GENERAL LIGHTING NOTES

CONSTRUCTION CF AN

Figure 1.1, System Integration and Coordination, shall be used to coordinate and integrate the various electrical systems and sub-systems for a project. The System Integration and Coordination (SI) shall be responsible for coordinating the installation of all electrical systems and sub-systems with the overall project. The SI shall be responsible for ensuring that all systems and sub-systems are properly coordinated and integrated to ensure a smooth and efficient operation of the project.

Figure 1.2, System Specifications, shall be used to specify the electrical systems and sub-systems for a project. The SI shall be responsible for specifying all electrical systems and sub-systems, including lighting, electrical power, and communication systems, to ensure that they are properly designed and integrated to meet the project requirements.

Figure 1.3, System Design, shall be used to design the electrical systems and sub-systems for a project. The SI shall be responsible for designing all electrical systems and sub-systems, including lighting, electrical power, and communication systems, to ensure that they are properly designed and integrated to meet the project requirements.

Figure 1.4, System Construction, shall be used to construct the electrical systems and sub-systems for a project. The SI shall be responsible for constructing all electrical systems and sub-systems, including lighting, electrical power, and communication systems, to ensure that they are properly constructed and integrated to meet the project requirements.

Figure 1.5, System Operation, shall be used to operate the electrical systems and sub-systems for a project. The SI shall be responsible for operating all electrical systems and sub-systems, including lighting, electrical power, and communication systems, to ensure that they are properly operated and maintained to meet the project requirements.

Figure 1.6, System Maintenance, shall be used to maintain the electrical systems and sub-systems for a project. The SI shall be responsible for maintaining all electrical systems and sub-systems, including lighting, electrical power, and communication systems, to ensure that they are properly maintained and repaired to meet the project requirements.
