APPENDICES:

I. INTRODUCTION

The purpose of this report is to determine the following:

- The impact of the proposed project on the existing City of Inglewood sewer system and pipe network capacity. The pipe segments are analyzed from the proposed development to the Los Angeles County Sanitation District (LACSD) trunk sewer lines. The capacities of existing City and LACSD sewer lines were analyzed, and the adequacy of the existing sewer systems to convey the additional anticipated wastewater from the proposed project was confirmed. The adequacy of existing LACSD lines are defined including future peak flows from Los Angeles Stadium and Entertainment District Project (LASED) that is currently under construction.
- To size the proposed sewer lines appropriately for the expected peak sewer flows from the proposed project based on the development program.

II. SITE DESCRIPTION

"Inglewood Basketball and Entertainment Center" (IBEC) Project is comprised of three sites located near the intersection of Century Boulevard and Prairie Avenue in the city of Inglewood. The first and main project site is located to the southeast of the intersection the second parcel is located to the southwest of the intersection, and the third piece is southeast of Century and Doty intersection. The first site of the proposed development includes a multi-purpose sport arena, a parking structure and other miscellaneous-use buildings. The site is located on an approximately 17-acre site bound by Century Blvd. on the North, Prairie Avenue on the West, Doty Avenue on the East and 103th Street on the South. The second site includes proposed parking structure over an approximately 5.5-acre parcel, not contiguous to the main project site, just west of Prairie Avenue. The third site includes a proposed parking structure and a hotel over an approximately 5-acre parcel, not contiguous to the main project site, just east of Doty Avenue. Refer to the project site map, *Figure 1 — Vicinity Map,* for project site locations.

The existing site over the proposed main project site currently contains commercial buildings, a hotel, a fast-food restaurant and significant portions of vacant land. The existing site over the proposed parking structure, surface parking and a hotel consists of five parcels that are currently all vacant. The existing site over the proposed parking structure west of Prairie Avenue site consists of twenty-seven parcels that are currently all vacant.

The sites are zoned as Limited Manufacturing (M-1L) and Airport Commercial (C-2A) per the City of Inglewood Zoning Map. Please refer to Existing Zoning Map in *Appendix A — Zoning Map*.

III. EXISTING SEWER SYSTEMS DESCRIPTION

The proposed project is located within the jurisdictional boundaries of the Los Angeles County Sanitation District (LACSD) District No.5. Two separate sewer systems exist in the vicinity of the project area, LACSD trunk sewers and City of Inglewood local collector sewer lines. LACSD system includes two trunk sewers, Prairie Avenue Trunk Sewer and South Inglewood Orange Trunk Sewer. Please refer to *Figure 2 — Existing Sewer Systems* for existing sewer infrastructure.

The table below provides a summary of the existing sewer infrastructure in the vicinity of the proposed project. This summary is based on the latest available and reviewed record drawings. Please refer to *Appendix H As-Built Plans* for copies of the City of Inglewood and LACSD record drawings.

Location	Size	Notes
Freeman Avenue	LACSD 30" Prairie Trunk Sewer south of 102nd Street to 107th Street City of Inglewood 8" Sewer Line	Both LACSD and City sewers flow south.
Doty Avenue	LACSD 15" Orange Trunk Sewer Line	Flows south
Prairie Avenue	City of Inglewood 8" Sewer Line	Flows south
Century Boulevard	LACSD 8" Sewer Line east of Doty Avenue. City of Inglewood 8" Sewer Line west of Doty Avenue.	Flows west to MH at Century and Doty intersection Flows east to MH at Century and Doty intersection
102ND Street	City of Inglewood 8" Sewer Lines east and west from Doty Avenue. City of Inglewood 8" Sewer Line west of Prairie Ave	City line between Prairie Ave and Doty Ave flows in two directions. The sewer flows west towards Prairie Avenue and east to Doty Avenue. Flow directions is split from the second MH west of Doty Avenue. City line east of Doty flowing west to MH at Doty Avenue. City Line west of Prairie Ave flowing west to MH at Freeman Avenue.
103TH Street	City of Inglewood 8" Sewer Line between Prairie Avenue and Freeman Avenue	Flowing west to MH at Freeman Avenue

IV. PROJECT DESCRIPTION

Project IBEC is a mixed-use project that includes a multi-purpose sport arena with auxiliary structures including retail, office buildings, restaurants, hotel, parking structures and plaza areas. The project consists of 71,000 square feet of office space, 48,000 square feet of retail and food service space, a 150-room hotel, 85,000 square feet of practice facilities, a 25,000-square foot sports medicine clinic, 15,0000 square feet of community space, an 18,000-fixed seat arena with an additional 500 temporary seats, a parking structures and surface parking.

The proposed project will have five points of connection (POC) to the existing sewer systems. The first, POC #1, will be to the City of Inglewood sewer line at Prairie Avenue and 102nd Street. The second, POC #2, will be to the City of Inglewood sewer line at 102nd Street west of Doty Avenue. The third, POC #3, will ultimately be to the LACSD Prairie Trunk Sewer at Freeman Avenue and 103th Street, however existing City sewer main along 103th street would provide an intermediate point of connection with possibility of the line in between POC #3 and intermediate

connection being upsized to accommodate additional flows from the proposed project. The fourth, POC #4, will be to the City of Inglewood sewer line at 102nd Street east of Doty Avenue. The fifth, POC #5, will be to the City of Inglewood sewer line at Prairie Avenue and 101st Street. Please refer to *Figure 3 — Tributary Areas and Proposed Points of Connection Exhibit* for the location of proposed points of connection needed to serve the proposed project.

The proposed project's sewage demand is estimated based on LACSD sewage generation factors. Refer to LACSD Table 1, "Loadings for each class of land use," in *Appendix C — Estimated Average Daily Sewer Flows for Various Occupancies* for sewage generation factors. Sewage demands were calculated based on the seating capacity for the arena and by square footage for all other proposed structures within the site. The main project site is subdivided in three tributary areas (Areas 1, 2 & 3) based on contribution to proposed points of connection. In addition, there are two existing areas (Area 4a & 4b) outlined along 102nd Street. Area 4 is exiting area along 102nd Street contributing to 8" sewer line that flows east to manhole at Doty Avenue. Portion of this area (4a) is within the project site limits, Area 4b is presenting the remaining portion of the existing site that will continue to contribute to 8" sewer line that flows east to Doty Avenue. Area 5 is not contiguous to the main project site and consists of the proposed hotel site. Area 6 is existing area north of 101st Street and east of proposed west parking garage. Please note both parking structures west of Prairie Avenue and East of Doty Avenue are not part of this calculation, simply because they do not have any sewer demand. Refer to *Table 1 — Summary of Contributing Flow for Each Tributary Area* for calculations of proposed site and existing sewage demand.

Additionally, as part of this Sewer Area Study, we reviewed Related Project List Methodology for the proposed IBEC memorandum dated January 14, 2019 prepared by Trifiletti Consulting Inc. The Memorandum identified list of 146 reasonably foreseeable relevant projects. We reviewed the locations of the identified relevant projects to evaluate and if applicable to consider their impact to capacity of the existing sewer infrastructure surrounding IBEC Project. Please refer to Appendix I copy of the memorandum with relevant project list table B and maps 1-7 for the project locations. Based on identified project locations we classified the project into three major groups. Please refer to Figure 4 for Sanitation Districts Map.

1. Projects within cities outside of District 5 that contribute to relief trunk sewer lines not within the vicinity of IBEC Project. These projects contribute to relief trunk sewer downstream from the project site or to different districts sewer relief systems. Therefore, these projects will not impact the capacity of the trunk sewer lines surrounding the IBEC project. Projects located within Culver City, El Segundo and Los Angeles are in this group.
2. Projects within District 5 contributing to different trunk sewer lines or downstream from IBEC project. These projects will not impact the capacity of the trunk sewer lines surrounding the IBEC project. Projects located within City of Inglewood, Gardena and Hawthorne are in this group.
3. Projects within District 5 located upstream of the IBEC project. These projects will contribute to Prairie Trunk Sewer or Orange Trunk Sewer and will be considered in this report. There are four projects located within City of Inglewood that are in this group including Stadium at Hollywood Park project. The contribution of stadium project is based on the Inglewood NFL Stadium at Hollywood Park Sewer Area Study. Please refer to Appendix G for details. Estimated peak flows from other three projects 644 E. Manchester Terrace, 501 E. 99th Street and 333 N. Prairie Ave. are calculated in Table 1 and indicated in Figure 3, node C2.

Existing sewer infrastructure surrounding Project IBEC include 8" City of Inglewood collector sewer line along Century Blvd, 101st, 102nd, and 103rd Streets and two LACSD trunk sewer systems, a 24" and 30" Prairie Avenue Trunk Sewer systems on Freeman Avenue and a 15" South Inglewood-Orange Avenue trunk line on Doty Avenue. The capacities of the existing lines were determined based on as-built plans, will serve letter provided from LACSD,

existing peak flows and the LASED Project sewer area study findings. Existing peak flows are based on sewer monitoring data or calculated using LACSD sewage generation factors as shown in *Table 1 — Summary of Contributing Flow for Each Tributary Area*.

The estimated capacities, existing peak flows and available capacities of these sewer lines are as follows:

- City of Inglewood Prairie Avenue (8" diameter) – (POC #1 at 102nd Street and POC#5 at 101st Street)
    - ∞ Estimated capacity for this line is 0.23 MGD (per Appendix E FlowMaster calculations) and existing peak flow based on flow monitoring at that confluence by US3 Inc. shows an existing peak of 0.06 MGD. This results in an available capacity of **0.17 MGD** at POC #1 and POC #2.

      Please refer to *Appendix E* for pipe capacity calculations and *Appendix D* for existing peak flow.

- City of Inglewood 102nd Street at manhole west of Doty Ave. (8" diameter) – (POC #2)
    - ∞ Estimated capacity for this line is 0.33 MGD (per Appendix E FlowMaster calculations). Based on the zoning designation for the properties currently using this sewer connection, the estimated existing peak flow is 0.22 MGD. This results in an available capacity of **0.11 MGD** at POC #2. However, the estimated current peak flow includes 0.16 MGD from properties that will be replaced by the proposed IBEC project.

      Please refer to *Appendix E* for pipe capacity calculations and *Appendix D* for existing peak flow.

- South Inglewood – Orange Avenue Trunk (15" diameter) at Doty / 102nd Street

    1. The LASED Sewer Area Study (Inglewood NFL Stadium at Hollywood Park Sewer Area Study) shows a capacity of 2.6 MGD per the letter from LACSD dated March 4, 2016. The LASED project will contribute an additional flow of 1.78 MGD.

    2. The Will Serve Letter from LACSD shows a current peak flow of 0.8 MGD, as measured in 2011. However, this peak flow takes into account sewer flow from the former Hollywood Park Racetrack, which no longer exists since was demolished in 2016 and will be replaced by the LASED project. This report will instead use the proposed sewer flow of 1.78 MGD from the LASED Sewer Area Study.

    3. Flow Monitoring at confluence manhole at Doty and 102nd Street by US3, Inc., dated 10/31/2017 shows a peak inflow of 0.09 MGD from the east and peak outflow of 0.37 MGD to south. Therefore, this manhole peak outflow, as measured in 2017 will be used as current peak flow for trunk sewer capacities, since is measured after Hollywood Park Racetrack demolition and present the most current conditions. See Appendix G.

    4. Using the capacity of 2.6 MGD from the LACSD letter, and both the current measured peak outflow of 0.37 MGD and the additional proposed LASED peak flow of 1.78 MGD, results in an available capacity of **0.45 MGD** at this manhole location.

Please refer to *Appendix E* for pipe capacity calculations, *Appendix D* for existing peak flow and *Appendix G* for LASED project contributing peak flow.

- Prairie Avenue Trunk (30" diameter) at Freeman / 103rd St. (POC #3)
    - ∞ Per the Will Serve letter from LACSD, the capacity of the Prairie Avenue Trunk Sewer at Freeman / 103rd St. is 10.9 MGD and there is a current peak flow of 3.7 MGD, as measured in 2011.
    - ∞ Flow monitoring at that confluence manhole by US3 Inc. shows a south peak outflow of 2.93 MGD, as measured in 2017. The LASED project will contribute additional 4.67 MGD at this location per the LASED Sewer Area Study dated January 5, 2017.
    - ∞ Using the most conservative capacity calculation for current peak flow from the LACSD Will Serve Letter, this results in an available capacity of **2.53 MGD** at POC #3.

      Please refer to *Appendix D* for existing peak flow and *Appendix G* for LASED project contributing peak flow.
- City of Inglewood 102nd Street at manhole east of Doty Ave. (8" diameter) – (POC #4)
    - ∞ Estimated capacity for this line is 0.22 MGD (per Appendix E FlowMaster calculations) and existing peak flow based on flow monitoring by US3 Inc. shows a peak of 0.09 MGD, dated 10/31/2019. This results in an available capacity of **0.13 MGD** at POC #4.
- South Inglewood – Orange Avenue Trunk Extension No.3 (8" diameter) east of Doty

    1. A connection in Century Blvd. was not considered feasible from the proposed hotel site as the existing LACSD 8" Sewer Line along Century Blvd. does not have available additional capacity per LASED Sewer Area Study. Refer to Appendix G.

    Please refer to *Appendix E* for pipe capacity calculations, *Appendix D* for existing peak flow and *Appendix G* for LASED project contributing peak flow.

The locations of the existing sewer systems, the four proposed points of connection and capacities of the existing sewer systems can be found in *Figure 3 — Tributary Areas and Proposed Point of Connections Exhibit.*

A will serve letter request was submitted to LACSD for the proposed development to verify estimated existing peak flows and sewer lines capacities. Please see approved will serve letter from Sanitation District dated January 10, 2018 in Appendix B.

V. Sewer Pipe Capacity Analysis

Based on the existing sewer lines available capacities determinate in section above and estimated proposed IBEC project sewer demands calculated in Table 2 the existing sewer lines remaining capacities including contribution from proposed IBEC project are as follows:

- City of Inglewood Prairie Avenue (8" diameter) – (POC #1 at 102nd Street and POC#5 at 101st Street)
    - Estimated available capacity for this line is **0.17** MGD (per Section IV calculations) and proposed IBEC project estimated peak flow is **0.04** MGD at 101st Street and **0.07** MGD at 102nd Street. This results in remaining capacity of **0.13 MGD** at POC #5 and **0.06 MGD** at POC #1.
- City of Inglewood 102nd Street at manhole west of Doty Ave. (8" diameter) – (POC #2)
    - Estimated available capacity for this line is **0.11** MGD (per Section IV calculations) and proposed IBEC project estimated peak flow is **0.09** MGD. However, the proposed IBEC project will replace existing structures with a current existing peak flow of 0.16 MGD. Therefore, the reduction in proposed flow to this connection will result in an additional capacity of 0.07 MGD. This results in remaining capacity of **0.18 MGD** at POC #2.
- Prairie Avenue Trunk (30" diameter) at Freeman / 103rd St.
    - Estimated available capacity for this line is **2.53** MGD (per Section IV calculations) and proposed IBEC project estimated peak flow is **0.50** MGD. Additionally, existing peak flow of **0.04** MGD is estimated from existing 103th street sewer line and future peak flow of **0.21** MGD is estimated from proposed upstream projects. This results in remaining capacity of **1.78 MGD** for Prairie Avenue Trunk Sewer.
- South Inglewood – Orange Avenue Trunk (15" diameter) at Doty / 102nd Street
    - Estimated available capacity for this line is **0.45** MGD (per Section IV calculations) and proposed IBEC project estimated peak flow from west and east sewer lines is **0.14** MGD. This results in remaining capacity of **0.31 MGD** for South Inglewood-Orange Trunk Sewer.

Based on the proposed project site plan, a portion of the existing 8" sewer line along 102nd street will need to be removed or abandoned. New 8" and 10" pipelines will be constructed to serve the proposed on-site structures and their laterals. It is proposed that the northern portion of the proposed site will drain to City sewer lines at Prairie Ave and 102nd Street. Similarly, the eastern portion will drain to the existing sewer line along 102nd street and ultimately to the Orange Ave trunk sewer along Doty Ave. Wastewater contribution to the eastern portion includes a fraction of the wastewater generated by the proposed arena. The remaining portion of the site will drain to the Prairie Avenue trunk sewer along Freeman Ave. This includes the sewage generated from offices, the practice facility and the majority of proposed arena. Refer to *Figure 3 — Tributary Areas and Proposed Point of Connections Exhibit* and *Table 1 — Summary of Contributing Flow for Each Tributary Area* for a summary of tributary areas and proposed onsite sewer system.

Peak flow capacities and pipe sizes were determined by using Kutter's Formula. Refer to Pipe Size Capacity Calculations in *Appendix E — Pipe Size Capacity Calculations*. Each main line is sized based on the minimum slope (worst case scenario) and half or 3/4 full pipe depending on the pipe size based on Los Angeles County guidelines.

As shown on *Table 2 — Sewer Capacity Summary* and *Figure 3 — Tributary Areas and Proposed Point of Connections Exhibit* the existing City and LACSD sewer lines have adequate capacity except the 8" sewer line along 103th street. This sewer line does not have enough capacity to convey the additional sewage from the project site nor does it currently extend to the project site. Therefore, it is proposed that the existing 8" line be upsized to a 12" line and extended to the project site as shown in Figure 3.

VI. CONCLUSION

A summary of proposed pipe diameters and slopes can be found in *Table 1 — Summary of Contributing Flow for Each Tributary Area*. All sewer mains that will serve the project site were sized between 8" and 12" and meet the Los Angeles County capacity standards of no more than ½ full for mains under 15" diameter and no more than ¾ full for mains with a diameter of 15" and larger, refer to *Appendix E — Pipe Size Capacity Calculations*.

The impact to the existing sewer systems is summarized in *Figure 3 — Tributary Areas and Proposed Point of Connections Exhibit* and *Table 2 — Sewer Capacity Summary*. The project site will contribute 0.50 MGD to the Prairie Avenue Trunk Sewer, which does not exceed the available capacity of 1.78 MGD. The existing City of Inglewood 8" sewer line along 103th Street that will convey project peak flow to this location will be upsized to a 12" line and extended to the project site. The project site will contribute 0.11 MGD to the City collector sewer line at Prairie Avenue, which does not exceed the available capacity of 0.17 MGD. The project site contributes an additional 0.09 MGD to 102nd sewer line from the west and an additional 0.05 MGD from the east, which does not exceed the available capacity of 0.41 MGD.

The proposed improvement along 103th Street the existing City collector lines have adequate capacity for the proposed project. Additionally, the existing LACSD sewer system has enough available capacity to serve the proposed project.

Tables

						TOTAL	**1.08**	**0.70**					
							CFS	**MGD**					

*Assumed pipe slopes are minimum allowed for proposed pipe size. Based on site grading pipe slopes can be steeper.

**Proposed sewer pipe design capacity was calculated as 1/2 full for pipe diameters of 12" or lower, and 3/4 full for pipe diameters of 15" or higher

***For pipe segments that have already been constructed, calculations were based on the minimum constructed slopes / sizes

****Velocities for these pipes are above 1.0 ft/s per Kutter's Formula calculations

†Existing line to be removed and reconstructed with new line, size as shown on table, please note 0.04 MGD = 0.062 CFS is existing flow from sewer monitoring result

GRACE ROBINSON HYDE
Chief Engineer and General Manager

January 10, 2018

Ref. Doc. No.: 4411341

Mr. Boris Tantchev
Senior Project Manager
D & D Engineering, Inc.
8901 South La Cienega Boulevard
Suite 106
Inglewood, CA 90301

Dear Mr. Tantchev:

Will Serve Letter for Project Condor

The Sanitation Districts of Los Angeles County (Districts) received your will serve letter request for the subject project on November 21, 2017. The proposed project is located within the jurisdictional boundaries of District No. 5. We offer the following comments regarding sewerage service:

1. The following is a list of Districts' trunk sewers that serve the project area:

Name	Location	Size (dia.)*	Capacity (mgd)**	Peak Flow (mgd)	Last Measured
South Inglewood-Orange Avenue Trunk Sewer	In Doty Avenue at 102nd Street	15	2.6	0.8	2011
Prairie Avenue Trunk Sewer	In the westbound Interstate 105 Prairie Avenue Exit	31.5	12.4	4.2	2011
Prairie Avenue Trunk Sewer	In Freeman Avenue at 103rd Street	30	10.9	3.7	2011

*diameter in inches
**million gallons per day

2. Availability of sewer capacity depends upon project size and timing of connection to the sewerage system. Because there are other proposed developments in the area, the availability of trunk sewer capacity should be verified as the project advances. Please submit a copy of the project's build-out schedule to the undersigned to ensure the project is considered when planning future sewerage system relief and replacement projects.

3. The wastewater generated by the proposed project will be treated at the Joint Water Pollution Control Plant located in the City of Carson, which has a capacity of 400 mgd and currently produces an average recycled water flow of 256.4 mgd.

4. The expected average wastewater flow from the project, described in the application as mixed use development consisting of 37,100 square feet of retail space, 50,500 square feet of general office

space, 21,700 square feet of food services, a 78,800 square-foot performance center, and an 18,000 seat arena, is 71,438 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

5. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System for increasing the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. In determining the impact to the Sewerage System and applicable connection fees, the Districts' Chief Engineer and General Manager will determine the user category (e.g. Condominium, Single Family home, etc.) that best represents the actual or anticipated use of the parcel or facilities on the parcel. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at (562) 908-4288, extension 2727.

6. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Very truly yours,

Adriana Raza
Customer Service Specialist
Facilities Planning Department

Site Report 04-11-2019

Confidential Proprietary Information

D & D Engineering, Inc

2017.11 Doty MH S Outflow

~3798 W. 102nd St
Manhole No.2

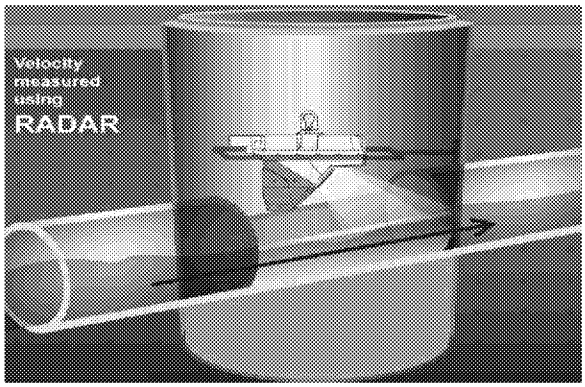
Access:
Manhole within intersection of S. Doty Av & W. 102nd St

System Type:
Sanitary [X] Storm [ ]

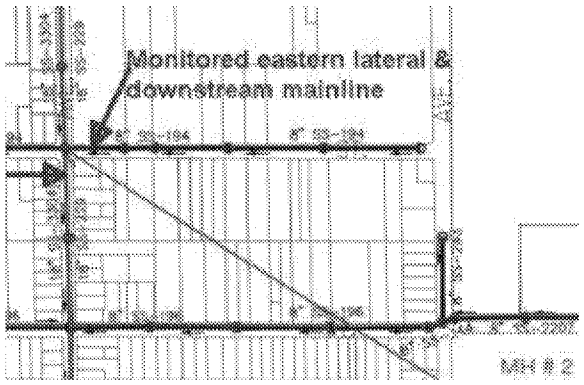
Install Date: 10/31/2017

Map

Technology



Traffic Plan



Flow Meter			
Meter Depth: 117"			
MH Coordinates: 33.943639, -118.339787			
Turbulent hydraulics due to drop in trough within the MH			
Avg Velocity	Avg Measured Level		Multiplier
2.66 fps	2.75"		1
Gas			
O2	H2S	CO	LEL
20.9	0	0	0
Notes			
Two 8-in laterals entering 15-in mainline; monitored downstream line per client direction.			
Traffic Safety			
Used cones & signs in accord with CA MUTCD requirements.			
Land Use			
Residential	Commercial	Industrial	Trunk
X	X		

Manhole Depth	143"
Monitored Pipe Size	15"
Mainline Size (In/Out)	15"/15"
Pipe Shape	Round
Pipe Condition	Good
Manhole Material	Brick
Silt	0
Velocity Profile Data	*
Velocity Profile Taken	0.4 2-D
Sensor Offset	26.14"
Sensor Dist. to Crown	11.14"
Sensor Direction	Downstream
Flow Heading	South

Appendix E

Pipe Size Capacity Calculations

Worksheet for Pipe Segment A to A1

Project Description

Friction Method	Kutter Formula
Solve For	Normal Depth

Input Data

Roughness Coefficient	0.013	
Channel Slope	0.02000	ft/ft
Diameter	0.67	ft
Discharge	0.01	ft^3/s

Results

Normal Depth	0.04	ft
Flow Area	0.01	ft^2
Wetted Perimeter	0.35	ft
Hydraulic Radius	0.03	ft
Top Width	0.33	ft
Critical Depth	0.04	ft
Percent Full	6.5	%
Critical Slope	0.01820	ft/ft
Velocity	1.03	ft/s
Velocity Head	0.02	ft
Specific Energy	0.06	ft
Froude Number	1.05	
Maximum Discharge	1.72	ft^3/s
Discharge Full	1.57	ft^3/s
Slope Full	0.00000	ft/ft
Flow Type	SuperCritical	

GVF Input Data

Downstream Depth	0.00	ft
Length	0.00	ft
Number Of Steps	0	

GVF Output Data

Upstream Depth	0.00	ft
Profile Description		
Profile Headloss	0.00	ft
Average End Depth Over Rise	0.00	%
Normal Depth Over Rise	6.55	%
Downstream Velocity	Infinity	ft/s

Worksheet for Pipe Segment A to A1

GVF Output Data

Upstream Velocity	Infinity	ft/s
Normal Depth	0.04	ft
Critical Depth	0.04	ft
Channel Slope	0.02000	ft/ft
Critical Slope	0.01820	ft/ft

Worksheet for Pipe Segment A1 to A2

Project Description

Friction Method	Kutter Formula
Solve For	Normal Depth

Input Data

Roughness Coefficient	0.013	
Channel Slope	0.00400	ft/ft
Diameter	0.67	ft
Discharge	0.06	ft^3/s

Results

Normal Depth	0.14	ft
Flow Area	0.05	ft^2
Wetted Perimeter	0.63	ft
Hydraulic Radius	0.08	ft
Top Width	0.54	ft
Critical Depth	0.11	ft
Percent Full	20.8	%
Critical Slope	0.01068	ft/ft
Velocity	1.14	ft/s
Velocity Head	0.02	ft
Specific Energy	0.16	ft
Froude Number	0.64	
Maximum Discharge	0.76	ft^3/s
Discharge Full	0.70	ft^3/s
Slope Full	0.00005	ft/ft
Flow Type	SubCritical	

GVF Input Data

Downstream Depth	0.00	ft
Length	0.00	ft
Number Of Steps	0	

GVF Output Data

Upstream Depth	0.00	ft
Profile Description		
Profile Headloss	0.00	ft
Average End Depth Over Rise	0.00	%
Normal Depth Over Rise	20.80	%
Downstream Velocity	Infinity	ft/s

Worksheet for Pipe Segment A1 to A2

GVF Output Data

Upstream Velocity	Infinity	ft/s
Normal Depth	0.14	ft
Critical Depth	0.11	ft
Channel Slope	0.00400	ft/ft
Critical Slope	0.01068	ft/ft

Worksheet for Pipe Segment A2 to A3

Project Description

Friction Method	Kutter Formula
Solve For	Normal Depth

Input Data

Roughness Coefficient	0.013	
Channel Slope	0.00400	ft/ft
Diameter	0.67	ft
Discharge	0.10	ft^3/s

Results

Normal Depth	0.18	ft
Flow Area	0.07	ft^2
Wetted Perimeter	0.72	ft
Hydraulic Radius	0.10	ft
Top Width	0.59	ft

Appendix F

Policies for Managing Available Sewer Capacity and Sewage Discharge in excess of Design Capacity

October 12, 2005

Approved

TO: Dean Efstathiou

FROM: Dennis Hunter
Land Development Division

POLICIES FOR MANAGING AVAILABLE SEWER CAPACITY AND SEWAGE DISCHARGE IN EXCESS OF DESIGN CAPACITY

The following will set forth Public Works' policies related to managing sewer infrastructure capacity. Design capacity of the sewer mainline is defined as follows:

< 15" diameter	½ full = 100% capacity (d/D)
≥ 15" diameter	¾ full = 100% capacity (d/D)

When Public Works determines there is available capacity in a mainline sewer for infill and redevelopment projects, the remaining available capacity shall be allocated on a first come – first serve basis.

Sewer Advisory Committee

A Sewer Advisory Committee (SAC) will be formed for the purpose of recommending courses of action to address proposed development connecting to existing sewers that will cause them to be operating beyond their design capacity. The SAC will make their recommendations to Dean Efstathiou, Assistant Director. The SAC will be chaired by Waterworks and Sewer Maintenance Division and will have representatives from Design and Land Development Divisions. Each Division will appoint a Principal Engineer or Senior Civil Engineer as a representative to the SAC and will convene whenever sewer decisions are required to address developmental impacts. Sewer Maintenance will maintain records of SAC meetings and will prepare recommendations to Administration for approval. The SAC may require other Division representatives to participate on a case-by-case basis when necessary, such as Building and Safety and Programs Development.

Divisional Responsibilities

Design Division

1. Support activities of the SAC.

2. Prepare sewer area studies when required.

3. Maintain records/archive of all approved sewer area studies and flow measurements.

Land Development Division

1. Support activities of the SAC.

2. Impose sewer area study requirements for private developments if necessary and review/approve all submittals.

3. Refer cases to SAC when both sewer area studies and flow measurements indicate that a potential overload situation exists or will exist based on criteria described below.

4. Provide copies of all approved sewer area studies and flow measurements to Design Division for archiving.

Waterworks and Sewer Maintenance Division

1. Chair the SAC, maintain meeting records and prepare position papers to Administration.

2. Advise the SAC when an overload condition is observed during maintenance activities.

3. Initiate effort to track and map all overload areas within the Consolidated Maintenance District.

4. Keep database of all flow measurement results.

Design Criteria

1. Capacity of sewer mainlines less than 15" in diameter are considered full (100 percent) when the ratio of the depth of flow (d) over the pipe diameter (D) is equal to 0.5, expressed as d/D = 0.5.

2. Capacity of sewer mainlines equal to or greater than 15" in diameter are considered full (100 percent) when the ratio of the depth of flow (d) over the pipe diameter (D) is equal to 0.75, expressed as d/D = 0.75.

3. When an area study indicates that flow conditions based on calculated discharges is between 101 percent to 150 percent of capacity, no flow measurements and no mitigation will be required. If maintenance records warrant, a flow test may be required.

4. When an area study for a development that proposes to increase the density or change the zoning indicates that flow conditions are between 151 to 200 percent of capacity, flow measurements shall be required. If the flow test indicates that the actual flow condition is below 151 percent, no mitigation will be required. If the flow test results indicate the actual flow is above 151 percent, the case shall be referred to the SAC to evaluate options and make recommendations to Administration for approval. These options may include, but are not limited to: requiring full mitigation from the development, assessing pro-rata shares, creation of a reimbursement district, or establishing a County Improvement (CI) district.

TABLE OF CONTENTS

I. Introduction

The purpose of this report is to determine the sizes of the proposed sewer lines for the Stadium Alternative of the City of Champions Revitalization Project permitted as an option under the entitlements granted by the City of Inglewood for the redevelopment of the Hollywood Park development. This report estimates peak sewer flows based on not only the expected development, but also the possible future redevelopment of the parking lots.

II. Site Description

The existing Hollywood Park site is a now-closed recreational and equestrian facility located in the City of Inglewood, California. The 298-acre area consists of 12 parcels and is at the northeast intersection of Prairie Avenue and Century Boulevard within the Centinela Valley and South Bay region (see Figure 1). The surrounding development consists primarily of commercial and residential areas with the L.A. Forum to the north across Pincay Drive. Refer to Figure 2 for existing zoning.

III. Project Description

The Stadium Alternative of the City of Champions Revitalization Project is a proposed mixed-use community that includes residential, retail, office, gaming, and sports uses. The project is currently entitled for 2,500 residential dwelling units, 890,000 square feet of retail space, 780,000 square feet of general office space, 300 hotel rooms, a 120,000 square foot casino, an 80,000-seat stadium, a 6,000-seat performance venue, and substantial amounts of surface parking and other interim uses. Refer to Figure 3, "Land Use". Because the General Plan permits additional density on the site, however, for the purposes of this analysis, additional density was assumed on certain blocks in order to ensure that the proposed lines will be able to meet any future needs.

There are two sewer trunk systems within District No. 5 (South Inglewood – Orange Avenue Trunk and Prairie Avenue Trunk) that can be used by the proposed project per the letters from Sanitation Districts of Los Angeles County (LA County) found in Appendix A. The existing peak flow and capacity of these sewer trunks is as follows:

- Prairie Avenue Trunk (21" diameter) at Hardy / Osage (POC #1)
  - The letter from LA County dated March 4, 2016 shows a capacity of 9.3 MGD and an existing peak flow of 3.2 MGD. This results in an available capacity of 6.1 MGD at POC #1.

- Prairie Avenue Trunk (24" diameter) at Century / Flower (POC #2)
  - The letter from LA County dated November 13, 2007 shows a capacity of 9.2 MGD and an existing peak flow of 3.3 MGD. This results in an available capacity of 5.9 MGD at POC #2.

- South Inglewood – Orange Avenue Trunk (15" diameter) at Century / Doty (POC #s 3, 4, 5, and 6)
    - The letter from LA County dated March 4, 2016 shows a capacity of 2.6 MGD and an existing peak flow of 0.8 MGD. This results in an available capacity of 1.8 MGD for the combined total from POC #s 3-6.
    - Flow monitoring near the confluence manhole at Century and Doty by Downstream Services, Inc. shows a peak flow of 0.043 from the west and 0.486 MGD from the east for a total peak flow of 0.529 MGD (see Appendix C).
    - This report will use the most conservative value of 0.8 MGD as the existing peak flow. This results in an available capacity of 1.8 MGD at POC #s 3, 4, 5, and 6.

The proposed project will have six points of connection (POC) to the existing sewer system. POC #1 is located to the west near the intersection of Prairie Avenue and Arbor Vitae Street. POC #2 is located to the west near the intersection of Hardy Street and Flower Street. The other four (POC #s 3 through 6) are located to the south along Century Boulevard. The location of the existing sewer trunk system and the six points of connection are shown in Figure 4. The existing and proposed peak flows for the existing sewer trunks can be found in Figure 5.

A request was submitted to LA County for the proposed abandonment of the 10" and 12" diameter sewer along the western boundary of the project site between Pincay Drive and Arbor Vitae Street. Appendix F shows the confirmation from LA County for the abandonment of the sewer line and the CCTV report that was submitted as part of the request.

IV. Sewer Pipe Capacity Analysis

The entire proposed sewer system will consist of gravity lines with a range of 8" to 21" in diameter. The minimum allowable slope will be 0.12%, and the maximum allowable slope will be 6.00%. The pipe slopes shown in Table 2 have been calculated based on the pipe size and the street grades shown in Figure 6. The minimum design velocity is 2 f/s, except for upstream pipes where the minimum velocity is between 1.5 f/s and 2 f/s. The maximum design velocity is approximately 6.24 f/s.

Refer to Figure 5 for a summary of the tributary areas and the proposed onsite sewer system. The northern and eastern parts (yellow and blue areas) of the sewer system will drain to the Prairie Avenue Trunk Sewer. This includes sewage from the stadium, which will connect to this proposed sewer system at various points as shown in Figure 7. The southern part of the sewer system (orange, purple, green, and pink areas) will drain to the South Inglewood – Orange Avenue Trunk Sewer.

Table 1 shows the on-site peak flows calculated from the standard average daily flows for the proposed occupancies per County standards shown in Appendix B. Peak flow capacities and pipe sizes were determined by using Kutter's Formula. Refer to Pipe Size Capacity Calculations in Appendix D. Each main line is sized

based on the minimum slope (worst case scenario) and half or 3/4 full pipe depending on the pipe size based on LA County guidelines.

V. Conclusion

A summary of proposed pipe diameters and slopes can be found in Table 1 and Table 2. All on-site sewer mains were sized between 8" and 21" and meet the County capacity standards of no more than ½ full for mains under 15" diameter and no more than ¾ full for mains with a diameter of 15" and larger per Appendix E.

The impact to the existing County Trunk Sewer System is summarized in Figure 5 and Table 2. The northern and eastern portions of the project site contribute 5.6 MGD to the Prairie Avenue Trunk Sewer, which does not exceed the available capacity of 5.9 MGD. The southern portions of the project site contribute 1.5 MGD to the South Inglewood – Orange Avenue Trunk Sewer, which does not exceed the available capacity of 1.8 MGD. Therefore, existing sewer trunks have enough available capacity for the proposed project.

Tables

TABLE 1 - SUMMARY OF CONTRIBUTING FLOW FOR EACH TRIBUTARY AREA

MARCH 2015 OVERALL BUILD-OUT

Peak Flow to POC [MGD]	Tributary Area	Parcel Name	Development Type	Daily Average Sewage Generating Factor [GPM]	Unit Contribution		Daily Average Flow [GPD]	Peak Flow (2.5x Average) [MGD]	Peak Flow [CFS]

							CFS	**MGD**					

*Pipe slopes were calculated to closely match proposed street grades. However, some pipes may be sloped higher to allow greater flow.

*Proposed sewer pipe design capacity was calculated as 1/2 full for pipe diameters of 12" or lower, and 3/4 full for pipe diameters of 15" or higher

**In cases where the sewer pipe slopes in the opposite direction of street grade, the calculations were based on the lowest allowed sewer pipe slope.

***For pipe segments that have already been constructed, calculations were based on the minimum constructed slopes / sizes

****Velocities for these pipes are above 1.0 ft/s per Kutter's Formula calculations

GRACE ROBINSON HYDE
Chief Engineer and General Manager

March 4, 2016

Ref File No.: 3639788

Mr. Chris Holmquist
Director of Development
Wilson Meany
6100 Center Drive, Suite 1020
Los Angeles, CA 90045

Dear Mr. Holmquist:

Will Serve Letter for City of Champions Revitalization Project (Stadium Alternative)

This is in response to your request for a will serve letter for the subject project, which was received by the County Sanitation Districts of Los Angeles County (Districts) on February 25, 2016. The proposed development is located within the jurisdictional boundaries of District No. 5. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge directly or indirectly to the Districts' Prairie Avenue Trunk Sewer, located in Hardy Street east of Flower Street, or the Districts' South Inglewood-Orange Avenue Trunk Sewer, located in Doty Avenue at Century Boulevard. The Districts' 21–inch diameter Prairie Avenue Trunk Sewer has a full-pipe capacity of 9.3 million gallons per day (mgd) and conveyed a peak flow of 3.2 mgd when last measured in 2011. The Districts' 15–inch diameter South Inglewood-Orange Avenue Trunk Sewer has a full-pipe capacity of 2.6 mgd and conveyed a peak flow of 0.8 mgd when last measured in 2011.

2. Sewer plans shall be submitted to the Districts for review and approval prior to connecting any sewer for this development to the existing sewer system. For information regarding the sewer plan review and approval process, please contact Mr. Stan Pegadiotes, Project Engineer in the Districts' Sewer Design Section, at (562) 908-4288, ext. 1620.

3. The wastewater generated by the proposed project will be treated at the Joint Water Pollution Control Plant located in the City of Carson, which has a design capacity of 400 mgd and currently processes an average flow of 258.4 mgd.

4. The expected average wastewater flow from the proposed project, described in the application as 2,500 residential dwelling units, 890,000 square feet of retail space, 780,000 square feet of general office space, 300 hotel rooms, a 120,000-square-foot card club, an 80,000 seat stadium, and a 6,000 seat performance venue, is 2,034,750 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

DOC: #3639968.D05

5. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System or for increasing the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. In determining the impact to the Sewerage System and applicable connection fees, the Districts' Chief Engineer will determine the user category (e.g. Condominium, Single Family home, etc.) that best represents the actual or anticipated use of the parcel or facilities on the parcel. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at (562) 908-4288, extension 2727.

6. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the design capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Very truly yours,

Adriana Raza

STEPHEN R. MAGUIN
Chief Engineer and General Manager

November 13, 2007

File No: 05-00.04-00

Mr. Sheldon Curry, Director
Planning and Building Department
City of Inglewood
One Manchester Boulevard
Inglewood, CA 90301

Dear Mr. Curry:

Hollywood Park Mixed-Use Project

The County Sanitation Districts of Los Angeles County (Districts) received a Notice of Preparation of a Draft Environmental Impact Report for the subject project on November 5, 2007. The proposed development is located within the jurisdictional boundaries of District No. 5. We offer the following comments regarding sewerage service:

1. The Districts maintain sewerage facilities within the project area that may be affected by the proposed project. Approval to construct improvements within a Districts' sewer easement and/or over or near a Districts' sewer is required before construction may begin. For a copy of the Districts' buildover procedures and requirements, go to www.lacsd.org, Will Serve Program, Obtain Will Serve Letter, and click on the appropriate link on page 2. For more specific information regarding the buildover procedure, please contact Mr. Ronnie Burtner at extension 2766.

2. The following is a list of Districts' trunk sewers that serve the project area.

Name	Location	Size (dia.)	Design Capacity (mgd)	Peak Flow (mgd)	Last Measured
Prairie Avenue Trunk Sewer	In Hardy Street at Osage Avenue	21"	14.4	2.7	2007
Prairie Avenue Trunk Sewer	In Century Boulevard at Flower Street	24"	9.2	3.3	2007
South Inglewood-Orange Avenue Trunk Sewer	In Doty Avenue at Century Boulevard	15"	2.59	0.4	2007

3. A direct connection to a Districts' trunk sewer requires a Trunk Sewer Connection Permit, issued by the Districts. For information regarding the permit, please contact the Public Counter at extension 1205.

Doc #: 890539.1

4. The wastewater generated by the proposed project will be treated at the Joint Water Pollution Control Plant located in the City of Carson, which has a design capacity of 385 mgd and currently processes an average flow of 310.8 mgd.

5. The expected average wastewater flow from the project site is 875,025 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Information Center, Will Serve Program, Obtain Will Serve Letter, and click on the appropriate link on page 2.

6. The Districts are authorized by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System or increasing the strength or quantity of wastewater attributable to a particular parcel or operation already connected. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Information Center, Will Serve Program, Obtain Will Serve Letter, and click on the appropriate link on page 2. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at extension 2727.

7. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the design capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Very truly yours,

Mr. Ben Straw
Senior Civil Engineer
ARUP
901 Market Street, Suite 260
San Francisco, CA 94103

Dear Mr. Straw:

Hollywood Park Master Plan

This is in reply to your letter, which was received by the County Sanitation Districts of Los Angeles County (Districts) on November 27, 2006. The proposed development is located within the jurisdictional boundaries of District No. 5. We offer the following comments regarding sewerage service:

1. The Districts maintain sewerage facilities within the project area that may be affected by the proposed project. Approval to construct improvements within a Districts' sewer easement and/or over or near a Districts' sewer is required before construction may begin. A copy of the Districts' buildover procedures and requirements is enclosed for your information. For additional information regarding the buildover procedure, please contact Mr. Ronnie Burtner at extension 2766.

2. The Districts' 21-inch diameter Prairie Avenue Trunk Sewer, located in Hardy Street at Osage Avenue (Connection Point A1), has a design capacity of 14.4 million gallons per day (mgd) and conveyed a peak flow of 3 mgd when last measured in 2003.

3. The Districts' 24-inch diameter Prairie Avenue Trunk Sewer, located in Century Boulevard at Flower Street (Connection Point B1), has a design capacity of 9.2 mgd and conveyed a peak flow of 3.5 mgd when last measured in 2003.

4. The Districts' 15-inch diameter South Inglewood-Orange Avenue Trunk Sewer, located in Doty Avenue at Century Boulevard (Connection Point C1), has a design capacity of 2.59 mgd and conveyed a peak flow of 0.7 mgd when last measured in 2002.

5. A direct connection to a Districts' trunk sewer requires a Trunk Sewer Connection Permit, issued by the Districts. For information regarding the permit, please contact the Public Counter at extension 1205.

6. The wastewater generated by the proposed project will be treated at the Joint Water Pollution Control Plant located in the City of Carson, which has a design capacity of 385 mgd and currently processes an average flow of 317 mgd.

7. The expected average wastewater flow from the project site is 1,128,750 gallons per day.

8. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System or increasing the existing strength and/or quantity of wastewater attributable to a particular parcel or operation already connected. This connection fee is required to construct an incremental expansion of the Sewerage System to accommodate the proposed project, which will mitigate the impact of this project on the present Sewerage System. Payment of a connection fee will be required before a permit to connect to the sewer is issued. A copy of the Connection Fee Information Sheet is enclosed for your convenience. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at extension 2727.

9. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the design capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

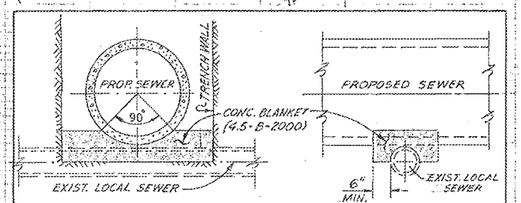
* PRIOR TO CONSTRUCTION OF THE SEWER BETWEEN STA. 113+00 & STA. 116+75.9 THE CONTRACTOR SHALL EXPOSE THE 8" SEWER AT STA. 113+71± AND THE 12" STORM DRAIN AT STA. 113+95. THE ENGINEER WILL DETERMINE IF CONFLICT EXISTS AND IF NECESSARY ADJUST THE HORIZONTAL AND VERTICAL ALIGNMENTS. FOR ANY HORIZONTAL ADJUSTMENT THE CONTRACTOR SHALL PULL AND DEFLECT THE PIPE JOINTS.



CONCRETE BLANKET DETAIL

NOTE:
PRIOR TO LAYING PROPOSED 30" PIPE WITHIN 50 FEET OF LOCAL SEWERS AT STA. 110+46± ℄ STA. 113+71± THE ENGINEER WILL DETERMINE IF THERE IS BELL INTERFERENCE. IF INTERFERENCE EXISTS THE ENGINEER WILL ADJUST HORIZONTAL ALIGNMENT OF PROPOSED SEWER. AFTER PROPOSED PIPE IS IN PLACE THE CONTRACTOR SHALL CONSTRUCT CONCRETE BLANKET AS SHOWN ABOVE. COST TO BE ABSORBED IN APPROPRIATE BID ITEM.

Section 1 - General

The notes and specifications contained on this drawing are supplemental to the "Standard Specifications for Public Works Construction, 1970 Edition, and Amendments as adopted by County Sanitation District No. 5 of Los Angeles County dated October, 1970. In all matters where conflict exists between the notes and specifications on the drawings and Standard Specifications, the notes and specifications on the drawings shall govern.

The Contractor shall not be responsible for the cost of removal, relocation or protection of existing utilities, if such utilities are not shown on the plans or are not identified in the specifications or, in case of service connections, are not located by the utility owners prior to construction.

The Contractor shall not be assessed damages for delay in completion of the project when such delay results from time required by the Contractor to protect a utility not shown on the plans or identified in the specifications, or when delay results from time required to remove or relocate said utility.

Unless otherwise allowed by the Engineer, the Contractor shall complete construction at each location including the permanent resurfacing within 45 days after commencement of construction at the location. Completion of construction shall include all work required on the drawings and in the specifications, including manholes, house connections, planting, and replacement or repair of damaged surface improvements. Failure on the part of the Contractor to complete construction at each location, including the permanent resurfacing within 45 days after commencement of construction at the location may result in a directive from the Engineer to cease progress on any or all parts of the work under contract until construction is completed including the permanent resurfacing on all portions of the project commenced more than 45 days prior to the date of the directive. No additional compensation will be allowed as a result of such directive.

Section 2 - Correction of Sanitation District Amendments to Standard Specifications for Public Works Construction, 1970 Edition

The third sentence of the second paragraph under 306-1.13 "House Connection Sewers" on page 14 of the above-named amendments is hereby deleted.

Section 3 - Sequence of Construction

To prevent interruption of traffic on major streets during the racing seasons at Hollywood Turf Club, the Contractor shall complete all construction, including permanent resurfacing, within Century Boulevard, Hardy Street, Arbor Vitae, Kelso Street and Prairie Avenue between the period of July 25, 1972 and September 6, 1972.

Section 4 - Notification

The Contractor shall notify the following agencies at least 48 hours prior to commencing construction:

Los Angeles County Flood Control District	223-2111
Mr. R. Kenis	Ext. 74211
Los Angeles County Road Department	
Permit Notification	773-4834
Traffic and Lighting	225-1677
Mr. Ed Cline	Ext. 75244
City of Hawthorne	
Mr. C. W. Smith	
Asst. City Engr. & Traffic Engineer	626-1181 Ext. 276
Fire Department	
Capt. J. Conner	675-0304
Police Department	
Chief C. B. Young	675-4446
City of Inglewood	
Mr. William Mahar	674-7111
Assistant City Engineer	Ext. 211
Mr. Paul Cook Traffic Engr.	Ext. 214
Mr. J. G. Smith Fire Department	Ext. 311
Sargeant Calderwood Police Department	Ext. 222
Mr. K. Duke Water Department	Ext. 201

The Contractor shall notify the following persons or firms at least 48 hours prior to commencing construction in the vicinity of their facilities:

Pacific Tel. & Tel. Mr. C. C. McLeod	296-8763
Southern Cal. Gas Co. Mr. Bob Fones	673-3020
Pacific Lighting Mr. V. L. Driver	623-7945

Southern Calif. Ed. Co. Mr. W. M. Burton	572-2539
Southern Calif. Water Co. Mr. Walter Paltz	386-7800

Section 5 - D-Load and Allowable Trench Width for R. C. Pipe

The D-load shown on the profile portion of the drawing is the minimum D-load required using normal bedding as defined in Section 306-2.1 of the Standard Specifications. The table below indicates the allowable trench widths for varying amounts of cover over the pipe for pipe with minimum D-load for (1) normal bedding and (2) gravel bedding. Gravel bedding shall be at the option of the Contractor. The gravel bedding shall be crushed rock 1/4" to 3/4" size conforming to ASTM C33 Size 67. The crushed rock shall extend from the bottom of the pipe to the top of the pipe. The cost for gravel bedding shall be absorbed in the appropriate pipe bid item. Allowable trench widths for cover between the amounts shown in the table shall be obtained by interpolation.

ΔW, shown in the table below, is to be used to determine allowable trench width for pipe with D-load in excess of the minimum required where normal bedding is used. ΔW represents the amount the allowable trench width will be increased over that shown in the table for each 100 D-load in excess of the minimum.

Section 6 - Allowable Trench Widths for V.C. Pipe

The table below indicates the allowable trench widths for varying amounts of cover over the pipe for (1) normal bedding and (2) gravel bedding. Gravel bedding shall be at the option of the Contractor. The gravel bedding shall be crushed rock 1/4" to 3/4" size conforming to ASTM C33 Size 67. The crushed rock shall extend from the bottom of the pipe to the top of the pipe. The cost for gravel bedding shall be absorbed in the appropriate pipe bid item. Allowable trench widths for cover between the amounts shown in the table shall be obtained by interpolation.

12	53	60
14	49	55
16	47	53
18	45	51
20	44	49

Section 7 - Traffic Requirements In and Across Streets

Traffic shall be handled in accordance with the Standard Specification for Public Works Construction, 1970 Edition, as adopted by the Los Angeles County Road Department.

Where traffic striping is not to be relocated, delineators shall be placed to divert and separate two-way traffic. Cones shall be placed to separate two lanes moving in the same direction.

A. In County Streets

Eastwood Ave. and Freeman Ave.
The Contractor may close to thru traffic, block by block, provided two adjacent intersecting streets are not closed concurrently.

Lennox Blvd.
The Contractor shall maintain a minimum of two 10-foot traffic lanes, one in each direction at all times, when construction is in progress in the street.

Intersecting Streets and Alleys: 111th Street, 107th Street, 106th Street, 105 Street, 104th Street, 103rd Street:
The Contractor may close to thru traffic when construction is in progress at the above intersections provided two adjacent intersecting streets or alleys are not closed concurrently.

To close a county street, the Contractor shall apply in writing for a road closure permit to the Road Commissioner, Los Angeles County Road Dept. to comply with Highway Permit Ordinance No. 3597, Sections 142, 143 and 316, at least three weeks prior to the proposed date of closure. The letter shall state the dates of closure that are requested by the Contractor. The Road Department will determine the authorized period of closure and the Contractor shall deposit with the Road Commissioner an amount equal to $50.00 for each day of authorized closure.

The Road Commissioner will authorize the closure by a rider to the permit stipulating the period of closure. If the road is reopened within the time authorized, the cash deposit will be refunded to the Contractor. If the Contractor fails to open the road after the period of authorized closure, $100.00 per day will be deducted from his cash deposit. Extensions of time may be authorized as set forth in the Standard Spec for Public Works Construction, 1970 Edition, as adopted by the Los Angeles County Road Dept.

B. In City of Hawthorne Streets

Eastwood Ave. and Intersection 112th Street
The Contractor may close to thru traffic when construction is in progress.

To close any street or alley in Hawthorne, the Contractor shall notify the Hawthorne Traffic Engineer at 676-1181, Ext. 276; Fire Dept. at 675-0304 and Police Dept. at 675-4446 three days in advance of closure.

C. In City of Inglewood Streets

Manchester Blvd. (State Hwy.)
The Contractor shall maintain all existing traffic lanes.

Freeman Ave., Flower Street and Osage Avenue
The Contractor may close to thru traffic, block by block, provided two adjacent intersecting streets are not closed concurrently.

Intersecting Streets: 103rd Street, 102nd Street, 101st Street, 99th Street, 97th Street, Buckthorne, LaBrea Drive and Intersecting Alleys:
The Contractor may close to thru traffic when construction is in progress at the above intersections provided two adjacent intersecting streets or alleys are not closed concurrently.

Century Blvd.
The Contractor shall maintain 4 10-foot traffic lanes at all times except when crossing Century Blvd. at Freeman Ave. between approx. Sta. 133+00 and 134+00, the Contractor may reduce traffic to 3 10-foot traffic lanes, two in one direction and one in the other direction, as determined by the City of Inglewood Traffic Engineer.

Hardy Street, Arbor Vitae St. and Kelso St.
The Contractor shall maintain a minimum of one flagmen controlled traffic lane.

Prairie Ave.
The Contractor shall maintain 4 10-foot traffic lanes at all times except, when constructing Connection "A" and the house connection, traffic may be reduced to 3 10-foot traffic lanes, two in one direction and one in the other direction, as determined by the City of Inglewood Traffic Engineer.

To close any street or alley in Inglewood, the Contractor shall notify the City of Inglewood Traffic Engineer at 674-7111, Ext. 211; Fire Dept. at 674-7111, Ext. 311 and Police Dept. at 674-7111, Ext. 222 three days in advance of closure.

Section 8 - Construction Requirements For Work Under Storm Drains of The Los Angeles County Flood Control District

Prior to commencing construction, the Contractor shall obtain approval of the Los Angeles County Flood Control District for his methods of temporary and permanent support of the storm drains.

All construction work in the immediate vicinity of the storm drains shall conform to the requirements of the Los Angeles County Flood Control District.

Construction under the storm drains at approximate Stations 133+25, 138+23, 147+80 and 151+00 shall be accomplished by the tunneling method.

Construction under the 27" storm drain at approximate Station 151+18 and the 60" storm drain at approximate Station 195+55 shall be accomplished by providing an approved temporary support and a permanent concrete support per S-a-217. The Contractor shall submit to and obtain approval from the Engineer of his proposed method of temporary support prior to any construction in the vicinity of the 27" and 60" storm drain.

All storm drain pipes to catch basins shall be temporarily supported per S-a-222 and permanently supported per S-a-217.

All work to be absorbed under the appropriate pipe item.

Section 9 - Resurfacing Requirements

Materials and methods of construction for repaving shall conform to the Standard Specifications for Public Works Construction, 1970 Edition, as adopted by the Los Angeles County Road Department.

Unless otherwise authorized by the Engineer, temporary resurfacing shall be placed and maintained in all locations where sidewalks, driveways or paving are removed. If the Engineer directs that temporary resurfacing be deleted, the contract price will be reduced by an amount representing the reduction in temporary resurfacing cost based on the actual area of temporary resurfacing omitted at the unit pride of fifteen cents per square foot of resurfacing. If the Contractor is allowed to place the base course of the permanent resurfacing in lieu of temporary resurfacing, he shall maintain it to the satisfaction of the Engineer until the permanent wearing surface has been placed.

Temporary resurfacing shall be replaced with permanent resurfacing including wearing surface when, in the opinion of the Engineer, the backfill is suitable for permanent resurfacing, but within thirty (30) calendar days after the temporary resurfacing was placed.

Permanent resurfacing shall be one inch greater in thickness than existing paving except as follows:

Eastwood Ave. (from County Boundary north to 111th St.)
Replace with 3" of Type 1 A.C. on 4" of aggregate base.

Eastwood Ave. (111th St. to Lennox Blvd.)
Replace with 4" of Type 1 A.C.

Lennox Ave.
Replace with 9" of Type 1 A.C.

Freeman Ave. (Lennox Blvd. to 103rd St.)
Replace with 4" Type 1 A.C.

Freeman Ave. (103rd St. to Century Blvd.), Flower St., Hardy St., and Osage St.
Replace with 2" Type 1 A.C. on 4" of aggregate base.

Century Blvd., Prairie Ave. and Arbor Vitae Street
Replace with 6" of Type 1 A.C. on 8" of aggregate base.

Kelso Street
Replace with 3" of Type 1 A.C. on 4" of aggregate base material.

Manchester Blvd.
Replace pavement section in kind plus one inch of thickness.

△ Eastwood Avenue (From 112th Street to County Bdry.-Approx. Sta. 88+75)
Replace with 4" of Type I A.C. on 8" of aggregate base.

Section 10 - Existing House Connections

The house connections as shown on the plans were obtained from the best information available, however, the information may not be complete nor entirely accurate.

House connections that conflict with the proposed sewer shall be relaid to the local sewer if sufficient grade is available. If sufficient grade is not available to connect directly to the local sewer, the Contractor shall temporarily connect the house connection to the local sewer, using a flexible pipe, either under or over the proposed sewer. The Contractor shall maintain the temporary connection until permanent connection is made. When the proposed sewer is placed in service, the Contractor shall permanently connect the house connection to the proposed sewer (see standard plan S-a-86).

The relaying of house connections, both temporary and permanent, will be paid under the house connection bid item. The unit price of the bid item paid shall be only for the laying length of the permanent connection.

Section 11 - Dewatering

All water encountered in constructing the sewer shall be disposed of by the Contractor in such manner as will not damage public or private property or create a nuisance or health menace. The Contractor shall furnish, install, and operate pumps, pipes, appliances and equipment of sufficient capacity to keep all sewer excavations free from water until the sewer is backfilled, unless otherwise authorized by the Engineer. The Contractor shall provide all means or facilities necessary to conduct water to the pumps. Water, if odorless and stable, may be discharged into an existing storm drain, channel, or street gutter in a manner approved by the Engineer. When required by the Engineer, a means of desilting the water before discharging it shall be provided.

Section 12 - Requirements for Work in Vicinity of Whelan School and Kelso School

During construction past the Whelan and Kelso Schools, the Contractor shall erect temporary 5-foot high chain link fences to enclose completely all open excavations left overnight or when excavations are left unattended. The fencing shall be used for open excavations up to 300 feet in each direction from limits of the school or up to 50 feet beyond the nearest pedestrian crossing, whichever distance is the greater. Fencing shall be fastened to posts driven in place and suitably spaced, as approved by the Engineer, to adequately support the fencing and provide security, in the opinion of the Engineer, against children entering the construction excavation. All costs of temporary fencing shall be absorbed in the appropriate pipe bid item.

The Engineer will notify Mr. Albert Aialouf, Principal of Whelan School, at 673-3110 and Mr. John Posterling, Principal of Kelso School, at 673-3110 at least 72 hours prior to commencing construction and shall furnish notices to the schools warning parents of the hazards and dangers present in the construction areas.

Section 13 - Construction Under Manchester Blvd., State Highway

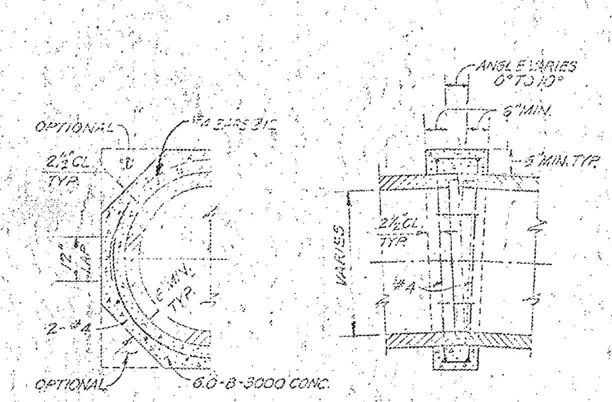
All work shall be done in accordance with the requirements of the California State Division of Highways. The Contractor shall submit to and obtain approval of the Engineer of his method of jacking and tight sheeting of jacking pit prior to commencing construction.

The State Highway Encroachment permit will be obtained by the District. The Contractor will not be required to apply for a construction permit; however, the Contractor will be required to post a P-4 form bond in the amount of $2,000.00 with the State Division of Highways, and to incur the State inspection fees. Inspection fees may amount to approximately $150.00. The State will bill the Contractor directly.

Between the jacking limits, as indicated on the drawing, the Contractor shall jack into place a 48" diameter steel casing having a minimum wall thickness of 3/8" and shall install the pipe within the casing. All voids outside of the casing and between the casing and the sewer pipe shall be filled with cement-sand grout placed under pressure. All cement-sand grout shall have 8 sacks of cement per cubic yard of grout.

The jacking pit perimeter and the backface at the end of the jacked casing shall be solid sheeted and the timbers used for sheeting shall extend 3-1/2 feet above the ground surface.

Section 14 - Concrete Collar



(NO SCALE)

Construct concrete collar where required on the drawings and at all pipe joints where there is a change in the type of joint or a change in the thickness of the walls of adjacent pipes.

If a water line is less than 3 feet above the proposed sewer, the pipe joints within 4 feet horizontally of the water line shall be encased as detailed hereon.

(All costs to be absorbed in the appropriate pipe bid item.)

Section 16 - Special Trench Excavation Requirements

In advance of commencement of excavation for all excavation of trenches five feet or more in depth, the Contractor shall submit a detailed plan showing the design of shoring, bracing, sloping or other provisions to be made for worker protection from the hazard of caving ground during the excavation of such trenches. If said plan varies from the shoring system standards established by Industrial Safety Division, Construction Safety Orders, the plan shall be prepared by a registered civil or structural engineer. The Contractor shall not commence excavation of such trenches until the detailed plan submitted by the Contractor has been accepted and approved in writing by the Engineer.

△ Section 17 - Backfill of Trenches

Trench backfill in Eastwood Avenue from the beginning of construction to Bounty Boundary - approximate Station 88+75 shall conform with the following:

"All trench backfill material from 3' below the finish grade to the bottom of the trench shall be placed and consolidated in accordance with Section 306-1.9.3 of the Standard Specifications for Public Works Construction, with Amendments of the County Sanitation Districts of Los Angeles County dated October 1970. All trench backfill material above 3' below the finish grade shall be mechanically compacted to a relative density of 95%."

Subject:	Related Project List Methodology for the proposed Inglewood Basketball and Entertainment Center (IBEC)

To support the environmental analysis of the Inglewood Basketball and Entertainment Center (IBEC) project, the project team prepared a cumulative projects list to support analytical assumptions made in the environmental impact report (EIR). The purpose of this documentation is to identify reasonably foreseeable projects anticipated to be constructed in the near term in order to form a basis for analysis of cumulative impacts in the EIR.

Identification of cumulative projects focused on projects that were proposed as of May 2018. This time frame coincides with the commencement of the City's environmental review process for the Proposed Project. The project team established several parameters for projects included on this list. Projects on this list consist of development projects within the City or surrounding jurisdictions. The projects have pending development applications, are approved, are under construction, and/or would be a significant traffic generator. Certain plan documents are included on the list if they have applications pending for specific projects proposed within the plan area.

The project team contacted planning staff from the cities of Inglewood, Los Angeles, Culver City, El Segundo, Manhattan Beach, Lawndale, Hawthorne, and Gardena. Additionally, Los Angeles County planning staff was contacted regarding pending projects in the unincorporated areas of the County of Los Angeles and the communities of Baldwin Hills, Del Aire, Gardena Valley, Lennox, View Park, West Athens, and Westmont. Outreach to these jurisdictions was conducted via email, phone calls, and/or in-person meetings with relevant planning staff. These contacts provided information regarding pending projects in their respective jurisdiction including project name, address, types of uses and sizes of development including number of dwelling units and square footages, project phase, and estimated completion date. Once input

from each of these jurisdictions was received, the project team reviewed the list of all projects; removed projects that were duplicative, already constructed, had development applications that had lapsed, or that did not have a development application pending (such as plan-level documents); cross-checked the list with projects included in the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) model; and field verified whether projects had already been constructed.

This outreach effort resulted in a cumulative project list of 145 relevant projects (see Table B). The projects listed in Table B include:

- The LAX Northside Plan is included because it has obtained project-level environmental clearance and projects listed in the plan are currently being constructed.

- The LAX Landside Access Modernization Program is included because the program authorizes 900,000 square feet of commercial development. This development is also included in the approved LAX Specific Plan. This aspect of the LAX Landside Access Modernization Program authorizes commercial development projects in the remaining land adjacent to LAMP facilities.

Table B also includes the proposed Inglewood Transit Connector (ITC) Project. The City of Inglewood issued a Notice of Preparation for the ITC Project in July 2018 and is preparing a project-level environmental analysis and clearance documentation. The ITC is expected to be included in the SCAG list of strategic projects in the Southern California Association of Governments 2020 Regional Transportation Plan.

Table B does not include the Inglewood Transit Oriented Development (TOD) plans because they are program-level plans that govern future development within certain areas around transit stations, but they do not assume specific development projects within those areas. If applications have been submitted for specific development projects within the TOD areas, then those proposed projects are included in Table B.

Hollywood Park Specific Plan (HPSP) Area

The HPSP encompasses approximately 238 acres. The City approved the HPSP in 2009. As approved at that time, the HPSP authorized the redevelopment of the Hollywood Park property, including the racetrack Grandstand and the Pavilion/Casino and the construction of a new mixed-use development. The HPSP authorized up to approximately 2,995 dwelling units, 620,000 square feet of retail space, 75,000 square feet of office/commercial space, a 300- room hotel, and 10,000 square feet of community space.

In February 2015, the City approved a voter-sponsored initiative entitled the "City of Champions Revitalization Initiative." The initiative amended the HPSP. The HPSP, as amended, authorizes the following uses: an NFL stadium of up to 80,000 seats; a performance venue of up to 6,000 seats; up to 890,000 square feet of retail uses; up to 780,000 square feet of office; up to 300 hotel rooms; up to 2,500 residential units; and approximately 25 acres of public parks and open space. Thus, the initiative builds upon, and adds to, the uses authorized by the City in the 2009 HPSP.

The initiative provides the landowner with a vested right to proceed with the development outlined above. The approval process for individual projects covered by the initiative is ministerial and does not require further CEQA review. The initiative also requires that the landowner implement the mitigation measures adopted by the City when it approved the HPSP in 2009. These measures include various, specific transportation improvements, and contributions to other transportation improvements.

The initiative also encompassed an additional, 60-acre parcel immediately north of the HPSP, generally referred to as the "Northern Parcel." The initiative designated the entire 298 acres (both the original HPSP area and the Northern Parcel) as "Major Mixed Use." A portion of the stadium is being constructed on the Northern Parcel. The Northern Parcel is also accommodating roadways and other improvements needed by the stadium project. Further development of the Northern Parcel will require performing CEQA review and amending the HPSP. The initiative provides that the overall floor area ratio for the entire site "shall not exceed 2:1 averaged over the 298-acre site." (City of Champions Revitalization Initiative, § 3.A.2.) The "entire site" includes both the 238-acre HPSP area, and the 60-acre Northern Parcel.

Construction of the stadium is now underway. In addition, the landowner has submitted plans for the specific development projects on the 238-acre HPSP area. The City is actively engaged in performing ministerial review of these projects. The landowner has reported that all of these projects are expected to be completed and operational well before 2024. Table A summarizes the status of development on the HPSP. This table has been prepared based on applications submitted to the City Planning Department as of November 2018.

Table A - Hollywood Park Specific Plan					
Land Use	**Adjusted Baseline**	**Remaining Development in Mixed-Use and Residential Areas**	**2.0 FAR in Interim Use Areas**	**Total Cumulative**	**Total HPSP Development Assumptions**
Retail	518,077 sf	371,923 sf	- sf	371,923 sf	890,000 sf
Office	466,000 sf	314,000 sf	3,253,314 sf	3,567,314 sf	4,033,314 sf
Residential	314 units	2,186 units	- units	2,186 units	2,500 units
Hotel	- rooms	300 rooms	- rooms	300 rooms	300 rooms
Stadium	70,000 seats	- seats	- seats	- seats	70,000 seats
Perform. Venue	6,000 seats	- seats	- seats	- seats	6,000 seats
Open Space	11.89 acres	13.06 acres	- acres	13.06 acres	24.95 acres
Civic Use	4 acres		- acres		4 acres

For projects that are either under construction or have plot plan applications underway (shown in Table A, "Adjusted Baseline" column), the projects will not be included in the cumulative projects list. Rather, these projects will be considered as part of the baseline environmental setting. The environmental setting generally consists of physical conditions as they exist at the time the lead agency commences the environmental review process. (CEQA Guidelines, § 15125, subd. (a).)

In response to its Notice of Preparation, the City received a letter regarding other development in the area that should be considered in the City's analysis. The letter stated that the "baseline analysis scenario" for purposes of traffic analysis should include the anticipated development of 5.25 million square feet of commercial development on a 60-acre parcel generally referred to as the "Hollywood Park Northern Parcel." (Letter from Amy Forbes to Mindy Wilcox (March 22, 2018).)
At the time the City commenced the environmental review process for the IBEC, the Hollywood Park Northern Parcel did not contain 5.25 million square feet of commercial development. As noted above, the development of the Northern Parcel requires amending the HPSP. An application to amend the HPSP has not been filed with the City. Nonetheless, to be conservative, the development of the Northern Parcel is included as part of the City's analysis of cumulative effects. The City has concluded that the development capacity of the Northern Parcel should be adjusted to reflect the fact that the NFL stadium is located on a portion of the Northern Parcel, as are certain roads and infrastructure. For this reason, the entire 60 acres may not be available for development. The City Planning Department estimates that, once the stadium and roads are constructed, the remaining

land on the Northern Parcel available for development will be approximately 37.3 acres. The Department estimates that, if a 2:1 floor area ratio is applied to this amount of land, then the Northern Parcel could accommodate up to 3.25 million square feet. (Memorandum from Mindy Wilcox to Christopher Jackson re: Hollywood Park 60-acre Site (January 10, 2019).) Accordingly, 3.25 million square feet of development in the Northern Parcel is included in the cumulative projects list. This cumulative scenario also assumes that all of the mitigation measures adopted as part of the initiative will be implemented.

The cumulative project "list method" reflected in Table B may overstate the level of development assumed in the cumulative impact analysis. Many of the projects on this list may not go forward. Others may be disapproved or approved at densities and intensities less than those sought by the landowner. Others may not be constructed by 2030, the cumulative development year analyzed in the EIR. Table B nevertheless lists the development as currently requested by the site landowner or project applicant, at full build-out. In this respect, Table B is conservative. The inclusion of all proposed or approved projects in Table B, assuming full build- out, ensures that the City will not underestimate the level of development expected to exist as of 2030.
