choice. Travelers tend to give equal or greater weight to convenience, travel time, comfort and so forth. The popularity of SUVs and pick-up trucks testifies to the secondary place of cost (both vehicle purchase and gasoline prices) in consumer transportation choices.

Finally, faith in shared trips as a solution to traffic congestion overlooks the fact that even if a fast and cheap shared ride service attracts auto users, it would also draw heavily from public transit ridership. The new users would continue to be a combination of motorists, transit users and people coming from other modes. The result would also be the same – billions more miles, many on already congested city streets.

Trip fees and congestion pricing

In the most basic terms, the problem that big cities with dense job, population, retail and entertainment activity are facing is simply that TNCs combined with other users of street space are demanding more space than is available. This is the classic "tragedy of the commons," where herdsmen keep adding cattle to the common fields until the cattle lay bare the vegetation that sustains them.

Economists have a ready answer for this problem. Economic theory holds that pricing scarce road space is the best way to address overuse of the public commons. The theory has, helpfully, been shown to work in the form of congestion pricing in London, Stockholm and Singapore, and with high occupancy lane tolls on highways in the United States. Similar plans have been proposed in New York City and discussed in other major cities. Experience with these proposals, as well as with trip fees, shows the limits to pricing strategies for addressing TNC-related traffic congestion.

The most visible form of pricing is fees or taxes on TNC rides. Chicago, Washington DC, Seattle and New York have instituted surcharges or taxes on TNC fares ranging from around 10 cents to $2.75 per trip. These charges are valuable in producing revenue for transit or other purposes. They also start to establish the idea that TNCs are part of an overall transportation system in which cross-subsidies are required to make the overall system best serve urban mobility needs.

However, there is little expectation that trip fees or taxes will serve to combat traffic congestion. This is the case even in New York where the fee, which takes effect next January, will be $2.75 per trip.

Fees could be effective if set at a much higher level. A previous Schaller Consulting study estimated that a fee of $50 per hour in Midtown Manhattan, which translates to about $10 more in the cost of an average trip, would substantially reduce the number of TNC vehicles in operation. But a fee of this magnitude is not under consideration and would face daunting political headwinds.

In advocating for pricing approaches, some analysts argue for a more holistic approach that includes charges on all vehicle travel including personal autos, TNCs, trucks and so forth, paired with large investments to improve public transit.[27] This is certainly an attractive vision for the future of cities and should continue to be pursued. But cordon pricing on the model of London and Stockholm has never gone very far in American cities. Vehicle mile charges have been tested in several states, but implementation seems even further from reach.

In sum, pricing can have an important role in addressing traffic congestion, but obtaining public support is difficult, and in any case, it is not a panacea.

Street management

Over the past decade, major U.S. cities have made major strides in implementing dedicated lanes for buses and bikes and using traffic signal strategies and street designs to improve traffic flow, increase safety and prioritize public transportation. Another response to the pressures created by TNC growth is to redouble these efforts, especially with dedicated street space for buses and bikes.

Both of these space-efficient modes greatly benefit from being separated from the flow of general traffic. Bus lanes improve bus speeds, eliminate the friction that normally occurs as buses pull out of bus stops and help raise the visibility and "readability" of bus service. Bike lanes improve safety and comfort for bike riders. Where physical separation is not feasible, distinctive markings and camera enforcement improves motorist compliance with bus lane restrictions.

Traffic signals and street designs can help speed buses and bikes safely through intersections. Strategies such as queue jumps for buses and holding back right turns across bike lanes serve these goals.

More broadly, traffic signal strategies such as adaptive signal control can ease overall traffic congestion by tweaking traffic signal timing in response to current traffic conditions.

Trip fees, congestion pricing, bus lanes and traffic signal timing can help alleviate growing pressures on the fixed amount of street space. But....

While these are proven strategies to reduce congestion, they also have limits that should be recognized. Bus lanes work best where they can occupy a lane free from cross-traffic. Thus, they are ideal on limited access highways and along parks and waterfronts. In downtowns filled with storefronts, offices and cross-streets, bus lane design needs to allow for turns by general traffic and for access to land uses.

Another response to TNC growth receiving increasing attention focuses on busy pick-up and drop-off areas, most notably at downtown entertainment and sometimes office districts. Growth in TNC trips has affected traffic where drivers block moving lanes and bus stops. The goal of designated pick-up and drop-off locations is to make efficient use of curb space, keep vehicles out of adjacent traffic lanes, and to minimize localized traffic impacts from TNC and/or microtransit vehicles.

Washington DC is piloting this approach in DuPont Circle, dedicating formerly on-street parking to TNC pick up and drop offs. The District set aside 60 spaces on Connecticut Avenue between Thursday night and Sunday morning to reduce double and triple parking as bar patrons use TNCs and taxis to go home. San Francisco, Boston and New York are among other cities considering similar zones.[28] In addition, San Francisco designated areas where Chariot can pick up and drop off riders, in part to ensure that vans move out of traffic lanes to do so, and in part to ensure they do not block bus stops.

These accommodations align with public policy goals for efficient use of roadway and curb space, efficient bus operations, and to help people avoid drinking and driving. Pilots will help to show how well they improve traffic flow and safety, and how much space is required for successful implementation.

Policies for accommodating TNC and microtransit operations can also be integrated with a broader set of goals. Airports, for example, have paired allowing TNCs to enter their property to pick up passengers with trip fees, to defray their landside costs, and in some cases more stringent checks on drivers or vehicles to protect public safety.

Although these pilots are in their infancy, cities might also look toward leveraging their value to TNCs to minimize the number of empty vehicles in the congested "hot spots," by limiting the number of unoccupied TNCs on these streets. In addition, cities could require that companies using designated street space serve all potential patrons. Wherever space on public streets is reserved to accommodate TNC or microtransit operations, these services should be expected to accommodate all members of the public, including people using wheelchairs and people who do not have a smartphone available to request a ride.

... if traffic congestion remains unacceptable, policy makers should look toward a more far-reaching goal: less traffic.

STRATEGIES FOR LESS TRAFFIC

The above strategies seek to relieve the pressures that arise from TNC growth and myriad other demands on a fixed amount of real estate on big city streets. Each strategy has value and is worth pursuing, but it is also important to recognize the limits to the amount of traffic relief they can provide.

In some cities, the strategies may suffice to support city goals of mobility, safety, equity and sustainability. Others may find that they need to do more. In the latter case, policy makers should adopt the more far-reaching goal of less traffic. Rather than trying assorted techniques to wedge more vehicles into city streets, the goal should shift to reducing the number of

vehicles. This means making space-efficient modes such as buses and bikes the preferred means of transportation on the core attributes that most affect mode choice, namely, speed, reliability, comfort and cost.

Currently, TNCs are highly attractive to their affluent and generally well-educated customers for perfectly rational reasons. Aside from cost, the individual traveler has every incentive to use the least space-efficient means of transportation - TNCs are most often faster and more reliable and provide a higher level of comfort and privacy.

The solution is to flip the incentives by making space-efficient modes more attractive than personal autos or cars-for-hire.

With less traffic, streets and intersections can be designed to provide turn lanes, areas for picking up and dropping off passengers and for freight deliveries that improve safety and traffic flow. Less traffic also creates room to make cycling feel safe and comfortable, as with separated bike lanes. Less traffic also alleviates conflicts between through bus movements and access to adjacent land uses for other vehicles, a key design issue for bus lanes.

The result is a street network in which all users - personal autos, buses, TNCs, microtransit, bicyclists and perhaps even people on electric scooters - can move safely and at a reasonable speed.

Getting to this can seem like a daunting task. But the rapid growth of TNCs is in a sense an opportunity. The resulting clogging of traffic has become an increasingly visible problem, putting in sharp relief the fact that crowded streets do not have room for everyone to move about with their own car and driver and the need to make buses in particular compete with TNCs.

The problem, to be sure, stems not simply from TNC growth. But the issue is not "who causes" (it is obviously a combination of TNCs and growth in deliveries, construction, population, jobs, tourism and so forth). The issue is what to do about it.

Three strategies can move cities toward the goal of less traffic, addressing use of personal motor vehicles, growth of TNCs and commercial vehicles, and the essential role of high-capacity transit.

1) Discourage personal vehicle use in congested areas.

This can be perhaps the most difficult of the three steps discussed here. The public has a very strong aversion to government limiting their option to drive into even the most traffic-clogged downtown. This aversion is not necessarily because they will choose to do so (although some obviously will), but because they want to reserve the choice of doing so when the benefits of driving outweigh the inconveniences of traffic and parking cost and hassle.

There are two demonstrated solutions to this issue.

The first involves parking supply. New York City eliminated parking requirements for new residential construction in the Manhattan business district in 1982 and limited the amount of other parking that could be built. The number of public parking spaces decreased from approximately 127,000 in 1978 to 102,000 in 2010.

Constraints on parking supply combined with population and employment growth pushed up the cost of off-street parking. One survey found that the average daily cost for off-street parking is $42 in New York City, well above the figures of $34 in Boston, $30 in Chicago and $28 in San Francisco. Monthly parking rates are also significantly higher in New York ($616) than in these other cities, which range from $265 to $425 per month.[29]

Due to the high cost of parking, only 11 percent of people entering the Manhattan business district during the morning peak travel by car, while 89 percent travel by public transportation.[30] Notably, many drivers entering the CBD either are driving through (and are unlikely to pay for parking at their destination), or avoid personally paying for parking because they park on-street, find free off-street spaces, or use employer-paid parking spaces.[31]

A proposal for a $20 or $30 tax to park in Manhattan would face even steeper odds against adoption than congestion pricing. But a policy to limit parking, which has had the same effect, has met with no opposition.

A second solution is to limit or even ban low-occupancy vehicles from certain streets at designated times of the day. Cars are banned from 16 Street in downtown Denver and Fulton Street in downtown Brooklyn, for example, making both into transit-only streets. Cars use parallel streets as an alternative.

A related approach is to allow drivers to use a street to access local stores, offices and the like, but not allow through movements. Seattle, which is nearly the only U.S. city to show recent transit ridership growth, limits Third Avenue to buses and cars that are then required to turn at the next intersection during the morning and afternoon peak period.

In Manhattan, this approach is also planned for 14th Street during the shutdown for repairs of the L line subway. It has also worked on Broadway, where drivers are forced to turn as they approach plazas installed in the late 2000s in Times Square and Herald, Madison and Union Squares. There is thus some auto and truck traffic on Broadway between these turn-off points, but it is very light throughout the day.

Either of these approaches, or some combination, can be used to limit (while not charging directly or eliminating) the number of personal motor vehicles in major congested areas. These steps can be tailored to specific goals and local circumstances – applying to short street segments or entire areas, throughout the day or for selected times of the day.

Over time, even limited steps to contain auto use are productive, yielding less traffic and opening up another opportunity to take further actions. Several European cities including Paris, Copenhagen and Amsterdam, have produced large drops in vehicle volumes through a long series of actions – none of which, notably, involved congestion pricing.

2) Set space-efficiency requirements for fleet-operated vehicles (e.g., TNCs, taxis and commercial vehicles)

The goal of space-efficiency requirements is to keep the number of vehicles within the capacity of the street for free-flow operation. Offering high-capacity transit, buses should have priority. As discussed above, personal autos need to be limited. Remaining capacity could then be used by fleets which would be limited through caps or some type of space-efficiency standards.

TNCs and taxis represent a low-hanging opportunity since they spend approximately 40 percent of their time between trips. In congested areas such as the Manhattan business district, this means there are an unnecessarily large number of empty vehicles clogging traffic, far more than needed to ensure satisfactory wait times for the next customer to request a ride.[32] Similarly, commercial vehicles often double park while making deliveries or plumbing, electrical or other repairs, also clogging traffic even when there may be curbside parking spaces nearby.

The result, like the "tragedy of the commons," is that TNC and taxi drivers, delivery drivers and everyone else gets one thing they want at the moment (quick pickup, park across from the premise entrance), but at the increasing cost for everyone of how long it takes to move around town.

Public policy has long tried to address these issues for taxicabs. Vehicle caps have been used for taxicabs for decades in major cities across the country. They have been applied to overall fleet size, however. Rather than reducing traffic in the most congested part of town, the result has been that cab drivers tend to concentrate in congested downtown areas where trip demand is most intense.

A better approach is to limit the number of vehicles in the congested area (e.g., downtown, or an entertainment district) at any one time.

The limit would apply to all phases of drivers' operations – transporting passengers and time between trips. TNCs would have strong incentive to reduce time between trips and maximize time transporting passengers, as well as to encourage shared trips. Companies might alter dispatch procedures to discourage drivers from deadheading into congested areas when they are not needed. They might provide faster pick-ups to pooled than private-ride customers.

Another approach is to mandate passenger occupancy levels. TNCs typically have an average of 1.1 passengers at any one time, taking into account the size of the typical traveling party (estimated at 1.5), rate of pooling (assumed to be 20 percent) and amount of time with passenger versus between trips (approximately 60 percent versus 40 percent, respectively). Cities could mandate that TNCs average a higher occupancy rate. The goal would be to reduce vacant time between trips (now around 40 percent) and reach much higher vehicle occupancy rates.

Commercial vehicles could also be subject to efficiency standards tailored to their operations. Much of the traffic impacts from commercial vehicles arises from double-parking to make deliveries and while repair or installation personnel are inside nearby premises. Cities could use in-vehicle GPS technology to track where commercial vehicles are during the day and impose fines or other sanctions for vehicles that do not use designated curb space for deliveries and other activities. It would be incumbent on the city to also make sure there are adequate delivery zones for this purpose.

3) Provide frequent bus service (and rail service where available)

High-capacity transit is clearly the backbone of any big-city transportation system. Only high-capacity vehicles create efficiencies in the use of street space that make possible dense urban centers with lively, walkable downtowns; a rich selection of jobs, restaurants, entertainment and other activities; diversity of population; and intensive and

The overall vision is for less traffic and greater ease of movement for everyone regardless of mode for a given trip.

inventive face-to-face interactions that make cities fertile grounds for business and artistic innovation. If everyone drives their own car to the city center, the need for parking to accommodate the cars would make impossible this density of jobs and activities.

Less traffic on city streets makes buses far more attractive than they are today – faster trips, more reliable, and greater frequency even with the same number of buses on the street. Attractive bus service creates a virtuous circle since the more people ride the bus, the more service a transit agency will likely put on the street. It also becomes far easier to transfer between buses since the main impediment to transferring is uncertainty about wait times before the next bus arrives. Easier transfers allow for simpler route structures, since transit planners have less need to connect disparate trip ends. Simplicity itself is valuable in making it easier for potential patrons to find their way.

* * *

The overall vision is thus for less traffic and greater ease of movement for everyone regardless of mode for a given trip. Ideally, a combination of these steps would be implemented as a package in large geographic areas. Change does not come easily, of course, so it is valuable that these steps can be taken on a small scale as well. They could be put in place along a few blocks during select hours for special events (which is already often the case) or at peak nighttime entertainment hours, or during the morning rush hour. Officials can experiment, learn what works, show success, and create another virtuous cycle that supports expansion of these steps.

8. Implications for Autonomous Vehicles

After years of development and testing, several companies are operating truly autonomous vehicles in passenger service – vehicles without a "safety manager" who can intervene in case something goes wrong. Many of the early implementations involve shuttles that run short distances on fixed routes that can be mapped in detail, providing an opportunity for real-world testing and for the general public to experience autonomous technology.[33]

Beyond shuttles, Waymo is transporting passengers in the Phoenix area in fully autonomous vehicles that pick-up passengers who request a trip using a smartphone app. General Motors has indicated it plans a similar roll-out in one or more major cities, likely including San Francisco in 2019. Other companies are also likely to enter the mix such as Daimler/Mercedes Benz, Aptiv and others.[34]

Whether working with Uber or Lyft or setting up their own shared ride services, these companies are expected to use a TNC service model. They are also expected to deploy the service in dense urban centers where constant use will spread the cost of AV technology across many trips.[35]

A critical and much-discussed issue is whether this path leads to a "heaven" or "hell" outcome, to use the dichotomy coined by Robin Chase. In the "heaven" scenario, people rely on shared autonomous vehicles and expanded public transit; electric vehicles replace gasoline power thus reducing greenhouse gas emissions; and acres of surface parking are replaced with parks, affordable housing and other active land uses. In the "hell" scenario, autonomous vehicles induce sprawl as people are less concerned about long commutes; miles driven and traffic congestion increase in both cities and suburbs; empty cars cruise city streets instead of paying for parking; and public support for bus and rail service erodes, leaving lower-income people stranded.
