

## MAP INFORMATION

Streams and Canals

## Transportation

Rails
\# Interstate Highways
US Routes
\%) Major Roads
...: Local Roads

## Background

䨐 Aerial Photography

The soil surveys that comprise your AOI were mapped at 1:24,000.

## Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.
Source of Map: Natural Resources Conservation Service Web Soil Survey URL
Coordinate System: Web Mercator (EPSG:3857)
Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.
This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.
Soil Survey Area: Los Angeles County, California, Southeastern Part
Survey Area Data: Version 4, Sep 12, 2017
Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 23, 2014-Jan 14, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Farmland Classification

| Map unit symbol | Map unit name | Rating | Acres in AOI | Percent of AOI |
| :---: | :---: | :---: | :---: | :---: |
| 1124 | Urban land-WindfetchCentinela complex, 0 to 5 percent slopes | Prime farmland if irrigated | 71.4 | 32.7\% |
| 1130 | Urban land-WindfetchTypic Haploxerolls complex, 0 to 2 percent slopes | Prime farmland if irrigated | 147.3 | 67.3\% |
| Totals for Area of Interest |  |  | 218.8 | 100.0\% |

## Description

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.

## Rating Options

Aggregation Method: No Aggregation Necessary
Tie-break Rule: Lower
