Hi Peter,

The reason these counts were not sent to F&P was that there was construction activity at these locations resulting in reduced geometry at these locations at the time the counts were conducted. I am not sure if the construction at these locations has been completed. If they have been completed, then we can schedule counts. If you are sure that the construction at these locations have been completed, please kindly let me know. If you want us to check the same by going to the field, we would be glad to do that. Please let us know.

Thanks,
Srinath

Srinath,

I know you were tasked with data collection for the IBEC. Could you please address the question from F&P below?

Thanks

Subject: Murphy's Bowl Counts

Hi Peter,

When we did our initial counts in the spring, we did not receive weekday counts for the intersection of 5th Avenue and Century Boulevard because there was construction (see attached list of counts from Raju and Associates). There was a similar issue for the neighborhood street segment count on 104th Street, west of Prairie Avenue. At the time, I believe you said the City was planning to take counts during the fall at these locations. Is the City still planning to conduct these counts?

Thanks,

Mike
